Credits 3.3 Lecture Hours.
Advanced topics in game theory; repeated games and reputation, strategic information transmission; learning and evolution; models of bargaining and networks.
Prerequisites: Graduate classification; ECON 629 and ECON 630 or approval of instructor.

ECON 633 Energy Markets and Policy
Credits 3.3 Lecture Hours.
Economics of energy markets and energy regulation with emphasis on implications for optimal energy policy; sectors include gasoline, oil, electricity, natural gas, renewables, nuclear; economic theory integrated with empirical applications from American and international experience; new energy markets, energy trading, and interaction with environmental policy.
Prerequisite: Graduate classification.

ECON 635 Monetary Theory
Credits 3.3 Lecture Hours.
Traditional and modern theories of money; general equilibrium systems and role of money in determination of prices, interest rate, income and employment.
Prerequisite: ECON 636.

ECON 636 Macroeconomic Theory I
Credits 3.3 Lecture Hours.
Theory of consumption, investment, money, interest, inflation and employment.
Prerequisite: ECON 410 or ECON 611.

ECON 637 Monetary Policy
Credits 3.3 Lecture Hours.
Effect of monetary policy on aggregate economic activity and distribution of resources; effectiveness of various policies; optimal policy in light of various institutional restrictions that exist.
Prerequisite: ECON 635.

ECON 646 Macroeconomic Theory II
Credits 3.3 Lecture Hours.
Dynamic models, open economies, disequilibrium analysis, unemployment and inflation; traditional macro models and recent developments in macro theory.
Prerequisite: ECON 636.

ECON 649 Industrial Organization I
Credits 3.3 Lecture Hours.
Industry structure, conduct and performance described and analyzed with tools of microeconomics.
Prerequisite: Approval of instructor.

ECON 650 Industrial Organization II
Credits 3.3 Lecture Hours.
Behavior of markets operating under conditions of imperfect information; construction and scientific evaluation of models designed to explain industry performance.
Prerequisite: ECON 649 or approval of instructor.

ECON 652 International Trade Theory
Credits 3.3 Lecture Hours.
Classical and neoclassical models of international trade. International price formation, patterns of trade and gains from exchange; specialization and comparative advantage; factor proportions, factor prices and the Heckscher-Ohlin theorem; foreign trade and growth; tariffs, customs unions and commercial policy.
Prerequisite: ECON 630 or approval of instructor.

ECON 655 Experimental Economics
Credits 3.3 Lecture Hours.
Experimental methods in choice behavior experiments, survey research, planned economic environments and animal experiments.
Prerequisite: Approval of instructor.
ECON 659 Behavioral Game Theory
Credits 3.3 Lecture Hours.
Static and dynamic games of complete and incomplete information and other advanced topics in game theory.

ECON 668 Decisions Under Risk and Uncertainty
Credits 3.3 Lecture Hours.
The mean-variance and expected utility decision models; the use of risk models in asset valuation, financial decision-making and economic analysis; portfolio choice, insurance demand, saving, investment and consumption decisions.
Prerequisites: ECON 607 or equivalent; enrolled in the Department of Economics’ master’s program or approval of director of the master’s program.

ECON 675 Capstone for Financial Economics/Financial Econometrics
Credits 3.3 Lecture Hours.
Integration of the knowledge gathered in coursework including micro- and macro-economics, financial economics, econometrics, forecasting, and other analytical tools; production of major group research paper utilizing professional literature, both printed and electronic, and published data.
Prerequisites: Graduate classification; 2 year master’s student enrolled in the master’s program in the department of economics.

ECON 680 Financial Economics
Credits 3.3 Lecture Hours.
Advanced theory of dynamic asset pricing utilizing the Economics of risk and uncertainty within a general equilibrium framework; stochastic calculus applications to the analysis of asset markets; theoretical foundations and empirical testing.
Prerequisites: ECON 630 and ECON 646.

ECON 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
Opportunities to put economics learned in the classroom into practice at government or industry facilities; design projects supervised by faculty coordinators and personnel at these locations; projects selected to match student’s area of specialization.
Prerequisites: Graduate classification and enrolled in the master’s program in the department of economics.

ECON 685 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
Directed individual instruction in selected problems in economics not related to thesis or dissertation.
Prerequisites: Graduate major or minor in economics; approval of instructor.

ECON 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of economics. May be repeated for credit.
Prerequisite: Approval of department head.

ECON 690 Theory of Economic Research
Credits 3.3 Lecture Hours.
Design of research experiments in various subfields of economics, and evaluation of research results with the aid of examples taken from the current scientific literature.

ECON 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Thesis research.

EDAD - Educational Administrtn

EDAD 601 College Teaching
Credits 3.3 Lecture Hours.
Initial preparation for instruction at the college level; focuses on the basic skills, strategies and issues common to university teaching. Open to graduate students committed to teaching in any area at the college level.

EDAD 602 The Community College
Credits 3.3 Lecture Hours.
Theoretical and practical knowledge of the American community college with emphasis on the history, purposes, programs, and personnel within these institutional contexts.
Prerequisite: Graduate classification.

EDAD 603 Advanced Student Development Theory
Credits 3.3 Lecture Hours.
Advanced study of the nature, needs and characteristics of American college students; developmental tasks, peer group relations and impact of college environment on student development; research from behavioral sciences.
Prerequisites: EDAD 669; graduate classification.

EDAD 605 The Secondary School Principalship
Credits 3.3 Lecture Hours.
Role of principal in the organization of junior and senior high schools; preparation for instructional management, program planning, evaluation and scheduling.
Prerequisites: Graduate classification.

EDAD 606 Instructional Leadership Development Training
Credits 3.3 Lecture Hours.
Using an interactive format and data from a simulated Texas school, students will become adept in basic tenets and requirements of the principalship: 1) data-driven decision-making; 2) curriculum, instruction, and assessment; 3) supervision; 4) professional development; 5) organizational management; and 6) community partnerships and communication.
Prerequisite: Graduate classification.

EDAD 607 Strategic Management of Technology in Educational Systems
Credits 3.3 Lecture Hours.
Provides a systemic approach to leadership in the management of technology for school districts and campuses and enables them to model effective utilization of technology.
Prerequisite: Graduate classification.

EDAD 608 K-12 School Finance and Budgeting
Credits 3.3 Lecture Hours.
Language of education finance and budgeting; purposes and uses of policy and management strategies; traditions of framing research questions and designing studies; accepted procedures for generating, analyzing, and interpreting issues related to school finance and budgeting administration.
Prerequisite: Graduate classification.

EDAD 609 Public School Laws
Credits 3.3 Lecture Hours.
Constitutional provisions, statutory laws, court decisions and regulations governing public schools with special reference to Texas and federal relationships.
EDAD 610 Higher Education Law
Credits 3.3 Lecture Hours.
Legal aspects of administration in institutions of higher education; statutes and case law related to liability, due process, student rights, admission, employee relations and property use.
Prerequisite: Graduate classification.

EDAD 611 Higher Education Business and Finance
Credits 3.3 Lecture Hours.
Business management and financial aspects of administration in higher education; federal and state funding, institutional planning, budgeting and controlling, sources of financial support and business operations in higher education.
Prerequisite: Graduate classification.

EDAD 612 Policy Issues in the Administration of Higher Education
Credits 3.3 Lecture Hours.
Examination of conflicting positions on policy issues of importance in higher education and their direct implications for participants.
Prerequisite: Graduate classification.

EDAD 615 School Superintendency
Credits 3.3 Lecture Hours.
Examination of the role of the superintendent of schools as the chief educational officer of the local school district; major emphasis on the functions and relationships of the superintendent.
Prerequisite: Graduate classification.

EDAD 616 Administration of Staff Personnel
Credits 3.3 Lecture Hours.
Personnel organization and administration in school systems; relationship of individual to organization; organizational health, staffing, remuneration, appraisal, ethics, security, service and negotiations.

EDAD 617 African American School Desegregation
Credits 3.3 Lecture Hours.
History of African American education through the lens of school desegregation; Brown v. Board of Education decision, including the conditions and actions that led to the ruling; the ensuing era of implementation; relevance of Brown for our schools today.
Prerequisite: Graduate classification.

EDAD 618 Educational Administration in Cross Cultural Environments
Credits 3.3 Lecture Hours.
Designed to provide educational administrators insights and background into the life styles, values and aspirations of minority Americans as related to the administrative process.

EDAD 619 Contemporary Dimensions of Administering Urban Schools
Credits 3.3 Lecture Hours.
Causes and consequences of racial and socio-economic isolation, impact of school desegregation, urban school politics, alternatives for urban schools, decentralization, community control, urban population trends and housing patterns.

EDAD 620 Educational Program Evaluation
Credits 3.3 Lecture Hours.
Theory and practice of evaluation of instructional programs including research methods and design strategies to measure program outcomes; skills to evaluate personnel and projects included as components of evaluation models and management of educational evaluation functions. Open to all graduate students in education.

EDAD 621 Futurism and Global Change
Credits 3.3 Lecture Hours.
Intriguing ideas, concepts and challenges for the field of futurism and planning in a global setting; community and social educational planning techniques and future methodologies.

EDAD 622 Designing and Managing Quality Educational Systems
Credits 3.3 Lecture Hours.
Fundamental theory and principles of quality in the design and management of educational systems; the role of processes in improving educational organizations and in process-based management; principles and techniques of continuous quality improvement and the use of quality tools to understand, analyze and improve educational systems and processes.
Prerequisite: Graduate classification.

EDAD 623 Advanced Fieldwork Methods
Credits 3.3 Lecture Hours.
To explore by conducting exemplary field examples, qualitative methods, their strengths and weaknesses; to learn how to keep and utilize ethnographic reflexive journals and methodological logs; and to understand the methodological decision points which indicate one method which may be preferable to another.
Prerequisite: EDAD 690 or approval of instructor.

EDAD 624 Administration of Special Populations and Special Programs
Credits 3.3 Lecture Hours.
Administration of special educational programs for special populations of students originating at the national, state and local levels of PreK-12 educational settings.
Prerequisite: Graduate classification.

EDAD 625 Personnel Law
Credits 3.3 Lecture Hours.
Legal aspects of personnel administration, personal and academic freedoms, and administration of student discipline in public schools; statutes and case law related to due process, liability, employee rights, student rights and governance.
Prerequisite: Graduate classification.

EDAD 626 Advanced Models for Managing High Performing Educational Systems
Credits 3.3 Lecture Hours.
Systems approach to designing and managing quality/high performing educational organizations with emphasis on systems theory, system dynamics and systems modeling; application of the Malcolm Baldrige National Quality Criteria for Performance Excellence as a systemic framework for managing change and achieving high performance in educational organizations.
Prerequisite: EDAD 622.

EDAD 627 Case Studies in Higher Education Administration
Credits 3.3 Lecture Hours.
Management of institutions of higher education through case studies, simulations, problem solving exercises, and in-basket activities; analysis, synthesis and evaluation of variables and decisions in administering the academic enterprise; understanding of process and content issues in administering higher education institutions.
Prerequisite: Graduate classification.
EDAD 628 Advanced Legal Issues in Higher Education
Credits 3.3 Lecture Hours.
Legal issues associated with student affairs and higher education administration; understand establishment and maintenance of relationship with university attorneys and office of general counsel. 
Prerequisites: EDAD 610 or equivalent, graduate classification.

EDAD 630 Site-Based Management of Schools
Credits 3.3 Lecture Hours.
Examination of theory and social forces leading to site-based management of schools, establishment of campus leadership teams; setting and monitoring campus goals; interaction with community and social agencies. 
Prerequisite: Graduate classification.

EDAD 635 Administration for Special Services
Credits 3.3 Lecture Hours.
To help administrators, counselors, supervisors and teachers develop an understanding of functions, operation and evaluation of special services which support the educational program; individual study of content and on-site evaluations of organization and administration of school services programs.

EDAD 637 Administration of Change in Educational Organizations
Credits 3.3 Lecture Hours.
Relationships among individual and group behaviors; roles of administrators; on-site analysis of educational organizations and change principles.

EDAD 638 Developing School-Community Partnerships
Credits 3.3 Lecture Hours.
Current educational issues affecting public education; merging and alternative models of community education.

EDAD 639 Foundations of Educational Administration
Credits 3.3 Lecture Hours.
Selected historical, philosophical and sociological foundations and developmental dimensions of educational administration.

EDAD 641 Community Education
Credits 3.3 Lecture Hours.
Structure, purpose and strategies of community education as they relate to public school administration.

EDAD 650 Professional Development in Higher Education
Credits 3.3 Lecture Hours.
An introduction to organizational, faculty and instructional development in higher education; emphasis on research and theoretical foundations and major issues connected with teaching and learning in higher education. 
Prerequisite: Graduate classification.

EDAD 651 Education Finance and Economics
Credits 3.3 Lecture Hours.
Interdisciplinary applications of historical and current education finance and economics of education research principles and procedures as a means to improve development, analysis, administration evaluation, and improvement of educational programs; policy and organizations.
Prerequisite: Graduate classification.

EDAD 652 Politics of Education
Credits 3.3 Lecture Hours.
Interdisciplinary survey course using various fields in political science, comparative government, and American and state history; interrelationships of educational administration to political organizations.

EDAD 653 Organizational Theory and Leadership in Education
Credits 3.3 Lecture Hours.
Analyzes the relationship between administrative theory and practice by utilizing the literature in organizational theory and administrative leadership behavior and applying the concepts to administrative practice in PreK-higher educational settings; case studies, debates, simulations and role playing will be utilized to supplement lectures and discussions. 
Prerequisite: Master's degree or approval of instructor.

EDAD 654 Organizational Learning
Credits 3.3 Lecture Hours.
Focuses on developing the abilities of professionals in educational institutions and other organizations to analyze learning as an organizational function and to develop strategies to enhance organizational learning in those organizations.

EDAD 655 Administration of Higher Education
Credits 3.3 Lecture Hours.
Survey of management principles in higher education; functions in delegation, direction, operation, governance and financing applied to postsecondary institutions.

EDAD 656 Assessment and Intervention in Student Affairs
Credits 3.3 Lecture Hours.
Understanding of assessment, evaluation and research in student affairs; familiarity with existing assessment instruments for students, services, programs and facilities; understanding importance of maintaining high standards of ethics and integrity in assessment of student affairs. 
Prerequisite: Graduate classification or approval of instructor.

EDAD 669 The College Student
Credits 3.3 Lecture Hours.
Nature, needs and characteristics of American college students; developmental tasks, peer group relations and impact of college environment on student development. Research from behavioral sciences.

EDAD 670 Student Affairs Administration in Higher Education
Credits 3.3 Lecture Hours.
Student affairs administration in higher education; principles, philosophy and major theoretical issues; organization and administration theory.

EDAD 683 Field Practicum in Student Affairs Administration in Higher Education
Credits 1 to 6.1 to 6 Other Hours.
Supervised experience in professional employment settings in educational administration; practical experiences and activities in student affairs administration in higher education supervised by departmental faculty. 
Prerequisite: Approval of instructor.

EDAD 684 Internship
Credits 1 to 6.1 to 12 Other Hours.
Designed to give the prospective educational administrator job related experience under supervision in an educational setting appropriate to the selected roles in administration indicated below. 
Prerequisites are determined by each specific degree, certification or program requirements. A maximum of 6 hours credit may be earned in each internship. Prior approval required. Selected roles include: a) Community Educator, b) College Administrator, c) School Principal, d) School Superintendent.
EDAD 685 Directed Studies  
Credits 1 to 4. 1 to 4 Other Hours.  
Directed individual study of elected problem in field of educational administration.  
Prerequisite: Approval of instructor.

EDAD 687 Proseminar: Principles of Professional Practice in Education  
Credits 3. 3 Lecture Hours.  
Exploration of major principles and hallmarks of professional practices in the field of education; foundations for effective decision making and leadership in diverse settings examined; team taught.

EDAD 688 Proseminar: Analysis of Critical Issues in Education  
Credits 3. 3 Lecture Hours.  
Exploration of a critical issue in the field of education from an interdisciplinary perspective; skills developed in analyzing an issue, exploring its impact upon diverse educational settings, formulating positions and seeking alternative solutions; team taught.

EDAD 689 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours.  
Selected topics in an identified area of educational administration. May be repeated for credit.

EDAD 690 Theory of Educational Administration Research  
Credits 3. 3 Lecture Hours.  
Theory and design of research and inquiry in various applications of models and research procedures including quantitative analyses, naturalistic inquiry, research design and preparation of research proposals, as they relate to the discipline of educational administration.  
Prerequisite: Graduate classification.

EDAD 691 Research  
Credits 1 to 23. 1 to 23 Other Hours.  
Research for thesis or dissertation.

EDAD 692 Professional Study  
Credits 1 to 23. 1 to 12 Other Hours.  
Approved professional study of project undertaken for doctor of education degree. Preparation of a record of study summarizing the rationale, procedure and results of the completed project.  
Prerequisite: Approval of major advisor.

EDCI - Educ Curriculum & Dev.

EDCI 601 Disciplinary Knowledge and Research in Curriculum and Instruction  
Credits 3. 3 Lecture Hours.  
Emphasizes key research and researchers, discipline-specific information, and the initial identification of researchable questions in the field of curriculum and instruction.  
Prerequisite: PhD classification in TLAC.

EDCI 602 Cultural Foundations of Education  
Credits 3. 3 Lecture Hours.  
Contributions of behavioral sciences applied as analytic tools in solving problems of curriculum and instruction.

EDCI 603 Professional Development: Strategies for Teachers  
Credits 3. 3 Lecture Hours.  
Principles of organizational management, instructional design, and change theory in framing professional development programs.  
Prerequisite: Graduate classification.

EDCI 604 E-Learning Classroom Management  
Credits 3. 3 Lecture Hours.  
Focuses on the development of effective management skills crucial to successful instruction and student achievement; application of theory and research to practice and establish oneself as a professional in the area of classroom management; applicable to elementary, middle level, and secondary school settings.  
Prerequisite: Graduate classification.

EDCI 605 Qualitative Research Methods in Curriculum and Instruction  
Credits 3. 3 Lecture Hours.  
Theoretical and methodological issues related to qualitative inquiry; discussion of qualitative paradigm's ontological, epistemological, and axiological stances; review and implementation of commonly used qualitative research methods and approaches in curriculum and instruction, including narrative, phenomenology, ethnography, grounded theory, and case study approaches.  
Prerequisite: Graduate classification.

EDCI 606 Cognition, Culture and Literacies  
Credits 3. 3 Lecture Hours.  
Exploration of complex interrelationships among cognition, culture, and literacies and their implications for education.  
Prerequisite: Graduate classification.

EDCI 609 Analysis and Reporting for Records of Study  
Credits 3. 3 Lecture Hours.  
Analysis of field-generated and existing data, classroom observations, empirical tests, and discussions; links theoretical and practical educational theory to analyses of qualitative and quantitative data; teacher-leaders interpretation of classroom phenomena using research-based theories for teaching and learning.  
Prerequisites: Graduate classification; EPSY 635 or equivalent.

EDCI 610 Second Language Assessment and Development  
Credits 3. 3 Lecture Hours.  
Second language assessment and development stressing classroom situations to teach second language acquisition.  
Prerequisite: Graduate classification.

EDCI 611 Teaching English as a Second Language  
Credits 3. 3 Lecture Hours.  
Translation of theory into practice stressing various methods and techniques in ESL; relationship of language development, culture and conceptual processes to language teaching.  
Prerequisite: Graduate classification.

EDCI 612 Bilingual/ESL Content-Area Instruction  
Credits 3. 3 Lecture Hours.  
Integrating English language instruction with content-based ESL instruction in science, mathematics and social sciences for non-English speaking students.  
Prerequisite: Graduate classification.

EDCI 614 ESL for International and Intercultural Settings  
Credits 3. 3 Lecture Hours.  
International and intercultural teaching practices with major emphasis on second language instruction in an international setting.  
Prerequisite: Graduate classification.

EDCI 615 Classroom Practice in Adult ESL  
Credits 3. 3 Lecture Hours.  
Literacy practice issues in adult ESL literacy leading to assessment, instructional planning, curriculum development and program evaluation.  
Prerequisite: Graduate classification.
EDCI 617 Early Childhood Mathematics and Science
Credits 3.3 Lecture Hours.
Development of mathematical and science concepts in young children from developmental and scientific perspectives.
Prerequisite: Graduate classification.

EDCI 619 Teaching and Learning Number and Quantity Concepts
Credits 3.3 Lecture Hours.
Examination of the content, pedagogy, technology, and research on teaching and learning concepts on number and quantity concepts; discussion of contemporary issues in K-12, standards and assessment.

EDCI 620 Science, Technology, Engineering and Mathematics (STEM) Teaching and Learning
Credits 3.3 Lecture Hours.
Examination of integrated and multidisciplinary practice-based pedagogies; building of interdisciplinary bridges among content areas; melding sociocultural and cognitive factors influencing STEM education across K-12 levels; discussion of underrepresented groups binding best practices; development and evaluation of STEM project-based learning.
Prerequisite: Graduate classification.

EDCI 621 Teaching and Learning Space, Dimension, and Measurement Concepts
Credits 3.3 Lecture Hours.
Examination of the content, pedagogy, technology, and research on teaching and student learning concepts on space, dimension, and measurement concepts. Discussion of contemporary issues in K-12, standards and assessments.

EDCI 622 Theories of Learning and Teaching Mathematics
Credits 3.3 Lecture Hours.
Theoretical bases of the learning and teaching of mathematics, including an examination of the research which supports the theoretical bases.

EDCI 623 Teaching and Learning Pattern and Change Concepts
Credits 3.3 Lecture Hours.
Examination of the content, pedagogy, technology, and research on teaching and learning concepts on skills in algebra, functions and calculus. Discussion of contemporary issues in K-12, standards and assessment.

EDCI 624 Assessing Cognitive, Conceptual, and Fluency Structures Related to Learning and Teaching Mathematics
Credits 3.3 Lecture Hours.
Examines diagnostic and assessment procedures in mathematics and their potential for identifying problem areas related to children's acquisition of mathematical skills; number and quantity concepts.
Prerequisite: Graduate classification.

EDCI 625 Teaching and Learning Mathematics with Diverse Learners
Credits 3.3 Lecture Hours.
Examining diagnostic and assessment procedures in mathematics and their potential for identifying problem areas related to children's acquisition of mathematical skills; number and quantity concepts.
Prerequisite: EDCI 624.

EDCI 627 Teaching and Learning Data Analysis and Uncertainty Concepts
Credits 3.3 Lecture Hours.
Examination of the content, pedagogy, technology, and research on teaching and student learning of concepts and skills in probability, statistics, and discrete mathematics; discussion of contemporary issues and K-12 curriculum, standards and assessment.
Prerequisite: Graduate classification.

EDCI 628 Analyzing and Reporting Field Based Research
Credits 3.3 Lecture Hours.
Analyze data from classroom observation, empirical tests and interviews; link theoretical and practical mathematics education to analysis of qualitative and quantitative data; equip teacher-leaders and researchers with the resources to interpret classroom phenomena from the research perspective using research-based theories of teaching and learning.
Prerequisite: Graduate classification.

EDCI 629 Benchmarks in Urban Education
Credits 3.3 Lecture Hours.
Identifies, analyzes, and applies benchmarks in urban education using research findings.
Prerequisites: Doctoral classification; urban education emphasis or approval of instructor; concurrent enrollment in EDCI 637.

EDCI 630 Urban Education
Credits 3.3 Lecture Hours.
Develops a knowledge base in urban education; share and discuss theoretical and conceptual frameworks that permeate city schools; examines historical perspective, pedagogical knowledge and insights of urban educational experiences.
Prerequisites: Graduate classification; urban education emphasis; concurrent enrollment in EDCI 648; or approval of instructor.

EDCI 631 Mentoring the Novice Educator
Credits 3.3 Lecture Hours.
To prepare the “teaching” graduate student to observe, evaluate, and reflect upon teaching, mentoring, communication, and supervision skills that support the novice or pre-service teacher with tools necessary to be successful. Examine research related to effective mentoring and supervising strategies and behaviors in environments which support mentoring behavior.
Prerequisite: Graduate classification.

EDCI 632 Program Evaluation in Curriculum and Instruction
Credits 3.3 Lecture Hours.
Program evaluation, investigating its purposes and procedures, with attention to settings, personnel and performance; review of standards, principal theories and models; study of histories, political contexts, ethics and the nature of evidence.
Prerequisite: Graduate classification.

EDCI 633 Educator as Learner
Credits 3.3 Lecture Hours.
Designed to challenge the graduate learner as one who studies metacognition, working to understand how self and others process learning, maximize application of learning and evaluate the meaning of learning; for students working with others in a role of mentor, supervisor, administrator or coach in a PK-12 setting.
Prerequisite: EDCI 631.

EDCI 634 Reflective Inquiry
Credits 3.3 Lecture Hours.
Explores the differences and unique characteristics of moral, multiperspective, collaborative, deliberative, autobiographical, and critical inquiries, and reflective practice related to all forms of inquiry; analyzes the implications of educator growth through reflective practices and the part that reflection plays in developmental growth and professional development.
Prerequisite: Graduate classification.
EDCI 636 Educator as Researcher  
Credits 3. 3 Lecture Hours.  
Develops action research skills to enable them to critically analyze insights into the historical, philosophical and social foundations of reflective teaching and leadership in educational environments. Includes an analysis of theories, methodologies, implications and actions related to educational action research. 
Prerequisite: Graduate classification.

EDCI 637 Urban Education: Policy and Analysis  
Credits 3. 3 Lecture Hours.  
Urban education policy making processes, emphasis on interaction between politics and educational policy. 
Prerequisites: Doctoral classification; emphasis in urban education or approval of instructor; concurrent enrollment in EDCI 629.

EDCI 638 Trends in Curriculum and Instruction  
Credits 3. 3 Lecture Hours.  
Recent research and development in theories and practices of curriculum and instruction; curriculum innovations, school organization and new instructional media.

EDCI 639 Grant Writing for Professional Development  
Credits 3. 3 Lecture Hours.  
Focus on the skills necessary to address a Request for Proposal (RFP) through the development and writing of a competitive funding proposal; attention to the process of identifying foundation, public, and corporate funding opportunities available to support specific programmatic needs/areas. 
Prerequisite: Graduate classification.

EDCI 640 Language/Literacy for Bilingual/Multicultural Young Learners  
Credits 3. 3 Lecture Hours.  
Critical multicultural perspectives on the acquisition and development of communication skills by young children who represent bilingual and multicultural backgrounds; critique of language development practices as applied in education settings with young children. 
Prerequisite: Graduate classification.

EDCI 641 The African American Learner in Urban Settings  
Credits 3. 3 Lecture Hours.  
Supports graduate level students in locating, reviewing, synthesizing, and analyzing research on the African American learner in urban settings. 
Prerequisites: Doctoral classification; urban education emphasis; or approval of instructor.

EDCI 642 Multicultural Education: Theory, Research and Practice  
Credits 3. 3 Lecture Hours.  
Theoretical basis for research and training in instruction; systematic study of the needs of young children; operating procedures, programs and instructional media. 
Prerequisite: Graduate classification.

EDCI 643 Teaching in Urban Environments  
Credits 3. 3 Lecture Hours.  
Provide educators with historical perspectives, pedagogical knowledge and insights concerning educational experience of teachers and learners in urban environments. Will address cognitive, psychomotor and affective aspects of teaching and learning in urban environments. 
Prerequisite: Graduate classification.

EDCI 644 Curriculum Development  
Credits 3. 3 Lecture Hours.  
Curriculum development; bases of curriculum design; problems of balance, scope, organization, sequence, selection and articulation. 

EDCI 645 Society and Education in World Perspective  
Credits 3. 3 Lecture Hours.  
Comparative education; interrelationships among societal institutions and particular roles that education plays in different cultures and political systems.

EDCI 646 Instruction Theory  
Credits 3. 3 Lecture Hours.  
Theoretical basis for research and training in instruction; systematic study of existing research on key factors influencing instructional effectiveness. Exploration of interaction among variables of instruction. Doctoral level only.

EDCI 647 Curriculum Theory  
Credits 3. 3 Lecture Hours.  
Theoretical basis for curriculum conceptualization, development, evaluation and implementation; value and empirical basis of curriculum decision-making strategies for curriculum change. Doctoral level only.

EDCI 648 Urban Schools and Communities  
Credits 3. 3 Lecture Hours.  
Sociological, historical, philosophical, anthropological, and political dimensions of urban schools and community change; issues and contexts grounded in core disciplines of social sciences. 
Prerequisites: Graduate classification.

EDCI 650 The Bilingual/Multicultural Young Child in Family and Culture  
Credits 3. 3 Lecture Hours.  
Bilingual/multicultural notions of family/culture as foundations for learning/anthropological investigation including cross-cultural comparisons of western concepts of "child" and "parenting," critique of various constructions of child as learner within family context and monocultural perspectives of "developmentally appropriate" educational practice. 
Prerequisite: Graduate classification.

EDCI 651 Bilingual/Multicultural Early Childhood Education  
Credits 3. 3 Lecture Hours.  
Historical/current models of early childhood curriculum/methodology as a foundation for the more critical analysis of curriculum as social construction, grounded within values of a particular society or culture; bilingual/multicultural views of early childhood education, curriculum and teaching strategies requiring constant examination. 
Prerequisite: Graduate classification.

EDCI 652 Parental Involvement in Early Childhood Education  
Credits 3. 3 Lecture Hours.  
Dynamics of the family unit, school-home communication systems, legalities of parent participation in the school, parent involvement, parent training and home bound programs; development of programs with parents.

EDCI 653 Education Policy for Language-Minority Children  
Credits 3. 3 Lecture Hours.  
Analysis of language planning, educational policies and instructional models in the U.S. and internationally for the education of young language-minority students. 
Prerequisite: Graduate classification.

EDCI 654 Organization and Operation of Early Childhood Education Programs  
Credits 3. 3 Lecture Hours.  
Comprehensive survey of the various types of preschool centers serving the needs of young children; operating procedures, programs and services provided; experimental educational research projects now being conducted with young children.
EDCI 655 Contemporary Visual Culture
Credits 3.3 Lecture Hours.
Interdisciplinary investigation of visual culture and related cultural, social, political, digital, ontological, and educational issues, theories, and production and consumption practices in the postmodern era; examination of contemporary visual culture as a site of critical inquiry that promotes social justice, cultural work, and democratic pedagogy.
Prerequisite: Graduate classification.

EDCI 656 Learning Theories for Teachers of Young Children
Credits 3.3 Lecture Hours.
Educational applications developed from theory and research of young learners, specifically the processes of learning.
Prerequisite: Graduate classification.

EDCI 658 History of Education
Credits 3.3 Lecture Hours.
The genesis of formal education in the Western world beginning with the ancient Greeks and working through the Enlightenment; tracing the idea that schooling is a fundamental part of human existence and therefore crucial to all questions concerning the human condition.
Prerequisite: Doctoral classification or approval of instructor.

EDCI 659 History of American Education
Credits 3.3 Lecture Hours.
The social and institutional role of public education in the United States from 1789 to the present; including clarification of the political and economic underpinnings that have worked catalytically to change the structure of public education in terms of philosophy, methods and curricula.
Prerequisite: Doctoral classification or approval of instructor.

EDCI 660 Research Investigating the Science Teacher Professional Continuum in Texas
Credits 3.3 Lecture Hours.
Reviews general features and investigates aspects of the science teacher professional continuum (TPC), including recruitment, retention, induction, mentoring, professional development, professional culture, and reformed practice; uses extant data sets in TPC research, including literature review, conceptual framework development, research proposal, IRB approval, data analysis, and making conclusions.
Prerequisite: Graduate classification in EDCI or approval of instructor.

EDCI 661 Mixed Methods Research in Curriculum and Instruction
Credits 3.3 Lecture Hours.
Introduction to mixed methods research, including a brief history of approaches to educational research; comparison of scientific research and educational research; specific designs and methods for mixing qualitative and quantitative approaches in data collection, analysis, and synthesis.
Prerequisite: Graduate classification.

EDCI 662 Philosophical Theories of Education
Credits 3.3 Lecture Hours.
Selected historical theories of education from Plato to Skinner; evaluating educational ends and means; the nature of knowledge, its acquisition and transmission. Doctoral level only.

EDCI 663 Scientific Inquiry in K-16 Classrooms
Credits 3.3 Lecture Hours.
Theory and research on the integration of scientific inquiry into classroom instruction in K-16 learning environments, emphasizing curriculum decision-making, alignment, and design across the K-16 continuum.

EDCI 665 Science and Mathematics Curricula
Credits 3.3 Lecture Hours.
Critical exploration of the trends and issues in school science and mathematics programs; consideration of the foundations and strategies for the design, selection, and evaluation of mathematics and science curricula.

EDCI 667 Research and Foundations of Science Education
Credits 3.3 Lecture Hours.
Analysis of research in science education which relates the historical and philosophical basis of science and science teaching; emphasis on implications for improved instruction, especially on the nature of science, its relation to other disciplines, and student understanding of the scientific way of knowing.

EDCI 668 History and Culture of Science Education: 1900 to Present
Credits 3.3 Lecture Hours.
Science education as a discipline, profession, culture and a component in the education of K-16 students during the last 100 plus years in the United States and selected developed nations.
Prerequisite: Graduate classification.

EDCI 669 Science Education in Sociological Context
Credits 3.3 Lecture Hours.
Explores science and its endeavors from a sociological perspective in order to make inferences on school science practice and science teaching; discusses the social context of disciplinary knowledge, problems of experimentation and scientific measurement, originality, cognitive particularism, collectivization of science, and peer review.
Prerequisite: Graduate classification.

EDCI 670 Social Studies in Elementary and Secondary Education
Credits 3.3 Lecture Hours.
Methodology course focusing upon the implementation, both practical and theoretical, of the objectives of social studies: current trends, resource materials, demonstrations of teaching methods.

EDCI 671 How People Learn Science
Credits 3.3 Lecture Hours.
The study of science learning and epistemology, centered upon the essays “How People Learn and How Students Learn Science;” reviewing and discussing learning science design strategies and theories of learning science in light of understanding and advancing students’ learning, classroom interactions, and the organization of schools.
Prerequisite(s): Graduate classification.

EDCI 673 Analysis of Teaching Behavior
Credits 3.3 Lecture Hours.
Identification of beliefs and assumptions regarding teaching; review of research on teacher effectiveness; alternative methods for gathering data regarding dimensions of teaching behavior; development of teacher analysis systems.

EDCI 675 Teaching Strategies: Patterns of Learning
Credits 3.3 Lecture Hours.
Learning and teaching theory and research applied to development of teaching strategies appropriate for various contents, objectives and instructional situations; variables influencing learner behavior and approaches to optimization of teacher behavior.
Prerequisite: EPSY 602 or EPSY 673 recommended.
EDCI 676 Evaluation and Implementation of Electronic Learning Materials
Credits 3. 3 Lecture Hours.
Principles of instructional design applied to electronic materials adoption and organizational management for implementation of eLearning resources; Emphasis on guidelines for selecting and evaluating eLearning resources addressing individual learner needs using online delivery platforms.
Prerequisite: Graduate classification.

EDCI 677 Strategies for Teaching in a Culturally Pluralistic Society
Credits 3. 3 Lecture Hours.
Research concerning the cognitive, psychomotor and affective aspects of learning and teaching among culturally diverse learners; practical applications to curriculum and instruction.

EDCI 680 Proseminar
Credit 1. 1 Other Hour.
Structured seminar on major concepts, principles and issues in education drawn and analyzed from various contributing theoretical and research bases. Critical new developments incorporated as they occur. Required of all Ed.D. students. May be repeated for credit.
Prerequisite: Approval of instructor.

EDCI 681 Seminar
Credit 1. 1 Lecture Hour.
Professional roles and responsibilities, research, special topics and other issues relevant to master's and doctoral students in curriculum and instruction.

EDCI 682 Seminar in...
Credit 1. 1 Lecture Hour.
Knowledge, skills and attitudes in educational curriculum and instruction. Specific topics will be assigned for each seminar as it is offered. May be repeated for credit.

EDCI 683 Field Practicum
Credits 1 to 3. 1 to 3 Other Hours.
Designed to provide supervised experiences based upon a theoretical framework in profession settings related to the work of teaching, learning and culture; practical experiences closely supervised by the department faculty.
Prerequisite: Approval of instructor.

EDCI 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
On-the-job training for educational curriculum and instruction majors under the supervision of successful, experienced personnel from the University; conducted in a setting appropriate to the student's projected career aspirations and areas of specialization.

EDCI 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed individual study of selected problems in the field of education.

EDCI 686 Research Methods in EDCI I
Credits 3. 3 Lecture Hours.
Framework for understanding distinctions among research methodologies used in the field of curriculum and instruction; includes classes of research questions, methods of collecting and decisioning evidence; basic principles of descriptive and inferential statistics and their application in context of various research paradigms.
Prerequisite: EDCI 686.

EDCI 687 Research Methods in EDCI II
Credits 3. 3 Lecture Hours.
Framework for understanding distinctions among research methodologies used in the field of curriculum and instruction; includes classes of research questions, methods of collecting and decisioning evidence; basic principles of multivariate statistics and their application in context of various research paradigms.
Prerequisite: EDCI 687.

EDCI 688 Research Methods in EDCI III
Credits 3. 3 Lecture Hours.
Framework for understanding distinctions among research methodologies used in the field of curriculum and instruction; includes classes of research questions, methods of collecting and decisioning evidence; basic principles of multivariate statistics and their application in context of various research paradigms.
Prerequisite: EDCI 688.

EDCI 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of curriculum and instruction. May be repeated for credit.

EDCI 690 Theory of Curriculum and Instruction Research
Credits 3. 3 Lecture Hours.
Theory and design of research problems and experiments in various subfields of curriculum and instruction; communication of research proposals and results; evaluation of current research of faculty and student and review of current literature. May be repeated for credit.

EDCI 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation.

EDCI 692 Professional Study
Credits 1 to 23. 1 to 23 Other Hours.
Approved professional study of project undertaken as the terminal requirement for doctor of education degree. Preparation of a record of study summarizing the rationale, procedure and results of the completed project.
Prerequisite: Approval of major advisor.

EDCI 701 Elementary Science Instructional Strategies and STEM Learning
Credits 3. 3 Lecture Hours.
Development of engaging STEM activities using inquiry and project-based learning approaches; creation of appropriate assessments for STEM activities and integrated STEM learning units.
Prerequisite: Graduate classification.

EDCI 702 Elementary Mathematics Instructional Strategies and STEM Learning
Credits 3. 3 Lecture Hours.
Teaching models and the design of elementary mathematics instruction for digital age learners; emphasis on inquiry learning models in science, technology, engineering and mathematics (STEM).
Prerequisite: Graduate classification.

EDCI 751 Problem-Based Research Frameworks
Credits 3. 3 Lecture Hours.
Introduction to scientific research associated with problems in K-12 curriculum and instruction settings; evaluation and problem solving for effective solutions to educational problems in school-based settings.
Prerequisite: Graduate classification and admission to online EdD in EDCI.
EDHP 500 Teaching and Learning Theory
Credits 3.
This course explores educational theories and practices foundational to classroom, simulation and clinical learning. Emphasis is placed on practical application of teaching/learning theory in classroom, simulation, and clinical learning environments promoting the transfer of theory to practice. Students will demonstrate knowledge of teaching and learning theories impacting curriculum design relevant to the health care educator.

EDHP 501/NURS 501 Curriculum Design
Credits 3.
Various models of curriculum development and design based on educational philosophy and professional standards will be investigated. Students will demonstrate knowledge of program development including scope and sequence, curriculum alignment, and mapping. Program development through topic identification and generation of content outlines/syllabi, objectives, and outcome measures are included in this course.

EDHP 502/NURS 502 Assessment and Evaluation in Education
Credits 3.
Practical and theoretical issues involved in evaluating student performance, teacher performance and educational programs will be explored. Students will explore various means of performance-based assessments applicable to didactic, simulated and clinical learning environments. Students will examine a variety of assessment instruments and strategies and the role each has in the evaluation process. The course will enable students to plan, execute and interpret educational assessments.

EDHP 503/NURS 503 Teaching Strategies
Credits 3.
Best practices research on instructional pedagogy and adult learning will be examined. The course focuses on recommended principles, concepts and theories used in practice that create effective learning environments. Teaching strategies responsive to diverse learning styles and needs of learners will be explored as well as reflective practices and self-assessment. A variety of practical classroom, simulation and clinical teaching strategies consistent with current evidence will be discussed emphasizing teaching methods using technology.

Cross Listing: NURS 503/EDHP 503.

EDHP 504 Teaching Practicum
Credits 1 to 2. 1 to 2 Other Hours.
This course focuses on the integration of education role theory and practice with socialization into the role of educator. It includes a faculty and preceptor-guided practicum with experiences in the application of the health profession’s role as an educator in selected academic and healthcare settings. The course also includes experiences in the classroom as well as the clinical area (academic or staff educator) in nursing, medicine, dental, public health and pharmacy as desired by the health profession.

EDHP 505 Project/Thesis
Credits 1 to 3. 1 to 3 Lecture Hours.
This course will guide students throughout the process of conducting a study and writing a manuscript. Coursework will include developing a research proposal, from topic and title selection to citing the significance of the research, reviewing related literature, explaining the methodology and results, and defending the work.

EDHP 506 Project/Thesis
Credits 1 to 3. 1 to 3 Lecture Hours.
This course will guide students throughout the process of conducting a study and writing a manuscript. Coursework will include developing a research proposal, from topic and title selection to citing the significance of the research, reviewing related literature, explaining the methodology and results, and defending the work.

EDHP 520 Advanced Innovative Teaching Strategies
Credits 3. 3 Lecture Hours.
This course is designed to facilitate the development, implementation, and assessment of instructional innovations in the health professions educational environment. Students will engage in active learning practices as they analyze, critique, and discuss teaching strategies. The integration of educational technology in the instructional process will also be examined.

EDHP 521 Curriculum Management, Leadership and Evaluation
Credits 3. 3 Lecture Hours.
This course is composed of three specific parts. Curriculum Management will focus on developing plans related specifically to how to lead, manage current curriculum, and affect changes for the institution’s educational mission. Leadership in Health Professions Education will introduce multiple concepts and theories regarding leadership approaches and how to apply the concepts in healthcare professions. The Learner Assessment and Program Evaluation portion will explore avenues of high quality, effective learner assessment and identify program performance, gaps and the process for improvement.

EDHP 522 Research and Design Analysis
Credits 4. 4 Lecture Hours.
This course will focus on the design of research studies in health professions education. Students will learn the principles of research design, become familiar with different types of designs, and analyze the strengths and weaknesses of study designs. The general principles of research design will be investigated, implemented, and practiced.

EDHP 523 Educational Research Design Practicum
Credits 2. 2 Lecture Hours.
This course is a hands-on, practicum experience which offers learners the opportunity to develop a research plan and carry it through to IRB submission. Research plan development includes considerations of research design, data collection, and data analysis. A review of the literature will be required. Completion of the research plan is required for course credit. Faculty facilitation will occur online, in person, or via email. This elective may be taken more than once, to allow for further project development. Milestones must be met to earn credit.

EDHP 524 Manuscript Development Practicum
Credits 2. 2 Lecture Hours.
This course is a hands-on, practicum experience which offers learners the opportunity to develop a medical education research paper and abstract suitable for submission to a peer-reviewed journal and/or conference. A comprehensive review of the literature will be required. Faculty facilitation will occur online, in person, or via email.

Prerequisite: Prior or concurrent learner involvement in an educational study, where data collection and analysis have already taken place.
EDHP 691 Research
Credits 1 to 3. 1 to 3 Other Hours.
Student research initiative within the scope of the project/thesis. This course is designed to provide students with additional time and support to complete the thesis or project and to maintain continuous enrollment. This course may be repeated for a maximum of three credits.
Prerequisite: Completion of the thesis course and approval by student’s advisory committee and the EDHP director.

EDTC - Educational Technology

EDTC 602 Educational Technology: Field, Theory, Profession Credits 3. 3 Lecture Hours.
Educational Technology: Field, Theory and Profession. Introduces the student to the educational technology profession and provides a conceptual map of the theory, research and practice of the field; a historical overview of the field aids in bringing current educational technology practices into perspective.
Prerequisite: Approval of department head.

EDTC 608 Foundations of Distance Learning Credits 3. 3 Lecture Hours.
Communication theory, learning theories, and systems theory related to distance learning; application of effective and efficient instructional methodologies to educational/instructional settings via multiple distance education technologies and techniques.
Prerequisites: EDTC 645 or approval of instructor; approval of department head.

EDTC 613 Integrating Technology in Learning Environments Credits 3. 2 Lecture Hours. 1 Lab Hour.
Develops a broad understanding of what is involved in designing technology rich environments to support active learning; examines the integration of human learning theories with instructional design and development practices in the selection, preparation, evaluation, and ethics of instructional technology implementation.

EDTC 621 Graphic Communication and Interface Design Credits 3. 3 Lecture Hours.
Application of research findings and design principles to the critical analysis of the interfaces of everyday objects, print materials, and Web sites; effective design of graphical displays to communicate functionality and structure; issues related to flawed interfaces, elegant design solutions, user-centered design, usability testing, and Web site accessibility.
Prerequisite: Approval of department head.

EDTC 631 Educational Video Credits 3. 3 Lecture Hours.
Design and development of educational video programs using an effect-to-cause model: message definition, scriptwriting, storyboarding, production, post-production editing and evaluation; topics include lighting, sound, the operation of digital video cameras, the use of digital editing software, visual effects, compression, video sharing websites, copyright law, production personnel, medium requirements.
Prerequisite: Approval of instructor.

EDTC 641 Educational Game Design Credits 3. 3 Lecture Hours.
Formal and dramatic elements of successful non-educational games for principles of effective game design; application principles to the critique of existing educational games; examination commercial games originally designed for entertainment and their use to address educational objectives; games through the lens of multiple theories of learning and motivation, including situated cognition, flow, and systems theory.
Prerequisites: Graduate classification; approval of department head.

EDTC 642 Designing for Mobile Learning Credits 4. 3 Lecture Hours. 3 Lab Hours.
Introduction to basics of designing educational applications for mobile devices; emphasis on instructional, visual and human-computer interaction design principles; hands-on design and development work combined with a theoretical approach to designing learning experiences; previous programming experiences not required.
Prerequisites: Graduate classification; approval of department head.

EDTC 645 Instructional Applications of Computer Technologies I Credits 3. 3 Lecture Hours.
Introduction to the integration of computers, telecommunications, and related technologies into educational practice; resources for personal productivity and development/delivery of instructional materials; applications for both educators and students (word processing, databases, etc.); projects include hands-on development of HyperText, Multimedia, and Internet (web-based) resources in participant’s own area of study.
Prerequisite: Approval of department head.

EDTC 646 Instructional Applications of Computer Technologies II Credits 3. 3 Lecture Hours.
Issues (social, educational, etc.) and techniques associated with educational applications of computers and related resources and techniques (graphics, multimedia, etc.); relationship of course activities and products to individual educational/instructional philosophies; web-supported.
Prerequisites: Graduate classification; approval of department head.

EDTC 651 Tutorials and Simulations Credits 3. 3 Lecture Hours.
Application of theory to the design and development of two types of computer-based instructional programs: tutorials and simulations; critique of existing instructional software for K-12 students and adult training programs; guidelines for design decisions related to rich media, navigation, learner/program control, practice, interactivity, and feedback.
Prerequisite: Approval of instructor.

EDTC 654 Instructional Design: Techniques in Educational Technology Credits 3. 3 Lecture Hours.
Introduces systems approach to instructional design with focus on the functions of systems models in planning, developing and evaluating instruction; use of instructional development models which systematically assure proper instructional design; participants will develop instructional products individually and in groups; a strong theoretical foundation utilized.
Prerequisite: Approval of instructor and department head.
EDTC 655 Instructional Design II
Credits 3. 3 Lecture Hours.
Preparation for leadership in instructional design through exploration of project management, needs assessment, goal analyses, rapid prototyping, problem-based learning, case-based learning, design of learning objects, ID for international audiences, instructional materials and program evaluation; theories that contribute to the field.
Prerequisites: Graduate classification; approval of department head; EDTC 654.

EDTC 656 Computer Graphics: Educational Applications and Production Techniques
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Computer graphics production used in the development of educational materials; acquired skills and knowledges applied to the student's interest area with respect to theoretical and research issues relating to effective instructional use of print and computer-based instructional materials; techniques include digitizing, image-processing and animation.
Prerequisites: EDTC 645 or approval of instructor; approval of department head.

EDTC 660 Interactive Video/Multimedia: Production and Utilization
Credits 3. 3 Lecture Hours.
Principles and techniques of interactive video/multimedia design and production; practical applications of media (video, digitized video and audio) production techniques and instructional control programs utilizing authoring software; produce materials for interactive instructional programs involving features such as: CD-ROM video and audio, simulations, interactive digital movies, web-based delivery, etc.
Prerequisites: EDTC 645 or approval of instructor; approval of department head.

EDTC 662 Computer Utilization in Educational Research and Practice
Credits 3. 3 Lecture Hours.
Use of computers for application in educational and research settings; activities include student/subject monitoring, hardware use and design, automatic data collection; data storage, retrieval, transmission and analysis; web-based research formats are included; projects will relate to major area of study.
Prerequisites: EDTC 645 or approval of instructor; approval of department head.

EDTC 664 Management of Instructional Telecommunication Systems
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Management of Instructional Telecommunication Systems. Analysis of instructional telecommunications needs associated with educational and training programs; analysis, design, development, implementation and evaluation of computer-based management systems.
Prerequisites: EDTC 645 or approval of instructor; approval of department head.

EDTC 668 Applications of Telecommunications in Education
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Instructional applications of telecommunications; analysis of characteristics of varied systems, both dedicated and public networks, and design of appropriate strategies and methods using those systems.
Prerequisites: EDTC 645 or approval of instructor; approval of department head.

EDTC 683 Practicum in Educational Technology
Credits 1 to 3. 1 to 9 Other Hours.
Supervised experience in applied area of educational technology; student will plan and develop an integrative product relating to educational technology theory, practice and equipment.
Prerequisite: Approval of instructor and department head.

EDTC 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
Supervised experiences in performing professional functions appropriate to career goals.
Prerequisites: Application one month prior to registration; approval of instructor and department head.

EDTC 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed individual study of selected problems in instructional technology not within thesis research and not covered by any other course.
Prerequisite: Approval of instructor and department head.

EDTC 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of educational technology. May be repeated for credit.
Prerequisite: Approval of instructor.

EDTC 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation.
Prerequisite: Approval of major advisor and department head.

EHRD 601 Foundations of Human Resource Development
Credits 3. 3 Lecture Hours.
Survey of the set of systematic and planned activities designed by an organization to provide its employees with the necessary skills to meet current and future job demands: learning and human resource development needs assessments, task analysis, designing, implementing and evaluating training programs, career development, organization development.
Prerequisite: Doctoral classification only.

EHRD 602 Critical Issues in Human Resource Development
Credits 3. 3 Lecture Hours.
Critical issues in human resource development; development of workforce through training and development activities.
Prerequisite: Graduate classification.

EHRD 603 Applied Theoretical Foundations of Human Resource Development
Credits 3. 3 Lecture Hours.
Challenges of supervision associated with human resource development settings; how to apply theoretical foundations of human resource development to ensure employees obtain the necessary skills for current and future job demands.
Prerequisite: Master's classification only.

EHRD 605 Principles and Practices of Leadership in Human Resource Development
Credits 3. 3 Lecture Hours.
Development and application of leadership models for human resource development settings; introduce and examine historical, philosophical and theoretical aspects of leadership; explore and evaluate the ethical and influence dimensions of leadership; critically examine the contemporary research characteristics of effective leadership.
Prerequisite: Graduate classification.
EHRD 606 Project Management in Human Resource Development
Credits 3. 3 Lecture Hours.
The use of established project management theory, tools, practices and technology toward the effective management of organizational processes, projects, and programs in universities, government, business, and industry.

EHRD 607 International Human Resource Development
Credits 3. 3 Lecture Hours.
Organization, delivery, and management of human resource development programs in multinational and global corporate settings.
Prerequisite: Graduate classification.

EHRD 612 Training and Development in Human Resource Development
Credits 3. 3 Lecture Hours.
Overview of the process of planning, implementing and evaluating training and development in a variety of settings; includes conceptual tools needed to develop and design training.
Prerequisite: Graduate classification.

EHRD 613 Career Development in Human Resource Development
Credits 3. 3 Lecture Hours.
Foundations for developing expertise in the area of career development; content to serve to expand knowledge and prepare individuals for optimizing human resources in human resource development organizations; focusing on programs, methods, practices, and techniques by combining personal and organizational factors.
Prerequisite: Graduate classification.

EHRD 614 Strategic Planning for Human Resource Development
Credits 3. 3 Lecture Hours.
Strategic planning in Human Resource Development (HRD); elements for training, career and organizational development; mission, values and culture, vision, audit analysis and modeling.
Prerequisite: Graduate classification.

EHRD 616 Methods of Teaching Adults
Credits 3. 3 Lecture Hours.
Selection and use of appropriate instructional design strategies in teaching adults.

EHRD 618 Evaluation Models in Human Resource Development
Credits 3. 3 Lecture Hours.
Providing instruction, insights, and learning experiences regarding educational human resource development applications of and relationships among five leading types of evaluation: needs assessment, program design/delivery, performance outcomes, impact assessment, and efficiency/ROI.

EHRD 620 Emotions in Education and Industry
Credits 3. 3 Lecture Hours.
Exploring and understanding the emotional foundations of effective working relationships among teachers, trainers and trainees in educational, industrial and business settings.
Prerequisite: Graduate classification.

EHRD 621 Communication in Human Resource Development
Credits 3. 3 Lecture Hours.
Visual, oral, written and computer-based communication processes and their application in organizations, interpersonal interactions and small group settings in human resources development.
Prerequisite: Graduate classification.

EHRD 622 Training Task Analysis
Credits 3. 3 Lecture Hours.
Developing an understanding of the theory and practice of performance and needs analysis as applied in the public and private employment sectors; reviewing of the current issues related to job task analysis.
Prerequisite: Graduate classification.

EHRD 624 Change Theory
Credits 3. 3 Lecture Hours.
Conceptual tools needed to understand theories of change and to develop ways of operationalizing change for education and research.
Prerequisite: Graduate classification.

EHRD 625 Organization Development and Performance in Human Resource Development
Credits 3. 3 Lecture Hours.
Introduction to major theories, concepts, skills, and techniques for the practice and management of organization change and development in various organizational performance contexts and human resource development settings.
Prerequisite: Graduate classification.

EHRD 627 Research and Development in Educational Human Resource Development
Credits 3. 3 Lecture Hours.
Methods of conducting research programs in educational human resource development; defining the research problem and overview of quantitative, qualitative, action research, and mixed methods.

EHRD 628 Research and Publishing in Human Resource Development
Credits 3. 3 Lecture Hours.
The role of research in human resource development; emerging themes in research; criteria for evaluating research; critique of past and future presentations; the role of professionalism and professional organizations in human resource development; offered in association with the annual conference of the Academy of Human Resource Development.
Prerequisites: Graduate classification.

EHRD 630 Adult Learning
Credits 3. 3 Lecture Hours.
Research and theory in adult learning; factors influencing the adult learning process; and how adult development intersects with learning in adulthood.

EHRD 631 Foundations of Adult Education
Credits 3. 3 Lecture Hours.
Fundamental concepts and definitions relating to adult education as a field of study; major historical developments and philosophical roots of adult education from a sociocultural and global perspective; diverse institutional commitments and responses to adult learner needs; administrative, programming, and instructional practices in the field.

EHRD 633 Adult Literacy Education
Credits 3. 3 Lecture Hours.
Important aspects of implementing literacy programs for adults; funding, recruiting, placement, counseling and using community resources.

EHRD 634/WGST 634 Introduction to Gender and Education
Credits 3. 3 Lecture Hours.
Major discussions and debates in the area of gender and education, with particular attention to the role that feminism and feminist theory have played on the intersections of gender, race, class, ethnicity and sexuality.
Prerequisite: Graduate classification.
Cross Listing: WGST 634/EHRD 634.
EHRD 636 Working with Adult Groups  
Credits 3.3 Lecture Hours.  
Development of skills for facilitating productivity in task-oriented groups of adults. Issues, problems and concepts frequently encountered, and potential solutions.

EHRD 637 Workforce Development  
Credits 3.3 Lecture Hours.  
Evaluation of the workforce and the development of research techniques for identifying, assessing and evaluating the needs of industry for a quality workforce; models for staffing, curriculum needs, and program development designed and evaluated.  
Prerequisite: Graduate classification.

EHRD 638 Issues in Adult Education  
Credits 3.3 Lecture Hours.  
Pressing contemporary issues within the field of adult education; explores issues and their impact on adult education research, theory, and practice. Specific topics addressed each semester offered.

EHRD 641 Evaluation of Adult Teaching and Learning  
Credits 3.3 Lecture Hours.  
Introduces a variety of approaches to assessment and provides experience in developing the appropriate materials of adult learning in adult settings.  
Prerequisite: Graduate classification.

EHRD 642 Program Development in Adult Education  
Credits 3.3 Lecture Hours.  
Conceptual tools needed to develop educational programs for adults in a variety of settings; concepts of planning, implementation and evaluation.

EHRD 643 Adult Education, Globalization and Social Justice  
Credits 3.3 Lecture Hours.  
Impact of globalization on individuals and groups across nations; issues of access and opportunity; societal versus individual change and the meaning of international development.  
Prerequisite: Graduate classification.

EHRD 647 Education for the Older Adult  
Credits 3.3 Lecture Hours.  
Older adults as unique learners—defining specific physical and psychosocial differences between older adults and other learners; educational implications of specific needs and current educational programs to meet those needs.  
Prerequisite: Graduate classification.

EHRD 649/WGST 649 Feminist Pedagogy  
Credits 3.3 Lecture Hours.  
Explores how educational systems and institutions have regarded women historically and contemporarily; considers practical and theoretical writings on feminist pedagogy.  
Prerequisites: EHRD 634/WGST 634.  
Cross Listing: WGST 649/EHRD 649.

EHRD 650/WGST 650 Gender and International Education  
Credits 3.3 Lecture Hours.  
Explores the intersection of formal and informal education and understandings of gender in countries beyond the United States.  
Prerequisites: EHRD 634/WGST 634.  
Cross Listing: WGST 650/EHRD 650.

EHRD 651 Models of Epistemology and Inquiry in Educational Human Resource Development  
Credits 3.3 Lecture Hours.  
Inquiry in various epistemology paradigms outlined by Habermas and links to the outcomes of the research process.

EHRD 655 Qualitative Research Methods  
Credits 3.3 Lecture Hours.  
Introduction to qualitative research methods; theoretical underpinnings; the research paradigm and applied experience with the methodology.  
Prerequisite: EHRD 651 or equivalent.

EHRD 656 Narrative Analysis  
Credits 3.3 Lecture Hours.  
Analysis of narratives; study of the theory behind "the narrative turn" in qualitative research; explore and apply various approaches to analyzing narratives in terms of both structure and their content.  
Prerequisite: EHRD 655 or equivalent.

EHRD 657 Life History Research  
Credits 3.3 Lecture Hours.  
Examines qualitative research that focuses on life experience both in its entirety (life history; biography and autobiography) and with specificity around a particular event (autoethnography); explores the nature of these types of qualitative research and discussing the methodological issues inherent in each mode.  
Prerequisite: EHRD 655 or equivalent.

EHRD 670 Women and Education  
Credits 3.3 Lecture Hours.  
Critical, theoretical and practical issues related to women and education.  
Prerequisite: Graduate classification.

EHRD 671 Management of Distance Learning Systems  
Credits 3.3 Lecture Hours.  
Organization, management and administration of distance learning systems; funding delivery systems and policy.  
Prerequisite: EHRD 673 or equivalent.

EHRD 673 Introduction to Distance Learning  
Credits 3.3 Lecture Hours.  
Introduction to the field of distance learning; application of distance learning principles to training settings via a variety of distance learning modalities; examination of the concepts surrounding distance learning, the theories that underpin the field, and the impact that they have on practice.  
Prerequisite: Graduate classification.

EHRD 674 Distance Networking for Training and Development  
Credits 3.3 Lecture Hours.  
Development of knowledge towards application of telecommunications networking in corporate training settings; technical alternatives for delivery of subject matter for trainers.  
Prerequisite: Graduate classification.

EHRD 675 Women and Organizational Leadership  
Credits 3.3 Lecture Hours.  
Historical, theoretical, ethical and legal issues relevant to women leaders in organizational contexts; skills development and practical approaches to effective leadership.

EHRD 679 Procurement of Contracts and Grants  
Credits 3.3 Lecture Hours.  
Funding sources that support research and development activities; identify methods of securing funding; study state, national and private funding sources and how to become successful in submitting to each; complete a proposal to a funding agency; and a management plan for a funded project.  
Prerequisite: Graduate classification.
EHRD 681 Seminar
Credit 1. 1 Lecture Hour.
Issues pertinent to adult education and/or educational human resource development and research in appropriate areas. Master of Science students seeking the HRD option will develop a professional portfolio documenting progress through the individual's program, highlighting goals, beliefs and reflections of learning outcomes associated with the program.

EHRD 683 Practicum in Educational Human Resource Development
Credits 1 to 6. 1 to 6 Lecture Hours.
Field-based practicum in theory and strategies for researching and delivering programs within a variety of educational human resource development settings. May be taken two times.
Prerequisite: Approval of advisor.

EHRD 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
Supervised experiences in performing professional functions appropriate to career goals.
Prerequisite: Approval of committee chair.

EHRD 685 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
Directed individual study of selected problems in the fields of educational human resource development and adult education. Students may register up to but no more than two sections of this course in the same semester.

EHRD 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in adult education and human resource development. May be repeated for credit.

EHRD 690 Theory of Educational Human Resource Development Research
Credits 3. 3 Lecture Hours.
Theory and design of research and inquiry in various applications of models and research procedures including quantitative analyses, naturalistic inquiry, research design and preparation of research proposals, as they relate to the discipline of educational human resource development and adult education.
Prerequisite: EHRD 651 or equivalent.

EHRD 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation.

EMED - Emergency Medicine

EMED 800 Emergency Medicine Required Rotation
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 4-week course will allow students to appreciate the role of emergency medicine within the health care system. Acquire basic life support skills, including the recognition of immediately life threatening conditions and appropriate interventions. Diagnose and treat common acute problems. Develop skills to assess the undifferentiated patient, including the performance of a focused history and physical and the development of an appropriate differential diagnosis.
Prerequisite: Satisfactory completion of year three of the medical curriculum.

EMED 801 Emergency Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The practice of emergency medicine entails the rapid assessment and stabilization of patients presenting with acute injuries and illnesses as well as those with exacerbations of many chronic illnesses. At the completion of this rotation, students will: Better appreciate the role of emergency medicine within the healthcare system, acquire basic life support skills, including the recognition of immediately life threatening conditions and appropriate interventions, diagnose and treat common acute problems, develop skills to assess the undifferentiated patient, including the performance of a focused history and physical and the development of an appropriate differential diagnosis.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

EMED 802 Emergency Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The practice of emergency medicine entails the rapid assessment and stabilization of patients presenting with acute injuries and illnesses as well as those with exacerbations of many chronic illnesses. At the completion of this rotation, students will: Better appreciate the role of emergency medicine within the healthcare system, acquire basic life support skills, including the recognition of immediately life-threatening conditions and appropriate interventions, diagnose and treat common acute problems, develop skills to assess the undifferentiated patient, including the performance of a focused history and physical and the development of an appropriate differential diagnosis.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

EMED 803 Prehospital Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 2- to 4-week elective will provide the student the opportunity to experience that will improve the student's understanding of EMS systems and operations; student's understanding of the training, capability and clinical practice of EMS personnel and EMS medical directors. Prepare the future physician for a role as part of the EMS system.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

EMED 804 Emergency Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The practice of emergency medicine entails the rapid assessment and stabilization of patients presenting with acute injuries and illnesses as well as those with exacerbations of many chronic illnesses. At the completion of this rotation, students will: Better appreciate the role of emergency medicine within the healthcare system, acquire basic life support skills, including the recognition of immediately life threatening conditions and appropriate interventions, diagnose and treat common acute problems, develop skills to assess the undifferentiated patient, including the performance of a focused history and physical and the development of an appropriate differential diagnosis.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

EMED 805 Prehospital Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 2- to 4-week elective will provide the student the opportunity to experience that will improve the student's understanding of EMS systems and operations; student's understanding of the training, capability and clinical practice of EMS personnel and EMS medical directors. Prepare the future physician for a role as part of the EMS system.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.
EMED 806 Emergency Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The practice of emergency medicine entails the rapid assessment and stabilization of patients presenting with acute injuries and illnesses as well as those with exacerbations of many chronic illnesses. At the completion of this rotation, students will: Better appreciate the role of emergency medicine within the healthcare system, acquire basic life support skills, including the recognition of immediately life-threatening conditions and appropriate interventions, diagnose and treat common acute problems, develop skills to assess the undifferentiated patient, including the performance of a focused history and physical and the development of an appropriate differential diagnosis.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

EMED 807 Toxicology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 2- to 4-week elective will provide the student the opportunity to experience the initial clinical management of a patient with an acute poisoning. This elective will increase the student’s familiarity and knowledge of clinical signs and symptoms of the major toxidromes. Students will also utilize the poison center in the management and use the clinical laboratory and radiography, decontamination, the use of antidotes, hemodialysis, and resuscitation algorithms.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

EMED 808 Emergency Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The practice of emergency medicine entails the rapid assessment and stabilization of patients presenting with acute injuries and illnesses as well as those with exacerbations of many chronic illnesses. At the completion of this rotation, students will: Better appreciate the role of emergency medicine within the healthcare system, acquire basic life support skills, including the recognition of immediately life-threatening conditions and appropriate interventions, diagnose and treat common acute problems, develop skills to assess the undifferentiated patient, including the performance of a focused history and physical and the development of an appropriate differential diagnosis.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

EMED 809 Emergency Ultrasound
Credits 1.25 to 6.3. 1.25 to 6.3 Other Hours.
The use of bedside ultrasound has become standard of care in the practice of emergency medicine. Focused bedside emergency ultrasound is used for diagnostic purposes as well as to assist with various procedures including but not limited to central line placement, fracture reductions, and incision and drainage. This elective will provide students with an introduction and basic understanding of ultrasound physics, knoblinogy, ability to acquire appropriate ultrasound images, interpretation of those ultrasound images, and limitations of bedside ultrasound. They will be expected to demonstrate 4th year medical student. Must be taken on a satisfactory/unsatisfactory basis.
Prerequisite: 4th year status.

EMED 985 Off Campus Student Initiated Elective
Credits 1.25 to 12. 1.25 to 12 Other Hours.
Formally described elective courses at another medical school or off-campus opportunities that are not formally approved electives. The College of Medicine requires that each of these electives be approved prior to the rotation.

EMED 999 On Campus Student Initiated Elective
Credits 1.25 to 12. 1.25 to 12 Other Hours.
This is an on-campus opportunity in the department of Emergency Medicine in the College of Medicine that is not defined herein. Experiences may include clinical research, basic science research, library research, other basic science activities, and other clinical activities. Students interested in developing an elective of this type should contact the head of the appropriate department for additional details.

ENDO - Endodontics

ENDO 5111 Current Literature Review
Credit 1. 1 Lecture Hour.
Detailed review of recently published literature on all subjects related to endodontics; critical evaluation of the scientific literature; student assignment of recent issues of 28 selected dental journals for critical review of pertinent articles for scientific merit and clinical relevance. Students register for a total of 9 credit hours.

ENDO 5121 Endodontics Treatment Planning Conference
Credit 1. 1 Lecture Hour.
Diagnosis and treatment planning for complicated endodontic cases requiring advanced skills; case presentation by students and graduate faculty in a prescribed format; formulation and defense of diagnosis and treatment plan with biologic rationale based on documented scientific or clinical evidence. Students register for a total of 9 credit hours.

ENDO 5141 Special Problems in Endodontics
Credit 1. 1 Lecture Hour.
In-depth exploration of subjects of individual’s interest under graduate faculty supervision; concentrated and detailed search for information and analysis of published data as a basis for special reports, protocol development, research orientation and formulation. Students may register for a total of 6 semester hours.

ENDO 5142 Advanced Special Problems in Endodontics
Credit 1. 1 Lecture Hour.
Advanced topics of individual scientific or clinical interest. Students may register for a total of 5 semester hours.

ENDO 5213 Implant Concepts and Treatment
Credits 2. 2 Other Hours.
In-depth knowledge of the theories, concepts and treatment modalities implant prosthodontics. Emphasis is placed integrating basic concepts with rationale for treatment.

ENDO 5222 Clinical Endodontics
Credits 2. 2 Lab Hours.
Diagnosis, management and treatment of patients requiring endodontic therapy by beginning graduate students under faculty supervision; case selection and patient load determined by student aptitude and clinical competence; students register for a total of three semesters.

ENDO 5223 Advanced Clinical Endodontics
Credits 2. 2 Lab Hours.
Diagnosis and management of patients with complex treatment problems; includes medically compromised patients, retreatments, surgeries and difficult interdisciplinary cases.
ENGL 602 First Year Seminar
Credits 3.3 Lecture Hours.
Comprehensive introduction to theory, method, and practice of graduate scholarship in English; develops familiarity with goals and practices of English studies, enhance research skills, formulate and articulate scholarship goals and projects, and practice writing genres within the field.
Prerequisite: Enrollment as a first-year PhD student.

ENGL 603 Bibliography and Literary Research
Credits 3.3 Lecture Hours.
Introduction of basic techniques of research and scholarly procedure in literature; research reports.

ENGL 604 Topics in Digital Research
Credits 3.3 Lecture Hours.
Topics in the studies of digital humanities; introduction to making/interpreting digital materials, the surrogates of books, paintings, etc., that form our cultural heritage, as well as digitally-born literature, art and culture; reflection on digital cultures/digital archives; theory and practice of creating and researching digital resources. May be taken three times for credit.
Prerequisite: Graduate classification.

ENGL 607 Topics in Medieval Literature and Culture
Credits 3.3 Lecture Hours.
Topics in history, theory, and interpretation of Medieval Literature and culture; may cover Old or Middle English; may include study of varied cultural forms, manuscript or editing problems, genres, and themes. May be taken three times for credit as content varies.

ENGL 608 Readings in Medieval Literature
Credits 3.3 Lecture Hours.
Wide reading in English literature of the Medieval period; introduction of major figures, genres, and issues in the period; introduction to current critical conversations in Medieval literary studies.

ENGL 610/LING 610 Topics in the History of the English Language
Credits 3.3 Lecture Hours.
Topics in the development of the English language; may include phonological, grammatical and lexical histories; study of social and political contexts; relationships between English and other languages.
Cross Listing: LING 610/ENGL 610. May be taken three times for credit as content varies.

ENGL 611 Topics in Early Modern Literature and Culture
Credits 3.3 Lecture Hours.
Topics in the history, theory, interpretation of Early Modern literature and culture; may focus on authors, groups of authors, themes, movements, genres, cultural contexts and/or theoretical framing. May be taken three times for credit as content varies.

ENGL 613 Readings in Early Modern Literature
Credits 3.3 Lecture Hours.
Wide reading in English literature of the Early Modern period; introduction of major figures, genres, and issues in the period; introduction to current critical conversations in Early Modern literary studies, including historical and social contexts.

ENGL 618 Readings in Eighteenth-Century British Literature
Credits 3.3 Lecture Hours.
Wide reading in British literature of the 18th Century; introduction of major figures, genres, and issues in the period; introduction to current critical conversations in 18th Century literary studies, including historical and social contexts.

ENGL 622 Elements of Creative Writing
Credits 3.3 Lecture Hours.
Creative writing in major forms; produce original work while reading models by masters; may include performance, group work, written and peer critiques.

ENGL 623 Topics in Creative Writing
Credits 3.3 Lecture Hours.
Topics in the theory and practice of creative writing; may focus on writing techniques; theories of composition in the major genres; theory, history, and interpretation of literary forms and composition. May be taken three times for credit as content varies.

ENGL 624 Advanced Creative Writing Workshop
Credits 3.3 Lecture Hours.
Writing workshop, with peer critique; may include discussion of literary and critical texts; major genres. May be taken three times for credit as instructor varies.
Prerequisite: ENGL 622 or approval of instructor.

ENGL 634 Readings in Nineteenth-Century British Literature
Credits 3.3 Lecture Hours.
Wide reading in British literature of the 19th Century; introduction of major figures, genres, and issues in the period; introduction to current critical conversations in 19th Century literary studies, including historical and social contexts.

ENGL 638 Topics in 18th and 19th Century British Literature and Culture
Credits 3.3 Lecture Hours.
Topics in the history, theory, interpretation of 18th and/or 19th Century British literature and culture; may focus on authors, groups of authors, themes, movements, genres, cultural contexts and/or theoretical framing. May be taken three times for credit as content varies.

ENGL 640 Topics in Children's Literature and Culture
Credits 3.3 Lecture Hours.
Topics in the history, theory, and interpretation of children's literature and other cultural forms; may focus on genres, critical and theoretical methods, social and historical contexts. May be taken three times for credit as content varies.

ENGL 642 Topics in Genre
Credits 3.3 Lecture Hours.
Topics in selected genres and subgenres of literary and cultural production; may focus on historical development and/or context, generic conventions, theoretical approaches. May be taken three times for credit as content varies.
ENGL 645 Topics in Gender, Literature, and Culture  
Credits 3.3 Lecture Hours.  
Topics in literature (especially women's writing), culture, and gender; may include issues such as feminism, masculinities, race, and sexualities; may be taken up to three times for credit.

ENGL 650 Readings in 20th and 21st Century Literature and Culture  
Credits 3.3 Lecture Hours.  
Wide reading in 20th and 21st Century literature; introduction of major figures, genres, and issues in the period; introduction to current critical conversations in modern and postmodern literary studies, including historical and social contexts.

ENGL 653 Topics in 20th and 21st Century Literature and Culture  
Credits 3.3 Lecture Hours.  
Topics in the history, theory, interpretation of 20th and 21st Century literature and culture; may focus on authors, groups of authors, themes, movements, genres, cultural contexts and/or theoretical framing. May be taken three times for credit as content varies.

ENGL 654/COMM 654 Classical Rhetoric  
Credits 3.3 Lecture Hours.  
Origins of rhetoric in classical Greece and Rome; exploration of the relationship between philosophy, rhetoric and democratic political culture; the contemporary relevance of classical thought to contemporary problems.  
Cross Listing: COMM 654/ENGL 654.

ENGL 655/COMM 655 Contemporary Theories of Rhetoric  
Credits 3.3 Lecture Hours.  
Investigation of the major figures in rhetorical theory in the 20th and 21st centuries; analysis of the relationship between rhetoric and power; identifying new challenges for rhetoric in global, multicultural, technological age.  
Cross Listing: COMM 655/ENGL 655.

ENGL 658 Topics in Film History  
Credits 3.3 Lecture Hours.  
Topics in the history of the production, reception, and institutional contexts of cinema; may focus on national cinemas, genres, movements, styles, film industries, film's relation to other media. May be taken three times for credit as content varies.

ENGL 659 Topics in Film Theory  
Credits 3.3 Lecture Hours.  
Topics in theory of film production, reception, and interpretation; may focus on film's relation to other media, on film theory's relation to other theoretical areas, on the interdisciplinary nature of film theory and film studies. May be taken three times for credit as content varies.

ENGL 665 Topics in Cultural/Interdisciplinary Studies  
Credits 3.3 Lecture Hours.  
Topics in history, theory, and practice of cultural studies and/or interdisciplinary studies; may focus on authors, schools, methods, genres, themes, or problems in rhetoric, discourse, and cultural studies. May be taken three times for credit as content varies.

ENGL 666 Topics in Textual Studies and Book History  
Credits 3.3 Lecture Hours.  
Topics in the theory and practice of textual studies and book history; may focus on the book as material object, histories of printing and other technologies, digital humanities, book production and distribution, research methodologies. May be taken three times for credit as content varies.

ENGL 667 Topics in the History and Theory of Rhetoric  
Credits 3.3 Lecture Hours.  
Issues and topics in the history and theory of rhetoric; may focus on rhetorical analysis of literature and other written and oral texts; theoretical issues in rhetoric and culture; social and historical contexts for rhetorical analysis; historical periods, themes, methods or genres. May be taken three times for credit as content varies.

ENGL 669 Topics in African American and Africana Literature and Culture  
Credits 3.3 Lecture Hours.  
Topics in the history, theory, interpretation of African American and African literature and culture; may focus on authors, groups of authors, themes, movements, genres, cultural contexts and/or theoretical framing. May be taken three times for credit as content varies.

ENGL 670 Topics in Latino/a Literature and Culture  
Credits 3.3 Lecture Hours.  
Topics in the history, theory, interpretation of Latino/a literature and culture; may focus on authors, groups of authors, themes, movements, genres, cultural contexts and/or theoretical framing. May be taken three times for credit as content varies.

ENGL 671 Readings in American Literature to 1900  
Credits 3.3 Lecture Hours.  
Wide reading in American literature from its beginnings through the 19th Century; introduction of major figures, genres, and issues in the period; introduction to current critical conversations in pre-1900 American literary studies, including historical and social contexts.

ENGL 672 Topics in American Literature and Culture to 1900  
Credits 3.3 Lecture Hours.  
Topics in the history, theory, interpretation of American literature and culture before 1900; may focus on authors, groups of authors, themes, movements, genres, cultural contexts and/or theoretical framing. May be taken three times for credit as content varies.

ENGL 673 Topics in Transnational Literature and Culture  
Credits 3.3 Lecture Hours.  
Topics in theory and interpretation of transnational literature and culture; may focus on definitions of the transnational; on the relationships between the transnational and the global; on methods for study; on new configurations of literature and culture. May be taken three times for credit as content varies.

ENGL 680/WGST 680 Theories of Gender  
Credits 3.3 Lecture Hours.  
Theories of gender, sexualities, feminism, embodiment, and difference with particular focus on their relationship to literary and cultural studies; emphasis on contemporary theoretical positions, discourses, and debates.  
Cross Listing: WGST 680/ENGL 680.

ENGL 681 Seminar in English  
Credit 1.1 Lecture Hour.  
Presentations by faculty, students and visiting scholars based on current research. May be repeated for credit.  
Prerequisite: Graduate classification in English.

ENGL 683 Topics in Theory  
Credits 3.3 Lecture Hours.  
Critical theory for English Studies; may focus on history, themes, methods, issues, new developments, interdisciplinary contexts. May be taken three times for credit as content varies.
ENGL 685 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
Readings to supplement the student’s knowledge of English or American literature or of the English language in areas not studied in other courses; research papers.
Prerequisites: Graduate classification and approval of department head.

ENGL 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of English. May be repeated for credit.

ENGL 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation.

ENGL 695 Publication and Professionalization
Credits 3. 3 Lecture Hours.
For advanced PhD students in English. Discussion of publication and professionalization; standards and practices of publication in academic journals; academic job market; writing, revision, and submission of scholarly articles. To be taken as S/U only.
Prerequisite: Must have completed coursework in English.

ENGR - Engineering

ENGR 600 Engineering Graduate Study Abroad
Credits 1 to 15. 1 to 15 Lecture Hours.
For students in approved study abroad and reciprocal educational exchange programs. May be taken two times for credit.
Prerequisites: Graduate classification in engineering; admission to approved program abroad; approval of study abroad coordinator.

ENGR 677 Science, Technology, Engineering and Mathematics (STEM) Teaching Professional Development
Credit 1. 1 Lecture Hour.
Center for Teaching Excellence (CTE) consultation and faculty mentoring in STEM teaching; course topic and syllabus design; learning outcomes and assessment; teaching methodology; reflection on teaching philosophy; reflection on teaching as research. Must be taken on satisfactory/unsatisfactory basis.
Prerequisites: Graduate classification and approval of instructor.
Cross Listing: GEOS 677 and SCEN 677.

ENGR 681 Professional Development Seminar
Credit 1. 1 Other Hour.
Topics of interest related to the professional practice of engineering.

ENGR 684 Professional Internship
Credits 1 to 10. 1 to 10 Other Hours.
Supervised experience of one academic year in industry where students can learn to apply their textbook-based skills to problems in the real-world environment.
Prerequisites: Admission to the Doctor of Engineering program and graduate classification.

ENGR 685 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
Design or research problems executed either individually or as a team.
Prerequisites: Graduate classification; approval of graduate advisor.

ENGR 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Advanced topics of current interest in engineering. May be repeated for credit.
Prerequisite: Approval of instructor.

ENGR 698 Writing for Publication
Credits 3. 3 Lecture Hours.
(3-0) Writing in academic disciplines and settings. Writing for different audiences and purposes. Style; planning and development of academic journal articles; grant proposals; correspondence; oral presentations; technical reports. Permission of departmental/college graduate advisor.
Prerequisite: advanced standing in master’s/doctoral programs.

ENTC - Engineering Technology

ENTC 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of engineering technology. May be repeated for credit.

ENTO - Entomology

ENTO 601 Principles of Systematic Entomology
Credits 3. 3 Lecture Hours.
An introduction to the principles and theory of systematic zoology and comparative biology including species concepts and speciation; methods for higher classification including phylogenetic systematics, phenetics and evolutionary taxonomy; introduction to zoological nomenclature.
Prerequisite: Graduate classification in entomology or other biological sciences.

ENTO 602 Insect Biodiversity and Biology
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Biodiversity and biology of the orders and selected families of insects; order-level morphology, family-level natural history and identification; field trips and an insect collection provide experience with insect collecting methods, specimen preparation techniques and field biology.
Prerequisite: 6 hours of biological sciences.

ENTO 606 Quantitative Phylogenetics
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Designed to provide the theory and tools required for inference of phylogenetic (evolutionary) relationships among biological taxa using various types of comparative data including morphological characters, biochemical and molecular characters, and DNA sequences; hands-on analysis of data using contemporary tools.
Prerequisite: Entomology 601 or approval of instructor.
Cross Listing: GENR 606 and WFSC 646.

ENTO 608 Principles of Biological Control
Credits 3. 3 Lecture Hours.
Theory and practices relating to the role and use of natural enemies in arthropod and plant population regulation; review and analysis of projects in biological control; biology and behavior of entomophagous arthropods.
Prerequisite: ENTO 201 or equivalent or approval of instructor.

ENTO 610 Host Plant Resistance
Credits 3. 3 Lecture Hours.
Host plant resistance programs from the standpoint of the plant breeder, plant pathologist and entomologist; team taught with each discipline represented; roundtable discussion of assigned readings and lectures.
Prerequisite: Approval of instructor.
Cross Listing: SCSC 610 and PLPA 610.
ENTO 612 Insect Evolution
Credits 3. 3 Lecture Hours.
Review current and historical ideas about the phylogeny and evolution of the major groups of hexapods; includes evidential basis for hypotheses of monophyly, competing phylogenetic hypotheses, major innovations and trends affecting the adaptive radiations of specific taxa, morphological character systems, and history of insect classification and the major character systems.
Prerequisite: One semester of insect or invertebrate zoology.

ENTO 614 Insect Community Ecology
Credits 3. 3 Lecture Hours.
Provide a strong and contemporary foundation in insect population, community and evolutionary ecology; review historical and theoretical perspectives, current philosophies, approaches and a description of classic experiments used to test and modify theories on topics including: insect herbivore-plant interactions; major biological forces affecting population dynamics and community structure (resource availability, competition, predation, mutualisms, etc.).
Prerequisite: Graduate classification.

ENTO 615 Insect Physiology
Credits 3. 3 Lecture Hours.
Physiological processes of insects; metabolism, nutrition, neuro-endocrinology, nerve action, cell structure, respiration, circulation, excretion and flight; functional integration and regulatory processes of total organism.
Prerequisite: ENTO 306 or equivalent.

ENTO 617 Acarology
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Systematics, morphology, physiology, and ecology of ticks and mites; management of acarine pests of humans, animals and plants; role of parasitic species in causation and transmission of diseases.
Prerequisite: ENTO 208 or equivalent. (Offered in 2010-2011 and alternate years thereafter.)

ENTO 618 Medical and Veterinary Entomology
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Taxonomy, biology and epidemiological role of insects that directly and/or indirectly affect the health and well-being of humans and animals.
Prerequisite: ENTO 208 or equivalent. (Offered in 2010-2011 and alternate years thereafter.)

ENTO 619 Insect Toxicology
Credits 3. 3 Lecture Hours.
Classification and properties of major types of insecticides; chemistry, metabolism and mode of action; selectivity, use hazards, residues and resistance; environmental problems; biological magnification, persistence and effects on non-target organisms.
Prerequisites: One course in organic chemistry and ENTO 615 or approval of instructor.

ENTO 621 Biology and Systematics of Entomophagous Insects
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Systematics of entomophagous insects at the family level; collecting and rearing parasitoids from their hosts; emphasis on groups used in biological control.
Prerequisites: ENTO 301 or approval of instructor. (Offered in 2010-2011 and alternate years thereafter.)

ENTO 625/GEOG 625 Landscape Ecology
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Study of structure, function and change in a heterogeneous land area composed of interacting ecosystems; examine basic ecological principles dealing with landscape structure.
Prerequisite: Approval of instructor.
Cross Listing: GEOG 625/ENTO 625.

ENTO 628 Arthropod Genomes and Gene Expression
Credits 3. 3 Lecture Hours.
Introduction to the vocabulary and experimental procedures routinely used for molecular genetic studies using arthropod systems as model examples; discussion of germ-line transformation, transient gene expression, and the analysis of tissue-specific and genome-wide gene expression.
Prerequisite: GENE 301 or equivalent.

ENTO 645 Arthropods as Vectors of Plant Pathogens
Credits 3. 3 Lecture Hours.
Concepts on transmission of plant pathogens, discussion of transmission mechanisms, characteristics of insect vectors and their consequences for plant protection.
Prerequisites: Graduate classification or approval of instructor.

ENTO 661 Seminar
Credit 1. 1 Lecture Hour.
Oral reports and discussions of current research and developments in entomology and related fields; designed to broaden understanding of problems in field and to stimulate research.
Prerequisite: Graduate classification.

ENTO 664 Professional Internship
Credits 1 to 4. 1 to 4 Other Hours.
On-the-job training in the fields of pest identification, home and garden pest control, medical and veterinary pest control, and pest management of food and fiber crop pests.
Prerequisite: Graduate classification in the Master of Agriculture program in economic entomology or plant protection.

ENTO 684 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Entomological problems not pertaining to thesis or dissertation.
Prerequisites: Graduate classification with major or minor in entomology; approval of department head.

ENTO 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in an identified area of entomology. May be repeated for credit.
Prerequisite: Graduate classification.

ENTO 690 Theory of Research
Credit 1. 1 Lecture Hour.
Examination of concepts and theories in entomological research including applications of novel technologies and experimental approach. May be repeated for credit.
Prerequisite: Graduate classification.

ENTO 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research problems on taxonomy, life histories, biological control, ecology and physiology of insects, and toxicology of insecticides.
Prerequisite: Graduate classification.
EPSY - Educational Psychology

EPSY 602 Educational Psychology
Credits 3.3 Lecture Hours.
Cognitive analysis of academic skills and tests; current cognitive views of learning, memory, problem solving and development of skill and expertise; effects of aptitude, motivation and task environment on academic performance. Implications for assessment and instruction.
Prerequisite: Approval of department head.

EPSY 604 Career Counseling in Schools
Credits 3.3 Lecture Hours.
Understanding the culturally competent career counseling theory, assessment and skills as applied to the diverse populations in schools.
Prerequisite: Approval of department head.

EPSY 605 Effects of Culture, Diversity, and Poverty on Children and Youth
Credits 3.3 Lecture Hours.
Understanding of how the intersecting nature of culture, diversity, and poverty impact adjustment outcomes in children and youth; comprehension of our own belief systems; exploration of disparities in education and mental health across ethnically, culturally and socially diverse groups; strategies for alleviating educational and mental health disparities.
Prerequisite: Graduate classification.

EPSY 606 Motivation and Emotion for Optimal Learning and Performance
Credits 3.3 Lecture Hours.
Role of motivation and emotion in human learning and performance; major theories and empirical research relevant to motivation and emotional impacts of learning, performance, or functioning in a variety of situations, contexts, and cultures; content applied across multiple disciplines including education, counseling or therapeutic outcomes, achievement performance in school, art, music and sports.
Prerequisite(s): EPSY 602 or approval of instructor; graduate classification.

EPSY 618 Neurodevelopment and Genetic Disorders in Children
Credits 3.3 Lecture Hours.
Comprehensive coverage of a broad array of neurodevelopment and genetic disorders in children; emphasis on cognitive and emotional sequelae of these disorders and their relationship to medical, psychological, and educational interventions.
Prerequisite: Graduate classification; approval of department head.

EPSY 619 Nature and Needs of the Gifted and Talented
Credits 3.3 Lecture Hours.
Psychological characteristics of the gifted and talented; introduction to identification techniques, educational programs, instructional approaches and special problems.
Prerequisite: Approval of department head.

EPSY 621 Clinical Neuropsychology
Credits 3.2 Lecture Hours. 2 Lab Hours.
Surveys brain-behavior relationships with an emphasis on understanding the brain as an interdependent, systemic network; administer and score the Halstead-Reitan Neuropsychological Test Battery.
Prerequisites: Graduate classification; approval of department head.

EPSY 622 Measurement and Evaluation in Education
Credits 3.3 Lecture Hours.
Principles of psychological testing applied to education; uses and critical evaluation of achievement and aptitude, interest, and personality tests and performance in educational settings.
Prerequisite: Approval of department head.

EPSY 623 Social and Emotional Development of the Gifted and Talented
Credits 3.3 Lecture Hours.
Theoretical models and patterns of social and emotional development among the gifted and talented through adolescence; implications and strategies for educators.
Prerequisite: Approval of department head.

EPSY 624 Creative Thinking
Credits 3.3 Lecture Hours.
Development of personal creativity across fields of endeavor; analysis of creative potential, including psychometric assessment; experience of methods for stimulating creative processing and productivity.
Prerequisite: Approval of department head.

EPSY 625 Advanced Psychometric Theory
Credits 3.3 Lecture Hours.
Psychometric theory, planning, construction, analysis, and evaluation of written and performance tests; item analysis, norms, reliability, and validity (including factor analytic) studies; item response theory.
Prerequisites: EPSY 640; approval of department head.

EPSY 626 At-Risk Hispanic Families and Their Young Children
Credits 3.3 Lecture Hours.
Provides educational practitioners and related personnel with the conceptual and theoretical foundations for understanding the nature and impact of exposure to childhood risks on literacy, physical and mental health development of Hispanic families and their young children within developmental framework.
Prerequisites: Graduate classification; approval of department head.

EPSY 627 Structured Personality Assessment in Counseling
Credits 3.3 Lecture Hours.
Personality evaluation using structured assessment instruments; variety of self-report personality inventories; the Minnesota Multiphasic Personality Inventory.
Prerequisites: EPSY 622; approval of department head.

EPSY 628 The Rorschach Technique with Children and Adolescents
Credits 3.3 Lecture Hours.
Analysis of the Rorschach Technique; basic issues in projective assessment, scoring, interpreting and analyzing the Rorschach, with an emphasis on its clinical use with children and adolescents.
Prerequisite: Approval of instructor and department head.

EPSY 629 Educational Planning for the Gifted and Talented
Credits 3.3 Lecture Hours.
Theoretical issues confronting educators involved in program development for gifted and talented children and adolescents; analysis of educational perspectives and instructional implications.
Prerequisites: Graduate classification and approval of department head.

EPSY 630 Single-Case Research
Credits 3.3 Lecture Hours.
Provides skills to conduct research with N=1 designs in the area of special education, school counseling and school psychology; provides the procedures and applications to scenarios in classroom and clinic settings; collect and analyze data in three mini studies.
Prerequisite: Approval of instructor and department head.
EPSY 631 Program Evaluation  
Credits 3.3 Lecture Hours.  
Learning of key evaluation skills: establishing focus with client, posing evaluation questions, data collection techniques, designing for internal validity, data aggregation; scenario practice.  
Prerequisite: EPSY 635 or equivalent.

EPSY 635 Educational Statistics  
Credits 3.2 Lecture Hours. 3 Lab Hours.  
Introduction to the theory and application of statistical methods in behavioral science research with emphasis on classroom applications.  
Prerequisite: Approval of instructor.

EPSY 636 Techniques of Research  
Credits 3.3 Lecture Hours.  
Fundamental concepts and tools of research applied to psychological and educational problems; rationale of research, analysis of problems, library skills, sampling, appraisal instruments, statistical description and inference, writing the research report and representative research designs.  
Prerequisite: Approval of department head.

EPSY 637 Qualitative Grounded Theory Methodologies  
Credits 3.3 Lecture Hours.  
Methods of collecting qualitative data to answer educational or psychological questions using Grounded Theory methodologies; analysis and interpretation of data using Grounded Theory methodologies.  
Prerequisites: Graduate classification; introductory course in qualitative methods; and approval of instructor.

EPSY 640 Experimental Design in Education I  
Credits 3.3 Lecture Hours.  
Preparation in experimental research design in educational studies; application of statistical methods in these designs.  
Prerequisites: EPSY 636 or equivalent; approval of department head.

EPSY 641 Experimental Design in Education II  
Credits 3.3 Lecture Hours.  
Preparation in research design in educational studies; application of statistical methods in these designs.  
Prerequisites: EPSY 640; approval of instructor and department head.

EPSY 642 Meta-Analysis of Behavioral Research  
Credits 3.3 Lecture Hours.  
Principles and use of quantitative techniques for research integration in education and other behavioral disciplines; computer-based and branching literature searches, coding protocols, theory of effect size estimation, analysis and reporting.  
Prerequisites: EPSY 435 or STAT 651; EPSY 636 or equivalent; approval of department head.

EPSY 643 Applied Multivariate Methods  
Credits 3.3 Lecture Hours.  
This seminar presents various techniques for applied multivariate modeling of phenomena in educational psychology.  
Prerequisites: EPSY 640 and EPSY 641 or approval of instructor; approval of department head.

EPSY 645 Creative Genius  
Credits 3.3 Lecture Hours.  
Analysis of patterns of development among highly creative individuals; required dramatic presentation on the life and accomplishments of a selected individual through the use of the soliloquy stage technique.  
Prerequisite: Graduate classification; approval of department head.

EPSY 646 Issues in Child and Adolescent Development  
Credits 3.3 Lecture Hours.  
Theoretical orientations, issues, research strategies and empirical findings of developmental psychology relevant to education.  
Prerequisites: PSYC 634 or equivalent; approval of department head.

EPSY 647 Lifespan Development  
Credits 3.3 Lecture Hours.  
Issues and models of studying lifespan development; research and theory of lifespan development; comprehensive and current foundation of lifespan development.  
Prerequisite: Graduate classification; approval of department head.

EPSY 648 Intelligence and Creativity  
Credits 3.3 Lecture Hours.  
Considers theory, research, methodologies and issues related to the definition, identification and assessment of intelligence, and assessment of intelligence and creativity; addresses theories of intelligence and creativity; methodologies and issues related to assessment of both; relationship between them; and frameworks for fostering creativity; considers implications/applications of theory and research on effective teaching practices for creativity.  
Prerequisite: Graduate classification; approval of department head.

EPSY 650 Multiple Regression and Other Linear Models in Education Research  
Credits 3.3 Lecture Hours.  
Overview of basic and advanced topics in regression analysis; equal emphasis on developing procedural knowledge, statistical theory, research designs, and practical issues and methods using statistics in empirical research; basis of linear regression models and logistic regression models.  
Prerequisites: EPSY 641 or STAT 652 or SOCI 631; graduate classification; approval of department head.

EPSY 651 Theory of Structural Equation Modeling  
Credits 3.2 Lecture Hours. 3 Lab Hours.  
Introduction to the theory and application of structural equation modeling.  
Prerequisites: EPSY 640 and EPSY 641 or STAT 650 and STAT 651; graduate classification; approval of department head.

EPSY 652 Theory of Hierarchical Linear Models  
Credits 3.3 Lecture Hours.  
Introduction to the theory and application of hierarchical linear models.  
Prerequisite: EPSY 640, EPSY 641 or STAT 651, STAT 652, or any equivalent courses; some knowledge on ANOVA and Multiple Regression; graduate classification; approval of department head.

EPSY 653 Advanced Structural Equation Modeling  
Credits 3.3 Lecture Hours.  
Advanced topics of structural equation models; includes exploratory factor analysis under the structural equation modeling framework, testing factorial invariance, structural equation models with categorical observed variables, multilevel structural equation models, latent growth models, and growth mixture models.  
Prerequisites: EPSY 651 and EPSY 652.

EPSY 654 Longitudinal Data Analysis  
Credits 3.3 Lecture Hours.  
Review of traditional approaches to longitudinal data analysis (e.g., MANOVA); consideration of newer approaches including multilevel modeling (MLM) and latent growth modeling (LGM) and their advantages in analyzing longitudinal data.  
Prerequisite: EPSY 651 and EPSY 652.
EPSY 655 Item Response Theory
Credits 3. 3 Lecture Hours.
Advanced measurement topics in item response models; theoretical foundations and practical applications of IRT models; dichotomous and polytomous IRT models including Rasch model (IPL model), 2-PL model, 3-PL model, rating scale model, partial credit model, and graded response model; analysis based on each model illustrated using BILOG-MG, PARSCALE, and M-plus.
Prerequisite: EPSY 625.

EPSY 656 Survey Instrument Development
Credits 3. 3 Lecture Hours.
Experiences in developing instruments to measure cognition, attitude or behavior; issues and practices relating to construct specification, instrument design and administration; emphasis on analysis and summary of validity study data.
Prerequisites: Graduate classification; EPSY 640 or equivalent; approval of department head.

EPSY 659 Practicum in Educating the Gifted and Talented
Credits 3. 1 Lecture Hour. 6 Other Hours.
Theory and strategies for instruction and guidance of the gifted and talented through a supervised experience in a laboratory setting with gifted and talented children and/or adolescents. May be taken three times for credit.
Prerequisite: Approval of instructor and approval of department head.

EPSY 673 Learning Theories
Credits 3. 3 Lecture Hours.
Comprehensive study of classical and current learning theories; their significance to modern education.
Prerequisite: Approval of department head.

EPSY 679 Research on Teacher Effectiveness
Credits 3. 3 Lecture Hours.
Considers theory, research and methodologies related to the definition and identification of effective teaching practices; practice, implications and applications of theory and research in educational psychology on effective teaching practices.
Prerequisites: Graduate classification; approval of department head.

EPSY 682 Seminar in...
Credit 1. 1 Other Hour.
Knowledge, skills and attitudes in special education, counseling, psychological foundations of education and school psychology. Specific topics are announced for each seminar offered. May be taken more than once but not to exceed 6 hours of credit.
Prerequisite: Approval of department head.

EPSY 683 Field Practicum in...
Credits 1 to 15. 1 to 15 Other Hours.
Supervised experience in professional employment settings in educational psychology. Wide range of practical experiences and activities as listed below that are closely supervised by departmental faculty. Repeatable to 15 hours total.
Prerequisite: Approval of instructor and department head.

EPSY 684 Professional Internship
Credits 1 to 4. 1 to 4 Other Hours.
Limited to advanced doctoral students; University-directed experience in a professional employment setting; full-time participation and responsibility in experiences related to career specializations in counseling or school psychology. Repeatable to 9 hours total.
Prerequisites: Approval of department head six weeks prior to registration; approval of department head.

EPSY 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed individual study of selected problems.
Prerequisite: Approval of department head.

EPSY 688/CPSY 688 Research Proposal Development
Credits 4. 3 Lecture Hours. 2 Lab Hours.
This seminar models the processes of developing and defending research proposals.
Prerequisites: EPSY 640 and EPSY 641 or approval of instructor; approval of department head.

Course Descriptions

ESSM 600 Principles of Ecosystem Science and Management
Credits 3. 3 Lecture Hours.
Ecological foundations for sustained use of natural resources; climatic, edaphic, biotic and cultural factors in land resource allocation; land and cover viewed with respect to population dynamics, succession and climax, gradients and graduation, equilibria and imbalance.
Prerequisite: Graduate classification in agriculture or in allied subject.*

ESSM 601 Ecosystem Stewardship
Credits 3. 3 Lecture Hours.
Integrates ecological concepts of resilience, sustainability, transformation and vulnerability within a framework of cosystem stewardship to support human well-being in a rapidly changing world; emphasizes social-ecological systems. adaptive management, and valuation of ecosystem services as mechanisms to strengthen management and policy recommendations supporting ecosystem stewardship.
Prerequisite: Graduate classification.

ESSM 605 The Research Process
Credits 2. 2 Lecture Hours.
Nature and objectives of graduate work, the scientific method and basic and applied research. Introduction to design of experiments and analysis of data; principles of organization of project proposals, theses and scientific reports.

ESSM 610 Rangeland Resource Management
Credits 3. 3 Lecture Hours.
Basic concepts and theories of rangeland resource management; trends in range classification, grazing management and improvement practices.
Prerequisite: Graduate classification in agriculture or related subject matter areas.*
ESSM 611 Grazing Management and Range Nutrition
Credits 3.3 Lecture Hours.
Nutritional ecology of domestic and wild herbivores on rangelands; vegetation and animal response to various grazing management practices; diet selection, quality, intake and supplementation of herbivores.*

ESSM 612 Rangeland Vegetation Management
Credits 3.3 Lecture Hours.
Principles of rangeland brush and weed control with mechanical, chemical, burning and biological methods; interrelationships of brush management with grazing, wildlife and watershed management; planning and economic analysis of range improvement practices.*

ESSM 616 Arboriculture
Credits 4.4 Lecture Hours.
Tree selection and planting to fit climatic, space and edaphic conditions, diagnosing tree abnormalities, and practicing intensive tree care; frequent field work and demonstrations; includes seminar classes involving discussions and presentations of current arboriculture research from peer-reviewed journals.
Prerequisite: Graduate classification.

ESSM 617 Urban Forestry
Credits 4.4 Lecture Hours.
Conceptual role of trees in improving the urban environment; optimum use of existing forested areas and the establishment of trees in appropriate open spaces; tree ordinances, species evaluation, street tree planning and tree inventory systems; includes seminar classes involving discussions and presentations of current urban forestry research from peer-reviewed journals.
Prerequisite: Graduate classification.

ESSM 620 Plant and Range Ecology
Credits 3.3 Lecture Hours.
Investigation of community/ecosystem/landscape distribution patterns, structure, spatial/temporal organization and function, paleoecology, ecological succession, disturbance regimes, ecological diversity and classification schemes. North American rangelands (grasslands, shrublands, deserts, wetlands, etc.) stressed but world ecosystems reviewed.
Prerequisites: RENR 205; RENR 215 or equivalent; graduate classification.*

ESSM 621 Physiological Plant Ecology
Credits 3.3 Lecture Hours.
Investigation of physiological mechanisms influencing ecological patterns and processes, including plant acclimation and adaptation in contrasting habitats, abiotic controls on species productivity and distribution, relevant conceptual and experimental approaches, and integration among ecological scales.
Prerequisites: RENR 205 or MEPS 313 or equivalent; graduate classification.

ESSM 622 Biogeochemistry of Terrestrial Ecosystems
Credits 3.3 Lecture Hours.
Biogeochemical cycles of carbon, nitrogen, sulfur and phosphorus and their interaction with biotic and abiotic processes; biogeochemical processes investigated at the global level and in several types of terrestrial ecosystems; addressing global climate change, deforestation, acid precipitation, ozone depletion.
Prerequisites: RENR 205 or equivalent; graduate classification.

ESSM 624 Terrestrial Ecosystems and Global Change
Credits 3.3 Lecture Hours.
Identify the physical and biological principles governing the structure and function of terrestrial ecosystems in an earth-system context; analyze how plants and microorganisms respond to environmental change and affect global carbon, nutrient, and water cycles; evaluate ecosystem response to global change, including rising carbon dioxide, climate warming, and human impacts.
Prerequisite: Graduate classification.

ESSM 626 Fire and Natural Resources Management
Credits 3.2 Lecture Hours. 3 Lab Hours.
Behavior and use of fire in the management of natural resources; principles underlying the role of weather, fuel characteristics and physical features of the environment related to development and implementation of fire plans.
Prerequisites: Graduate classification and approval of instructor.*

ESSM 628 Wetland Delineation
Credits 3.2 Lecture Hours. 2 Lab Hours.
Prerequisite: Graduate classification or approval of instructor.

ESSM 630 Restoration Ecology
Credits 3.3 Lecture Hours.
Review and discuss fundamental concepts, current literature, and contemporary topics relating to ecological restoration. This includes the theoretical development of restoration ecology and its application. The relationship with conservation biology will be explored. The goal is to inform, exchange views, and develop critical thinking skills through case studies.
Prerequisite: Graduate classification.*

ESSM 631 Ecological Restoration of Wetland and Riparian Systems
Credits 3.2 Lecture Hours. 2 Lab Hours.
How wetland and riparian areas link terrestrial and aquatic systems and function hydrologically and ecologically within watersheds; integrated approaches for restoration of degraded wetland and riparian systems; improving water resources through vegetation management with a special interest in rangelands.
Prerequisites: RENR 205 or equivalent and WFSC 428 or equivalent.

ESSM 635 Ecohydrology
Credits 3.3 Lecture Hours.
Framework for understanding how plants and animals affect the water cycle; examine and explore the water cycle in all of its aspects with the idea of understanding how changes in land cover may influence the water cycle; implications for both upland and riparian systems.
Prerequisite: Graduate classification.

ESSM 636 Range and Forest Watershed Management
Credits 3.3 Lecture Hours.
Management of range and forest watersheds; influence of range and forest practices on runoff, interception, infiltration, erosion and water quality; current literature and research advances.*

ESSM 647 Range Grasses and Grasslands
Credits 3.2 Lecture Hours. 3 Lab Hours.
Basic concepts of grass structure and classification, recent advances in agrostological research, genetic and ecological basis for patterns of variation and evolution in grasses. Offered Spring Semester of even numbered years.*
ESSM 648 Wetland Plant Taxonomy
Credits 3. 1 Lecture Hour. 4 Lab Hours.
Interpretation of plant morphologies for keying and the identification of wetland plants from prime habitats; plant communities including the plant's adaptation to variation in salinity and soils; identification of inconspicuous flowered plant species including sedges, rushes and grasses.
Prerequisite: RLEM 304 or approval of instructor. Offered Fall Semester of even numbered years.*

ESSM 651/BAEN 651 Geographic Information System for Resource Management
Credits 3. 2 Lecture Hours. 2 Lab Hours.
(2-2) Geographic Information System (GIS) approach to the integration of spatial and attribute data to study the capture, analysis, manipulation and portrayal of natural resource data; examination of data types/formats, as well as the integration of GIS with remote sensing and Global Positioning System; laboratory includes extensive use of GIS applications to conduct analyses of topics in natural resources.
Prerequisites: Graduate classification.
Cross Listing: BAEN 651/ESSM 651.

ESSM 652 Advanced Topics in Geographic Information Systems
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Advanced GIS topics with a focus on modeling actual GIS applications including relational and database theory, design and implementation and its connection to GIS; surface analysis with digital terrain models; and an introduction to spatial statistics.
Prerequisite: ESSM 651/BAEN 651 or BAEN 651/ESSM 651.

ESSM 655 Remote Sensing of the Environment
Credits 3. 2 Lecture Hours. 1 Lab Hour.
Remote sensing for the management of renewable natural resources; use of aerial photography and satellite imagery to detect, identify and monitor forest, range and agricultural resources; utilize remotely sensed data as input to computerized information management systems.
Prerequisite: Graduate classification.

ESSM 656 Advanced Remote Sensing
Credits 3. 2 Lecture Hours. 1 Lab Hour.
Advanced techniques for information extraction using airborne and satellite imagery; active and passive sensors characteristics; customizing and developing image processing tools for remote sensing applications for a broad range of sensors and applications.
Prerequisites: ESSM 655, RENR 444, GEOG 651, GEOG 661.

ESSM 660 Landscape Analysis and Modeling
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Introduction to quantitative methods of landscape analysis and modeling for applications in natural resource conservation and management; quantification of landscape composition and configuration; spatial statistical methods for characterizing landscape pattern; methods for hypothesis testing with spatial data; landscape modeling approaches and applications; current literature and software.
Prerequisite: Approval of instructor.*

ESSM 663/SCSC 663 Applied Spatial Statistics
Credits 4. 3 Lecture Hours. 2 Lab Hours.
An introduction to the theory and practice of spatial statistics as applied to the natural resources. Spatial analyses focusing primarily on ordinary kriging, point processes, and lattice data.
Prerequisites: MATH 141, MATH 142; STAT 651; or equivalents; ESSM 651/BAEN 651 preferred.
Cross Listing: SCSC 663/ESSM 663.

ESSM 665 Computer Programming for Natural Resources Applications
Credits 3. 2 Lecture Hours. 2 Lab Hours.
An introduction to programming concepts and applications; elements of Visual Basic programming including data types, control and program structure; introduction to objects and object-oriented programming; macro and applications development; automation of GIS programming through the use of macros.
Prerequisites: Approval of instructor.

ESSM 670 Ecosystems and Markets
Credits 3. 3 Lecture Hours.
Concepts and analysis of supply chains for natural resource commodities and ecosystem services. Exploration of the economic uses of goods and services from ecosystems.
Prerequisite: Graduate classification.

ESSM 671 Ecological Economics
Credits 3. 3 Lecture Hours.
Study of the relationships between ecosystems and economic systems; understanding the effects of human economic endeavors on ecological systems and how the ecological benefits and costs of such activities can be quantified and internalized.
Prerequisite: Graduate Classification.
Cross Listing: AGEC 659 and RENR 659.

ESSM 672/RENR 660 Environmental Impact Analysis for Renewable Natural Resources
Credits 3. 3 Lecture Hours.
Analysis and critique of contemporary environmental analysis methods in current use; environmental impact statements; national policies; political, social and legal ramifications as related to development and use of renewable natural resources.
Prerequisite: Graduate Classification.
Cross Listing: RENR 660/ESSM 672.

ESSM 675 International Sustainable Community Development
Credits 3. 3 Lecture Hours.
Depicting global trends, paradigms and a comparative framework on sustainable community development; visioning, design, planning and developmental processes; leadership and management skills; marketing and promotion of sustainability concepts and practices; efficacies, indicators, analytic methods and case analyses; platforms for international cooperation; opportunities and careers in pertinent fields.

ESSM 676/RENR 650 Leadership, Development and Management of Environmental NGOs
Credits 3. 3 Lecture Hours.
Trends and increasing power of NGOs in environment and sustainable development; understanding of the organizational structures, functions, planning and management processes of environmental NGOs; technical skills and leadership qualities for careers with environmental NGOs.
Prerequisite: Graduate Classification.
Cross Listing: RENR 660/ESSM 676.

ESSM 681 Seminar
Credits 1. 1 Lecture Hour.
Reviews and discussions of current topics and advances in Ecosystem Science and Management.
Prerequisite: Graduate classification.

ESSM 684 Professional Internship
Credits 1 to 16. 1 to 16 Lecture Hours.
On-the-job training in fields of ecosystem science and management.
Prerequisite: Graduate classification in an ecosystem science and management major.
EURO 601 The Formation of the Republic of Letters
Credits 3. 3 Lecture Hours.
The beginnings of European culture in ancient Greece, its development into a Europe-wide civilization under the Roman Empire, and its survival as a common, Latin-based culture in the Middle Ages and Renaissance; deals with literature, the arts, and politics.
Prerequisite: Graduate classification.

EURO 602 The Rise of Modern Nation States
Credits 3. 3 Lecture Hours.
The process by which the traditional, Latin-based common culture of Europe is supplemented and supplanted by vernacular cultures tied to the rise of nation states, from the Baroque through the Enlightenment and Romanticism to the nineteenth century; deals with literature, the arts, and politics.
Prerequisite: Graduate classification.

EURO 603 Nationalism and European Integration
Credits 3. 3 Lecture Hours.
From the breakdown of civilization in the twentieth century to the determination, difficulties, and potential of reconstituting a common European culture in the post-national era; deals with literature, the arts, politics, film, press, and new media.
Prerequisite: Graduate classification.

EURO 604 European Avantgardes
Credits 3. 3 Lecture Hours.
An interdisciplinary examination of modernist currents in art, culture, and politics.
Prerequisite: Graduate classification.

EURO 605 European Cinema
Credits 3. 3 Lecture Hours.
An examination of the development of cinematic culture in Europe from the Lumière brothers' invention of the cinematograph, to the development of national film cultures, to current trends in transnational filmic coproduction.
Prerequisite: Graduate classification.

EURO 606 History and Memory in Modern Europe
Credits 3. 3 Lecture Hours.
Explores artistic, cultural, and political representations of fundamental experiences in the shaping of modern Europe, such as the Holocaust, the Nazi occupation of Europe, and Soviet prison camps of the Gulag.
Prerequisite: Graduate classification.

EURO 607 Europe and Its Margins
Credits 3. 3 Lecture Hours.
Explores the interaction between European and neighboring cultures, such as those of North and Central Asia, the Middle East, North Africa, and the Atlantic in history.
Prerequisite: Graduate classification.

EURO 608 European Drama
Credits 3. 3 Lecture Hours.
Examines literary, social, and historical aspects of dramatic literature and performance in the context of different European cultures.
Prerequisite: Graduate classification.

EURO 610 Seminar in Classical Culture
Credits 3. 3 Lecture Hours.
Topics in Greek and Roman culture and civilization; readings in English. May be repeated for credit.
Prerequisite: Graduate classification.

EURO 620 Seminar in French Culture
Credits 3. 3 Lecture Hours.
Topics in French culture and civilization; readings in English. May be repeated for credit.
Prerequisite: Graduate classification.

EURO 630 Seminar in German Culture
Credits 3. 3 Lecture Hours.
Topics in German outline and civilization; readings in English. May be repeated for credit.
Prerequisite: Graduate classification.

EURO 640 Seminar in Russian Culture
Credits 3. 3 Lecture Hours.
Topics in Russian culture and civilization; readings in English. May be repeated for credit.
Prerequisite: Graduate classification.

EURO 650 Seminar in Italian Culture
Credits 3. 3 Lecture Hours.
Topics in Italian culture and civilization; readings in English. May be repeated for credit.
Prerequisite: Graduate classification.

EURO 680 Proseminar
Credit 1. 1 Lecture Hour.
Student and faculty presentation of research fields, current issues, and research methods.
Prerequisite: Graduate classification.

EURO 685 Directed Studies
Credits 1 to 4. 1 to 4 Lecture Hours.
Individual problems or research or scholarly activity not pertaining to thesis or dissertation, or selected instruction not covered by other courses. Final documentation of directed study is required.
Prerequisites: Graduate classification; approval of department head.

EURO 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of European Studies. May be repeated for credit.

EURO 691 Research
Credits 1 to 12. 1 to 12 Lecture Hours.
Thesis or dissertation research; credit given only upon acceptance of completed thesis or dissertation.
Prerequisite: Graduate classification.
FINC - Finance

FINC 601 Financial Analysis Practicum
Credits 1 to 6. 1 to 6 Lecture Hours. 1 to 6 Other Hours.
Application of finance theory to careers in finance; development of practical skills for finance professionals, including proficiency with industry-standard software, databases and analytic products; operational, legal and ethical aspects of the financial industry; financial career planning. May be taken two times for credit.
Prerequisite: Enrollment limited to FINC Classification 7 students.

FINC 602 Corporate Finance
Credits 3. 3 Lecture Hours.
Theoretical development of principles of corporate financial management; application of principles to problems faced by financial officers, such as capital budgeting, cost of capital, capital structure, dividend policy, financial distress and corporate valuation.
Prerequisite: Enrollment limited to MS in FINC students.

FINC 603 Investments
Credits 3. 3 Lecture Hours.
Theoretical development and application of principles of investment management; topics include measuring risk aversion, portfolio optimization, factor models, asset pricing models, bond pricing, term structure of interest rates, bond portfolio management and equity valuation.
Prerequisite: Enrollment limited to MS in FINC students or approval of Department Head.

FINC 604 Fixed Income Securities
Credits 3. 3 Lecture Hours.
Economics and institutional analysis of bond markets and determinants of interest rates for bonds, including Treasury issues, federal agency issues, corporate bonds, municipal bonds, mortgage-backed and asset-backed securities; features of fixed income securities from microeconomic and macroeconomic perspectives; analysis of risk and return, valuation, term structure, trading strategies and credit risk.
Prerequisite: FINC 602 and FINC 603 or approval of Department Head.

FINC 605 Valuation and Financial Modeling
Credits 3. 3 Lecture Hours.
Principles of value creation; definition of fundamental value, market value and replacement value; differences between well-established valuation approaches; applications to measuring the value of business organizations using rigorous applications of financial theory and accounting principles.
Prerequisite: FINC 602, FINC 603 and ACCT 610 or approval of Department Head.

FINC 612 Finance for the Professional
Credits 1 to 4. 1 to 4 Lecture Hours.
Focuses on investment and financing decisions in corporate firms. Emphasizes principles, techniques and applications in corporate finance, including: risk and return, capital budgeting, discounted cash flow valuation, capital structure, and payout policy. Classification 6 students may not enroll in this course. Please note this is changing to a variable credit course.
Prerequisite: ACCT 610 or equivalent. Enrollment is limited to BUAD classification 7.

FINC 613 Finance for the Professional II
Credits 1 to 3. 1 to 3 Lecture Hours.
Focus on advanced topics in domestic and international finance; analysis of dividend, capital structure and refinancing decisions; exposure to financial derivatives; foreign exchange rate determination and risk management.
Prerequisite: FINC 612. Enrollment is limited to BUAD classification 7.

FINC 629 Financial Management I
Credits 3. 3 Lecture Hours.
Analysis of finance function, credit and equity markets, financing and dividend decisions; mechanics of financial analysis. Classification 6 students may not enroll in this course.
Prerequisites: FINC 612 or FINC 635; ACCT 610 or ACCT 640.

FINC 630 Financial Management II
Credits 3. 3 Lecture Hours.
Basic concepts of finance applied to solution of business problems using case studies; financial analysis skills further developed and refined; investment and financing decisions analyzed. Classification 6 students may not enroll in this course.
Prerequisite: FINC 629.

FINC 632 Investment Management
Credits 3. 3 Lecture Hours.
Introductory course in investments; nature and functioning of securities markets; various investment media and tools for analysis of these media; analysis of debt and equity securities. Alternative trading strategies evaluated. Classification 6 students may not enroll in this course.
Prerequisite: FINC 612 or FINC 635.

FINC 635 Financial Management for Non-Business
Credits 3. 3 Lecture Hours.
External and internal factors affecting financial decision-making in the firm; fundamental concepts of accounting and managerial economics.
Prerequisite: ACCT 640 or equivalent or approval of instructor.

FINC 641 Valuation
Credits 3. 3 Lecture Hours.
Theory and application of various approaches to valuation; measuring and managing the value of corporations; principles of value creation; fundamental valuation methodology; application of value creation principles to managerial problems; special cases and complex valuation issues.
Prerequisites: ACCT 229 or ACCT 610 or ACCT 640; FINC 351 or FINC 632; FINC 361 or FINC 629.

FINC 642 Analysis of Money and Capital Markets
Credits 3. 3 Lecture Hours.
U.S. money and capital markets; changes in supply of and demand for money and capital as they influence the policies of financial intermediaries, fiscal and monetary authorities and nonfinancial firms. Interest rates; factors affecting their level and structure; flow of funds in the U.S. economy. Classification 6 students may not enroll in this course.
Prerequisite: FINC 612 or FINC 635.

FINC 643 Commercial Bank Management
Credits 3. 3 Lecture Hours.
Financial management problems of commercial bank management including raising funds, investing funds and making loans; nontraditional bank activities; emphasis on actual case situations. Classification 6 students may not enroll in this course.
Prerequisite: FINC 642.
FINC 644 Funding New Ventures
Credits 3.3 Lecture Hours.
Introduction to the general phenomena of small business and entrepreneurship; central focus provides students an understanding of entrepreneurship and the financing of entrepreneurial ventures; addresses the types of financing available at different stages of the new venture. Classification 6 students may not enroll in this course.

FINC 645/IBUS 645 International Finance
Credits 1 to 3. 1 to 3 Lecture Hours.
Problems confronted by financial managers of firms with international business operations; international money and capital markets; exchange rate risks and political risks. May be repeated for up to 3 hours credit. Classification 6 students may not enroll in this course.
Prerequisite: FINC 612 or FINC 635.
Cross Listing: IBUS 645/FINC 645.

FINC 646 Technical Analysis of Financial Markets
Credits 3.3 Lecture Hours.
Use of price, volume and other non-fundamental, market and behavioral data to analyze and predict security prices; emphasis on pattern recognition and correlation analysis over theory and casual analysis; application of technical analysis as an investment discipline for institutional portfolio management; principles, terminology, techniques, and emerging theories of technical analysis.
Prerequisites: FINC 351 or FINC 632; FINC 361 or FINC 629.

FINC 647/ACCT 647 Financial Statement Analysis
Credits 3.3 Lecture Hours.
Analytical approach to financial statements; application of finance and accounting principles relevant to the analysis of financial statements. Classification 6 students may not enroll in this course.
Prerequisites: FINC 612 or FINC 635; ACCT 610 or ACCT 640.
Cross Listing: ACCT 647/FINC 647.

FINC 648 Advanced Investments
Credits 3.3 Lecture Hours.
Application of finance theory to complex investment problems; implementation of asset pricing models, portfolio theory and arbitrage strategies; implications of principles of market efficiency and behavioral finance for selection of individual securities and portfolios.
Prerequisites: FINC 351 or FINC 632; FINC 361 or FINC 629.

FINC 649 Financial Modeling
Credits 3.3 Lecture Hours.
Computer-based modeling of contemporary problems in investments and corporate finance including asset pricing, portfolio optimization, valuation, capital budgeting, cost of capital, risk assessment, and option pricing; using models to evaluate financial decision variables and alternative investment strategies.
Prerequisites: Graduate classification; classification 6 students may not enroll in this course; FINC 421 or FINC 632; FINC 434 or FINC 629.

FINC 660 Fixed Income Analysis
Credits 3.3 Lecture Hours.
Characteristics of fixed income securities including Treasury issues, federal agency issues, corporate and municipal bonds, mortgage-backed and asset-backed securities; institutional features fixed income markets; risks of bond investing; fixed income valuation; term structure; trade strategies; modeling and assessing credit risks; hedging with fixed income derivatives.
Prerequisites: Graduate classification; classification 6 students may not enroll in this course; FINC 421 or FINC 632; FINC 434 or FINC 629.

FINC 661 Trading Risk Management
Credits 3.3 Lecture Hours.
Focuses on Mid-office risk management strategies using the energy markets as a focus; develops understanding of commodity market behavior, use of forwards and options for risk management, risk management reporting, Greeks and simulation-based VaR analysis. Classification 6 students may not enroll in this course.
Prerequisite: FINC 632.

FINC 663 Trading and Markets
Credits 3.3 Lecture Hours.
Issues relating to securities trading and securities markets; discusses why and how people trade, and the operation, structure, and regulation of securities markets; focus on equity markets; comparisons to the markets for derivatives and other securities. Classification 6 students may not enroll in this course.
Prerequisite: FINC 632.

FINC 664 Active Portfolio Management
Credits 3.3 Lecture Hours.
Analysis of investment tactics designed to earn abnormal returns; identification and evaluation of active strategies that exploit capital market anomalies and market inefficiencies; portfolio structuring, stock and sector selection, performance measurement, attribution analysis and benchmarks in inefficient markets.
Prerequisites: Graduate classification; classification 6 students may not enroll in this course; FINC 421 or FINC 632; FINC 434 or FINC 629.

FINC 665 Derivative Securities
Credits 3.3 Lecture Hours.
Valuation of financial forward contracts, futures contracts and basic options; course covers valuation and behavior of interest rate and exchange rate forward curves, fixed-for-float transactions, stock options, and index based-options. Classification 6 students may not enroll in this course.
Prerequisite: FINC 632.

FINC 666 Wall Street, Investment Banking and the Financial Markets
Credits 3.3 Lecture Hours.
Provides students an opportunity to visit Wall Street and the heart of U.S. financial and security markets; focuses on visitations to Wall Street firms and interaction with financial market professionals. Classification 6 students may not enroll in this course.
Prerequisite: Approval of instructor.

FINC 668 Applied Investment Analysis
Credits 3.3 Lecture Hours.
Theoretical and analytical developments in security selection and portfolio management; includes macroeconomic analysis, portfolio theory, and portfolio performance evaluation; concepts applied to the allocation of investments in a student-managed equity portfolio. Classification 6 students may not enroll in this course.
Prerequisites: FINC 632 and approval of instructor.

FINC 669 Titans of Investing
Credits 3.3 Lecture Hours.
Readings from the most influential theorists and practitioners of 20th and 21st century investing. Case studies and portfolio sector exercises in an institutional context, based on detailed assessment of global investment risks. Classification 6 students may not enroll in this course.
Prerequisite: Approval of instructor.
FINC 670 Real Property Analysis
Credits 3. 3 Lecture Hours.
Provides the economic and financial tools used to analyze real estate investments, new property developments and the redevelopment of existing properties. Classification 6 students may not enroll in this course.
Prerequisite: Graduate classification.

FINC 672 Real Property Finance
Credits 3. 3 Lecture Hours.
Primary and secondary mortgage markets; mortgage markets' institutional organization, alternative mortgage instruments, creative financing techniques, loan underwriting factors and risk hedging strategies. Classification 6 students may not enroll in this course.
Prerequisites: FINC 612 or FINC 635; FINC 670.

FINC 673 Real Property Valuation I
Credits 3. 3 Lecture Hours.
Procedures used to estimate market value of real property; market analysis and valuation techniques most appropriate for appraising income-producing properties; demonstration appraisal report. Classification 6 students may not enroll in this course.
Prerequisites: FINC 612 or FINC 635; FINC 670; enrollment in MRE program.

FINC 674 Real Property Valuation II
Credits 3. 3 Lecture Hours.
Provides opportunity to develop advanced competencies in analysis and valuation of more complex assignments and properties; draws upon previous coursework in land economics and real estate program including real property valuations, market analysis, real estate investment analysis and real property finance. Classification 6 students may not enroll in this course.
Prerequisites: Enrollment in MRE program; FINC 670.

FINC 675 Analysis of Real Estate Investment Decisions
Credits 3. 3 Lecture Hours.
Analytical techniques for real estate investment decision-making which emphasize the importance of income tax considerations, the magnitude of relevant cash flows and the timing of both; case histories used to analyze investment problems. Classification 6 students may not enroll in this course.
Prerequisite: FINC 612 or FINC 635.

FINC 676 Commercial Real Estate Law
Credits 3. 3 Lecture Hours.
Commercial real estate law including legal ownership interests in oil and gas law, real estate sales contacts, financing, instruments and closings, commercial leases and real estate regulations and taxation. Classification 6 students may not enroll in this course.
Prerequisite: Graduate classification.

FINC 677 Real Estate Development Analysis
Credits 3. 3 Lecture Hours.
Financial aspects of real estate development; project investment characteristics and merits. Classification 6 students may not enroll in this course.
Prerequisites: FINC 612 or FINC 635; enrollment in MRE program.

FINC 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
A directed internship in an organization to provide students with on-the-job training with professionals in organizational settings appropriate to the student's professional objectives. Classification 6 students may not enroll in this course.
Prerequisites: Approval of committee chair and department head.

FINC 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed study of selected problems using recent developments in business research methods. Classification 6 students may not enroll in this course.
Prerequisites: Graduate classification and approval of instructor.

FINC 688 Doctoral Seminar
Credits 3. 3 Other Hours.
Historical development of the conceptual framework of finance theory and practices; analysis of current research and controversial issues in the field. For doctoral students only. Classification 6 students may not enroll in this course. May be repeated for credit.
Prerequisite: Doctoral classification.

FINC 689 Special Topics in...
Credits 1 to 4. 1 to 8 Lecture Hours.
Selected topics in an identified area of finance. May be repeated for credit. Classification 6 students may not enroll in this course.

FINC 690 Theory of Research in Finance
Credits 3. 3 Lecture Hours.
Design of research in various subfields of finance and the evaluation of research results using examples from the current research literature. May be repeated for credit. Classification 6 students may not enroll in this course.
Prerequisite: Doctoral classification.

FINC 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation. Classification 6 students may not enroll in this course.
Prerequisite: Doctoral classification.

FREN - French

FREN 601 Introduction to Scientific French
Credits 3. 3 Lecture Hours.
Intensive course to prepare graduate students to read scientific material; technical vocabulary and translation. May not count for hours in a supporting field.
Prerequisite: Graduate classification.

FREN 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed individual study of selected problems in the field of French.
Prerequisite: Approval of instructor.

FREN 689 Special Topics in...
Credits 3. 3 Lecture Hours.
Selected topics in an identified area of French. May be repeated for credit.
Prerequisite: Approval of instructor.

FREN 692 Readings
Credits 3. 3 Lecture Hours.
Readings in French literary texts in the original language.
Prerequisite: Graduate classification.
FSTC - Food Science & Tech.

FSTC 605 Chemistry of Foods
Credits 3.3 Lecture Hours.
Chemical covalent and noncovalent interactions in food systems; the glass transition and moisture in foods; carbohydrate chemistry; reactions of food lipids; food protein functionality; chemistry of flavor; processing chemistry; food additives; and nutraceutical phytochemicals.
Prerequisite: BICH 410 or BICH 603.

FSTC 606/DASC 606 Microbiology of Foods
Credits 3.3 Lecture Hours.
Nature and function of beneficial and defect-producing bacteria in foods; food-borne illness, effects of processing, storage and distribution; techniques for isolation and identification from foods.
Cross Listing: DASC 606/FSTC 606.

FSTC 607/ANSC 607 Physiology and Biochemistry of Muscle as a Food
Credits 3.3 Lecture Hours.
Biochemical, histological, anatomical and physical characteristics of muscle cells and factors associated with transformation of muscle cells into meat.
Prerequisite: BICH 410 or approval of department head.
Cross Listing: ANSC 607/FSTC 607.

FSTC 610/NUTR 610 Nutritional Pharmacometrics of Food Compounds
Credits 3.3 Lecture Hours.
Introduction into nutritional pharmacokinetics and pharmacodynamics of food compounds; specific examples of toxicological and pharmacological effects of food compounds.
Prerequisite: NUTR 202 or NUTR 203 or FSTC 201 or CHEM 227 or CHEM 222 or instructor approval.
Cross Listing: NUTR 610/FSTC 610.

FSTC 611/POSC 611 Poultry Further Processing
Credits 3.3 Lecture Hours.
Egg and poultry meat processing; egg markets, egg processing, grading, packaging, safety, quality and consumer acceptance of shell eggs; poultry meat processing (specifically turkey and broilers), meat quality, markets, consumer acceptance of poultry meat and safety.
Cross Listing: POSC 611/FSTC 611.

FSTC 619 Molecular Methods for Microbial Characterization
Credits 3.2 Lecture Hours. 2 Lab Hours.
Underlying principles of molecular methods for microbial detection and characterization in natural and man-made ecosystems; emphasis on method application and data interpretation; emphasis on microbial pathogens and indicator organisms in foods and environment; laboratory covers select protocols.
Prerequisites: FSTC 326/DASC 326; SCSC 405; POSC 429; approval of instructor.
Cross Listing: SCSC 619, POSC 619, and VTMI 619.

FSTC 629/POSC 629 Microbiology of Food Irradiation
Credits 3.2 Lecture Hours. 2 Lab Hours.
Lecture plus laboratory overview of electron beam and x-ray based food irradiation principles; provides a working knowledge of using electronic pasteurization as a means of destroying microbial pathogens or retarding microbial spoilage in foods.
Cross Listing: POSC 629/FSTC 629.

FSTC 630/SCSC 630 Cereal Grains for Human Food
Credits 4.3 Lecture Hours. 3 Lab Hours.
Fundamental concepts of dry milling, wet milling, oil extraction, baking, malting, brewing, storage, sanitation and quality evaluation and control interrelated with physical and biochemical properties of cereals and their products; use of instruments and techniques to evaluate cereal quality.
Prerequisite: Approval of instructor.
Cross Listing: SCSC 630/FSTC 630.

FSTC 631 Food Carbohydrates
Credits 3.3 Lecture Hours.
Chemistry, structure, functionality and nutritional properties of food carbohydrates; fiber chemistry, functionality and nutritional properties, artificial sweeteners, starch structure and functionality and hydrocolloid functionality.
Prerequisite: BICH 410. (Offered in alternate years.)

FSTC 634 Oilseed Proteins for Foods
Credits 3.3 Lecture Hours.
World production, composition, processing technologies, uses of products (oil, meal, protein concentrates and isolates, and texturized products) in feeds and foods; present and potential food applications of oilseed proteins.
Prerequisites: CHEM 228 and CHEM 317. (Offered in alternate years.)

FSTC 635 Oil and Fat Food Products
Credits 3.3 Lecture Hours.
Composition, properties and reactions; sources, handling and storage of raw materials; extraction refining and bleaching; hydrogenation, deodorization, esterification and interesterification; fractionation; uses in salad oils, shortenings, margarine, bakery products and other foods.
Prerequisites: CHEM 228 and CHEM 317. (Offered in alternate years.)

FSTC 640/NUTR 640 Therapeutic Microbiology I
Credits 3.3 Lecture Hours.
Alimentary (gastrointestinal) microbiology including: (i) the "normal" intestinal microbiota; (ii) probiotic and prebiotic nutritional supplements; (iii) recombinant pharmabiotics; (iv) gut-associated lymphoid tissue and mucosal immunity; (v) foodborne gastrointestinal pathogens; and (vi) fermented products as functional foods.
Prerequisite: Undergraduate survey course in microbiology (or instructor's consent).
Cross Listing: NUTR 640/FSTC 640.

FSTC 644 Disease Mechanisms of Foodborne Pathogens
Credits 3.3 Lecture Hours.
Principles of pathogenicity of foodborne bacteria; mechanisms used by disease-causing bacteria leading to human illness; basic principles of immunology and human and bacterial physiology; investigation of bacterial virulence factors and effects of stress response, quorum sensing and other external factors.
Prerequisite: FSTC 326/DASC 326 or BIOL 351, or approval of instructor.

FSTC 647/ANSC 647 Technology of Meat Processing and Distribution
Credits 3.3 Lecture Hours.
Quantitative and qualitative characteristics of meat and meat products as related to food technology processing operations; manufacturing, preservation, packaging and merchandising.
Cross Listing: ANSC 647/FSTC 647.
FSTC 657/ANSC 657 Hazard Analysis and Critical Control Point System
Credits 3. 3 Lecture Hours.
Examination of the Hazard Analysis and Critical Control Point (HACCP) principles specifically related to meat and poultry; microbiological and process overviews; good manufacturing practices (GMP) and standard operating procedures (SOP) development; team-building and implementation into industry operations. This class is designed for the production of food and fulfills the training requirements of USDA's HACCP regulation for meat and poultry (9 CFR Part 417), and FDA's HACCP regulations for fish and fishery products (21 CFR Part 123 and 1240) and for juice (21 CFR Part 120).
Cross Listing: ANSC 657/FSTC 657.

FSTC 667/ANSC 667 Industrial Processed Meat Operations
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Application of scientific principles and business practices to manufactured meat products; interrelationships among marketing, manufacturing, product development, regulatory compliance and quality assurance in commercial processed meat operations.
Prerequisite: Approval of instructor.
Cross Listing: ANSC 667/FSTC 667.

FSTC 669/NUTR 669 Experimental Nutrition & Food Science Laboratory
Credits 4. 1 Lecture Hour. 6 Lab Hours.
Experimental Nutrition & Food Science Laboratory. Nutritional intervention in animal models of metabolic or emotional disorders; genetic modifications or pathogens in food products; analyses of gene expression and behavior.
Prerequisite: BICH 432/GENE 432/GENE 432/BICH 432 recommended; graduate in nutrition or related major.
Cross Listing: NUTR 669/FSTC 669.

FSTC 671/NUTR 671 Critical Evaluation of Nutrition and Food Science Literature: Evidence Based Reviews
Credits 3. 3 Lecture Hours.
Evaluation of scientific literature, research methods within the literature, and the quality of scientific studies to produce an evidence-based review in areas specific to nutrition and food science.
Prerequisites: NUTR 202 or NUTR 203 and STAT 302; knowledge of nutrition, statistics, and technical writing helpful.
Cross Listing: NUTR 671/FSTC 671.

FSTC 681 Seminar
Credit 1. 1 Lecture Hour.
Oral reports and discussions of current research and developments in food technology designed to broaden understanding of problems and to stimulate research.

FSTC 684 Professional Internship
Credits 1 to 16. 1 to 16 Other Hours.
Experience in application of formal training to a commercial operation under supervision of operations manager and designated faculty member. Student will investigate matter of mutual interest and report results in a professional paper approved by the graduate committee.

FSTC 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed study of selected problems emphasizing recent developments in research techniques.

FSTC 687/ANSC 687 Sensory Evaluation of Foods
Credits 3. 2 Lecture Hours. 1 Lab Hour.
Application of sensory science principles and practices to food systems including an understanding of discriminative, descriptive and consumer sensory techniques.
Prerequisite: CHEM 222 or CHEM 228.
Cross Listing: ANSC 687/FSTC 687.

FSTC 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Special topics in an identified area of food science and technology. May be repeated for credit.

FSTC 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Investigations leading to thesis or dissertation in various areas of food science and technology.

FSTC 697/ANSC 697 Applied Microbiology for Foods of Animal Origin: Processing, Sanitation and Sanitary Design
Credits 3. 3 Lecture Hours.
Application of basic food microbiology knowledge and principles to food production processes and products; sources of microbiological contamination and their impact on food safety and spoilage; application of sanitary design and validation; testing and auditing to monitor and trouble-shoot the process.
Prerequisites: DASC/FSTC 326/DASC 326 or FSTC 606/DASC 606 or equivalent.
Cross Listing: ANSC 697/FSTC 697.

GENE - Genetics

GENE 603 Genetics
Credits 4. 4 Lecture Hours.
Development of fundamental concepts related to the structure, function, organization, transmission and distribution of genetic material.
Prerequisite: GENE 301.

GENE 606 Quantitative Phylogenetics
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Designed to provide the theory and tools required for inference of phylogenetic (evolutionary) relationships among biological taxa using various types of comparative data including morphological characters, biochemical and molecular characters, and DNA sequences; hands-on analysis of data using contemporary tools.
Prerequisite: Entomology 601 or approval of instructor.
Cross Listing: ENTO 606 and WFSC 646.

GENE 608 Critical Analysis of Genetic Literature
Credit 1. 1 Lecture Hour.
An introduction to primary literature in the field of genetics which will give students experience in critically evaluating scientific papers and develop an appreciation of how genetics can be used to address important biological questions.

GENE 612 Population Genetics
Credits 3. 3 Lecture Hours.
Biological approach to genetic characteristics of populations dealing with genetic equilibrium, allelic variation, determination of genetic variation in populations, effects of mating systems, selection, mutation and drift on population parameters.
Prerequisites: GENE 603; STAT 651.
GENE 613 Quantitative Genetics I  
Credits 3. 3 Lecture Hours.  
Quantitative genetics concepts particularly dealing with partitioning of phenotypic variance into genetic and environmental components, selection response, effects of systems of mating, genetic covariance and threshold effects.  
Prerequisites: GENE 612; STAT 652.  

GENE 614/ANSC 614 Maximum Likelihood Estimation of Genetics  
Credits 3. 3 Lecture Hours.  
Theoretical and analytical approaches to the application of maximum likelihood for the estimation of parameters under linear and nonlinear models; single and polygene genetic models including Hardy-Weinberg equilibrium, linkage analysis and quantitative trait loci detection.  
Prerequisites: GENE 603; STAT 651; STAT 652 or STAT 601.  
Cross Listing: ANSC 614/GENE 614.  

GENE 620 Cytogenetics  
Credits 3. 3 Lecture Hours.  
Examination and analysis of variation in chromosome structure, behavior and number; developmental and evolutionary effects of this variation.  
Prerequisite: GENE 603.  

GENE 626/ANSC 626 Analyses of Gene Expression  
Credits 2. 1 Lecture Hour, 3 Lab Hours.  
Proficiency in handling DNA and RNA gained during exercises used routinely in analyses of gene expression; RNA preparation and analysis on Northern blots; in vitro transcription and polyacrylamide gel analysis of nucleic acids; sub-cloning and mRNA quantitation using polymerase chain reaction.  
Prerequisites: GENE 450 or approval of instructor; radiation safety training.  
Cross Listing: ANSC 626/GENE 626.  

GENE 629 Applied Animal Genomics  
Credits 3. 3 Lecture Hours.  
Theory and application of genomics by livestock industries; consideration of genetic markers, gene mapping methods, genome analysis and emerging technologies such as microarrays, transgenesis, cloning and marker assisted selection; exposure to bioinformatic tools for genomics.  
Prerequisite: GENE 603 or approval of instructor.  
Cross Listing: ANSC 629 and POSC 630.  

GENE 631/BICH 631 Biochemical Genetics  
Credits 3. 3 Lecture Hours.  
Genetic control of cellular metabolism. Mechanism of gene action; gene-enzyme relationships; regulation of gene expression; structure and organization of genomes; biochemical manipulation and characterization of genetic molecules.  
Prerequisite: GENE 431/BICH 431 or BICH 431/GENE 431; BICH 603.  
Cross Listing: BICH 631/GENE 631.  

GENE 633/WFSC 633 Conservation Genetics  
Credits 3. 3 Lecture Hours.  
Genetic concepts and techniques relevant to management and conservation of biological diversity; research and conservation within a conservation genetics framework.  
Prerequisites: Introductory courses in genetics and ecology or biological conservation.  
Cross Listing: WFSC 633/GENE 633.  

GENE 638/ANSC 638 Predictions of Genetic Merit  
Credits 3. 3 Lecture Hours.  
Mixed linear models and best linear unbiased prediction for genetic evaluation.  
Prerequisite: GENE 613.  
Cross Listing: ANSC 638/GENE 638.  

GENE 643/SCSC 643 Molecular Quantitative Genetics and Plant Breeding  
Credits 3. 3 Lecture Hours.  
Classical, applied and molecular aspects of quantitative genetics in plant breeding; genetic relationships; genetic diversity; genetic phenomena (linkage, heterosis and epistasis); genotype by environment interaction; mapping quantitative trait loci (QTL); genomic and marker-assisted selection; application of statistical software.  
Prerequisites: STAT 651, SCSC 642 or GENE 613 or approval of instructor.  
Cross Listing: SCSC 643/GENE 643.  

GENE 648/WFSC 648 Molecular Evolution  
Credits 3. 2 Lecture Hours. 1 Lab Hour.  
Theory and tools used in the analysis of molecular evolutionary patterns of DNA and protein sequences; format combines lecture presentations by instructor, discussion of relevant scientific literature, computer exercises, preparation of research proposal or independent research project, and practice in peer review process.  
Prerequisites: Basic courses in general Genetics and in Evolution.  

GENE 654 Analysis of Complex Genomes  
Credits 3. 3 Lecture Hours.  
History and current status of genetic and molecular analysis of higher eukaryotic genomes; coverage of techniques for dissection of genomes into manageable parts; investigations in genetics, breeding and evolution; emphasis on quantitative inheritance, genetic mapping, physical mapping, map-based cloning, with examples drawn from a wide range of organisms.  
Prerequisite: GENE 603.  
Cross Listing: SCSC 654 and MEPS 654.  

GENE 655 Analysis of Complex Genomes—Lab  
Credits 3. 7 Lab Hours.  
Analysis of Complex Genomes—Lab. Laboratory methods in molecular genetic techniques for genetic mapping, physical mapping, and map-based cloning of both qualitative and quantitative phenotypes.  
Prerequisite: GENE 603 or equivalent or approval of instructor.  
Cross Listing: SCSC 655 and MEPS 655.  

GENE 673/BICH 673 Gene Expression  
Credit 1. 1 Lecture Hour.  
Oral presentations and discussions related to the biochemistry and molecular biology of gene expression in animal, plant, and microbial systems. Course may be repeated for credit up to 12 times.  
Prerequisite: Graduate classification in biochemistry or genetics or approval of instructor.  
Cross Listing: BICH 673/GENE 673.  

GENE 677/MCMD 677 Genes and Diseases  
Credits 3. 3 Lecture Hours.  
Molecular and genetic basis for human disease; structure, function and evolution of chromosomes; epigenetics; gene mapping; complex genetic traits; cancer genetics; neurodegenerative disorders; animal models (yeast, mouse, worms, fruit flies); ethics.  
Prerequisite: GENE 603, GENE 631/BICH 631, or MSCI 601 or approval of instructor.  
Cross Listing: MCMD 677/GENE 677.
GENE 681 Seminar
Credit 1. 1 Lecture Hour.
Reports and discussions of topics of current importance in genetics; reports to be prepared and presented by graduate students enrolled in course.

GENE 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Individual problems or research not pertaining to thesis or dissertation. 
Prerequisite: Approval of instructor.

GENE 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of genetics. May be repeated for credit.
Prerequisite: Approval of instructor.

GENE 691 Research
Credits 1 to 23. 1 to 23 Other Hours.

GENE 697 Teaching Genetics Labs
Credit 1. 1 Lecture Hour.
Theory and practical aspects of teaching genetics labs, with emphasis on content, grading, instructional methods and practical aspects of genetics labs. May be repeated for credit.
Prerequisites: Graduate classification in genetics; appointment as a TA for genetics labs.

GEOG - Geography

GEOG 603 Processes in Economic Geography
Credits 3. 3 Lecture Hours.
Spatial organization and distribution of economic activity; patterns of land rent and land use; theories of economic development; models of spatial decision making.
Prerequisite: GEOG 304 or equivalent or approval of instructor.

GEOG 604 Processes in Physical Geography
Credits 3. 3 Lecture Hours.
Methodologies and problems of physical geography with emphasis on the interrelationships of the physical environment; a foundation course for graduate work in geography.
Prerequisite: Approval of instructor.

GEOG 605 Processes in Cultural Geography
Credits 3. 3 Lecture Hours.
Evolution of cultural landscapes; processes of innovation, diffusion and adaptation in context of developing human-environment relationships.
Prerequisite: Approval of instructor.

GEOG 610 Geographical Methods and Theory
Credits 3. 3 Lecture Hours.
Development of geography as a discipline; methods and theories used in geography for understanding place and for spatial analysis of human and biophysical phenomena.
Prerequisite: Graduate classification in geography or approval of instructor.

GEOG 611 Geographical Research Design
Credits 3. 3 Lecture Hours.
Methods, techniques and conceptual models for the conception, design, planning and conduct of geographical research.
Prerequisite: Graduate classification in geography or approval of instructor.

GEOG 612 Applied Climatology
Credits 3. 3 Lecture Hours.
Climate data and methods to solve a wide range of environmental problems; collection, processing, analysis and interpretation of surface observations, radar, satellite, reanalysis and climate model data; statistical methods and physical modeling; practical problems and development of tools for decision makers.
Prerequisite: Graduate classification.

GEOG 616 Urban Geography
Credits 3. 3 Lecture Hours.
Spatial patterns and processes of urban systems; growth and sprawl; environmental impacts; residential choice models; political fragmentation; economic development; power and privilege; place-based identity.
Prerequisite: GEOG 306 or equivalent.

GEOG 619 Human Impact on the Environment
Credits 3. 3 Lecture Hours.
Human alterations of landscapes, the atmosphere and the waters of the earth; interference with natural chemical cycles; disturbance of ecological equilibria; depletion of natural resources; roles of technology and population growth.
Prerequisite: Approval of instructor.

GEOG 621 Land-Use and Land-Cover Change
Credits 3. 3 Lecture Hours.
Human dimensions of land-use and land-cover change; theories of global and regional land-use and land-cover changes that emphasize processes, institutions, and patterns at multiple scales; methodologies and research agendas including geo-spatial analysis, modeling, and social science approaches.
Prerequisites: GEOG 619 or approval of instructor; Graduate classification.

GEOG 624 Biogeography: Theory and Methods
Credits 3. 3 Lecture Hours.
Prerequisite: Approval of instructor.

GEOG 625/ENTO 625 Landscape Ecology
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Study of structure, function, and change in a heterogeneous land area composed of interacting ecosystems; examine basic ecological principles dealing with landscape structure.
Prerequisite: Approval of instructor.
Cross Listing: ENTO 625/GEOG 625.

GEOG 626 Fluvial Geomorphology
Credits 3. 3 Lecture Hours.
Concepts and methods applicable to the fluvial systems; components affecting rivers and drainage basin and analysis geomorphology; analytical treatment of problems arising from fluvial changes.
Prerequisite: GEOG 203 or approval of instructor.

GEOG 627 Arid Lands
Credits 3. 3 Lecture Hours.
Processes and landforms in dryland environments; nature and dynamics of gravity, water and wind in deserts; Quaternary climates and arid lands; human impact in drylands.
Prerequisite: GEOG 604 or approval of instructor.
GEOG 629 Cultural and Political Ecology
Credits 3. 3 Lecture Hours.
History of ideas about humans and environment; political and social meanings of nature and culture; access and control of resources; theories of environmental change; geographic approaches to political ecology research; current debates and future directions.

GEOG 635 Advanced Biogeography
Credits 3. 3 Lecture Hours.
Theory and contemporary research in biogeography; methods used in conducting biogeographical research; spatial and temporal changes in the distribution of organisms; influences of humans and the physical environment on biogeographic patterns.
Prerequisite: GEOG 624 or approval of instructor.

GEOG 642/GEOS 642 Past Climates
Credits 3. 3 Lecture Hours.
Terrestrial and marine proxy records of past climate variability, including tree rings, coral, and sediments; past climate change events such as the Little Ice Age and Medieval Warm Period; greenhouse gases and global temperature; insight into the nature of climate change and challenges humankind faces in the next few centuries.
Prerequisite: Graduate classification.
Cross Listing: GEOS 642/GEOG 642.

GEOG 644 Geographic Education: Theory and Practice
Credits 3. 3 Lecture Hours.
Geography as an element of the educational system: K-12, undergraduate, graduate; geography's role in curricula and its practice in classrooms; course design and integration of geographic concepts into classroom instruction.
Prerequisite: Graduate classification.

GEOG 645 Research in Geographic Education
Credits 3. 3 Lecture Hours.
Research in geographic education and the interface between research in geography and geographic education; identification of research questions; choice of methodology; review of literature; data collection and analysis; communication of results.
Prerequisite: Graduate classification.

GEOG 648 Political Geography of the World-System.
Credits 3. 3 Lecture Hours.
Political and geopolitical evolution of the modern world-system; major geopolitical theories, settler colonization, extractive colonization, imperialism, decolonization, development of European state-system hegemonic change and theory of world leadership cycles.
Prerequisite: Graduate classification.

GEOG 651 Remote Sensing for Geographical Analysis
Credits 3. 3 Lecture Hours.
Provides and introduction to remote sensing fundamentals. Discussion of past, present and planned earth observing sensors as well as technical issues involved in the collection, processing and interpretation of remote sensing images with emphasis on application to geographic problems, including geomorphology, hydrology and coastal oceanography.
Prerequisite: Graduate classification.

GEOG 652 Quantitative Methods in Geography
Credits 3. 3 Lecture Hours.
Designed to acquaint with quantitative methods commonly used in geographical research to describe, characterize, model and analyze geospatial data.
Prerequisite: Approval of instructor.

GEOG 655 Geodatabases
Credits 4. 3 Lecture Hours. 2 Lab Hours.
GIS data modeling; introductory and advanced spatial SQL (structured query language); spatial database management system (DBMS) server setup, management and maintenance; spatial DBMS design, implementation, tuning, performance analysis and indexing; connecting spatial data services and warehouses to GIS software.

GEOG 660 Applications in GIS
Credits 3. 3 Lecture Hours.
Integrates spatial analysis and modeling with GIS for environmental and socio-economic applications.
Prerequisites: GEOG 390; STAT 651 and STAT 652.

GEOG 661 Digital Image Processing and Analysis
Credits 3. 3 Lecture Hours.
Principles of georectifying, processing, manipulating and interpreting data collected by nonphotographic sensors concentrating on solid earth resources using Thematic Mapper with supplemental data from the SPOT satellite.
Prerequisite: GEOG 332 or approval of the instructor.

GEOG 662 GIS in Land and Property Management
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Introduction to concepts of design, planning and implementation of GISs related to commercial real estate development; case studies for land and property management; laboratory exercises in practical applications for real estate.
Prerequisites: Enrollment in Master of Land Economics and Real Estate; approval of instructor.

GEOG 665 GIS-Based Spatial Analysis and Modeling
Credits 3. 3 Lecture Hours.
Investigates methodology of integrating various spatial analysis and modeling techniques with GIS for environmental/socio-economic applications; practical applications; theoretical/technical aspects of related issues in detail.
Prerequisites: GEOG 390; STAT 651 or equivalent; approval of instructor.

GEOG 666 Coastal Geomorphology
Credits 3. 3 Lecture Hours.
Essential concepts and methods to coastal geomorphology; review history and processes of coastal geomorphology; analytical treatment of problems associated with coastal environmental changes.
Prerequisite: GEOG 203 or equivalent.

GEOG 667 Dynamic Modeling of Earth and Environmental Systems
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Dynamical systems modeling; dynamic complexity; key concepts, processes and human impact on earth and environmental systems; model building and testing; system behavior over time; model validation and sensitivity; examples from the applications in earth and environmental sciences.
Prerequisite: Approval of instructor.

GEOG 668 Arctic Climates
Credits 3. 3 Lecture Hours.
Arctic climate system, physical characteristics and climatic features, the atmospheric energy budget, the atmospheric circulation, the surface energy budget, the hydrologic cycle, and the interactions between the atmosphere, Arctic Ocean, and the sea ice cover.
Prerequisite: Graduate classification.
GEOG 676 GIS Programming
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Automation of GIS software; integration of custom code as extensions into GIS software; programmatic manipulation of GIS data.
Prerequisite: Graduate classification.

GEOG 678 WebGIS
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Internet architectures; setup, management and maintenance of web-based Geographic Information System (WebGIS) servers, data and services; use of WebGIS data as services in the creation of custom web-based maps; analysis of WebGIS system architecture, design and implementation.
Prerequisite: Graduate classification.

GEOG 681 Seminar
Credit 1. 1 Lecture Hour.
Reports and discussions of current research and selected topics.
Prerequisite: Approval of department head.

GEOG 685 Directed Studies
Credits 1 to 6. 6 Other Hours.
For students with major or minor in geography to undertake investigations in special aspects of geography.
Prerequisite: Approval of instructor.

GEOG 687/ANTH 624 Geoarchaeology
Credits 3. 3 Lecture Hours.
Application of geological concepts and methods to archaeological research; history of geoarchaeology; site formation processes; modification of archaeological sites and sediments; landscape reconstruction and change and their effects on human behavior.
Prerequisite: ANTH 602 or equivalent.
Cross Listing: ANTH 624/GEOG 687.

GEOG 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in an identified area of geography. May be repeated for credit.
Prerequisite: Approval of instructor.

GEOG 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Original research in various areas of geography. Research for thesis or dissertation.

GEOG 695 Frontiers in Geographic Information Science
Credits 3. 3 Lecture Hours.
Theoretical foundations and the latest development of geographic information science (GIScience); topics related to representations of space and time, geocomputation, spatially integrated social sciences, and social informatics.
Prerequisite: Introductory GIS.

GEOG 696 Geomorphology and Remote Sensing
Credits 3. 3 Lecture Hours.
Application of remote sensing to study landforms, imagery, includes, aerial photography; LANDSAT; SPOT, TM and shuttle photography.
Prerequisite: GEOG 203 or approval of instructor.

**GEOL - Geology**

GEOL 609 Field Geology
Credits 1 to 6. 1 to 6 Other Hours.
Individual instruction in advanced and specialized field methods, geologic interpretation and field evaluation procedures. Choice of topics and locations of field studies will vary depending upon individual and specific needs.
Prerequisite: GEOL 300 or approval of instructor.*

GEOL 610 Field Methods in Hydrogeology
Credits 3. 1 Lecture Hour. 6 Lab Hours.
Field methods in hydrogeology; including ground water drilling technology and law; investigation and planning of well sites; installation of ground water wells; field testing of aquifer properties and analysis of field data.
Field trips may be required for which departmental fees may be assessed to cover costs.
Prerequisite: GEOL 410 or approval of instructor.

GEOL 612 Structural Geology
Credits 3. 3 Lecture Hours.
Mechanical principles important to structural geology and experimental results relating to rock deformation followed by applications to natural deformation; mechanisms, rather than geometries. Primarily for students not concentrating in structural geology but who desire an advanced general course.
Prerequisite: Approval of instructor.

GEOL 614 Advanced Hydrogeology
Credits 3. 2 Lecture Hours. 2 Lab Hours.
(2-2) Geologic conditions determining the distribution and movement of ground water and their effect on the hydrologic properties of aquifers.

GEOL 619 Petroleum Geology
Credits 3. 3 Lecture Hours.
Properties of reservoir rocks; origin, migration and accumulation of petroleum; geologic interpretation of borehole logs and fluid-pressure measurements and the role of hydrostatic and hydrodynamic pressures in oil accumulation.
Prerequisite: Approval of instructor.

GEOL 621 Contaminant Hydrogeology
Credits 3. 3 Lecture Hours.
Physical concepts of mass transport; dispersion; diffusion; advection; geochemical processes including surface reaction; hydrolysis; biodegradation; aspects of modeling; process and parameter; and remediation.
Prerequisite: GEOL 410 or approval of instructor.

GEOL 622 Stratigraphy
Credits 3. 3 Lecture Hours.
Principles for correlating and naming stratigraphic units; controls on stratigraphic development (sediment supply, base-level change, subsidence, climate, and compaction); principles and application of sequence stratigraphy; subsurface stratigraphy; facies analysis and stratigraphic architecture.
Prerequisite: Graduate classification or approval of instructor.
GEOL 623 Carbonate Rocks  
**Credits 3. 3 Lecture Hours.**
Principles of carbonate sedimentology; carbonate depositional sequences defined in modern environments and utilized to interpret the rock record; introduction to depositional and diagenetic microfacies; shelves, ramps and isolated platforms and their tectonosedimentary significance; suggested for geoscience majors.  
**Prerequisites:** A basic understanding of sedimentology and the associated terminology; graduate classification.

GEOL 624 Carbonate Reservoirs  
**Credits 3. 3 Lecture Hours.**
Recognition and description of hydrocarbon reservoirs in carbonate rocks; classification of carbonate porosity; capillary pressure curves and pore types; pore characteristics as proxies for permeability in reservoir modeling; techniques for mapping flow units.  
**Prerequisites:** Graduate classification and approval of instructor.

GEOL 625 Applied Ground Water Modeling  
**Credits 3. 3 Lecture Hours.**
Concept of groundwater flow and contaminant transport; numerical simulations of solving flow and transport equations; finite difference and finite element methods; software structures of groundwater flow, contaminant transport, density-dependent fluid flow and hydrocarbon remediations; real case applications of software including geological, physical, chemical, biological and hydrological information.  
**Prerequisite:** GEOL 410 or approval of instructor.

GEOL 629 Regional Geology of North America  
**Credits 3. 3 Lecture Hours.**
Regional geology of North America, examining the accumulation and deformation of the rock units involved; structural form and style emphasized; entire geologic history investigated.  
**Prerequisite:** Graduate classification or approval of instructor.

GEOL 631 Engineering Geomorphology  
**Credits 3. 3 Lecture Hours.**
Active surface processes as they influence engineering construction; erosion, rivers and floods, slope processes, subsidence, coastal processes, ice, weathering and ground water.  
**Prerequisites:** Graduate classification in engineering or geosciences; GEGO 331 or approval of instructor.

GEOL 633 River Restoration  
**Credits 3. 3 Lecture Hours.**
Geologic, geomorphic and geomechanical principles applied to the investigation, design, construction, and maintenance of river restoration projects.  
**Prerequisite:** GEOL 631 or GEOG 626 or approval of instructor.

GEOL 635 Engineering Geology  
**Credits 3. 3 Lecture Hours.**
Geological principles applied to the investigation design, construction and maintenance of engineering projects; history, development and role of engineering geologic practice as applied to dams, waste disposal, surface and ground water, tunneling, quarrying and construction materials.

GEOL 640/WMHS 640 Geochemistry of Natural Fresh Waters  
**Credits 3. 3 Lecture Hours.**
Chemistry of aqueous solutions; weathering/redox reactions and controls on fresh waters; natural and anthropogenic factors affecting major, minor, and trace elements in fresh waters; evaluation of fresh water composition; application of water-quality measurements to quantitative hydrology.  
**Cross Listing:** WMHS 640/GEOL 640.

GEOL 641 Environmental Geochemistry  
**Credits 3. 3 Lecture Hours.**
Geochemical processes affecting the fate and transport of inorganic and organic pollutants in terrestrial systems; equilibrium and kinetic modeling.  
**Prerequisite:** GEOL 451 or approval of instructor.

GEOL 643 Introduction to Electron Microprobe Analysis  
**Credits 2. 1 Lecture Hour. 3 Lab Hours.**
Digital imaging and qualitative and quantitative chemical analysis of geological and material science samples using the electron microprobe; emphasis on quantitative chemical analysis using WDS (wavelength-dispersive spectrometry) methods; use the electron microprobe and correctly interpret analytical results.  
**Prerequisite:** Approval of instructor.

GEOL 645 Geochronology  
**Credits 3. 3 Lecture Hours.**
Earth’s 4.5 billion-year history is divided into units of geologic time based on the observed changes in the rock record: the timing of those changes is quantified by numerical dating methods: this course examines both dating methods and physical and biological changes observed in the rock record.  
**Prerequisite:** Graduate classification or approval of instructor.

GEOL 648 Stable Isotope Geology  
**Credits 3. 2 Lecture Hours. 3 Lab Hours.**
Stable isotopes of oxygen, carbon, sulfur and hydrogen applied to problems in paleontology and paleoecology, carbonate diagenesis, petroleum exploration, and igneous and metamorphic petrology; isotopic paleotemperatures; analytical methods; theory of isotopic fractionation.  
**Prerequisite:** GEOL 451 or approval of instructor.

GEOL 650 Paleoecology  
**Credits 3. 2 Lecture Hours. 3 Lab Hours.**
Interrelationships of organisms and environment in the fossil record; methods and criteria available for interpreting ancient environments; critical review of classical studies and current research in paleoecology.  
**Prerequisite:** Approval of instructor.

GEOL 651 Paleoecological Community Analysis  
**Credits 3. 3 Lecture Hours.**
Quantitative analysis of multivariate paleoecological community data; measurement of diversity; cluster analysis; gradient analysis by standard and canonical ordination techniques.  
**Prerequisite:** A basic course in statistics or approval of instructor.

GEOL 652 Biogeology  
**Credits 3. 2 Lecture Hours. 3 Lab Hours.**
Major trends and processes in the evolution of life through geologic time. Interrelationships of biological and physical processes in earth history; application of paleontology to current problems in geology; critical review of modern developments in biogeology.  
**Prerequisite:** GEOL 305 or approval of instructor.

GEOL 653 Geobiological Research  
**Credits 3. 1 Lecture Hour. 6 Lab Hours.**
Team-based research in modern or historical geobiology; definition of questions and hypothesis testing; analytical techniques; project lifecycle; reporting of results. May be taken two times for credit.  
**Prerequisite:** Approval of instructor.
GEOL 654 Evolutionary Patterns and Theory
Credits 3.3 Lecture Hours.
Evolutionary patterns in the fossil record and application of evolutionary theory to understanding these patterns; comparisons of neo-Darwinian and punctuational hypotheses; events and processes pertaining to microevolutionary and macroevolutionary change; and methods of determine phylogenies of organisms.
Prerequisite: Graduate classification in geological or biological sciences.

GEOL 658 Earth Systems Through Deep Time: Global Change, Paleoclimate and Life
Credits 3.3 Lecture Hours.
History and cause of global change in the earth system, Archean to Holocene; Impact of biotic change on the earth system; influence of tectonics on paleochemistry and climate change; influence of climate on tectonics; methods and models for evaluating global change.
Prerequisite: Graduate classification.

GEOL 663 Fracture and Faulting of Rocks
Credits 3.3 Lecture Hours.
The structure of fractures and faults in the Earth's crust at the macroscopic and microscopic scale; formation and evolution of faults, faults networks and fault zones; fault-related rocks and faulting mechanisms; influence of faults on fluid flow properties; seismic faulting and creep; current problems and research opportunities.
Prerequisite: Graduate classification.

GEOL 664 Mechanical Analysis in Geology
Credits 3.3 Lecture Hours.
Mechanical analysis of geological problems based on concepts of stress, strain, strength, elasticity, viscosity and plasticity; folding, faulting, dike formation, hydraulic fracturing, magma and glacial flow, and cooling of magmatic bodies.
Prerequisites: MATH 253; approval of instructor.

GEOL 665 Structural Petrology
Credits 4.3 Lecture Hours. 3 Lab Hours.
Mechanisms of rock deformation from single crystal to mountain range; techniques for mapping stresses and strains and for inferring physical conditions and mechanical behavior at time of deformation; laboratory assignments on descriptive techniques include petrographic microscope-universal stage methods, field procedures and data analysis.
Prerequisite: Approval of instructor.

GEOL 666 Clastic Sedimentology and Sedimentary Petrology
Credits 4.3 Lecture Hours. 3 Lab Hours.
Detailed analyses of clastic sedimentary rocks: relationships of facies and depositional environments with emphasis on continental, coastal and shallow shelf clastic sediments; petrography and diagenesis of modern and ancient clastic sediments.
Prerequisites: Optical mineralogy course and sedimentology (undergraduate); graduate classification.

GEOL 678 Earth Science Modeling
Credits 4.3 Lecture Hours. 3 Lab Hours.
Techniques for building, solving and analyzing numerical models applied to a wide variety of problems in geology, geochemistry, geobiology and geophysics; derivation and scaling of conservation laws; finite difference and finite element techniques and error analysis; programming in MATLAB or a high-level language.

GEOL 681 Seminar
Credit 1.1 Lecture Hour.
Reports and discussions of current research and selected topics from geologic literature.
Prerequisite: Graduate classification.

GEOL 685 Directed Studies
Credits 1 to 12.1 to 12 Other Hours.
Enables graduate students to undertake limited investigations not within their thesis or dissertation research and not covered in established curricula.
Prerequisites: Graduate classification and approval of instructor.

GEOL 689 Special Topics in...
Credits 1 to 4.1 to 4 Lecture Hours. 1 to 7 Lab Hours.
Selected topics in an identified area of geology. May be repeated for credit.
Prerequisite: Approval of instructor.

GEOL 691 Research
Credits 1 to 23.1 to 23 Other Hours.
Original research on problems in various phases of geology. Research for thesis or dissertation.

GEOP - Geophysics

GEOP 421 or approval of instructor.

GEOP 611 Geomechanics
Credits 3.3 Lecture Hours.
Development of continuum mechanics and its application to rock deformation; stress, strain, stress equilibrium, constitutive relations; governing equations for elastic solids and viscous fluids formulated and used to solve elementary boundary-value problems which have application to structural geology and solid-state geophysics.
Prerequisite: MATH 221 or equivalent.

GEOP 615 Experimental Rock Deformation
Credits 4.3 Lecture Hours. 3 Lab Hours.
Results of laboratory testing of mechanical properties of rocks at high pressure and temperature; interaction of theoretical, experimental, petrofabric and field studies of rock deformations as applied to problems in structural geology, seismology and engineering; philosophy of experimentation, apparatus design, data interpretation and extrapolation.
Prerequisite: GEOP 611 or GEOL 665 or approval of instructor.

GEOP 620 Geophysical Inverse Theory
Credits 3.3 Lecture Hours.
Inferences about Earth structure from geophysical data; explicit treatment of sparse and noisy observations; construction of smooth Earth models; linear inversion of marine magnetic anomalies from seafloor magnetization; smooth inversion of DC sounding data from electrical structure; seismic tomography and geodetic fault-plane reconstructions; advanced methods for nonlinear deterministic inversion.
Prerequisite: Graduate classification.

GEOP 622 Petroleum Seismology II
Credits 4.3 Lecture Hours. 2 Lab Hours.
Sampling (wavefield sampling); F-K analysis (applications to dip filtering and migration); deconvolution (deterministic and predicative); velocity estimation and tomography (travel time inversion); imaging in time and depth (migration); Zoepritz equations and AVO analysis.
Prerequisite: GEOP 421 or approval of instructor.

GEOP 628 Basin Architecture
Credits 3.3 Lecture Hours.
Tectonic classification of basins; tectonic mechanisms responsible for basin formation: mechanical behavior of the lithosphere; subsidence; geophysical signatures of sedimentary basins; tectonic controls on sedimentation and basin filling; petroleum systems and basin-scale hydrologic systems.
Prerequisite: Approval of instructor.
GEOP 629 Seismic Interpretation
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Introduces the problem of converting seismic properties of reflection time, velocity, impedance, amplitude and phase to geologic parameters of lithology, structures and stratigraphy using both models and real data.
Prerequisite: Approval of instructor.

GEOP 631 Seismic Data Processing
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Methods used to image the Earth using seismic reflection data, including deconvolution, f-k filtering, velocity analysis and migration; processing software; emphasis on field data.
Prerequisite: Graduate classification or approval of instructor.

GEOP 651 Theoretical Seismology
Credits 3. 3 Lecture Hours.
Wave propagation in unbounded and bounded elastic media; seismic reciprocity and the elastodynamic representation theorem; radiation patterns from earthquake sources; body waves, Rayleigh waves, Stoneley waves, Love waves and Lamb waves; characteristic equation for surface waves in a layered half-space; dispersion and phase and group velocities; methods of stationary phase and steepest descents; Cagniard-deHoop technique; ray theory in an inhomogeneous earth; inversion of travel times; viscoelastic wave propagation; normal modes of vibration of the earth.
Prerequisite: GEOP 652 or approval of the instructor. (Offered in alternate years.)

GEOP 652 Earthquake Seismology
Credits 3. 3 Lecture Hours.
Seismometry and earthquake precursors; mathematical theory of elasticity and its application to earthquake studies; dissipation of elastic energy; seismic sources; earthquake risk; free modes of the earth; discrimination between underground nuclear explosions and earthquakes.
Prerequisite: GEOP 421 or GEOP 652 or approval of instructor.

GEOP 655 Borehole Acoustic
Credits 3. 3 Lecture Hours.
Introduces propagation of acoustic waves in boreholes, with applications to petroleum exploration and comparisons to other waveguide phenomena in the earth sciences; survey of full waveform acoustic logging and influence of borehole modes for crosswell and vertical seismic profile experiments; exercised in data analysis with industry software.
Prerequisite: GEOP 421 or GEOP 652 or approval of instructor.

GEOP 660 Physics of the Earth's Interior
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Physics of the Earth's Interior. Structure, composition and physical state of the Earth's interior; constraints on models of the Earth imposed by seismic, gravity, heat flow, and electrical conductivity; thermodynamics and high pressure mineral physics; Earth's motion and deformation; rheology.
Prerequisite: Graduate classification.

GEOP 661 Reservoir Rock Physics
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Poroelasticity and electrodynamics of porous media; Biot Theory, Gassman fluid substitution and advanced rock physics models; relationships between seismic/electromagnetic properties and multiphase reservoir properties such as porosity, saturation, permeability, wettability, connectivity and other pore-structure parameters; computer-based rock physics modeling; application to reservoir characterization; time-lapse reservoir monitoring.
Prerequisite: Approval of instructor. (Spring, alternate years.)

GEOP 681 Seminar
Credit 1. 1 Lecture Hour.
Discussion of subjects of current importance.
Prerequisite: Graduate classification.

GEOP 685 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
For graduate students to undertake limited investigations not within their thesis or dissertation research and not covered in established curricula.
Prerequisites: Graduate classification and approval of department head.

GEOP 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of geophysics. May be repeated for credit.
Prerequisites: Graduate classification and approval of instructor.

GEOP 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research toward thesis or dissertation.

GEOS - Geosciences

GEOS 601 Polar Regions of the Earth: Science, Society, and Discovery
Credits 3. 3 Lecture Hours.
Disciplines and topics that define modern polar science in the north and south; includes history of the Polar Regions, polar geosciences, major polar scientific projects, and special topics; participate as individuals and teams in education, outreach and science projects.
Prerequisite: Graduate classification.

GEOS 642/GEOG 642 Past Climates
Credits 3. 3 Lecture Hours.
Terrestrial and marine proxy records of past climate variability, including tree rings, coral, and sediments; past climate change events such as the Little Ice Age and Medieval Warm Period; greenhouse gases and global temperature; insight into the nature of climate change and challenges humankind faces in the next few centuries.
Prerequisite: Graduate Classification.
Cross Listing: GEG 642/GEOS 642.

GEOS 677 Science, Technology, Engineering and Mathematics (STEM) Teaching Professional Development
Credit 1. 1 Lecture Hour.
Center for Teaching Excellence (CTE) consultation and faculty mentoring in STEM teaching; course topic and syllabus design; learning outcomes and assessment; teaching methodology; reflection on teaching philosophy; reflection on teaching as research. Must be taken on satisfactory/unsatisfactory basis.
Prerequisites: Graduate classification and approval of instructor.
Cross Listing: ENGR 677 and SCEN 677.

GEOS 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of geosciences. May be repeated for credit.
Prerequisites: Graduate classification and approval of instructor.
GERM - German

GERM 603 Introduction to Scientific German
Credits 3.3 Lecture Hours.
Intensive course to prepare graduate students to read scientific material; technical vocabulary and translation. May not count for hours in a supporting field.
Prerequisite: Graduate classification.

GERM 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed individual study of selected problems in the field of German.
Prerequisite: Approval of department head.

GERM 692 Readings
Credits 3.3 Lecture Hours.
Readings in German literary texts in the original language.
Prerequisite: Graduate classification.

HCPI - Healthcare Prof Core In

HCPI 552/NURS 552 Scholarship and Application
Credits 3.3 Lecture Hours.
Integrate theory, evidence, clinical judgment, research and interprofessional perspectives using translational processes to improve patient outcomes; application of available evidence to interdisciplinary clinical practice; identification of gaps in knowledge and development of a spirit of inquiry and lifelong scholarship.
Cross Listing: NURS 552/HCPI 552.

HCPI 555 Leadership and Health Policy I
Credits 3.3 Lecture Hours.
This course will emphasize leadership skills while focusing on ethical decision making and effective working relationships within an organization. It will prepare the health profession leader to intervene at the system level through the policy development process. Advocacy strategies to influence health and health care will be applied.

HCPI 556/NURS 556 Leadership and Health Policy II
Credits 3.3 Lecture Hours.
The development of skills essential to leadership and policy processes, including communication, collaboration, negotiation, delegation and coordination by applying systems theory and complexity science will be promoted. The student will be prepared to assume a leadership role in the management and evaluation of human, fiscal and physical health resources. Students will develop skills in political efficacy and the ability to improve the systems and population outcomes through the development of health policy.
Cross Listing: NURS 556/HCPI 556.

HCPI 557 Contemporary Healthcare Issues
Credits 3.3 Lecture Hours.
This course explores contemporary healthcare issues that affect the medical and dental needs of special care patients. The healthcare issues are examined within historic, economic, and philosophical contexts and students will analyze those that affect individuals with special healthcare needs.

HCPI 558 Survey Research
Credits 3.3 Lecture Hours.
This course will help graduate students develop the knowledge and skills necessary to plan, conduct and evaluate survey research as well as write a survey research report.

HISP - Hispanic Studies

HISP 600 Introduction to Hispanic Studies
Credits 3.3 Lecture Hours.
Interdisciplinary review of linguistic, literary, theoretical, cultural, historical and socio-economic issues of the Hispanic world; study of the mechanics and ethics of scholarly procedure and bibliographical guidance on original research; Spanish-language writing practicum.
Prerequisite: Graduate classification.

HISP 602 Spanish Applied Linguistics
Credits 3.3 Lecture Hours.
Current linguistic research that investigates real-world issues related to Spanish language use and the acquisition of Spanish as a second language.
Prerequisite: HISP 600.

HISP 603 Development of the Spanish Language
Credits 3.3 Lecture Hours.
The origin and development of the Spanish language from pre-Roman to modern period with emphasis on the socio-historical contexts; analysis of literary and documentary evidence of linguistic evolution.
Prerequisite: HISP 602 or approval of instructor.

HISP 605 Spanish for Reading and Translation
Credits 3.3 Lecture Hours.
Lexical and grammatical study and practice for the acquisition of research-practical reading and translation competence in Spanish; for graduate students needing foreign language reading competence; taught in English.
Prerequisite: Graduate classification.

HISP 606 Spanish in the United States
Credits 3.3 Lecture Hours.
In-depth description and analysis of Spanish varieties spoken in the United States, by both traditional and new immigrant populations, including New Mexico and Louisiana Spanish, Mexican, Cuban, Puerto Rican, Dominican, Central and South American dialects; topics include accommodation, koinéization, borrowing, code-switching, attitudes and policies related to language maintenance and shift.
Prerequisite: Graduate classification.

HISP 607 Seminar in Spanish Linguistics
Credits 3.3 Lecture Hours.
Intensive investigation of an issue important to understanding historical linguistics, dialectology, sociolinguistics, developments in theoretical and applied linguistics. May be taken three times for credit as content varies.
Prerequisite: Graduate classification.

HISP 614 Spanish Dialectology
Credits 3.3 Lecture Hours.
Analysis of regional linguistic variation from a synchronic and diachronic perspective; topics include varieties spoken in Spain, the Americas, and worldwide; dialect diversification, contact varieties, Spanish-based pidgins and creoles.
Prerequisite: Graduate classification.

HISP 618 Hispanic Traditional and Popular Culture and Religion
Credits 3.3 Lecture Hours.
Examination of traditional and popular cultural forms in the Hispanic world including legends and proverbs, religious beliefs and practices, music and dance, film and media production; comparison, appreciation, and evaluation of written, visual and oral formats; application of current research methods to the analysis of cultural artifacts.
Prerequisite: Graduate classification.
HISP 620 Studies in Critical Theory
Credits 3. 3 Lecture Hours.
Comprehensive examination of theories of criticism and their application to the study of literature and culture.
Prerequisite: Graduate classification.

HISP 625 U.S. Hispanic Literature and Culture
Credits 3. 3 Lecture Hours.
Study of the origins and evolution of U.S. Hispanic literature, culture and folklore, and U.S. Hispanic regional dialects.
Prerequisite: Graduate classification.

HISP 630 Seminar in Latin American Literature
Credits 3. 3 Lecture Hours.
Study of the literary production of Latin America from colonial times to the present; topics may include colonial literature, Romanticism, Modernism, the novel of the Mexican Revolution, contemporary trends in the Latin American novel, Afro-Hispanic literature, Hispanic Caribbean literature. May be taken three times for credit as content varies.
Prerequisite: Graduate classification.

HISP 640 Seminar in History of Ideas in the Hispanic World
Credits 3. 3 Lecture Hours.
Study of cultural and ideological currents as reflected in Spanish literature; topics may include Spain and European culture, European thought in Latin America, the Renaissance in Spanish literature and society, Spain and Western tradition, national identity, U.S. Hispanic nationalism. May be taken three times for credit as content varies.
Prerequisite: Graduate classification.

HISP 645 Hispanic Women Writers
Credits 3. 3 Lecture Hours.
A study of the development of writing by women in the Hispanic world, including Spain, Latin America, and the United States. Topics include identity and nation, building of a feminine aesthetics, the reception of women writers, literary canons and exclusion, women and/in the Latin American boom, Latina writers in the United States.
Prerequisite: Graduate classification.

HISP 646 Seminar in Cultural Encounters and Borders
Credits 3. 3 Lecture Hours.
Study of cultural encounters across borders in geography, language, society, gender and genre. May be taken three times for credit as content varies.
Prerequisite: Graduate classification.

HISP 650 Research Methods in Linguistics
Credits 3. 3 Lecture Hours.
Examination of various methods of linguistics research and their application to issues in Hispanic linguistics; quantitative data collection (questionnaires, surveys, corpora) and statistical analysis; qualitative methods (ethnographic interviews, focus groups) and discourse analysis; mixed methods and triangulation.
Prerequisite: Graduate classification.

HISP 653 Don Quixote and the Hispanic Novel
Credits 3. 3 Lecture Hours.
Don Quixote and the development of modern fiction, its influence in the Hispanic narrative tradition, from Fernández de Avellaneda to Pérez Galdós, G. García Márquez, and Carlos Fuentes, and presence in the U.S. Hispanic novel.
Prerequisite: Graduate classification.

HISP 660 Seminar in Hispanic Cultural Studies
Credits 3. 3 Lecture Hours.
Intensive study and research on specialized subjects in cultural studies. May be taken three times for credit as content varies.
Prerequisite: Graduate classification.

HISP 664 Seminar in Hispanic Theater
Credits 3. 3 Lecture Hours.
Study of Peninsular, Latin American, U.S. Hispanic, Afro-Hispanic theater and performance. May be taken three times for credit as content varies.
Prerequisite: Graduate classification.

HISP 665 Seminar in Spanish Literature
Credits 3. 3 Lecture Hours.
Study of Peninsular literary periods, genres and authors from medieval to contemporary times. May be taken three times for credit as content varies.
Prerequisite: Graduate classification.

HISP 667 Seminar in Hispanic Genre Studies
Credits 3. 3 Lecture Hours.
Study of selected topics in the works, characteristics and classifications of a given genre cultivated by Hispanic writers. May be taken three times for credit as content varies.
Prerequisite: Graduate classification.

HISP 668 Modern Latin American Poetry from 1850-2010
Credits 3. 3 Lecture Hours.
Study of poetry in Latin America between 1850 and 2010 with particular emphasis on "poesía gauchesca," Romanticism, Modernism and avant-garde, along with neobaroque, barrocó, language poetry and cybertextual poetry.
Prerequisite: Graduate classification.

HISP 670 Seminar in U.S. Hispanic Literature
Credits 3. 3 Lecture Hours.
Study of the literary production of U.S. Hispanic authors; topics may include bilingual literature, Nuyorican literature, Cuban American literature, Chicano literature, the immigrant novel, ethnic autobiography, U.S. Hispanic theater, Chicano theater. May be taken three times for credit as content varies.
Prerequisite: Graduate classification.

HISP 671 Bilingualism in the Spanish-speaking World
Credits 3. 3 Lecture Hours.
Linguistic, psycholinguistic, and social aspects of bilingualism and multilingualism with special reference to Spanish and the United States; bilingual speakers and bilingual acquisition; bilingual communities: language identity, language maintenance and shift; implications for education and society; written and oral manifestations of bilingualism in the media and arts.
Prerequisite: Graduate classification.

HISP 672 Hispanic Film and Performance Arts
Credits 3. 3 Lecture Hours.
Theoretical and historical exploration of cinema and performance arts in the Hispanic world: description and interpretation of films and performance arts such as flamenco and folkloric ballet with particular attention to history, ethnology, artistic trends and tendencies, and relationship to other arts.
Prerequisite: Graduate classification.
HISP 675 Spanish Language Teaching Methods
Credits 3.3 Lecture Hours.
Overview of the current language methodology as it applies to the teaching of Spanish to native and non-native speakers, pedagogical and professional issues related to teaching Spanish at the college level.
Prerequisite: Graduate classification and approval of instructor.

HISP 685 Directed Studies
Credits 1 to 4.1 to 4 Other Hours.
Directed individual study of selected problems in the field of Hispanic linguistics, literature or culture.

HISP 689 Special Topics in...
Credits 1 to 4.1 to 4 Lecture Hours.
Selected topics in an identified area of Hispanic linguistics, literature, or culture. May be repeated for credit.
Prerequisite: Approval of instructor.

HISP 691 Research
Credits 1 to 23.1 to 23 Other Hours.
Thesis research credit given only upon acceptance of completed thesis.
Prerequisite: Twelve hours of advanced courses in Hispanic studies.

HIST - History

HIST 601 Colonial North America
Credits 3.3 Lecture Hours.
The 17th- and 18th-century settlement of European North American colonies; slavery; comparisons of colonial administrations; interactions of Native Americans, Europeans, and African Americans across racial, ethnic, and cultural borders. May be taken two times for credit as content varies.
Prerequisite: Graduate classification.

HIST 604 The Early Republic
Credits 3.3 Lecture Hours.
War for Independence; organizing the new government; the Constitutions; Federalists and Jeffersonians; Wars of 1812 and 1846; race, class, and gender in Jacksonian society; political, social, cultural, economic and territorial changes. May be taken two times for credit as content varies.
Prerequisite: Graduate classification.

HIST 613 Twentieth Century United States Diplomacy
Credits 3.3 Lecture Hours.
U.S. foreign policies from end of Spanish-American War to present; scope, principles, practices, objectives, dangers and lessons learned.
Prerequisite: Approval of department head.

HIST 615 Colonial Latin America
Credits 3.3 Lecture Hours.
Social, ethnic, political, economic, religious, military, and cultural institutions in colonial Latin America, including attention to ethnohistory, women, and comparative colonial systems.
Prerequisite: Graduate classification.

HIST 617 Latin America: The National Period
Credits 3.3 Lecture Hours.
Social, ethnic, cultural, religious, political, and economic history of Latin America.
Prerequisite: Graduate classification.

HIST 620 Sectionalism, Civil War and Reconstruction
Credits 3.3 Lecture Hours.
Antebellum sectional divisions; causes of the Civil War; military campaigns and political and military leadership; the changing status of African Americans; social, political, economic, cultural and diplomatic developments; Reconstruction.
Prerequisite: Graduate classification.

HIST 621 The Emergence of Modern America
Credits 3.3 Lecture Hours.
Social, political, economic and cultural developments in the late 19th and early 20th centuries; industrialization; labor and farmer unrest; immigration; frontier transitions, imperialism.
Prerequisite: Graduate classification.

HIST 623 America since World War II
Credits 3.3 Lecture Hours.
The Cold War; wars in Korea, Vietnam, and the Persian Gulf; the Civil Rights and Women’s Rights Movements; immigration; social, cultural, and gender controversies.
Prerequisite: Graduate classification.

HIST 624 Readings in Race, Ethnicity, and Migration
Credits 3.3 Lecture Hours.
Selected topics and themes in the history of race, ethnicity, and migration; individual and community identity-formation; colonization, slavery, and empire; migration and immigration; social movements; borders and nation-building. May be taken three times for credit as content varies.
Prerequisite: Graduate classification.

HIST 625 Research Seminar in Race, Ethnicity, and Migration
Credits 3.3 Lecture Hours.
Topics and issues in the study of race, ethnicity, and migration history. May be taken three times for credit as content varies.
Prerequisite: Graduate classification.

HIST 628 Historiography
Credits 3.3 Lecture Hours.
Analysis of historical writing and philosophy of history; works of important historians from Herodotus to present; schools, theories and function of history.
Prerequisite: Approval of department head.

HIST 629 Research Methods and Professional Development
Credits 3.3 Lecture Hours.
Prepares for a career in history by exploring the practical side of the profession; includes life as a graduate student, teaching, research methods, ethics, grant-writing, conference papers, publishing, non-academic alternatives, and the job market.
Prerequisite: Approval of instructor.

HIST 630 Quantitative Methods in Historical Research
Credits 3.3 Lecture Hours.
Introduction to formal methods of analysis in historical research using computers; and applying quantitative methods to research problems.
Prerequisite: Approval of instructor.

HIST 631 Reading Seminar in United States History to 1877
Credits 3.3 Other Hours.
Prerequisite: Approval of department head.

HIST 632 Reading Seminar in United States History after 1876
Credits 3.3 Lecture Hours.
Prerequisite: Approval of department head.
HIST 633 The American West  
Credits 3. 3 Other Hours.  
Imigrants and settlement patterns; international conflicts; social, racial,  
ethnic and cultural interactions across frontiers and borders; economic  
developments; politics and admission of new states into the United States;  
women's and gender issues; environmental concerns. May be taken two  
times as content varies.  
Prerequisite: Graduate classification.

HIST 634 Maritime History and Sea Power  
Credits 3. 3 Lecture Hours.  
Examines the maritime and naval history of the world with emphasis on  
the Western World since 1600; trade and communication, exploration,  
technology, maritime communities and naval warfare.  
Prerequisite: Graduate classification.

HIST 635 Writing History  
Credits 3. 3 Lecture Hours.  
Development of writing skills for graduate students in history; preparation  
of publishable-quality article-length essays based on primary sources;  
peer review and criticism.  
Prerequisites: Graduate classification; approval of instructor.

HIST 639 Readings in Asian History  
Credits 3. 3 Lecture Hours.  
Social and cultural transformation of modern Asia; politics and  
government; wars and military; imperialism and foreign relations;  
economic development, society, and culture. May be taken three times  
for credit as content varies.  
Prerequisite: Graduate classification.

HIST 640 Readings in Atlantic World and Caribbean History  
Credits 3. 3 Lecture Hours.  
Selected topics and themes in the history of the Atlantic World and  
Caribbean; revolutions, European colonialism in Africa and the Americas;  
transatlantic slave trade; growth of plantation societies; abolition of  
slavery; post-emancipation period. May be taken three times for credit  
as content varies.  
Prerequisite: Graduate classification.

HIST 641 Research Seminar in Atlantic World and Caribbean History  
Credits 3. 3 Lecture Hours.  
Topics and issues in the history of the Atlantic World and the Caribbean.  
May be taken three times for credit as content varies.  
Prerequisite: Graduate classification.

HIST 643 Reading Seminar in European History from Renaissance to  
French Revolution  
Credits 3. 3 Lecture Hours.  
Reading seminar in European history from the Renaissance to the French  
Revolution, classic and current themes, debates and methodologies in  
European history from the Renaissance to the French Revolution.  
Prerequisite: Approval of department head.

HIST 644 Reading Seminar in European History from French  
Revolution to Present  
Credits 3. 3 Lecture Hours.  
Reading seminar in European history from the French Revolution to  
the present; classic and current themes, debates and methodologies in  
European history from the French Revolution to the present.  
Prerequisite: Approval of department head.

HIST 645 Research Seminar in War and Society  
Credits 3. 3 Lecture Hours.  
Research and writing seminar focusing on issues and topics in war and  
society. May be taken four times for credit as content varies.  
Prerequisite(s): Graduate classification.

HIST 646 Readings in War and Society  
Credits 3. 3 Lecture Hours.  
Reading seminar focusing on methodological issues related to the study  
of war and society; impact of organized violence and warfare on social  
structures; military organizations and operations; the experience of non-  
combatants. May be taken four times for credit as content varies.  
Prerequisite: Approval of instructor and director of graduate studies;  
graduate classification.

HIST 648 Readings on Topics in Modern European History  
Credits 3. 3 Lecture Hours.  
Readings on topics covering the history of the political, social, cultural,  
intellectual, and diplomatic development of modern Europe as a whole  
or in part, or that of individual nations, empires, or regions. May be taken  
three times for credit as content varies.  
Prerequisite: Graduate classification.

HIST 666 History of Technology  
Credits 3. 3 Lecture Hours.  
Origins of the subfield; historiography; industrial development and labor  
relations; impact on the military; gender, class, and other social aspects.  
Prerequisite: Graduate classification.

HIST 674 Readings in Chicano-Latino History  
Credits 3. 3 Lecture Hours.  
Selected topics and themes related to Chicano-Latino history; race/  
ethnicity, gender/sexuality, labor adaption and resistance movements;  
colonialism, transnationalism, immigration; identity, and citizenship. May  
be taken three times for credit as content varies.  
Prerequisite: Graduate classification.

HIST 675 Research Seminar in Chicano-Latino History  
Credits 3. 3 Lecture Hours.  
Seminar focuses on researching and writing, core skills for historians;  
conduct primary source research in a subfield Chicano-Latino history and  
compose an article-length paper. May be taken three times for credit.  
Prerequisite: Graduate classification.

HIST 677 Modern Britain  
Credits 3. 3 Lecture Hours.  
Political, social, cultural, economic and diplomatic development of the  
United Kingdom in the 20th Century. May be taken for credit two times  
as content varies.  
Prerequisite: Graduate classification.

HIST 678 Readings in the Southwest and its Borders  
Credits 3. 3 Lecture Hours.  
Reading seminar focusing on how groups in the American Southwest  
articulate, enforce and challenge difference; brings together disparate  
historiographies to consider a variety of theoretical and methodological  
approaches used in understanding borders; examines contact, conflict and  
change across various kinds of historical and cultural boundaries. May be  
taken two times for credit as content varies.  
Prerequisite: Graduate classification.

HIST 679 Research Seminar in the Southwest and its Borders  
Credits 3. 3 Lecture Hours.  
Research and writing seminar focusing on selected topics and themes in  
an identified area of Southwest Border Studies. May be taken two times  
for credit as content varies.  
Prerequisite(s): Graduate classification.
HIST 685 Directed Studies  
Credits 1 to 6. 1 to 6 Other Hours.  
Individual problems of research or scholarly activity not pertaining to thesis  
or dissertation, or selected instruction not covered by other courses.  
Prerequisite: Approval of instructor and department head.

HIST 689 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours.  
Selected topics in an identified area of American or European history. May  
be repeated for credit.

HIST 691 Research  
Credits 1 to 23. 1 to 23 Other Hours.  
Thesis research.  
Prerequisite: Approval of department head.

HLTH - Health

HLTH 605 Health Research Methods  
Credits 3. 3 Lecture Hours.  
Designing and conducting health education and health promotion research  
including survey design, sampling, data collection, management and  
analysis.  
Prerequisite: Graduate classification.

HLTH 607 International Health  
Credits 3. 3 Lecture Hours.  
Health and health care delivery around the world; how various  
organizations are addressing global health concerns; includes emerging  
diseases, eradication of disease, global nutrition, family planning;  
emphasis on providing health information on a cross cultural environment.  
Prerequisite: Graduate classification.

HLTH 609 Applied Epidemiology  
Credits 3. 3 Lecture Hours.  
Principles and methods of epidemiology; epidemiologic investigation and  
research are discussed with emphasis on application of epidemiological  
methods to health promotion and disease prevention.  
Prerequisite: Graduate classification.

HLTH 610 Health Assessment  
Credits 3. 3 Lecture Hours.  
Concepts and procedures of health assessment, interpretation of health  
appraisal instruments; function of health assessment in health education,  
health promotion and wellness programs.  
Prerequisite: HLTH 425 or course in statistics.

HLTH 611 Organization and Administration of Health  
Credits 3. 3 Lecture Hours.  
Organizing and management of public health education and health  
promotion programs; public health administration issues and management  
skills emphasized.  
Prerequisite: Graduate classification.

HLTH 629 Environmental Health  
Credits 3. 3 Lecture Hours.  
Examination of environments that threaten health and implications for  
human health and community health planning; emphasis on planning and  
implementing health education and promotion strategies to promote a  
healthy environment.  
Prerequisite: Graduate classification.

HLTH 630 Health Program Planning  
Credits 3. 3 Lecture Hours.  
Public health education and promotion program planning including  
educational diagnosis, selection of educational strategies, program  
implementation and evaluation; using planning models.  
Prerequisite: Graduate classification.

HLTH 631 Community and Public Health  
Credits 3. 3 Lecture Hours.  
Community health problems; public health laws; national, state and local  
health agencies.

HLTH 632 Health Program Evaluation  
Credits 3. 3 Lecture Hours.  
Evaluation of public health education and promotion programs; overview of  
theory of program evaluation, methodology and application.  
Prerequisite: Graduate classification.

HLTH 634 Women's Health  
Credits 3. 3 Lecture Hours.  
Women's Health. Health and health care concerns of women; emphasis  
on importance of women's health issues to public health; identification  
of special concerns for planning and implementation of women's health  
programs.  
Prerequisite: Graduate classification.

HLTH 635 Race, Ethnicity and Health  
Credits 3. 3 Lecture Hours.  
Explore racial, ethnic, and cultural dimensions that underlie health and  
health disparities; special attention to culture, social economic status,  
and governmental policies as they influence the adaptations of health  
practices.  
Prerequisite: Graduate classification.

HLTH 639 Behavioral Foundations of Health Education  
Credits 3. 3 Lecture Hours.  
Theoretical and historical foundations of health behavior research:  
emphasis placed on understanding and predicting behavior, as well as  
facilitating behavior change programs through health education.

HLTH 640 Health Intervention and Wellness  
Credits 3. 3 Lecture Hours.  
Wellness as a concept and a process; systematic planning,  
implementation and evaluation of wellness programs and review of  
research relating to the efficacy of wellness programs and methods.  
Prerequisite: HLTH 415 or equivalent.

HLTH 641 Foundations in Health Education  
Credits 3. 3 Lecture Hours.  
Introduction to the profession of Health Education; basic history,  
philosophy, theory, and standards; responsibilities and competencies of  
the health educator; methods of practice.  
Prerequisites: Graduate classification; admission to E-Master's program  
in Health Education.
HLTH 642 Health Education Ethics  
**Credit 1. 1 Lecture Hour.**  
Basic concepts in health education ethics; ethical dilemmas faced by health educators; articulated ethics framework; includes fairness, justice, and the reduction of unjust disparities in the health education practice.  
**Prerequisites:** Graduate classification; admission to E-Master's program in Health Education.

HLTH 643 Introduction to Epidemiology  
**Credits 2. 2 Lecture Hours.**  
Principles and methods of epidemiology; epidemiologic investigations and research; emphasis on application of epidemiological methods for health promotion and disease prevention.  
**Prerequisites:** Graduate classification; admission to E-Master's program in Health Education.

HLTH 644 Health Education Theory  
**Credits 3. 3 Lecture Hours.**  
Theory in the practice of Health Education; selected theories and their structure, function, and value to health professionals.  
**Prerequisites:** Graduate classification; admission to E-Master's program in Health Education.

HLTH 645 Health Education Research and Program Evaluation  
**Credits 3. 3 Lecture Hours.**  
Design and conduct health education and health promotion research and evaluation; provide an overview of program evaluation and research theory, methodology, and application.  
**Prerequisites:** Graduate classification; admission to E-Master's program in Health Education.

HLTH 646 Health Education Training  
**Credits 3. 3 Lecture Hours.**  
Designing, implementing, and evaluating workforce training for professional health educators; emphasis on evidence-based workforce training.  
**Prerequisites:** Graduate classification; admission to E-Master's program in Health Education.

HLTH 649 Advanced Health Behavior Theory  
**Credits 3. 3 Lecture Hours.**  
Examine the nature of theoretical thinking and its application to health research design, analysis, and program development; explore new theoretical trends in health education sciences research and education; exposed to an informed critique of current health behavior theories and their uses.  
**Prerequisite:** HLTH 639 or approval of instructor.

HLTH 659 Writing for Health Educators  
**Credits 3. 3 Lecture Hours.**  
Practical application activities to enhance writing appropriate for entry level PhD trained professionals in their field; taught in a seminar format.  
**Prerequisite:** Graduate classification.

HLTH 660 Health Issues in Aging, Dying and Death  
**Credits 3. 3 Lecture Hours.**  
Health issues related to aging, dying and death including: health problems of aging individuals; community response to health problems of aging individuals; issues regarding definitions of death; bereavement, grief and mourning and educational implications of aging, dying and death.  
**Prerequisite:** Approval of instructor.

HLTH 669 Professional Skills Development for Health Educators  
**Credits 3. 3 Lecture Hours.**  
Provides the tools necessary to become an effective health education professional; issues will be discussed that will be critical to the success of a future university faculty member.  
**Prerequisite:** Graduate classification.

HLTH 671 Interdisciplinary Seminar in Prevention Science  
**Credit 1. 1 Lecture Hour.**  
Contemporary research programs that represent interdisciplinary field of prevention science; strengths and limitations of diverse theoretical and conceptual bases of research in prevention science, application of research findings to issues related to the prevention of mental, emotional, and physical health problems and the promotion of well-being. May be taken 3 times for credit.  
**Prerequisite:** Graduate classification and enrollment in the interdisciplinary graduate certificate in prevention science or approval of instructor.  
**Cross Listing:** COMM 671, RPTS 620 and SPSY 620.

HLTH 681 Seminar  
**Credit 1. 1 Lecture Hour.**  
Reports and discussions of topics of current interest in the discipline.

HLTH 684 Professional Internship  
**Credits 1 to 6. 1 to 6 Other Hours.**  
Designed to permit students the opportunity for on-the-job training with professionals in schools and public and institutional health agencies.  
**Prerequisites:** 12 semester hours of selected graduate work; approval of department head.

HLTH 685 Directed Studies  
**Credits 1 to 12. 1 to 12 Other Hours.**  
Directed study of selected problems within the discipline. May be repeated for credit.  
**Prerequisite:** Approval of department head.

HLTH 689 Special Topics in...  
**Credits 1 to 4. 1 to 4 Lecture Hours.**  
Selected topics in an identified area of the discipline. May be repeated for credit.  
**Prerequisite:** Approval of department head.

HLTH 690/KINE 690 Theory of Research in the Discipline  
**Credits 3. 3 Lecture Hours.**  
Theory and design of research problems and experiments in various subfields of the discipline; communication of research proposals and results; evaluation of current research of faculty and students and review of current literature. May be repeated for credit.  
**Cross Listing:** KINE 690/HLTH 690.

HLTH 691 Research  
**Credits 1 to 23. 1 to 23 Other Hours.**  
Research for thesis or dissertation.  
**Prerequisite:** Approval of committee chair.
HORT - Horticultural Sciences

HORT 604 Applied Physiology of Horticultural Crops
Credits 3. 3 Lecture Hours.
Chemical, biological, and environmental factors in growth and differentiation and their application to ornamental, fruit, and vegetable crops; growth kinetics; source-sink relations; fruit development; seed development and germination; juvenility; apical dominance; growth retardants; pruning; photoperiodism; flowering; sex expression; and senescence.
Prerequisite: MEPS 313 or approval of instructor.

HORT 605 Internet Applications for Horticulture
Credits 3. 2 Lab Hours.
Internet applications for horticulture presents the theory and practice of computer networks and networking so that the information and educational content (not the hardware) is the key; the focus is on the World Wide Web and creating Web materials for teaching, research and extension applications.
Prerequisite: Graduate classification.

HORT 608 Plants for Landscape Design
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Identification and use of indigenous and introduced plants in landscape designs; plants for special uses in commercial and residential developments; emphasis on ornamental attributes, identification, cultural requirements, limitations and adaptability in urban and suburban environments for important taxa; discussion of current issues, research, and trends in selection, marketing, and utilization of plants for landscape design.
Prerequisite: HORT 201 or HORT 308 or BIOL 101, or approval of instructor, not open to students with previous credit for HORT 306.*

HORT 609 Plants for Landscape Design II
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Identification and use of indigenous and introduced landscape plants; plants for special uses in urban environments; emphasis on plants' ornamental attributes, cultural requirements, and adaptability in urban and suburban environments. Not open to students who have completed HORT 308.
Prerequisite: BOTN 101, HORT 201, HORT 306, HORT 608, or approval of instructor.

HORT 610/MEPS 610 Physiological and Molecular Basis for Plant Stress Response
Credits 3. 3 Lecture Hours.
Provide the tools to understand the molecular and physiological consequences caused by environmental factors (abiotic and biotic) on plant growth and development and the mechanisms of stress adaptation to stress.
Prerequisite: MEPS 313 or equivalent.
Cross Listing: MEPS 610/HORT 610.

HORT 611 Ecology of Urban Landscape
Credits 3. 3 Lecture Hours.
Basic concepts and current topics in ecology or urban landscapes; role of plants in urban and fragmented ecosystems ranging from individual plant responses to changes in ecosystem function; discuss recent literature in the field of urban plant ecology.
Prerequisite: An undergraduate or graduate class in plant biology or plant ecology is recommended.
HORT 645/SCSC 645 World Agriculture and International Plant Breeding
Credit 1. 1 Lecture Hour.
Evolution of world agriculture; plant breeding and improved varieties; international agricultural research centers and green revolution; population growth; environmental challenges; IPR; role of plant breeding and biotechnology in meeting world food needs.
Prerequisite: SCSC 304, HORT 404/GENE 404 or approval of instructor.
Cross Listing: SCSC 645/HORT 645.

HORT 681 Seminar
Credit 1. 1 Lecture Hour.
Student and staff participation in review of literature and reporting on current developments in research on production and processing of horticultural crops. Required of all graduate students in horticulture and floriculture. May be taken more than once but not exceed 3 hours of credit.
Prerequisite: Graduate classification.

HORT 684 Professional Internship
Credits 1 to 4. 1 to 4 Other Hours.
Program planned to provide professional training in student's particular field of interest. Faculty and employer will supervise the activity. Work-study planned as a part of the Master of Agriculture degree program in fruit, ornamentals or vegetable production, processing and handling or landscape or garden design and maintenance. May be repeated for credit.
Prerequisite: Approval of instructor.

HORT 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Individual problems of research or scholarly activity not pertaining to thesis or dissertation, or selected instruction not covered by other courses. Final documentation of directed study is required.
Prerequisite: Approval of instructor.

HORT 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 1 to 4 Lab Hours.
Selected topics in an identified area of horticulture. May be repeated for credit.
Prerequisite: Approval of department head.

HORT 690 Theory of Research
Credit 1. 1 Lecture Hour.
Design of research experiments in various fields of horticulture and floriculture and evaluation of results with the aid of examples taken from the current scientific literature. May be repeated for credit.

HORT 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research in horticultural problems for thesis or dissertation.

HORT 693 Professional Study
Credits 1 to 9. 1 to 9 Other Hours.
Approved professional paper undertaken as the requirement for the Master of Agriculture. May be taken more than once, but not to exceed 3 hours of credit towards a degree.
Prerequisite: Graduate classification.

HPCH - Health Promo Comm Hlth

HPCH 603 Social and Behavioral Determinants of Health
Credits 3. 3 Lecture Hours.
An overview of theories and principles focusing on social and behavioral determinants of health, the social-ecological approach to the examination of health and health behaviors, social patterns of health behavior, and an introduction to health promotion and public health interventions. Intended for non-majors.

HPCH 604 Social Ecology and Health Behavior
Credits 3. 3 Lecture Hours.
Social determinants of health behavior, social organization and stressors on human health, social-ecological approach to the examination of health behaviors, social patterning of disease and health behavior, basic theories of health behavior and communication, public health program diffusion and implementation. Intended for majors only.

HPCH 605 Social and Behavioral Research Methods
Credits 3. 3 Lecture Hours.
Overview of quantitative and qualitative methods used by public health professionals, advantages and limitations of different methods, mechanisms for gathering data in a community setting, techniques for managing and analyzing data, and strategies for presenting information to community members.
Prerequisite: HPCH 604 or equivalent, or permission of instructor required for non-majors.

HPCH 606 Public Health Informatics
Credits 3. 3 Lecture Hours.
Provides an overview of the field of public health informatics, and focus on PHI competencies for public health practitioners. Key informatics challenges and current topics, such as evidence-based public health data and vocabulary standards, privacy and security, interoperability and health information exchange, electronic health records, and data integration, are explored. Students will learn techniques for searching public health literature and will practice informatics evaluation skills by assessing a health information system.

HPCH 607 Biological Basis of Health and Common Diseases
Credits 3. 3 Lecture Hours.
(3-0) The Biological Basis of Health and Common Diseases is designed to provide public health students grounding in the biological basis of health human functioning and the biology of diseases that they are likely to encounter in public health practice. The course provides an overview of molecular biology, genetics, immunology, diabetes, obesity, cardiovascular disease, hypertension, the metabolic syndrome, cancer, respiratory infections, intestinal infections, and emerging infectious diseases. The course is recommended for all public health students who do not have significant training in medicine, nursing, pharmacy, or closely related field.

HPCH 610 Community Organization and Assessment
Credits 3. 3 Lecture Hours.
The nature of community and its role as setting, target and facilitator of health among its population. Approaches to assessing community factors that influence health status; application of that information in planning community-based interventions.
Prerequisite: HPCH 603 or HPCH 604, or approval of instructor.

HPCH 611 Program Planning
Credits 3. 3 Lecture Hours.
Use of theory and evidence in planning public health interventions, appropriate objective development, integration of levels of intervention, consolidation of intervention strategies into coherent program design, program implementation, diffusion and institutionalization.
Prerequisite: HPCH 604 or approval of instructor.

HPCH 612P Public Health Interventions
Credits 3. 3 Lecture Hours.
Examination of the conceptualization and theoretical foundation, design, implementation, and effectiveness of specific public health interventions at the individual, interpersonal, organizational, community, and policy levels for addressing particular chronic or infectious diseases related to health conditions or problems (specific focus may vary by semester).
Prerequisite: Either HPCH 603 or HPCH 604.
HPCH 613 Program Evaluation
Credits 3.3 Lecture Hours.
Study of program evaluation techniques. The course focuses on issues relevant to the assessment and evaluation of health promotion interventions and examines the social context of program evaluation and a variety of epistemological orientations.
Prerequisite: Either HPCH 603 or HPCH 604; HPCH 605; HPCH 611 (or concurrent).

HPCH 620 Introduction to Border Health
Credits 3.3 Lecture Hours.
This course introduces the U.S.-Mexico border as a dynamic region where public health problems grow out of a combination of factors in the United States and Mexico. A major focal point is community health, to which the course relates the various public health disciplines as an introduction to public health. Overarching factors such as population movement, diverse sociocultural and economic demographics, and a rapidly expanding population influence infectious disease transmission and general population health. Information about the history and cultures of the South Texas region provide background information for understanding the confluence of factors shaping regional public health. Economic forces that influence health include the maquiladora system of binational factories that operate in a free-trade zone environment and the need for hand labor in various economic sectors in different parts of the United States. Environmental challenges in the region include water pollution and scarcity, air pollution, food supply problems, and poor urban and rural infrastructure. Policy and political factors also affect population health and economics along the border (e.g., NAFTA, homeland security, and state regulation of health insurance plans).

HPCH 635 Community Health Development
Credits 3.3 Lecture Hours.
The theory and practice of community development for health; a comparative study of community development models in diverse communities. Analysis of how to create systematic and sustainable community change related to health and healthy communities, with attention to rural, minority and underserved communities.
Prerequisites: Either HPCH 603 or HPCH 604; HPCH 610; or approval of instructor.

HPCH 636 Health Care Systems in China
Credits 3.3 Lecture Hours.
This is a study abroad course designed for public health graduate students who have interests in global health. Students will spend 2 weeks in Nanjing, Shanghai, and Beijing of China. Students will visit different public health agencies, health care, delivery organizations, and community health centers; students will also attend lectures delivered by public health and medicine faculty members from host institutes and discuss with Chinese public health students and professionals. Pre-travel lectures and post-travel presentations are also included.

HPCH 637 Principles of Health Program Management
Credits 3.3 Lecture Hours.
This course prepares the student with knowledge and skills to assume a role in the management of health promotion programs. The course covers management theory, leadership, organizational assessment, planning, decision-making, organizational structure, budgeting, marketing and human resource management.

HPCH 638 Seminar on Alcohol, Tobacco and Other Drugs
Credits 2 to 3.2 to 3 Lecture Hours.
In-depth study of public health issues and concerns related to alcohol, tobacco and other drug use. Includes overview of contributing causative and mediating factors of drug use and theory-based prevention and intervention strategies and programs.
Prerequisite: HPCH 604 or approval of instructor.

HPCH 639 HIV/AIDS: A Public Health Issue
Credits 0 to 3.0 to 3 Lecture Hours.
This course provides an overview of HIV/AIDS, including history of the epidemic, trends and geographic disparities, economic and social impact, high risk populations, prevention interventions, treatment and care. Both domestic and international aspects of the HIV/AIDS pandemic will be covered. The focus will be prevention and social and policy focus that divert attention away from practical steps that need to be taken to prevent the spread of HIV.
Prerequisite: Graduate students only.

HPCH 640 Diet and Lifestyle Interventions for Obesity, Diabetes and Cardiovascular Disease
Credits 3.3 Lecture Hours.
Diet and Lifestyle Interventions for Obesity, Diabetes, and Cardiovascular Disease. Diet and Lifestyle Interventions for Obesity, Diabetes and Cardiovascular Disease reviews social and behavioral research related to the prevention and control of these diseases. The course reviews policy guidelines, the social and behavioral activities that are associated with beneficial clinical outcomes, and the methods used to increase these activities.

HPCH 665 Proposal Writing and Grants Management
Credits 3.3 Lecture Hours.
Introduction to skills needed to successfully develop proposals for funding in fields related to healthcare and social services. Course focuses on best methods used by community-based organizations to develop public and private funding applications, develop and maintain relationships with the funding agency and assess organizational implications of applying for and managing grants.
Prerequisite: HPCH 604 for Health Promotion and Community Health Sciences Students.

HPCH 670 Seminar in History and Context of Public Health
Credits 3.3 Lecture Hours.
This doctoral seminar will introduce doctoral students to major themes in public health with emphasis on the evolution of public health problems, and the future of public health. This course sets public health within context and discusses relationship to other related fields of study.
Prerequisite: Approval of instructor.

HPCH 671 Seminar in Public Health Theory
Credits 3.3 Lecture Hours.
This doctoral seminar will review and reflect upon theories and perspectives that relate to public health problems and proposed solutions. Students will critique current social and behavioral theories, discussing commonalities and differences across multiple theoretical approaches for addressing public health problems.
Prerequisite: Approval of instructor.
HPCH 672 Seminar in Public Health Interventions  
Credits 3. 3 Lecture Hours.  
This doctoral seminar will focus on the examination of the theoretical foundation, implementation and effectiveness of public health interventions from a multi-level approach. The emphasis will be on the translation from research to practice, understanding the elements of evidence-based intervention strategies.  
Prerequisite: Approval of instructor.

HPCH 673 Seminar in Public Health Evaluation  
Credits 3. 3 Lecture Hours.  
This doctoral seminar will review the conceptual and methodological elements of public health evaluations, providing an opportunity for reflection on the strengths and weaknesses of different public health evaluations. Students will be asked to design an evaluation strategy for a self-identified health problem/intervention approach.  
Prerequisite: Approval of instructor.

HPCH 674 Seminar in Social and Behavioral Health  
Credits 3. 3 Lecture Hours.  
This doctoral seminar will cover topics of interest to faculty and students within the purview of social and behavioral health. The topic will be assigned the first day of class by mutual agreement of participating students and faculty. Students will be expected to reflect critically on the assigned literature and participate in classroom discussions. May be taken four times.  
Prerequisite: Approval of instructor.

HPCH 684 Practicum  
Credits 3 to 6. 3 to 6 Other Hours.  
Field placement experience where students work closely with a departmental faculty member and appropriate field professional(s) applying skills and techniques acquired through course work. Satisfactory/Unsatisfactory grading option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day, outlined in the course syllabus and not be altered once the course has begun.  
Prerequisite: Approval of student's academic advisor.

HPCH 685 Directed Study  
Credits 1 to 12. 1 to 12 Hours.  
Student investigation of a topic not covered by other formal courses. May be repeated for a maximum of 12 hours total credit. Satisfactory/Unsatisfactory grading option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day, outlined in the course syllabus and not be altered once the course has begun.  
Prerequisite: Approval of student's academic advisor.

HPCH 686 Directed Research  
Credits 1 to 9. 1 to 9 Other Hours.  
Student research initiative not within the scope of a thesis or dissertation. May be repeated for a maximum of nine credits. Satisfactory/Unsatisfactory grading option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day, outlined in the course syllabus and not be altered once the course has begun.  
Prerequisite: Approval of student's academic advisor.

HPCH 689 Special Topics - Social And Behavioral Health  
Credits 1 to 4. 1 to 4 Other Hours.  
Revolving topics seminar in an area of specialization within the department. May be repeated for credit. Satisfactory/Unsatisfactory grading option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day, outlined in the course syllabus and not be altered once the course has begun.  
Prerequisite: Approval of student's academic advisor.

HPCH 691 Thesis  
Credits 3 to 6. 3 to 6 Lecture Hours.  
Research for master's thesis. Satisfactory/Unsatisfactory grade option only.  
Prerequisite: Approval of student’s academic advisor and department head.

HPCH 695 Doctoral Capstone  
Credits 3 to 9. 3 to 9 Other Hours.  
Doctoral Dissertation or equivalent project(s). Satisfactory/Unsatisfactory grade option only. May be repeated for credit.  
Prerequisite: Approval of instructor.

HPED - Health Professions Ed

HPED 5225 Teaching Skills for Health Professions Educators  
Credit 1. 1 Other Hour.  
Provides an overview of teaching principles and methods. Geared toward the special needs of the health profession educator. Students are presented with materials and are actively involved in exercises concerned with all aspects of the teaching/learning process. Seminar and workshop format.

HPED 5343 Educational Assessment  
Credits 2. 2 Lecture Hours.  
Promotes an in-depth understanding of assessment and continuous quality improvement in higher education. Students create assessment plans for the course and program level.

HPED 5V13 Teaching Internship  
Credits 0 to 5. 0 to 5 Other Hours.  
Students teach in the preclinical laboratories, clinics and lecture in selected courses. A progression from teaching observation to lecture and course development and presentation occurs over the duration of the program. Students work closely with course directors in the development of teaching and clinical activities.

HPED 5V25 Research Practicum  
Credits 0 to 5. 0 to 5 Other Hours.  
Each student works with a mentor to conduct research in biomedical, clinical science or education. Students are required to prepare a research proposal in their first year and to complete a research project by the end of their second year.

HPED 5V26 Literature Review Seminar  
Credits 0 to 5. 0 to 5 Other Hours.  
This course is designed in a journal club format. Each semester, a major topic is explored through reading and discussion. Students take responsibility for leading class discussions. Semester topics address current issues in higher education.

HPED 5V27 Teaching Practicum  
Credits 0 to 5. 0 to 5 Other Hours.  
Each student works with a teaching mentor to improve teaching effectiveness. This mentoring process includes providing written feedback from students concerning teaching characteristics, self-analysis by the teaching student, observation by a mentor and videotaping of teaching session in the lecture, laboratory and clinical setting. Mentors and students meet in a seminar setting to discuss teaching and learning issues.
IBUS - International Business

IBUS 645/FINC 645 International Finance
Credits 1 to 3. 1 to 3 Lecture Hours.
Problems confronted by financial managers of firms with international business operations; international money and capital markets; exchange rate risks and political risks. May be repeated for up to 3 hours credit. Classification 6 students may not enroll in this course.
Prerequisite: FINC 612 or FINC 629 or FINC 635.
Cross Listing: FINC 645/IBUS 645.

IBUS 646/ACCT 646 International Accounting
Credits 3. 3 Lecture Hours.
Introduction and examination of accounting issues unique to multinational enterprises and international business activity. Classification 6 students may not enroll in this course.
Prerequisites: ACCT 328; FINC 341.
Cross Listing: ACCT 646/IBUS 646.

IBUS 667/MGMT 667 Multinational Enterprises
Credits 3. 3 Lecture Hours.
Graduate seminar in international business; multinational enterprises (MNEs) are studied from various perspectives including economics, management, entry and expansion strategies, contractual agreements, transfer pricing, impacts on home and host countries, MNE-state relations, regional integration, public policies towards MNEs.
Prerequisite: Graduate classification.
Cross Listing: MGMT 667/IBUS 667.

IBUS 677/MKTG 677 Multinational Marketing Management
Credits 3. 3 Lecture Hours.
Theoretical and empirical materials on multinational marketing; nature and justification of international trade, analysis of environments faced by multinational firms and formulation of multinational marketing strategy. Classification 6 students may not enroll in this course.
Prerequisite: MKTG 613 or 621 or equivalent.
Cross Listing: MKTG 677/IBUS 677.

IBUS 678/MGMT 678 International Management
Credits 3. 3 Lecture Hours.
Survey of the issues, problems, challenges, and opportunities facing organizations competing in a global economy; includes: the environment of international management, international strategies, forms of organization design used by multinational firms, managing human resources in an international context, and cultural and control issues facing the international manager.
Prerequisite: Graduate classification.
Cross Listing: MGMT 678/IBUS 678.

IBUS 679/MGMT 679 International Business Policy
Credits 3. 3 Lecture Hours.
Determinants of U.S. competitiveness in international markets; the international environment of business; introduction to multinational enterprises, global competition, international organizations, protection of intellectual property; international trade regulations; strategic trade theory.
Prerequisite: Graduate classification.
Cross Listing: MGMT 679/IBUS 679.

IBUS 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed study of selected international business problems using recent developments in business research methods. Classification 6 students may not enroll in this course.
Prerequisite: Graduate classification and approval of instructor.
IBUS 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of international business. May be repeated for credit. Classification 6 students may not enroll in this course.
Prerequisite: Approval of instructor.

IBUS 692 International Professional Study II
Credits 1 to 12. 1 to 12 Lecture Hours.
Approved professional studies abroad on international business issues and organizations. May be taken to meet requirements for the MBA or MS degrees in business. Course to be taken for a grade. May be taken 3 times for credit.
Prerequisite: Admission to approved program.

IBUS 693 International Professional Study
Credits 1 to 12. 1 to 12 Other Hours.
Approved professional studies abroad on international business issues and organizations. May be taken to meet requirements for the MBA or MS degrees in business. To be taken on a satisfactory/unsatisfactory basis.
Prerequisites: Admission to approved program; approval of program coordinator.

ICPE 601 Environmental Issues of Energy Systems
Credit 1.5. 1.5 Lecture Hour.
(1.5-0). 5. Introduction to energy-related engineering principles and energy conservation efficiency; basic processes and chemicals/materials used in the current and emerging energy systems; impact on the environment; approaches for minimizing contaminants released by usage of energy sources.
Prerequisite: Graduate classification.

ICPE 602 Reservoir Characterization and Modeling
Credit 1.5. 1.5 Lecture Hour.
(1.5-0). 5. Application of geostatistical techniques to build reservoir models through integration of geological core/well log, seismic and production data to generate a consistent reservoir description; background and insights to geostatistical modeling techniques and situation where the application of geostatistics could add value.
Prerequisite: Graduate classification.

ICPE 603 Bioenergy
Credit 1.5. 1.5 Lecture Hour.
(1.5-0). 5. Introduction to the fundamentals of biomass (biochemistry and resources); basics of important processing technologies for the pre-treatment and conversion of biomass to useful products.
Prerequisite: Graduate classification.

ICPE 604 Energy Systems Engineering I
Credit 1.5. 1.5 Lecture Hour.
(1.5-0). 5. State-of-the-art topics for energy systems engineering including modelling of energy systems, mixed integer and continuous optimization techniques for the analysis of energy systems, model based control, and interactions of design, control and scheduling of power and energy systems.
Prerequisite: Graduate classification.

ICPE 605 Energy Systems Engineering II
Credit 1.5. 1.5 Lecture Hour.
(1.5-0). 5. State-of-the-art topics for energy systems engineering including modeling of hybrid feedstock energy systems, energy supply chain networks, polygeneration systems, model predictive control, fuel cells and combined heat and power systems.
Prerequisite: ICPE 604.

ICPE 606 Introduction to Optimization
Credit 1.5. 1.5 Lecture Hour.
(1.5-0). 5. Basics of deterministic optimization with focus on modeling and computer solutions; practical examples to develop understanding of modeling and solution techniques that can be used to improve decision-making; linear, non-linear, mixed integer, combinatorial and network optimization problems.
Prerequisite: Graduate classification.

ICPE 607 Energy Accounting
Credit 1.5. 1.5 Lecture Hour.
(1.5-0). 5. Exploration of the financial aspects of the energy industry; emphasis on oil and gas with additional attention placed on all sources of power generation including alternatives; interactive with cases worked in each session; advanced preparation guided by the instructor.
Prerequisite: Graduate classification.

ICPE 608 Beyond Science and Technology
Credit 1.5. 1.5 Lecture Hour.
: The Role of Policy in Future of Energy in the U.S. (1.5-0). 5. Introduction to the history of U.S. science and technology policy with a specific emphasis on energy; focus on regulatory rules, the key government agencies at the national level, the role states and localities play, how government funds are allocated in research and technology transfer related to energy innovations, the role of universities, the threats and opportunities to energy-related educational success at all levels.
Prerequisite: Graduate classification.

ICPE 609 Introduction to U.S. Energy Law and Policy
Credit 1.5. 1.5 Lecture Hour.
(1.5-0). 5. Introduction to energy law and regulation in the United States; focus on the key sources of energy (both nonrenewable and renewable) driving the U.S. economy, and identifies the various challenges facing the industry in their production and distribution; key regulations and laws governing energy production as well as the jurisdictional and regulator divisions between federal and state governments.
Prerequisite: Graduate classification.

ICPE 610 The Global Energy Future
Credit 1.5. 1.5 Lecture Hour.
(1.5-0). 5. Global energy outlook including energy demand, population growth and humanitarian issues, environmental and climate concerns, and the energy/water nexus and water scarcity; evolution of the global oil and gas industry; controlling nations, laws and agencies (OPEC, IEA, etc.); international and domestic climate change laws and policies; global future of climate change adaptation and mitigation.
Prerequisite: Graduate classification.

ICPE 611 Economics of Energy
Credit 1.5. 1.5 Lecture Hour.
(1.5-0). 5. Basics of economics concepts as they relate to energy applications; how the government policies affect the energy economy; present the economics of energy and climate change; introduction to renewable technologies and their impact.
Prerequisite: Graduate classification.

ICPE 612 Entrepreneurship in Energy
Credit 1.5. 1.5 Lecture Hour.
(1.5-0). 5. Focus on developing an understanding of the techniques and issues for growing emerging organizations in the energy field; participants will be guided through a range of issues faced by a venture team in building and growing a new organization or pursuing innovative projects inside existing organizations.
Prerequisite: Graduate classification.
ICPE 613 Natural and Shale Gas Monetization: Technologies, Fundamentals, Economics and Applications  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Focuses on important role played by natural and shale gas in energy market and the potentials to grow; major monetization processes including production, treatment, processing and conversion; key economic and technical aspects as they pertain to the processing technologies and the supply chains of natural and shale gas.  
Prerequisite: Graduate classification.

ICPE 614 CO2 Sequestration  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Introduction to the goals and methods of CO2 sequestration in the subsurface and of monitoring its effectiveness; discussion and explanation of current technological challenges and problems in monitoring CO2 in the subsurface and in implementing sequestration for mitigating climate change; addresses how carbon is transferred between atmosphere, hydrosphere, biosphere and geosphere by natural processes; basic geologic processes influencing sequestration programs.  
Prerequisite: Graduate classification.

ICPE 615 Smart Grid Fundamentals  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Fundamentals of electricity grid development; monitoring, control and protection; renewable generation; microgrids and grid integration; electricity markets; long term planning and associated risk, and grid robustness.  
Prerequisite: Graduate classification.

ICPE 616 Multi-functional Materials for Energy Conversion  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Focus on the two most important multi-functional materials (MFMs): piezoelectric materials and shape memory alloys (SMA); understanding the materials and how devices are designed using these materials; study of energy conversion via: (1) actuators that convert electrical or thermal energy into mechanical work; and (2) energy harvesting, in which mechanical work is converted into electrical energy.  
Prerequisite: Graduate classification.

ICPE 617 Gas Separations for Energy: Fundamentals, Applications and New Directions  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Robust foundation of advanced expertise in gas separation technologies including (i) solid-phase absorbent technologies, (ii) liquid amine-based adsorption technologies, (iii) polymeric and inorganic membrane technologies, and (iv) emerging reactive separation for process intensification.  
Prerequisite: Graduate classification.

ICPE 618 Carbon Capture, Utilization and Storage, CCUS  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Introduction to technologies for carbon capture, modelling and techno-economic analysis and comparison of different carbon capture technologies, and economics of carbon capture, utilization, and storage statewide and nationwide.  
Prerequisite: Graduate classification.

ICPE 619 Nanomaterials Engineering and Energy Storage  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Nanomaterial synthesis and processing with an emphasis on the creation of materials relevant to energy storage (batteries, capacitors, etc.). Prior knowledge of an undergraduate engineering level of familiarity of chemistry and physics is desirable.  
Prerequisite: Graduate classification.

ICPE 620 Thermoelectric Materials and Devices  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Methods useful for the synthesis of both bulk crystals and nanomaterials (nanoparticles and nanowires); focus on the underlying thermodynamics and kinetic principles involved in the synthesis of these materials; pathways useful for the integration of nanomaterials into functional thermoelectric devices, methods used for ascertaining the thermoelectric performance of materials and devices.  
Prerequisite: Graduate classification.

ICPE 621 Thermoelectrics: Fundamentals of Electronic and Thermal Transport  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Fundamentals of electronic and phononic transport phenomena; understanding of thermodynamics and transport properties from a microscopic viewpoint; thermal transport theories for analyzing and designing energy conversion devices, nanomaterials, microelectronics and nano/micro-electromechanical systems (NEMS/MEMS).  
Prerequisite: Graduate classification.

ICPE 622 Energy Efficiency in Buildings  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Introduction to energy efficiency in buildings; understanding the energy use in buildings, the heating and cooling requirements, the role of renewable energy resources, the impact of lighting, the role of optimal control measures in existing and new buildings, the verification of energy savings, and the building energy simulation.  
Prerequisite: Graduate classification.

ICPE 623 Water-Energy-Food Nexus: Towards Sustainable Resource Allocation  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Securing energy, clean water and greening agriculture; principles of the Water-Energy-Food nexus and its application to the corresponding three themes; includes hands on laboratory.  
Prerequisite: Graduate classification.

ICPE 624 Energy-Water-Nexus  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Various aspects of energy-water nexus including the fundamentals, technologies, applications and economics; focus on energy production, conversion and utilization; connection with water production, treatment, delivery and usage.  
Prerequisite: Graduate classification.

ICPE 625 Integrated Risk Management for Exploration and Production Projects  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Structured introduction to project systems and advance analysis of integrated project risks to practicing engineers and decision makers in the energy sector; emphasis on risks in context of a) project phase-gate process; b) systems representation, and c) flow across different functional and design requirements, areas of expertise /specialization and construction/installation methods.  
Prerequisite: Graduate classification.

ICPE 626 Safety in Energy Systems  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Role of leadership and development of management systems to ensure safety performance in energy systems, a systems approach to safety management for energy systems, lifecycle analysis and the energy supply chain, and applications of engineering principles of process safety and hazards analysis.  
Prerequisite: Graduate classification.
ICPE 627 Interfacial Phenomena of Energy Systems  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Fundamentals of interfacial phenomena, energy related interfacial materials and interfacial issues of energy systems; specific energy-related applications include oil recovery, lubrication, thermal management, photovoltaics, battery, fuel cells and supercapacitors.  
Prerequisite: Graduate classification.

ICPE 628 Multi-physics Geomechanisms for Energy Applications  
Credit 1.5. 1.5 Lecture Hour.  
(1.5-0). 5. Focuses on main physical phenomena and processes that control the behavior of porous media; formulation for non-isothermal multiphase flow and transport problems in deformable porous media; problems of practical interest in the broad field of geo-engineering and geo-mechanics.  
Prerequisite: Graduate classification.

IDIS - Industrial Distribution

IDIS 611 Current Issues in Industrial Distribution  
Credits 3. 3 Lecture Hours.  
Contemporary issues and trends affecting participants in the industrial distribution industry; opportunities and challenges for leaders identified and explored from the perspective of industrial distributors, manufacturers and end users.  
Prerequisite: Enrollment in the MID program.

IDIS 614 Industrial Distributor Networks  
Credits 3. 3 Lecture Hours.  
Industrial distributor's network channel in distribution centers, warehouse management systems, hot-shot and standard truck fleets, forecasting and purchasing strategies for technical products; an examination of the integration of the field and inside sales force into distributor network strategy.  
Prerequisite: Enrollment in the MID program.

IDIS 621 Industrial Distributor Processes I  
Credits 3. 3 Lecture Hours.  
Industrial distributor processes with an emphasis on assessing the value added effectiveness of specific industrial distributor initiatives.  
Prerequisite: IDIS 644.

IDIS 622 Industrial Distributor Processes II  
Credits 3. 3 Lecture Hours.  
Continuation of IDIS 621.  
Prerequisite: IDIS 621.

IDIS 624 Strategic Relationships for Industrial Distributors  
Credits 3. 3 Lecture Hours.  
Issues related to establishing and maintaining a beneficial relationship between distributors and manufacturers; developing effective buyer-seller relationships in the industrial distribution sector.  
Prerequisite: Enrollment in the MID program.

IDIS 634 Quality Concepts in Industrial Distribution  
Credits 3. 3 Lecture Hours.  
Concepts, issues and techniques used to plan, analyze, control, and improve the quality of industrial distribution products and processes for increased consumer satisfaction.  
Prerequisite: IDIS 655.

IDIS 644 Industrial Distributor Information and Technology Management  
Credits 3. 3 Lecture Hours.  
Industrial distributor's use of information systems to manage operations; combination of information systems and automation to achieve increased cross docking drop ships and automated tracking of industrial distributor operations metrics.  
Prerequisite: IDIS 614.

IDIS 655 Global Distribution  
Credits 3. 3 Lecture Hours.  
Issues in global distribution on a small to large scale; emphasis on competitive global business strategies, cultural and exchange issues, distribution practices of other countries, global distribution networks, and transportation issues across the globe; an optional one week international trip to solidify foundation in international distribution concepts and strategies.  
Prerequisite: IDIS 611.

IDIS 664 Distribution Profitability Analysis  
Credits 3. 3 Lecture Hours.  
Integrating advanced financial and accounting analysis useful to distribution executives in assessing the financial performance of distribution operations. Concepts and techniques in using financial statements and industrial distribution industry studies to manage cash flow, debt, working capital risk, capital budgeting, credit, receivables, inventory, personnel and profitability.  
Prerequisite: IDIS 624.

IDIS 674 Industrial Distribution Enterprise  
Credits 3. 3 Lecture Hours.  
Explore changing environment of industrial distribution from globalization effects, environmental conditions, industrial distribution culture and organizational factors; focus on building, achieving and sustaining a competitive advantage.  
Prerequisite: IDIS 664.

IDIS 685 Directed Studies  
Credits 1 to 6. 1 to 6 Other Hours.  
Individual and group problems dealing with application of industrial distribution theory and practice; foreign and domestic projects of special interest. May be repeated for credit.  
Prerequisites: Enrollment in the MID program and approval of program director.

IDIS 689 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours.  
Selected topics in an identified area of industrial distribution. May be repeated for credit.  
Prerequisite: Approval of MID program director.

IDIS 693 Professional Study  
Credits 1 to 6. 1 to 6 Other Hours.  
Approved professional study project in industrial distribution; preparation of a record of study summarizing the rationale, procedure and results of the completed study.  
Prerequisite: Approval of MID program director.
**IMED - Internal Medicine**

**IMED 800 Internal Medicine Clerkship**
**Credits 15. 15 Other Hours.**
General outpatient and inpatient internal medicine, with patient work-up and management under supervision of the clinical faculty. Participation in clinical rounds, conferences, seminars, and diagnostic evaluations. **Prerequisite:** Satisfactory completion of year two of the medical curriculum.

**IMED 801 Hematology/Oncology**
**Credits 1.25 to 10.**
It is the purpose of this elective to provide the student with an introduction to clinical oncology and laboratory hematology/oncology, particularly the approach to and evaluation of the patient with a hematologic/oncology disorder. The student will assist/perform routine hematologic procedures, including evaluation of peripheral smears and possibly one marrow biopsies.

**IMED 802 Internal Medicine – Community**
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
25 to 10. To provide an introductory experience in the practice of internal medicine. **Prerequisite:** Satisfactory completion of year three of the medical school curriculum.

**IMED 803 Clinical Cardiology and Electrocardiography**
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
This course will introduce the students to the clinical management of hospitalized cardiovascular patients. It will strengthen the student's abilities in cardiovascular history and physical examination and introduce and/or reinforce skills in electrocardiographic interpretations. It will introduce students to certain non-invasive cardiac techniques including echocardiography, phonocardiography, and nuclear cardiology. Students will have the opportunity to experience a balance of inpatient and outpatient exposure according to student preference and be expected to make rounds daily with the Cardiology Service (Staff and Interns). The student will be expected to work up approximately one patient daily and participate in the care of that patient to the point of discharge. The student will participate with the Staff assigned to EKG interpretation in the daily readings of EKG's. Lastly, the student will also have the opportunity to observe the performance and interpretation of non-invasive studies such as: echocardiography, nuclear cardiology, and systolic time intervals.

**IMED 804 Dermatology**
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
This elective is designed to provide a broad overview of the clinical presentation and management of common Dermatologic conditions seen in a clinic. An opportunity for self-study is provided as well. In addition, students will have the chance to accurately describe skin lesions. Diagnosis and treatment of common skin lesions, including papulosquamous diseases, vesiculobullous diseases, benign and malignant growths of the skin, drug reactions, sexually transmitted diseases of the skin, acne, bacterial, fungal, and viral infections of the skin, urticaria, skin signs of systemic diseases and recognition of life-threatening skin diseases. The student will appropriately perform and utilize diagnostic and surgical techniques such as microscopic examination of cutaneous preparations, biopsies, curettage, cryosurgery, and electrosurgery.

**IMED 805 Allergy and Clinical Immunology**
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
In general, students will learn to identify, diagnose and treat common allergic and immunologic disorders: rhinosinusitis, asthma, atopic dermatitis, urticarial, angioedema, immunodeficiency states and insect, food, and drug allergy. The course will review allergic/allergic dermatology conditions and immunological deficiencies seen in private practice. The faculty will give regular feedback on their patient presentations. The student will develop an understanding of the indications and methods of allergy skin testing, office spirometry, and laboratory tests used in diagnosing allergic and immunologic diseases. Additionally, the student will develop a working knowledge of basic immunology concepts as they pertain to clinical care.

**IMED 806 Clinical Infectious Disease**
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
This elective will teach the student a logical approach to the diagnosis and management of patients suspected of having an infectious disease through direct participation in the consultative infectious diseases service of St. Joseph Hospital and College Station Medical Center as well as participation in the management of outpatient consults and outpatient primary care patient's clinic visits. The elective will discuss the use of ancillary radiological technology for the diagnosis and management of infectious diseases; establish a basic understanding of microbiological techniques as well as other laboratory techniques including pathology surgical specimens, in the diagnosis of infectious diseases through rounds in the clinical pathology laboratory of both hospitals. The elective will also discuss principles of antimicrobial therapy, including antibacterial, antifungal and antiviral, in the treatment of infectious diseases. Lastly, the elective will discuss principles regarding the interaction between consulting and consultant physicians including proper communication, hierarchy of physicians in the decision-making process, confidentiality issues, and conflict resolution.

**IMED 807 Gastroenterology**
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
This course will offer daily experience with a practicing gastroenterologist including office practice, inpatient rounds, and procedures. Goals include education in basic gastroenterology as well as allowing the student to experience the daily activities of a busy gastroenterology practice. The course will introduce the student to subspecialty consulting, with special focus on working cooperatively with primary care physicians and other subspecialists for the benefit of the patient. Hours are typically Monday-Friday 0700-1800. There is no night or weekend call.

**IMED 808 Physical Medicine and Rehabilitation**
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
This elective will allow fourth year medical students to familiarize themselves with the specialty of Physical Medicine and Rehabilitation if they are considering it as a possible career specialty. It will familiarize fourth year medical students with an inpatient and outpatient PM&R program and the treatment of complex neuromuscular and musculoskeletal problems. In addition, it will familiarize the student with a concept of interdisciplinary teams, and to help understand the appropriate and cost effective use of allied health therapies. Lastly, it will familiarize the student with the allied therapies including physical, occupational, speech and recreational therapy, prosthetics and orthotics.
Course Descriptions

IMED 810 Neurology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This course provides a broad exposure to outpatient clinical neurology. It is primarily targeted to 4th year students considering a career in neurology, but may also be appropriate for students in 3rd year with an interest in neurology. Students should develop refinements of their neurologic examination skills and learn much regarding the clinical management of neurologic disease.

IMED 811 Internal Medicine Acting Internship
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The acting internship at Baylor University Medical Center at Dallas is a 4-week rotation that will provide fourth year medical students with the opportunity to function as an "acting intern" in Internal Medicine on a general medicine service with supervision by senior residents and faculty. It will provide an opportunity for medical students to gain a better experience in Internal Medicine if they are considering Internal Medicine or primary care as a possible career.

IMED 812 Physical Medicine and Rehabilitation
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This elective is designed to expose the student to various aspects of physical medicine and rehabilitation. The elective can be tailored according to the student's interests. Students work with attending physicians and residents while delivering patient care in both the inpatient and outpatient setting. Exposure to the rehabilitative care of patients with stroke, spinal cord injury, brain injury, amputation, neuromuscular diseases, and musculoskeletal problems will be available. Sub-specialty PM&R areas such as electrodiagnostics and pediatric rehabilitation may be accommodated for students who express interests in such areas. Students take part in various weekly didactic sessions such as Journal Club and Grand Rounds. No call is required.

IMED 813 Physical Medicine and Rehabilitation
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This elective is designed to expose the student to various aspects of physical medicine and rehabilitation. The elective can be tailored according to the student's interests. Students work with attending physicians and residents while delivering patient care in both the inpatient and outpatient setting. Exposure to the rehabilitative care of patients with stroke, spinal cord injury, brain injury, amputation, neuromuscular diseases, and musculoskeletal problems will be available. Sub-specialty PM&R areas such as electrodiagnostics and pediatric rehabilitation may be accommodated for students who express interests in such areas. Students take part in various weekly didactic sessions such as Journal Club and Grand Rounds. No call is required.

IMED 814 Hematology and Oncology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Students will be a member of a team participating in the provision of comprehensive subspecialty consultations for inpatients and outpatients with a wide variety of blood and neoplastic diseases. Students must demonstrate knowledge about established biomedical and clinical sciences and the application of this knowledge to patient care. There are no examinations. Evaluation will be based on achievement of the stated objectives of the course as assessed by the attending physician to whom the student is assigned and the Program Director. Similarly, evaluation of the elective by the student will be requested.

IMED 815 Clinical Infectious Diseases
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This course will offer a logical approach to the diagnosis and management of patients suspected of having an infectious disease through direct participation in the consultative infectious diseases service as well as participation in the management of outpatient consults and outpatient primary care patients' clinic visits. The student will become familiar with the use of ancillary radiological technology for the diagnosis and management of infectious diseases. The course will establish a basic understanding of microbiological techniques, as well as other laboratory techniques including pathology surgical specimens, in the diagnosis of infectious diseases through rounds in the clinical pathology laboratory. Principles of antimicrobial therapy, including antibacterial, antifungal, antiparasitic, and antiviral therapeutics, in the treatment of infectious diseases will be introduced. Additionally, principles regarding the interaction between consulting and consultant physicians including proper communication, hierarchy of physicians in the decision-making process, confidentiality issues and conflict resolution will be presented.

IMED 816 Clinical Nephrology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This course will provide an overview of the practical clinical application of basic principles of renal physiology. Methods of instruction will include a didactic and clinical component. The didactic component includes the following regularly scheduled conferences: Medicine (general) Noon Conferences held Monday-Thursday; Internal Medical Grand Rounds, 8 a.m. every Tuesday; Nephrology Fellow Teaching Conference every Wednesday at 4:00, and Nephrology Journal Club held every Friday at 11:00 a.m. The clinical component consists of students performing the initial renal consultation, presenting the consult to the attending physician, and following the patient on a daily basis. The students are supervised by the members of the Nephrology Division at Baylor. Schedule is set by the attending physician. The student is accountable to the one member of the Nephrology Division to whom he/she is assigned. Students will be responsible for synthesizing data, formulating plans of action, and following patients with acute and chronic renal failure, fluid and electrolyte abnormalities and renal pathology.

IMED 817 Dermatology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This elective is designed to provide a broad overview of the clinical presentation and management of common Dermatologic conditions seen in a large group practice. Opportunity for self-study is provided as well. Housing is not provided and there is no required night call.

IMED 818 Allergy/Clinical Immunology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
In general, students will learn to identify, diagnose and treat common allergic and immunologic disorders: rhinosinusitis, asthma, atopic dermatitis, urticaria, angioedema, immunodeficiency states and insect, food, and drug allergy. The course will review allergic/allergic dermatology conditions and immunological deficiencies seen in private practice. The faculty will give regular feedback on their patient presentations. The student will develop an understanding of the indications and methods of allergy skin testing, office spirometry, and laboratory tests used in diagnosing allergic and immunologic diseases. Additionally, the student will develop a working knowledge of basic immunology concepts as they pertain to clinical care.
IMED 819 Bone Marrow Transplant  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
The BUMC Marrow Transplant Program is one of the largest transplant groups in the country offering a rich experience in the field. The students will be exposed to a broad clinical overview of hematologic malignancy with an emphasis on bone marrow transplant. Students will round with the transplant team in the hospital and in the clinic. There will be a focus on the indications for transplant, complications of self and donor transplantation, and long term impact on Immunity in terms of host defense, auto/alloimmunity (graft versus host disease), and in terms of preventing or treating relapse. This will likely be best for those interested in medical oncology and hematologic malignancies. Two- to four-week rotations suggested but there would be flexibility in the time frame. This will be principally a clinical rotation with a strong emphasis on the care of the marrow transplant patient.

IMED 820 Cardiology Imaging  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
This course will instruct students in the common and appropriate indications for echocardiography, cardiac/coronary CT angiography, and what each of these tests can provide for the evaluation of cardiac disorders.

IMED 821 Clinical Cardiology  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
This elective will allow a 4th year student to work directly with an attending for a 2- or 4-week rotation. No specific call will be mandated, although students are allowed to be on call with their attending (attending dependent). Patients will be evaluated and admitted by the student/attending, as a part of their daily activities. Patients will be seen in different settings including the ED, office setting, and in-hospital, depending on the attending. Different levels of acuity patients are expected to be seen, from admissions with heart failure to STEMI patients who are going acutely to the catheterization lab. The student will attend cardiology conferences (as available, depending on location within the Baylor System as there are various locations for clinical cardiology) with the attending in addition to rounds.

IMED 823 HIV Medicine  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
Students will be under the direct supervision of an attending physician on staff at Baylor University Medical Center at Dallas. Students will participate, through direct observation and through independent history-taking and physical examination, in the care of patients living with HIV/AIDS that are chronically managed by the attending physicians.

IMED 824 Neurology  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
This is a 2- to 4-week elective in clinical neurology. It will consist of a mandatory 2 weeks of inpatient neurology care and an additional elective 2 weeks of outpatient neurology in various clinics (including child neurology). The main goal of the rotation is to learn basic principles of Neurology that are necessary to the non-neurologist, while demonstrating conscientious and responsible behaviors pertaining to patient care.

IMED 825 Palliative Medicine and End-of-Life Care  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
Faculty will strive to provide basic information on interdisciplinary approach to palliative and end-of-life care. This course will teach skills needed to improve communication with patients with chronic or terminal diseases and appropriate methods of delivering bad news. The student will be provided basic information on pain assessment and management. The course will demonstrate comprehensive nature of end-of-life care, the distinctive nature of its patient care model, and its significant place in today’s healthcare arena.

IMED 827 Traditional Pulmonary Medicine  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
This elective is designed to expose the student to a pulmonary consultative experience. The student will rotate and see pulmonary consults at Baylor University Medical Center and in a doctor’s private office. Thus, the student will be exposed to patients with COPD, dyspnea, interstitial lung disease, pleural effusions, thromboembolic disease, and lung nodules, masses, and cancer. The student will be able to participate in bronchoscopies, thoracentesis, and pulmonary function testing. The objectives of the rotation are: 1. to teach interpretation of pulmonary function testing; 2. to teach interpretation of chest x-rays and CT scans; and 3. to be able to appropriately address and understand the evaluation and management of dyspnea; airway diseases such as asthma, COPD, and bronchitis; pleural effusions; lung masses; thromboembolic diseases; and interstitial diseases (pulmonary fibrosis). The student will also see some in-patient consultations in the surgical intensive care units.

IMED 828 Advanced Lung Disease I  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
This elective is designed to expose the student to patients with advanced and unusual lung diseases. The student will be expected to learn how to interpret chest x-rays and the different types of CT scans of the chest, have a better understanding of pulmonary physiology and to learn how to interpret pulmonary function testing, attend the clinics, see, and treat patients with COPD, interstitial lung diseases, pulmonary hypertension, cystic fibrosis, and who have undergone or are being referred for lung transplantation. The students will participate in bronchoscopies. During this part of the rotation, the student will see patients both in the clinics and in the hospital. The second half of the rotation will be spent in the Martha Foster Lung Center. This aspect of the rotation will focus on treatment of patients with asthma and COPD and on pulmonary rehabilitation.

IMED 829 Advanced Lung Disease II  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
This elective is designed to expose the student to patients with advanced and unusual lung diseases. The student will be expected to learn how to interpret chest x-rays and the different types of CT scans of the chest, have a better understanding of pulmonary physiology and to learn how to interpret pulmonary function testing, attend the clinics with Dr Rosenblatt, see, and treat patients with COPD, interstitial lung diseases, pulmonary hypertension, cystic fibrosis, and who have undergone or are being referred for lung transplantation. The students will participate in bronchoscopies. During this part of the rotation, the student will see patients both in the clinics and in the hospital. The objectives of the rotation are: 1. To teach the student how to interpret and appropriately order chest x-rays; 2. To teach the students about the different types of CT scans and how to interpret them; 3. To teach the student how to interpret pulmonary function testing including arterial blood gases, spirometry, plethysmography, and diffusion; 4. To learn how to diagnose and treat the various interstitial lung diseases; 5. To learn about the presentation and management of adult patients with Cystic Fibrosis; 6. To learn about the indications and evaluation of patients referred for lung transplantation; 7. To learn about the post operative and long term follow-up of lung transplant patients which will include a focus on infectious disease and immunosuppressive medications; 8. To learn about pulmonary hypertension; and 9. To learn about the evaluation and treatment of patients with asthma, COPD, and bronchiectasis.
IMED 830 Rheumatology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Identify, diagnose, and treat common rheumatologic disorders; rheumatoid arthritis, musculoskeletal exam techniques, lupus, crystalline arthropathies, spondyloarthropathies, vasculitis, osteoarthritis, soft issue disorders and myopathies. The student will understand the risks and benefits of drugs used to treat rheumatologic diseases. The student will become familiar with the indications and methods of joint aspiration and injection, soft tissue injections, and serologic tests for rheumatologic disorders. Basic concepts in immunology and pharmacology as they pertain to clinical care will also be taught.

IMED 831 Medical Intensive Care Unit
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The Medical Intensive Care Unit will guide the student through a systematic approach to the critically ill patient and impart an appreciation for the dynamic multi-organ system interrelationships in critical care. Senior medical students will be taught an evidence based medical approach to the frequently encountered medical illnesses requiring critical care intervention. Additionally, the students should anticipate fostering of their ethical compass as it relates to complex medical dilemmas involving life and death issues.

IMED 832 Medical-Surgical Intensive Care Unit
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The Medical-Surgical Intensive Care Unit will guide the student through a systematic approach to the critically ill patient and impart an appreciation of the dynamic multi-organ system interrelationships in critical care and the multidisciplinary management if those patients. Senior medical students will be taught an evidence-based medical approach to the frequently encountered medical illnesses requiring surgical and medical critical care intervention to include ventilatory management, hemodynamic monitoring and management, as well as nutritional, pharmacologic, and rehabilitative efforts. In addition, the experience will foster setting of the students’ ethical compass as it relates to complex medical ethical dilemmas and life and death issues. There will be no night call but students may be asked to work weekend shifts.

IMED 833 Clinical Endocrinology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The endocrinology experience will include all levels of care (1-3 degree), primary and secondary patients along with several outpatients per day with a variety of endocrine disease. The faculty will introduce the student to endocrine evaluation based upon knowledge of clinical physiology and pharmacologic manipulation. The faculty will familiarize the student with the management of diabetes, thyroid disease, osteoporosis and lipid disorders in patients.

IMED 834 Clinical Gastroenterology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Daily experience with a practicing gastroenterologist including office practice, inpatient rounds, procedures and educational conferences. Goals include education in basic gastroenterology and for the student to gain insight into what a gastroenterology practice is like. This includes the concept of being a subspecialist consultant and to work cooperatively with other subspecialists for the benefit of the patient. Hours are typical Monday-Friday starting at 0700 each day and finishing before 1800 each day. There is no night or weekend call. In addition to the usual Internal Medicine noon conferences, students attend a number of GI conferences weekly and interact with residents and fellows on the service.

IMED 835 Infectious Disease
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at MD Anderson. In-depth clinical experience in the diagnosis, treatment and prevention of infectious diseases; teach the fundamental infectious diseases concepts during the rotations in our in-patient consult services and our outpatient clinics; and also during our regularly scheduled academic meetings, provide regular feedback to the students on their history and physical, case presentation, professionalism and interpersonal skills.

IMED 836 Benign Hematology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at MD Anderson. Provide structured rounds on inpatients service; expose students to out-patients with a variety of benign hematological conditions: hypercoagulability, thrombosis, bleeding, and abnormal platelets, red blood cells, and white blood cells; provide didactic sessions at least weekly; and challenge students to master and teach on focused topic.

IMED 837 Cardiology Imaging
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at the Methodist Hospital. Hospital management of common cardiology conditions such as atrial fibrillation, heart failure, pericarditis, acute coronary syndromes, and recovery from open heart surgery Interpret ECGs with the student; and teach an evidence-based approach to the evaluation and management of common cardiology disorders, including the appropriate use of testing and invasive procedures.

IMED 838 Inpatient General Internal Medicine Consult Service
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at MD Anderson. Inpatient management of common medical problems; management strategies for patients requiring urgent care; improve students’ skills in developing work-up and management strategies for common medical diagnosis; and provide opportunities to experience the role of an inpatient GIM consultant to a diverse group of specialists.

IMED 839 Clinical Cardiology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at MD Anderson. Unique learning experience in general cardiology and cardiovascular complications of cancer treatments; teach clinical cardiology concepts during clinic, inpatient rounds, and regularly scheduled didactic departmental and multidisciplinary conference; and provide regular feedback to student on patient presentations.

IMED 840 Clinical Endocrinology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Broad clinical experience in endocrinology and endocrine neoplasias; teach clinical endocrinology concepts during clinic, inpatient rounds, and regularly scheduled didactic, multidisciplinary and research conferences; and provide regular feedback to student on patient presentations.

IMED 841 Clinical Dermatology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at MD Anderson. Broad clinical experience in dermatology; teach clinical dermatology concepts in the outpatient dermatology clinic and regularly scheduled didactic conferences; and provide exposure to dermatopathology and dermatologic surgery.
IMED 842 Immunology Research Elementary Mechanisms of Inflammation
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The faculty will strive to create a stimulating educational environment and provide opportunities to conduct research based on the scientific method; supervise the student’s performance of basic laboratory techniques; meet regularly with the student to discuss and critique the progress of their research project; and encourage the student to present at scientific meetings.

IMED 843 Cardiology Outpatient
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at the Methodist Hospital. Outpatient management of common cardiovascular disorders such as hypertension, perlipidemias, heart failure, chronic atrial fibrillation, angina pectoris and valvular disorders; and interpret ECGs with the student.

IMED 844 Cardiology Inpatient
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at the Methodist Hospital. Common and appropriate indications for echocardiography, nuclear cardiology, cardiac MRI, and cardiac/coronary CT angiography, and what each of these tests can provide to the evaluation of cardiac disorders.

IMED 845 Gastroenterology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at MD Anderson. A unique opportunity for medical students to see patients referred with specific issues related to gastroenterology and gastrointestinal cancer; working one-on-one with faculty in the outpatient clinic, hospital and endoscopy unit will provide close interaction between students, fellows and staff in an environment that nurtures teaching; provide defined educational experiences that will impact on providing insight consultation for a very wide range of gastrointestinal problems, the effective management and appropriate use of endoscopic procedures; and provide students with the opportunity to evaluate and manage outpatients under close faculty supervision; perform consultative evaluations on a limited number of inpatients under close faculty supervision; and observe both diagnostic and therapeutic endoscopic procedures such as used for tumor ablation, control of bleeding and screen for colon cancer.

IMED 846 Nephrology Consult Service
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at MD Anderson. Broad clinical experience in nephrology; teach clinical nephrology concepts in the hospital, clinic, and regularly scheduled didactic conferences; and give regular feedback to students on their patient presentations.

IMED 847 Pulmonary Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at MD Anderson. Provide fourth year medical students the opportunity to be a part of the inpatient consult service for pulmonary issues and complications related to cancer and cancer-related treatment, under close supervision by a faculty member; develop skills in differential diagnosis, as well as guide them in identifying appropriate diagnostic and therapeutic studies; enhance physical exam skills, especially related to the pulmonary system; encourage evaluation and interpretation of pulmonary function tests, chest radiograph and computed tomography of the lungs; and allow observation of common pulmonary procedures, including thoracentesis and bronchoscopy.

IMED 848 Acting Internship/Hospitalist General Internal Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at MD Anderson. Inpatient management of common medical problems; management strategies for patients requiring urgent care; improve students’ skills in developing work-up and management strategies for common medical diagnosis; and provide opportunities to experience the role of an inpatient GIM consultant to a diverse group of specialists.

IMED 851 Neurology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at the Methodist Hospital. Provide the student with an opportunity to see patients with neurological problems under the supervision of various neurologists and neurology residents; provide feedback on histories, physicals, and case presentations; and encourage independent study of neurological disorders and pathophysiology.

IMED 853 Cardiology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at Austin Heart. Improve student clinical skills in obtaining a pertinent cardiovascular history and performing physical examination including identification of cardiac murmurs by auscultation. Increase knowledge of path physiology of cardiac illnesses. Improve knowledge about management of cardiac problems, congestive heart failure, angina pectoris acute coronary syndrome, cardiac arrhythmias and emergencies. Improve student skills in identification of EKG abnormalities and arrhythmias. Introduction to non-invasive tests like cardiac stress tests, echocardiograms. Introduction to nuclear cardiology. Introduction to hemodynamics, cardiac patients in ICU. Introduction to evidence based approach to medicine practiced in care of cardiac patients.

IMED 854 Cardiology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at Texas Cardiovascular. Improve student clinical skills in obtaining a pertinent cardiovascular history and performing physical examination including identification of cardiac murmurs by auscultation. Increase knowledge of path physiology of cardiac illnesses. Improve knowledge about management of cardiac problems, congestive heart failure, angina pectoris acute coronary syndrome, cardiac arrhythmias and emergencies. Improve student skills in identification of EKG abnormalities and arrhythmias. Introduction to non-invasive tests like cardiac stress tests, echocardiograms. Introduction to nuclear cardiology. Introduction to hemodynamics, cardiac patients in ICU. Introduction to evidence based approach to medicine practiced in care of cardiac patients.
IMED 855 Clinical Rheumatology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The four-week elective is designed to provide a broad clinical experience in Clinical Rheumatology. First contact experience will be provided in the outpatient clinical setting at Scott and White Healthcare - Round Rock. Housing is not provided. No night call is required.

IMED 856 Hematology and Medical Oncology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The elective is designed to give the student understanding and educational experience in the evaluation and clinical management of patients with hematologic and non-hematologic malignancies. Housing is not provided. No night call is required.

IMED 857 Hematology and Medical Oncology – Outpatient
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The elective is designed to give the student understanding and educational experience in the evaluation and clinical management of patients with hematologic and non-hematologic malignancies. Housing is not provided. No night call is required.

IMED 858 Neurology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The two- or four-week elective is designed to teach the principles and skills underlying the recognition and management of neurological diseases that a general practitioner is most likely to encounter in practice. The student will attend outpatient clinic throughout the elective and will be assigned new patients for evaluation as well as previously assigned patients for follow-up. Housing is not provided. No night call is required.

IMED 859 Intensive and Critical Care
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The four-week rotation is designed to impress upon the student the need for a comprehensive problem oriented approach to the critically ill patient and to help the student to understand and manage complex medical problems of the critically ill patient. The faculty will strive to teach the student a logical evidence-based approach to the care of critically ill patients and provide the student an in-depth exposure to a wide range of medical diseases encountered in the intensive care setting. Faculty will strive to assist the student in basic knowledge and abilities of ICU procedures. The student will follow their own group of patients and work directly with the critical care faculty member.

IMED 860 Adult and Pediatric Allergy and Immunology Outpatient Clinic
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This is a four-week elective in allergy and immunology that will provide experience in managing common adult and pediatric allergy and immunology ambulatory illness. It will introduce student to uncommon allergic diseases and illustrate broader aspects of adult and pediatric care, as it relates to the care of patient with chronic allergic conditions. The elective will encourage student to develop skills in carefully evaluating patient with allergic or immunological problems and introduce them to an ambulatory health care system dealing with patients who have chronic illnesses and require chronic management.

IMED 861 General Internal Medicine Acting Internship
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Strengthens and refines student’s skills in taking historic and performing physical examinations; assist students in developing better capabilities in arriving at differential diagnoses and ordering diagnostic testing; guide students in making therapeutic decisions; give students responsibility for patient management under faculty supervision; and allow students to perform certain diagnostic procedures under supervision on their patients when indicated.

IMED 862 Preventative Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The elective will introduce the student to: experience the roles and responsibilities of a preventative medicine physician; evidence based preventative services in the public health setting and in the community; expose the student to the core functions and essential services of a local public health agency including the programmatic and practices examples of each; explore the competencies inherent in preventative medicine residencies, the scope and content of the Masters of Public Health Degree and opportunities for scholarly research in prevention.

IMED 863 Community Based Geriatric Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Increase student awareness of the biopsychosocial factors which characterize the uniqueness of the elderly, understand normal aging processes and differentiate this from disease. Improve student capacity for effective assessment and treatment of the ill elderly and recognize the unique aspects of drug therapy and drug interaction in the elderly. Exposure to the multidisciplinary team concept to enhance effectiveness in working with therapists, social workers, dieticians, nurses, nurse practitioners, etc. Examine negative attitudes toward aging and the aged and the implications of these attitudes for medical care. Provide information about proper methods for preventing unnecessary illness in the elderly. Exposure to extended care facilities, community home services, and alternatives to institutional care which are available to elderly citizens.

IMED 864 Gastroenterology Hospital Service
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Reinforce the clinical diagnostic skills obtained by the student during his third-year clerkship in medicine. Introduce the student to the specialized diagnostic procedures relating to gastrointestinal disorders with emphasis on their indications and interpretations. Familiarize the student with the management of some of the more commonly encountered gastrointestinal disorders.

IMED 865 Clinical Gastroenterology, Hepatology, and Nutrition
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This elective will reinforce the clinical diagnostic skills obtained by the student during his third-year clerkship in Medicine; introduce the student to the specialized diagnostic procedures relating to gastrointestinal disorders with emphasis on their indications and interpretations, limitations, and risks; and familiarize the student with the management of some of the more commonly encountered gastrointestinal disorders.

IMED 866 Clinical Nutrition
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This elective will provide an introduction to clinical malnutrition in the adult patient with emphasis on the clinical syndromes of kwashiorkor and marasmus. An understanding of alterations in nutrition which occur as a result of adult illnesses including the clinical recognition and management of resulting disorders of nutrition. A familiarity to the student of the proper evaluation and utilization of specific lab tests in the diagnosis of malnutrition in the hospitalized adult patient. A familiarity to the students of the indications and usage of enteral nutrition in the support of the hospitalized adult patient. A familiarity to the student of proper utilization of central alimentation (Total Parenteral Nutrition) in the hospitalized adult patient.
IMED 867 Pulmonary and Critical Care Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This elective will strive to: guide the student through a systematic approach to the critically ill patient and impart an appreciation of the dynamic multi-organ system interrelationships in critical care; Teach the student an evidence-based medical approach to the frequently encountered medical illnesses requiring critical care intervention; Teach the student an appropriate approach and initial diagnostic evaluation of the more common pulmonary diseases encountered in internal medicine; Foster the students' ethical compass as it relates to complex medical ethical dilemmas and life and death issues.

IMED 868 Clinical Allergy
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This elective will provide experience in the diagnosis and management of allergic and related non allergic diseases commonly encountered in primary medical practice and uncommon allergic and immunologic diseases referred to the faculty.

IMED 869 Hematology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This elective will introduce the student to the spectrum of hematologic problems seen in a primary care practice; reinforce basic concepts of pathophysiology, clinical evaluation, and management of common hematologic problems; strengthen the student's understanding of peripheral blood and bone marrow morphology; strengthen the student's understanding of basic coagulation testing as it applies to patients with hematologic and non-hematologic disease; and acquaint the student with the indications and proper technique for commonly used diagnostic procedures in patients with hematologic problems.

IMED 870 Geriatric Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This elective is designed to give fourth year medical students the opportunity to practice community based geriatric medicine. The students will examine and evaluate patients in their home environments within senior living communities as opposed to hospital based care. This approach provides a rich opportunity to put into practice the concepts of multi-faceted geriatric assessment taught during the 3rd year ambulatory internal medicine block. The students will also have case-based interactive learning sessions, which will focus on integrating pharmacology and patho-physiology as they apply to the aging population. This elective will cover common geriatric syndromes such as falls, incontinence, atypical presentation of disease, failure to thrive, elder abuse, pressure ulcers, end of life care, gait instability and debility. Transportation to distant clinical sites is available via carpool.

IMED 871 Ambulatory General Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Strengthen and refine a student's skill set focusing on taking an accurate patient history, performing physical exams, and developing a differential diagnosis. The faculty will assist the student in developing a plan of care including ordering diagnostic imaging and laboratory as well as providing insight into the therapeutic decision making. The students will be given responsibility for patient management under faculty supervision. The students will be allowed to perform appropriate diagnostic procedures under supervision on their patients when indicated.

IMED 872 Gastroenterology Clinic
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Introduce the student to the spectrum of diseases and problems seen in the outpatient clinical practice of gastroenterology. Reinforce basic concepts regarding the pathophysiology, clinical evaluation and management of the more common problems seen in gastroenterology and hepatology. Acquaint the student with the GI investigative procedures their indications, practice and interpretation. Familiarize the student with the indications for and interpretation and clinical correlation of GI radiological techniques.

IMED 873 Clinical Pulmonology (VA)
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Improve skills in obtaining a respiratory history and performing a physical examination of the chest; strengthen ability to interpret radiographs of the chest, pulmonary function tests, and arterial blood gas results; increase knowledge of pulmonary disease and the pathophysiology of respiratory disorders; improve skills in managing patients with common pulmonary disease; and provide opportunities for observing endobronchial abnormalities at bronchoscopy.

IMED 874 Private Service Internal Medicine Acting Internship
Credits 1.25 to 10. 1.25 to 10 Other Hours.
One-on-one mentoring and teaching for fourth year students. Promote autonomous decision making within appropriate confines of a teaching service. Further develop student's patient management skills. Promote increased appreciation of the multiple aspects of the practice of Internal Medicine.

IMED 875 Neurology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Principles and skills underlying the recognition and management of neurologic diseases that a general practitioner is most likely to encounter in practice.

IMED 876 Medical Intensive Care Unit (VA)
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Provide fourth year medical students with the opportunity to function as an "acting intern" in the Coronary and Medical Intensive Care Unit (CMICU) with the supervision by senior residents and faculty. Assist students in developing better capabilities in arriving at differential diagnoses and ordering diagnostic tests. Guide students in learning patient monitoring and life-support equipment used in the critical care setting. Allow the students to perform certain diagnostic procedures on their patients when indicated.

IMED 877 Clinical Pharmacology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Introduce the principles of pharmacotherapy, including therapeutic drug monitoring, as these principles apply to the clinical setting. Enhance the student's ability to apply pharmacologic principles to clinical medicine. Introduce the student to the resource materials available for information on drugs and drug therapy. Familiarize the student with the principles of drug absorption, distribution, metabolism, and elimination as they apply to patients with different diseases and of varying age groups. Expand the student's knowledge of principles of antimicrobial therapy.

IMED 878 Clinical Cardiology and Electro Cardiology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This elective will introduce the students to the clinical management of hospitalized cardiovascular patients; strengthen the student's abilities in cardiovascular history and physical examination; introduce and/or reinforce skills in electrocardiographic interpretations; and introduce students to certain noninvasive cardiac techniques including echocardiography, phonocardiography, and nuclear cardiology.
**IMED 879 ICU Clinical Cardiology and Electrocardiography (VA)**

Credits 1.25 to 10. 1.25 to 10 Other Hours.

Improve student skills in obtaining a pertinent cardiovascular history and performing physical examination including identification of cardiac murmurs by auscultation. Increase knowledge of pathophysiology of cardiac illnesses. Improve knowledge about management of cardiac problems, congestive heart failure, angina pectoris, acute coronary syndrome, cardiac arrhythmias and emergencies. Improve student skills in identification of EKG abnormalities and arrhythmias. Introduce to non-invasive tests like cardiac stress tests, echocardiograms. Introduce to nuclear cardiology. Introduce to hemodynamics, cardiac outpatients in ICU. Introduce to evidence based approach to medicine practiced in care of cardiac patients.

**IMED 880 Medical Intensive Care Unit**

Credits 1.25 to 10. 1.25 to 10 Other Hours.

This elective will impress upon the student the need for a comprehensive problem oriented approach to the critically ill patient, and strive to help the student to understand and manage complex medical problems of the critically ill patient. Teach the student a logical evidence-based approach to the care of the critically ill patient and provide the student an in-depth exposure to a wide range of medical diseases encountered in Internal Medicine. Assist the fourth year student in learning basic knowledge and abilities of ICU procedures. Insure that this rotation meets the requirements for acting internship. The student will maintain their own group of patients and work directly with the critical care faculty member as well as an upper level resident or pulmonology fellow. The student will take in-house call with the team at least once a week.

**IMED 881 Clinical Endocrinology**

Credits 1.25 to 10. 1.25 to 10 Other Hours.

Introduce the student to endocrine evaluation based upon knowledge of clinical physiology and pharmacologic manipulation. Familiarize the student with the management of diabetes, thyroid disease, osteoporosis and lipid disorders in patients.

**IMED 882 Clinical Endocrinology with Primary Focus on Diabetes (VA)**

Credits 1.25 to 10. 1.25 to 10 Other Hours.

Disease and pathophysiology of Diabetes Type 1 DM and Type 2 DM; recognition of disease and its complications and treatments; and also include other endocrine related disorders, including but not limited to thyroid, pituitary, adrenal, parathyroid, other hormones, electrolyte and water disturbances.

**IMED 883 Dermatology**

Credits 1.25 to 10. 1.25 to 10 Other Hours.

This elective is designed to provide a broad overview of the clinical presentation and management of common dermatologic conditions seen in a large group practice. Opportunity for self-study is provided as well. Housing is not provided and there is no required night call.

**IMED 884 Academic Medicine Clinic (VA)**

Credits 1.25 to 10. 1.25 to 10 Other Hours.

General principles of primary care in a prepaid setting, with emphasis on preventive medicine and outpatient diagnosis and therapy; out-patient management of some of the most common problems in adult medicine; and broad range of activity in an outpatient clinic, operating under the managed care paradigm, so as to help the student with a career choice.

**IMED 885 Neurology**

Credits 1.25 to 10. 1.25 to 10 Other Hours.

The 2- to 4-week elective is designed to teach the principles and skills underlying the recognition and management of neurological diseases that a general practitioner is most likely to encounter in practice. Housing is not provided. No night call is required.

**IMED 886 Inpatient Palliative Medicine**

Credits 1.25 to 10. 1.25 to 10 Other Hours.

Rotation that will teach communication skills, expert symptom management and interdisciplinary team work with a social worker and chaplain on an inpatient Palliative Care Service. Regardless of our eventual area of expertise, each of us will take care of patients with major symptoms of disease and the associated emotional and spiritual reactions. Research has shown that although we have accomplished major technical expertise over the last few decades, until recently very little educational effort has been spent on communication skills, professionalism and aggressive symptom management. This course will be helpful for all those that deal with sensitive patient and family issues, regardless of specialty. It will also encourage the student to care for themselves that they may have the energy and strength to care for others.

**IMED 887 Clinical Infectious Disease (Inpatient Service)**

Credits 1.25 to 10. 1.25 to 10 Other Hours.

Familiarize the clinical clerk with the presentation, differential diagnosis, and management of commonly encountered infections disease; familiarize the clinical clerk with his responsibilities as a physician in the public health system of Texas; acquaint the clinical clerk with the practical aspects of antimicrobial agents commonly used; and provide experience in microbiologic techniques useful for the practicing physician.

**IMED 888 Clinical Infectious Diseases (VA)**

Credits 1.25 to 10. 1.25 to 10 Other Hours.

Acquire skills in diagnosis and treatment of adult infectious diseases, including both acute and chronic community acquired infections as well as nosocomial infections; and develop experience and education in the proper use of anti-infective agents.

**IMED 889 Clinical Nephrology**

Credits 1.25 to 10. 1.25 to 10 Other Hours.

Reinforce core material from the Nephrology section of the Introduction to Medicine course; provide clinical correlation and patient management experience in renal disease; familiarize the student with laboratory investigative procedures utilized in the diagnosis of renal disease; and strengthen the students' basic history physical performance skills.

**IMED 890 Subinternship in Medical Oncology**

Credits 1.25 to 10. 1.25 to 10 Other Hours.

Basic principles of non-surgical acute hospital care; experience in the day-to-day management of severely ill hospitalized patients with malignant diseases at all stages, both as a primary care giver and as a consultant, biologic therapy, immunotherapy and supportive care; initiation and proper use of clinical research protocols in medical oncology; basic principles of symptom control in patients with all stages of malignant disease; basic principles of a multidisciplinary approach to patients with cancer, including interaction with other medical specialists and support services; and strengthen the student's ability to interact with patients and their families at a time of health crisis.
IMED 891 Pulmonary and Sleep Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This elective will provide the student with exposure to the diagnosis and treatment of a wide variety of pulmonary diseases under the guidance of the attending staff and fellows. Familiarize the student with the various pulmonary function tests used in the clinical practice of pulmonary medicine. Introduce the student to various special diagnostic procedures used in pulmonary medicine and sleep disorders medicine. Reinforce the pathophysiologic principles learned in the classroom and correlate them with special clinical problems. Introduce the student to and acquaint him/her with common sleep disorders and their diagnosis and treatment. Regularly review radiographic findings of patients seen and correlate them clinically.

IMED 892 General Internal Medicine Acting Internship (VA)
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Strengthen skills in taking histories and performing physical examinations; assist students in developing better capabilities in arriving at differential diagnoses and ordering diagnostic tests; guide students in making therapeutic decisions; give students responsibility for patient management under faculty supervision; allow students to perform certain diagnostic procedures under supervision on their patients when indicated.

IMED 893 Research in Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
An appreciation for research has high educational value in the development of physicians. The purpose of this elective will be to provide students an opportunity to explore research processes, planning and execution particularly within medicine. Students may or may not be involved in a research project at the commencement of the elective. Thus, the elective can provide assistance to students with an ongoing research project reach their project goals and can provide those interested in starting a research project the fundamentals to begin, carryout, and potentially complete a research project.

IMED 894 Medical Education/Simulation
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Introduce students to curriculum design, outcome measure implementation and learning styles. Present simulation opportunities for teaching, as well as train students to utilize simulation equipment/software (partial task trainers, SimMan, MicroSim). Instruct students on teaching methods and provide opportunities for students to employ teaching methods within the MS3 IM clerkship. Expose students to faculty development opportunities. Four-Week Elective: In addition to the expectations above: Familiarize students with concepts in research design, including carrying out a literature review, gathering and analyzing data, and writing for presentation (e.g., poster presentation.)

IMED 895 Intensive Care Unit
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Management of acute cardiac emergencies with emphasis on coronary care; reinforce the student's skills in bedside evaluation and history taking of angina and clinical presentation of myocardial infarctions; familiarize the student with current techniques in management of acute myocardial infarction including the treatment of arrhythmias and congestive heart failure in the acute infarct setting; introduce the student to post myocardial infarction rehabilitation and education practices; and introduce the student to the care of postop CA bypass patients.

IMED 896 Internal Medicine Acting Internship
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Provide fourth year medical students with the opportunity to function as an "acting intern" in Internal Medicine on a general Medicine service with supervision by senior residents and faculty. Help prepare medical students for responsibilities and skills necessary during internship. Provide an opportunity for medical students to get a better experience in Internal Medicine if they are considering Internal Medicine or primary care as a possible career.

IMED 897 Critical Care
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered at Austin Pulmonary Consultants. This elective will impress upon the student the need for a comprehensive problem oriented approach to the critically ill patient, and strive to help the student to understand and manage complex medical problems of the critically ill patient. Teach the student a logical evidence-based approach to the care of the critically ill patient and provide the student an in-depth exposure to a wide range of medical diseases encountered in Internal Medicine. Assist the fourth year student in learning basic knowledge and abilities of ICU procedures.

IMED 898 Ambulatory General Internal Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Strengthen and refine a students’ skill set focusing on taking an accurate patient history, performing physical exams, and developing a differential diagnosis. The faculty will assist the student in developing a plan of care including ordering diagnostic imaging and laboratory as well as providing insight into the therapeutic decision making. The students will be given responsibility for patient management under faculty supervision. The students will be allowed to perform appropriate diagnostic procedures under supervision on their patients when indicated.

IMED 901 General Medicine Acting Internship
Credits 1.25 to 6.3. 1.25 to 6.3 Other Hours.
The IMED AI is a four-week experience in the inpatient setting during which students assume the role of ‘intern.’ Students will be integrated into the service as a member of the team, participating in all aspects of patient management. The student will be expected to complete at least 40 hours per week on the service. Students will be expected to do after hours call overnight twice weekly and will work directly with attending at St. David's Medical Center-Georgetown. Housing is not provided for this elective. Must be taken on a satisfactory/unsatisfactory basis. Prerequisite: 4th year status.

IMED 902 Physical Medicine and Rehabilitation
Credits 1.25 to 6.3. 1.25 to 6.3 Other Hours.
This elective will allow fourth year medical students to familiarize themselves with the specialty of physical medicine and rehabilitation if they are considering it as a possible career specialty. It will familiarize fourth year medical students with an inpatient and outpatient PM&R program and the treatment of complex neuromuscular and musculoskeletal problems. In addition, it will familiarize the student with a concept of interdisciplinary teams, and to help understand the appropriate and cost effective use of allied health therapies. Lastly, it will familiarize the student with the allied therapies including physical, occupational, speech and recreational therapy, prosthetics and orthotics. Must be taken on a satisfactory/unsatisfactory basis. Prerequisite: 4th year status.
IMED 903 Traditional Pulmonary Medicine
Credits 1.25 to 6.3. 1.25 to 6.3 Other Hours.
This elective is designed to expose the student to a pulmonary consultative experience. The student will rotate at St. David's Georgetown Hospital and in a doctor's private office at Central Texas Pulmonary. Thus, the student will be exposed to patients with COPD, dyspnea, interstitial lung disease, pleural effusions, thromboembolic disease, and lung nodules, masses, and cancer. The student will be able to participate in bronchoscopies, thoracentesis, and pulmonary function testing. The objectives of the rotation are: (1) to teach interpretation of pulmonary function testing, (2) to teach interpretation of chest x-rays and CT scans, and (3) to be able to appropriately address and understand the evaluation and management of dyspnea; airway diseases such as asthma, COPD, and bronchitis; pleural effusions; lung masses; thromboembolic diseases; and interstitial diseases (pulmonary fibrosis). The student will also see some patient consultations in the surgical intensive care units. Must be taken on a satisfactory/unsatisfactory basis.
Prerequisite: 4th year status.

IMED 904 Coronary Care Unit
Credits 1.25 to 6.3. 1.25 to 6.3 Other Hours.
Improve student skills in obtaining a thorough history and performing a physical examination with particular emphasis on pertinent cardiovascular history as well as comprehensive examination of the cardiovascular system that encompasses the following five key areas: (1) general examination of the patient; (2) assessment of the venous pulse, both in normal and diseased states; (3) assessment of arterial pulse, both in normal and diseased states; (4) precordial examination; and (5) auscultation of the cardiovascular system, including identification of cardiac murmurs. Must be taken on a satisfactory/unsatisfactory basis.
Prerequisite: 4th year status.

IMED 985 Off Campus Student Initiated Elective
Credits 1.25 to 12. 1.25 to 12 Other Hours.
Formally described elective courses at another medical school or off-campus opportunities that are not formally approved electives. The College of Medicine requires that each of these electives be approved prior to the rotation.

IMED 999 On Campus Student Initiated Elective
Credits 1.25 to 12. 1.25 to 12 Other Hours.
This is an on-campus opportunity in the department of Internal Medicine in the College of Medicine that is not defined herein. Experiences may include clinical research, basic science research, library research, other basic science activities, and other clinical activities. Students interested in developing an elective of this type should contact the head of the appropriate department for additional details.

INTA - International Affairs

INTA 601 Leadership in International Affairs: Institutions, Organizations and People
Credits 3. 3 Lecture Hours.
Provides the knowledge base for developing a deep understanding of the study of leadership and management and the role(s) of leaders in international affairs.

INTA 603 American Diplomacy
Credits 3. 3 Lecture Hours.
Explores the use of diplomacy in American foreign policy during recent decades; description and assessment are undertaken of United States diplomatic efforts to pursue its vital interests and to respond to changing international conditions and challenges; specific regions or substantive issues may be highlighted in a given semester using a variety of learning strategies.
Prerequisite: Graduate classification.

INTA 604 Politics of the Contemporary Middle East
Credits 3. 3 Lecture Hours.
Learn factors influencing the political course of the middle east, what makes the region seemingly “impervious” to worldwide trends, topics include regime types, influential political trends, the role of kinship, religion and tribe in opposition and regime politics, regional oil economy, democratic liberalization, growth of civil society.
Prerequisite: Graduate classification.

INTA 605 American Foreign Policy Since World War II
Credits 3. 3 Lecture Hours.
An examination of American foreign policy from 1945 to the present; focus on decisions made by American elected and appointed officials at critical moments of the Cold War and after; theory provides a framework, but the focus is on practical matters that confronted decision-makers.
Prerequisite: Graduate classification.

INTA 606 International Politics in Theory and Practice
Credits 3. 3 Lecture Hours.
The effects of international politics on the competing forces of global integration and disintegration are investigated and policy implications are considered, drawing upon theories of interstate politics.
Prerequisite: Admission to MPIA or approval of instructor.

INTA 608 Fundamentals of the Global Economy
Credits 3. 3 Lecture Hours.
Examines three fundamental pillars of the global economy: international trade, international finance and foreign direct investment (FDI); appreciation for the complexities of the international environment from both theoretical and policy perspectives.
Prerequisite: Graduate classification.

INTA 609/PSAA 667 Principles of International Law
Credits 3. 3 Lecture Hours.
Introduction to the nature and sources of international law, including jurisdiction of states; law governing the making, interpretation, application and termination of treaties and agreements; recognition of states and government; nationality of persons and corporations; state immunities from jurisdiction and control; and human rights.
Prerequisite: Graduate classification.
Cross Listing: PSAA 667/INTA 609.

INTA 611 Authoritarianism and Political Elites in the Arab World
Credits 3. 3 Lecture Hours.
Introduces the concept of political elite and linking it to the authoritarian state in the Arab world in an attempt to explain the lack of democracy in that part of the world.

INTA 612/PSAA 668 U.S. Law and Homeland Security
Credits 3. 3 Lecture Hours.
Analyze the threat to the homeland as reflected in a number of pre and post 9/11 commission reports; master's level course intended for individuals preparing for professional careers in the conduct of international affairs.
Cross Listing: PSAA 668/INTA 612.
INTA 613 Diplomatic Negotiations: A U.S. Embassy Perspective
Credits 3.3 Lecture Hours.
Explore the role of a formal Presidential National Security Strategy, gain first-hand skills and practice in how an American Embassy functions to achieve national security objectives; master's level course intended for individuals preparing for professional careers in the conduct of international affairs.

INTA 617 Deterrence and Coercion
Credits 3.3 Lecture Hours.
Introduces deterrence and coercion as instruments of defense policy by applying them to historical and contemporary security problems.

INTA 616 Economic Development in China
Credits 3.3 Lecture Hours.
Economic development in China introducing descriptive information of development strategies, institutional changes and policy effectiveness with respect to industrialization, economic growth income distribution and welfare at different historical stages.

INTA 615 Democratization as Foreign Policy
Credits 3.3 Lecture Hours.
Explores concept of democracy and its “requisites”, focuses on “third wave” and possible “fourth wave” of democratization, attention to cases in Eastern and Southern Europe, Latin America, Middle East; addresses in-depth international dimension of democratization; war, institutional change, aid and the promotion of democracy; assessment of relationship between democracy and peace.

INTA 614 International Security
Credits 3.3 Lecture Hours.
Introduces U.S. general purpose forces; examine issues at the intersection of military strategy and operations, including force planning and future operational environment; relies on relevant historical examples including recent conventional and unconventional military campaigns.

INTA 613 U.S. Military Power
Credits 3.3 Lecture Hours.
Introduces U.S. general purpose forces; examine issues at the intersection of military strategy and operations, including force planning and future operational environment; relies on relevant historical examples including recent conventional and unconventional military campaigns.

INTA 612 Chinese Strategic Thought
Credits 3.3 Lecture Hours.
Intensive reading and research course in Chinese strategic thought from the Warring State period (403-221 BC) to 21st century China with two goals: to provide an introductory understanding of the nature of strategic thinking throughout Chinese history and to provide the conceptual tools to put Chinese strategic thought in a comparative perspective.

INTA 611 Chinese Foreign Policy
Credits 3.3 Lecture Hours.
Provide an overview of Chinese Foreign Policy since 1949, understand the major external and domestic determinants of Chinese foreign policy, the results of domestic politics and/or international pressures, the role of ideology in Chinese foreign policy, economic interests affecting Chinese foreign policy, and what drives China's involvement in international affairs.

INTA 610 International Security
Credits 3.3 Lecture Hours.
Focus on how government is structured to combat terrorism, essentially a course in federalism, with a concentration on issues related to homeland security; topics include governmental structure and jurisdiction, political, fiscal and administrative; master's level course intended for individuals preparing for professional careers in the conduct of international affairs.

INTA 609 Multinational Enterprises
Credits 3.3 Lecture Hours.
Fundamental texts dealing with war and diplomacy from ancient Greeks through the present; authors will include Thucydides, Sun-tzu, Ibn Khaldun, Plutarch, Cicero, Augustine, Aquinas, Machiavelli, Hobbes, Bacon, Rousseau, Hume, Bentham, Grotius, Vattel, Montesquieu, Smith, Kant, The Federalists, Tocqueville, Burke, Mill, Hegel, Nietzsche, Clausewitz, Marx, Freud, Schmitt, Heidegger, and Rawls among others.

INTA 608 Foundations of Strategy and Statecraft
Credits 3.3 Lecture Hours.
Basic macroeconomics of open economy, coordination of policies and exchange rate regimes; the main characteristics of the international payments system, the role of international organizations and proposals for reform; intended as a survey course with emphasis on current policy issues.

INTA 607 Advanced Economic Development
Credits 3.3 Lecture Hours.
Provides a broad survey of the field of international business; multinational enterprises in a variety of sectors, countries, and organizational forms; focus primarily on the past 20 years, but the historical development of MNEs also examined.

INTA 606 Government and Homeland Security
Credits 3.3 Lecture Hours.
Evaluates frameworks for understanding international conflict and then uses these perspectives to survey security problems across several regions, including East Asia, the Middle East and South Asia.

INTA 605 Development in the Context of Globalization
Credits 3.3 Lecture Hours.
Evaluates frameworks for understanding international conflict and then uses these perspectives to survey security problems across several regions, including East Asia, the Middle East and South Asia.

INTA 604 Economic Policy in Developing Countries
Credits 3.3 Lecture Hours.
Evaluates frameworks for understanding international conflict and then uses these perspectives to survey security problems across several regions, including East Asia, the Middle East and South Asia.

INTA 603 International Economic Development
Credits 3.3 Lecture Hours.
Evaluates frameworks for understanding international conflict and then uses these perspectives to survey security problems across several regions, including East Asia, the Middle East and South Asia.

INTA 602 International Trade Policy Analysis
Credits 3.3 Lecture Hours.
Traditional and strategic trade theory and analysis are used to examine such concepts as comparative advantage, Heckscher-Ohlin-Samuelson model, gains from specialization and trade, partial equilibrium analysis of free trade, violations of the free trade model, welfare effects of trade, trade creation and diversion, and other topics.

INTA 601 Economic Growth and Development
Credits 3.3 Lecture Hours.
Explore the role of a formal Presidential National Security Strategy, gain first-hand skills and practice in how an American Embassy functions to achieve national security objectives; master's level course intended for individuals preparing for professional careers in the conduct of international affairs.

INTA 625 International Trade Policy Analysis
Credits 3.3 Lecture Hours.
Traditional and strategic trade theory and analysis are used to examine such concepts as comparative advantage, Heckscher-Ohlin-Samuelson model, gains from specialization and trade, partial equilibrium analysis of free trade, violations of the free trade model, welfare effects of trade, trade creation and diversion, and other topics.

INTA 624 Advanced Economic Development
Credits 3.3 Lecture Hours.
Research methods which are commonly used in evaluating the effectiveness of international development programs; overview of issues salient to the poor in developing countries around the world; education, health, credit constraints, gender inequality, migration and corruption.

INTA 623 Grand Strategy
Credits 3.3 Lecture Hours.
Addresses origins of great powers' grand strategies, impact of international system on grand strategic options, alliance behavior of states, why and when great powers balance, impact of technology and location on strategies, and causes of great powers' overexpansion; utilizes theoretical approaches and historical case studies to understand grand strategies.
INTA 633 POLITICAL CONSEQUENCES DEVELOPMENT
Credits 3.3 Lecture Hours.
Political Consequences of Development. The political issues concerning consequences of development; does development foster transition to democracy or allow the elites to consolidate their power; does economic development shape the degree of cleavages in society; conditions under which political and economic institutions reinforce, complement, or subvert on another.

Prerequisite: BUSH 631.

INTA 634 Politics and Development Policies
Credits 3.3 Lecture Hours.
Examines why some development policies succeed and others fail; the political processes behind these policies in developing countries, particularly those countries with weak political institutions; understanding the political aspects of decision-making and implementation to improve policy design and sustainability.

INTA 635 Great Famines, War and Humanitarian Assistance
Credits 3.3 Lecture Hours.
(3-0) Exploration of famines, their various definitions, theories of their causes and consequences; how those affected by them cope with the stages through which famines pass and means by which they may be predicted, measured and assessed.

INTA 636 International Development in Theory and Practice
Credits 3.3 Lecture Hours.
Reviews various definitions of development and the theories which explain why some countries develop and other do not; examination of current controversies and factors that lead to economic growth; the role good governance and democratic institutions play; the cultural values of a society; social services play in government.

Prerequisite: Graduate classification.

INTA 639 Homeland Security and Emergency Management
Credits 3.3 Lecture Hours.
Examines the evolution of emergency management; survey the multiple disciplines involved in the disaster process and examine future directions for this field.

Prerequisite: Graduate classification.

INTA 645 Women and Nations
Credits 3.3 Lecture Hours.
Examination of the role of women in shaping of international affairs and how international affairs shape the lives of women; implications of theories concerning international relations drawn from a masculine perspective; what the result of that imbalanced perspective might be; survey a wide variety of issue areas where the generalized invisibility of women and their concerns has had a significant impact.

INTA 646 Foreign Policy Analysis
Credits 3.3 Lecture Hours.
Examination of the actor-specific theory of international relations through a focus on foreign policy decision-making; interpretation of foreign policy making from multiple perspectives (e.g., individual, governmental, cultural identity) in order to enhance understanding of why certain policies emerge and prevail.

INTA 647 State Building and State Failure in the Developing World
Credits 3.3 Lecture Hours.
Focuses on state-building sometimes called nation-building in the developing world; issues of state weakness, state failure and international responses to security concerns associated with weak and failing states; studies the origins of the modern state; examines why states fail or remain weak; surveys ongoing debates on role of international community.

INTA 648 Contemporary Civil Wars
Credits 3.3 Lecture Hours.
Surveys major debates and competing theories on the causes, conduct, resolution and outcome of civil wars; causes of civil wars; participants and how they organize violence; how states respond and to what effect; considers how civil wars end and the domestic and international repercussions.

Prerequisite: Graduate classification.

INTA 650 National Security Law
Credits 3.3 Lecture Hours.
An introduction to the nature and sources of national security law including such topics as the framework of separate branches of law with shared national security powers, maintaining national security abroad, terrorism and other national security threats, and protecting national security information.

Prerequisite: Graduate classification.

INTA 651 National Security Policy
Credits 3.3 Lecture Hours.
A graduate-level seminar on national security policy that will provide a forum for developing an understanding of key concepts, players, institutions, intergovernmental processes, and contemporary issues in the national security policy domain.

Prerequisite: Graduate classification.

INTA 652 The Role of Intelligence in Security Affairs
Credits 3.3 Lecture Hours.
A survey of U.S. Intelligence operations, techniques, objectives and resources, with particular emphasis on how intelligence has contributed and continues to contribute to U.S. national security.

Prerequisite: Graduate classification.

INTA 653 Technical Collections Systems for International Security
Credits 3.3 Lecture Hours.
An introduction to the technical aspects of remote sensing and signals technology applied to international security issues and an introduction to interpretation of the acquired information. Featured outside speakers from U.S. government agencies explain the operation of technical collection systems and their contribution to national and international security.

Prerequisites: Graduate classification; approval of instructor.

INTA 654 Military Strategy in the Conduct of Nations
Credits 3.3 Lecture Hours.
Overview of strategic thought and national security policy; focuses on both the works of prominent military theorists, the historical context, and the significance for current international strategic affairs.

Prerequisite: Admission to MIPA or approval of instructor.

INTA 655 Nationalism, Immigration and Terrorism in the European Union
Credits 3.3 Lecture Hours.
Familiarization with the important trends in European politics and security; investigation of the rise of nationalism and extremist groups in the European Union; the newest immigration trends, their impact on the EU member states and on the EU as a whole; terrorism and other forms of political violence in the European Union and the strategies developed to counter them; relationships between extremist groups in Europe and the U.S.

Prerequisite: Graduate classification.
INTA 657/PSAA 657 Terrorism in Today's World
Credits 3.3 Lecture Hours.
Terrorism in Today's World. Comprehensive survey of international terrorism from its origins to the present; emphasis on how the U.S. government has responded and how it has organized to counter the threat; all major terrorist groups studied; understanding of the nature of the terrorist threat and the implications for the U.S. Government.
Prerequisite: BUSH or INTA G6 or G7 classification of approval of instructor.
Cross Listing: PSAA 657/INTA 657.

INTA 658 Congress and International Security
Credits 3.3 Lecture Hours.
Develop knowledge of Congress, gain a deeper understanding of the key concepts, players institutions, intergovernmental processes, and contemporary issues in the topic area of Congress and international and national security policy.

INTA 659 Transnational Security Issues
Credits 3.3 Lecture Hours.
Understand the composition, role, mission of offices, departments that comprise Intelligence Community; obtain appreciation for transnational security issues; address potential impact short/long term to U.S. national security policies and/or programs that may affect those transnational security issues by the year 2020.

INTA 661 NATO from Military Alliance to Collective Security
Credits 3.3 Lecture Hours.
Comprehensive overview of the central issues concerning the transformation of NATO from a defense security alliance into a collective security organization.

INTA 663/MGMT 663 International Transfer Pricing
Credits 3.3 Lecture Hours.
Valuation of cross-border transactions between units of a multinational enterprise; includes internal and external motivations for transfer pricing, managerial and economic approaches, estimates of transfer manipulation, arm's length standard; U.S. and OECD rules and procedures, tax court cases, and ethical dilemmas.
Cross Listing: MGMT 663/INTA 663.

INTA 667 International Crisis Management: The Policy Process
Credits 3.3 Lecture Hours.
Examination of the policymaking process used by U.S. government officials in response to rapidly moving international crisis situations; simulations of executive meetings, briefings and press conferences; analysis of political, diplomatic, legal and ethical issues involved.
Prerequisite: Graduate classification.

INTA 669/NUEN 669 Nuclear Terrorism Threat Assessment and Analysis
Credits 3.3 Lecture Hours.
Study the manner in which we conduct threat assessments and the analysis of non-state actors in the fields of nuclear and radiological security; examine the history of threats and security issues in an effort to better understand terrorist groupings, their motivations and attack methodologies.
Prerequisite: Graduate classification.
Cross Listing: NUEN 669/INTA 669.

INTA 670 International Affairs Capstone Seminar
Credits 3.3 Lecture Hours.
Capstone team exercise in subject related to international affairs. For MPIA majors only.
Prerequisites: For MPIA majors only, graduate classification and approval of MPIA director.

INTA 672 East Asian Security
Credits 3.3 Lecture Hours.
Examination of international military, diplomatic and political dynamics in the Asia Pacific region; focus on contemporary security relations; examines a wide range of security challenges facing the region; familiarization with the strategic preferences of key actors in the major areas of potential conflict.

INTA 673 Chinese Domestic Politics in Transition
Credits 3.3 Lecture Hours.
Examination of the origins and development of contemporary political system in China; the history and foundational experiences of the Chinese Communist Party; revolutionary and reformist leaderships and its trace from the origins, functioning, and evolution of contemporary China’s political institutions; current and future domestic challenges facing China from a public policy perspective.

INTA 674 U.S. Foreign Policy in the Persian Gulf
Credits 3.3 Lecture Hours.
Examination of U.S. policy in the Persian Gulf against background of oil politics, the Cold War, rise of Islamism, and multiple major wars; compares and contrasts recent U.S. administrations in terms of approaches used to advance U.S. interests and deal with various challenges in the Persian Gulf.

INTA 675 Religion and Politics in Iran
Credits 3.3 Lecture Hours.
Examination of political and social dynamics of contemporary Iran including Iran’s modern history; roots of the Islamic Revolutions; establishment of Iran’s Islamic theocracy, Iran-Iraq war and its major consequences; the emergence of new generation of religious intellectuals; rise and decline of various political movements.

INTA 676 International Politics of the Middle East
Credits 3.3 Lecture Hours.
Focus on critical issues including Great Power involvement in the region, and the regional and international effects of Arab nationalism, Zionism, Islamism, post-Islamism, oil and aid rents, ethnicity, religious minorities, gender and human rights.

INTA 677 Islam in International Politics
Credits 3.3 Lecture Hours.
Investigate how Political Islam developed in the first half of the century and why it gained so much support. Examine the various strategies state elites have taken toward political Islam and will consider the regional and transnational manifestations and implications of Islamist movements; intended for individuals preparing for professional careers in the conduct of international affairs.

INTA 678 Interstate War: Theory and History Implications for the 21st Century
Credits 3.3 Lecture Hours.
Comprehensive look at the central organizing principles for international security and the nature and role of war in contemporary relations among states and the evolving challenges.

INTA 680 Political Violence and Terrorism within the International System
Credits 3.3 Lecture Hours.
Focuses on terrorism as special case of political violence and on non-state actors as a specific category of players toward which the international system must adapt; develops underlying concepts of terrorism and core response strategies to terrorism; develops both national and international responses to terrorism, emphasizing need for complementary policy approaches.
INTA 682 Law of War
Credits 3. 3 Lecture Hours.
Provides key concepts for those who desire an expanded understanding of how and why Law of War influences U.S. Military operations and national security and foreign policy decisions today; introduction to the historical, customary development and the significant efforts of Law of War codification such as the Hague and Geneva Conventions.

INTA 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
Directed internship in a public or private organization to provide on-the-job training with professionals in organizational settings appropriate to the student's professional objectives.
Prerequisites: Graduate classification and approval of MPSA or MPIA director.

INTA 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed individual instruction in selected problems in government and public service.
Prerequisites: Graduate classification and approval of MPSA or MPIA director.

INTA 686 Russia and International Politics
Credits 3. 3 Lecture Hours.
Examines changes within Russia and its role in international politics since 1991, emphasizing the period of Vladimir Putin's presidency, explores Putin's approach to political, economic and social challenges facing Russia, as well as the war in Chechnya and terrorism within Russia, also examines Russia's critical relationship with the United States.

INTA 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in an identified area of government and public service. May be repeated for credit.
Prerequisites: Graduate classification and approval of MPSA or MPIA director.

INTA 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation.

ISEN - Indus. & Systems Engr.

ISEN 601 Location Logistics of Industrial Facilities
Credits 3. 3 Lecture Hours.
Selection of the optimal locations of industrial plants and distribution centers through analytical modeling of the costs of inventory storage, transportation, utilities, labor supply and other cost components.
Prerequisites: ISEN 620.

ISEN 602 Applications of Random Processes
Credits 3. 3 Lecture Hours.
Introduction to probability and random processes as a basis for studying topics in industrial engineering and operations research.
Prerequisites: ISEN 609; STAT 212 or STAT 601.

ISEN 603 Advanced Logistics
Credits 3. 3 Lecture Hours.
Topics in logistics including measures of logistical systems performance, facilities location-allocation, production/distribution system design, transportation network design, vehicle routing; emphasis on mathematical modeling based on large scale integer programs and solution approaches for general network design problems.
Prerequisites: ISEN 601, ISEN 622, ISEN 623, ISEN 668 or approval of instructor.

ISEN 605 Material Handling Systems
Credits 3. 3 Lecture Hours.
Analysis and design of integrated material handling systems; automatic storage and retrieval of unit loads, and identifying and establishing boundary conditions on key parameters required to specify the desired system required for equipment vendors to design appropriate hardware.
Prerequisites: ISEN 420; ISEN 416.

ISEN 608 Industrial Case Analysis
Credits 3. 3 Lecture Hours.
Practice in applications of principles to the solution of actual case problems involving broad management decisions.
Prerequisite: Approval of instructor.

ISEN 609 Probability for Engineering Decisions
Credits 3. 3 Lecture Hours.
Introduction to probability and stochastic processes for characterization of uncertainty in engineering decisions.
Prerequisite: Approval of instructor.

ISEN 611 Foundations of Technology Evaluation and Assessment
Credits 3. 3 Lecture Hours.
Quantifying gambles arising in engineering activities associated with the design, deployment, and operations of technology; analytical foundations of technology evaluation and assessment from an engineering perspective; focus on examination of probability models supporting quantification of value and risk.
Prerequisites: ISEN 609 or approval of instructor.

ISEN 612 Design by Reliability
Credits 3. 3 Lecture Hours.
Quantitative reliability analysis in engineering design. Reliability methods applicable to risk based design, component reliability and degradation, static and dynamic system reliability modeling and analysis, life testing, stress/strength analysis, and fault tree analysis.
Prerequisites: ISEN 609; STAT 414.

ISEN 613 Engineering Data Analysis
Credits 3. 3 Lecture Hours.
Selected topics in probability and data analysis for quality in engineering problems; measurement principles, data collection and data analysis to solve quality engineering problems. Introduction to courses in the assurance sciences-reliability, maintainability, quality control and robust design.

ISEN 614 Advanced Quality Control
Credits 3. 3 Lecture Hours.
Advanced methods applied to quality control and anomaly detection; classical treatments and recent developments in statistical process control; evaluation, design and maintenance of quality control programs; focus on monitoring and root cause identification.
Prerequisite: STAT 212 or STAT 601.

ISEN 615 Production and Inventory Control
Credits 3. 3 Lecture Hours.
Model development for inventory management and for production planning; production control models for line balancing, lot sizing, dispatching, scheduling, releasing, kitting, MRP and just-in-time with treatment of flexible manufacturing and assembly.
Prerequisites: ISEN 620; ISEN 609.
ISEN 616 Design and Analysis of Industrial Experiments
Credits 3.3 Lecture Hours.
Fundamental theory, concepts and procedures required for industrial experimental design, statistical data analysis, and model building, with emphasis on engineering formulations and applications. One-factor experiments with and without restrictions on randomization, treatment comparison procedures, Latin and other squares, factorial experiments, full and fractional two-level factorial experiments, blocking in factorial designs, response surface methodologies and introduction to Taguchi methods.
Prerequisite: STAT 212 or STAT 601.

ISEN 617 Quantitative Models for Supply Chain Coordination
Credits 3.3 Lecture Hours.
Concepts, complexities, and models pertaining to supply chain management and relate these to recent practical initiatives; includes channel coordination models, supply chain contracting, and vendor-managed inventory models.
Prerequisites: ISEN 615, ISEN 623, and ISEN 609 or STAT 615 or approval of instructor.

ISEN 618 Stochastic Processes in the Assurance Sciences
Credits 3.3 Lecture Hours.
Stochastic processes necessary to deal with advanced problems in reliability, maintainability and other related areas.
Prerequisite: ISEN 602.

ISEN 619 Analysis and Prediction
Credits 3.3 Lecture Hours.
Data-mining methods and data-driven models; statistical model building and parameter estimation for Markov processes; sampling of dynamic systems with random disturbances; on-line identification algorithms; design of time-series control charts for process monitoring; multivariate analysis; applications using real data.
Prerequisite: ISEN 609.

ISEN 620 Survey of Optimization
Credits 3.3 Lecture Hours.
Theory and numerical methods for deterministic linear and nonlinear optimization; topics include linear programming, unconstrained nonlinear optimization, Lagrange and K-K-T conditions, and numerical algorithms.
Prerequisite: MATH 304 or MATH 311.

ISEN 621 Heuristic Optimization
Credits 3.3 Lecture Hours.
Focus on heuristic optimization methods that search beyond local optima; includes neighborhood search methods and advanced search strategies such as genetic algorithms, simulated annealing, neural networks, tabu search, and greedy randomized adaptive search procedures.
Prerequisites: ISEN 620 or ISEN 622 or approval of instructor.

ISEN 622 Linear Programming
Credits 3.3 Lecture Hours.
Development of the mathematics and algorithms associated with linear programming; convex sets and cones, polyhedral sets, duality theory, sensitivity analysis, simplex, revised simplex and dual simplex methods; also covered are bounded variables, column generation, decomposition, integer programming; computer assignment.
Prerequisite: MATH 304.

ISEN 623 Nonlinear and Dynamic Programming
Credits 3.3 Lecture Hours.
Understanding of algorithms for nonlinear optimization; development of optimality conditions and different types of algorithms for unconstrained and constrained problems; formulation and solution of many types of discrete dynamic programming problems.
Prerequisite: MATH 304.

ISEN 624 Applied Distribution and Queueing Theory
Credits 3.3 Lecture Hours.
Queueing theory and its applications; single and multiple channels, priorities, balking, batch arrivals and service, and selected non-Markovian topics.
Prerequisite: ISEN 609 or ECEN 646.

ISEN 625 Simulation Methods and Applications
Credits 3.2 Lecture Hours. 3 Lab Hours.
Fundamental methodologies of simulation modeling; random number and variate generation, statistical analysis of model output, and discrete event modeling using a commercial simulation language.
Prerequisite: STAT 212 or STAT 601.

ISEN 627 Engineering Analysis for Decision Making
Credits 3.3 Lecture Hours.
Principles and application of techniques in analysis of decision processes involving engineering systems under uncertainty. Areas of utility and information theory as related to quantification of information for decision-making.
Prerequisites: ISEN 609; STAT 601 or approval of instructor.

ISEN 629 Engineering Optimization
Credits 3.3 Lecture Hours.
Develops a modern framework for studying nonlinear programming problems using convex analysis; convex sets and cones, separating hyperplanes, sub-differentiability, conjugate transforms, duality theory and parametric analysis; applications of the principles and methods will be studied.
Prerequisite: ISEN 623; corequisite: MATH 409.

ISEN 630 Human Operator in Complex Systems
Credits 3.3 Lecture Hours.
Basic understanding of the theory and practice of human factors engineering. Topics are presented within the framework of humans as functioning systems and their requirements when incorporated in hardware and software systems.

ISEN 631 Cognitive Systems Engineering
Credits 3.3 Lecture Hours.
Analyze how artifacts, displays, social interaction and factors such as stress, time pressure, competing demands and uncertainty affect human cognitive functions such as perception, attention, memory, decision-making and problem-solving in joint human-machine systems; user-centered design techniques, research and evaluation methods introduced and applied to a design project.
Prerequisites: ISEN 635, ISEN 430/ISEN 630, or approval of instructor.

ISEN 635 Human Information Processing
Credits 3.3 Lecture Hours.
Perceptual and cognitive issues as related to the design of man-machine systems; perception, central processes, decision making and other performance aspects of the human component as an information processor.
Prerequisite: ISEN 430 or approval of instructor.
ISEN 636 Large-Scale Stochastic Optimization
Credits 3.3 Lecture Hours.
Introduction to models, theory and computational methods for large-scale stochastic optimization including decomposition-coordination algorithms for stochastic programming such as generalized Benders decomposition and resource-price directive methods; emphasis on practical algorithm implementation and computational experimentation.
Prerequisites: ISEN 620 or ISEN 622, STAT 610 and CSCE 602 or approval of instructor.

ISEN 637 Stochastic Dynamic Programming
Credits 3.3 Lecture Hours.
Methodologies for stage-wise stochastic-decision processes; includes finite-horizon models, infinite-horizon discounted total cost models, and average cost models; applications of methods to various situations.
Prerequisites: ISEN 609 and ISEN 622, or approval of the instructor.

ISEN 638 Polyhedral Theory and Valid Inequalities
Credits 3.3 Lecture Hours.
Advanced knowledge of polyhedral theory and valid inequalities for (mixed) integer programming; introduction to fundamental concepts in polyhedral theory and several approaches to generation of valid inequalities; includes state-of-the-art advancements and current avenues of research.
Prerequisite: ISEN 668.

ISEN 640 Systems Thinking and Analysis
Credits 3.3 Lecture Hours.
Introduction to the systems thinking process and the fundamental considerations associated with the engineering of large-scale systems, or systems engineering.
Prerequisite: MATH 304 or approval of instructor.

ISEN 641 Systems Engineering Methods and Frameworks
Credits 3.3 Lecture Hours.
Concepts, methodology, methods and tools for discovery, definition, analysis, design, creation, and sustainment of systems involving information, physical, and human elements; architecture modeling methods include IDEF/UPDM; systems engineering frameworks include DoDAF/MoDAF, and Zachman; analysis tools include executable architectures to assess consistency, interoperability and performance.
Prerequisites: MATH 304 or approval of instructor.

ISEN 643/CVEN 654 Strategic Construction and Engineering Management
Credits 3.3 Lecture Hours.
Strategic and systems perspectives applied to construction and engineering management projects, organizations, and industries; system dynamics methodology to model construction and engineering systems; understanding drivers of performance; feedback and high leverage points for performance improvement.
Prerequisite: Graduate classification or approval of instructor.
Cross Listing: CVEN 654/ISEN 643.

ISEN 644/CVEN 644 Project Risk Management
Credits 3.3 Lecture Hours.
Identifies causes of risks in projects; discusses probabilistic description of risks and formulation of risk models; Bayesian methods for revising probabilities; qualitative and quantitative risk assessment; setting contingencies on budgets and schedules; risk mitigation and risk management; handling technological risk; Utility theory and game theory in management of risks.
Prerequisite(s): STAT 601 or equivalent; graduate status in Engineering, approval of instructor.
Cross Listing: CVEN 644.

ISEN 645 Lean Thinking and Lean Manufacturing
Credits 3.3 Lecture Hours.
Introduces the principles of lean thinking in modern manufacturing systems; philosophical, managerial and organizational requirements studied; lean manufacturing quantitative modeling methodologies, lean manufacturing cell design and case study analysis.
Prerequisites: ISEN 609 or approval of instructor.

ISEN 650 Healthcare Delivery Systems Modeling and Analysis
Credits 3.3 Lecture Hours.
Challenges in modeling and analysis of healthcare systems; deterministic and stochastic approaches to model and analyze healthcare systems; existing and emerging policies in healthcare and effects on healthcare system models.
Prerequisite: ISEN 609, ISEN 620, or approval of instructor.

ISEN 654/MEEN 648 Manufacturing Systems Planning and Analysis
Credits 3.3 Lecture Hours.
The systems perspective of a computer integrated manufacturing system; manufacturing and its various levels and the planning and control of product movement through the production system in the context of using realtime control, multiprocessor systems, network architectures and databases.
Prerequisite: ISEN 420.
Cross Listing: MEEN 648/ISEN 654.

ISEN 655/MEEN 650 Control Issues in Computer Integrated Manufacturing
Credits 3.3 Lecture Hours.
Examines the nature of computer aided manufacturing systems with emphasis on control; an architecture for control of CAM systems is presented; control issues, problems and procedures to control CAM systems are studied and developed.
Prerequisite: Approval of instructor.
Cross Listing: MEEN 650/ISEN 655.

ISEN 656 Virtual Manufacturing
Credits 3.3 Lecture Hours.
Focus on principles of virtual reality and 3-D graphics and their application in manufacturing, automation and simulation; virtual reality modeling, motion, collision detection and networking issues studied and developed.
Prerequisite: Approval of instructor.

ISEN 659 Modeling and Analysis of Manufacturing Systems
Credits 3.3 Lecture Hours.
Analytical models applied to the description, design operation and control of manufacturing processes and systems; includes serial assembly, jobshops, FMS and cellular manufacturing configurations.
Prerequisites: ISEN 609.

ISEN 660 Quantitative Risk Analysis
Credits 3.3 Lecture Hours.
Fundamental concepts, techniques, and applications of quantitative risk analysis and risk-informed decision making for students in all engineering fields. Practical uses of probabilistic methods are demonstrated in exercises and case studies from diverse engineering areas.
Prerequisites: Graduate or senior classification.
Cross Listing: CHEN 660 and SENG 660.
ISEN 661 Network-Based Planning and Scheduling Systems
Credits 3.3 Lecture Hours.
Fundamental theory, mathematical modeling, and algorithms of network flow models including shortest path models, maximum flow, and cost minimization models; out-of-kilter algorithm; pure and generalized network specializations of the primal simplex method; introduction to multi-commodity networks.
Prerequisite: ISEN 620 or 622.

ISEN 662 Production Economics
Credits 3.3 Lecture Hours.
Develop an understanding of the analytical and empirical techniques required to conduct an analysis of the magnitude and the sources of productivity change; programming and regression approaches to analyze industries include manufacturing, energy, and service systems.
Prerequisites: ISEN 303 and ISEN 620 or approval of instructor.

ISEN 663 Engineering Management Control Systems
Credits 3.3 Lecture Hours.
Integration of human relations, planning and control concepts, systems analysis and design, and principles of management oriented toward engineering functions within an organization; organizational design and administration as they impact along the product life cycle, i.e., research, design, development, production, and use.

ISEN 664 Principles of Scheduling
Credits 3.3 Lecture Hours.
Scheduling and sequencing for production, assembly, supply chain, logistics, and service operations; relevant solution methods including algebraic, branch and bound, Lagrangian relaxation, facet generation, branch and price, heuristics, and simulation; computational complexity issues.
Prerequisite: ISEN 620 or ISEN 622 or approval of instructor.

ISEN 667 Engineering Economy
Credits 3.3 Lecture Hours.
Fundamental concepts and advanced techniques of engineering economic analysis; evaluation of alternative capital investments considering income taxes, depreciation, and inflation; discounted cash flow analysis of competing projects, break-even analysis, and determination of rate of return on investment. Risk and uncertainty in engineering analysis.
Prerequisite: ISEN 303 or approval of instructor.

ISEN 668 Integer Programming
Credits 3.3 Lecture Hours.
Formulation principles and general approaches for solving integer (and mixed, integer linear) programs including preprocessing, cutting plane methods, branch and bound, branch and cut, branch and price, and Lagrange relaxation; classical problem structures with special-purpose solution algorithms; fundamental theory of polyhedra, methods to generate valid inequalities, and computational complexity.
Prerequisite: ISEN 620 or ISEN 622.

ISEN 669 Software Tools for Stochastic Decision Support Analysis
Credits 3.3 Lecture Hours.
Overview of stochastic decision analysis; focus on Palisade Corporation's Decision Tools Suite of Excel add-in macros; topics include sensitivity analysis of Excel models, decision tree construction and analysis, and simulation within Excel.
Prerequisite: STAT 630 or equivalent and ISEN 667.

ISEN 681 Seminar
Credit 1.1 Lecture Hour.
Opportunity to present research in a professional atmosphere. Presentations are not restricted to thesis or problem research. Acquaints the student with departmental research activities and procedures in documenting research.

ISEN 684 Professional Internship
Credits 1 to 16. 1 to 16 Other Hours.
On-the-job training under supervision of practicing engineers in settings appropriate to professional objectives. May be repeated for credit.
Prerequisite: Approval of committee chair and department head.

ISEN 685 Directed Studies
Credits 1 to 12. 1 to 12 Other Hours.
Special topics not within scope of thesis research and not covered by other formal courses.
Prerequisite: Graduate classification in industrial engineering.

ISEN 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in an identified area of industrial engineering. May be repeated for credit.
Prerequisite: Approval of instructor.

ISEN 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research in industrial engineering field; content and credit dependent upon needs of individual student.

ISEN 692 Professional Study
Credits 1 to 9.1 to 9 Other Hours.
Approved professional study or project. May be taken more than once, but not to exceed 4 hours of credit toward a degree. Must be taken on a satisfactory/unsatisfactory basis.
Prerequisite: Approval of instructor.

ISYS - Mgmt Info Systems

ISYS 601 Fundamentals of Business Programming
Credits 3.3 Lecture Hours.
Business Application Development using both procedural and object-oriented programming techniques; use of component-based software design and development for distributed business software systems.
Prerequisite: Graduate business classification or approval of instructor.

ISYS 610 Business Data Communications
Credits 3.3 Lecture Hours.
Concepts and technology of on-line and network-based systems in business; analysis of data communication requirements, design, selection, and application of network technologies including wide and local area networks, distributed processing, network architecture, and systems management and control; software simulation projects emphasized. Classification 6 students may not enroll in this course.
Prerequisites: Graduate classification.

ISYS 612 Management Information Systems
Credits 1 to 3. 1 to 3 Lecture Hours.
Concepts, theories, and the strategic role of information systems as applied to business organizations; highly integrative/cross functional in nature. Classification 6 students may not enroll in this course.
Prerequisite: Enrollment is limited to MBA students.
ISYS 615 Business Database Systems  
Credits 3.3 Lecture Hours.  
Information processing and management involving applications and user orientation in a business environment using commercially available database management systems.  
Prerequisite: Knowledge of one programming language.

ISYS 620 Systems Analysis and Design  
Credits 3.3 Lecture Hours.  
Methodologies, techniques, and tools for information systems analysis and design; the analysis and logical design of business processes and management information systems focusing on the systems development life cycle; techniques for logical system design.  
Prerequisite: ISYS 615 or concurrent enrollment.

ISYS 622 Advanced Data Management  
Credits 3.3 Lecture Hours.  
Data/database management and advanced SQL techniques; issues of data security, backup and recovery, large scale databases, master data management, concurrent user data access, scalability, and policies.  
Prerequisites: ISYS 615 or equivalent; graduate classification in business.

ISYS 624 Advanced Systems Analysis and Design  
Credits 3.3 Lecture Hours.  
Advanced topics in business systems analysis and design; alternative methodologies such as agile development, extreme programming, Rational Unified Process; Unified Modeling Language; bench marking and best practices for systems development; cost/benefit analysis, estimation and budgeting for business information systems; testing; patterns, domain-driven design; process modeling; service-oriented architecture and cloud computing.  
Prerequisite: ISYS 620 or equivalent; graduate classification in business.

ISYS 630 MIS Project Management and Implementation  
Credits 3.3 Lecture Hours.  
Advanced coverage of systems development topics with emphasis on the management and implementation of business computing systems; group project orientation to include feasibility analysis, alternative evaluation and selection, and management approval; use of software engineering tools where appropriate. Classification 6 students may not enroll in this class.  
Prerequisite: ISYS 620.

ISYS 631 Information Systems Design and Development Project  
Credits 3.3 Lecture Hours.  
Design and delivery of functional, multi-platform application system using current technologies; user interface design emphasized; issues of mobile device forms, software delivery, and development.  
Prerequisites: Graduation classification; ISYS 622; ISYS 630.

ISYS 635 Business Information Security  
Credits 3.3 Lecture Hours.  
Explores the business, managerial, and technological aspects of information security; analysis, design, and implementation issues surrounding effective information security; authentication, authorization, availability, business continuity planning, confidentiality, disaster recovery, encryption, firewalls, fraud protection, security policy development, integrity, risk management, virus protection, VPNs and wireless security. Classification 6 students may not enroll in this course.  
Prerequisite: ISYS 610.

ISYS 637 Data Warehousing  
Credits 3.3 Lecture Hours.  
Provides an understanding of the process by which a data warehouse system is designed and developed along with the underlying concepts and software systems; includes OLAP models and their differences with standard OLTP models.  
Prerequisite: ISYS 615 or approval of instructor.

ISYS 640 Information Systems Sourcing  
Credits 3.3 Lecture Hours.  
Identify the challenges of information systems sourcing, as well as the costs, risks, rewards, and strategies involved in sourcing situations; focus on global sourcing of professional services, including IT, business process, and knowledge process outsourcing; issues such as vendor management, legal issues, distributed work teams, and comparing alternative sourcing strategies.  
Prerequisites: ISYS 624 or equivalent or approval of instructor; graduate classification in business.

ISYS 643 Corporate Information Planning  
Credits 3.3 Lecture Hours.  
Concepts regarding the design and use of computer-based management information and decision support systems; combinations of computing hardware and software and design concepts evaluated to meet managers’ information needs. Classification 6 students may not enroll in this course.  
Prerequisites: ISYS 615 or equivalent or approval of instructor.

ISYS 645 IT Security Controls  
Credits 3.3 Lecture Hours.  
Familiarization with planning, design, and implementation of controls to minimize risks to business information; focus on the importance of managing business information security; introduction to the tools, concepts and theories to safeguard an organization’s information systems and IT assets; understanding of cryptography and application, operations, and physical security.  
Prerequisite: ISYS 635.

ISYS 646 E-Services  
Credits 3.3 Lecture Hours.  
Examines the deployment and utilization of information technologies by businesses, governments and not-for-profit organizations to deliver services, with applications in banking and financial advisory services, healthcare, and federal, state and local governments.  
Prerequisite: ISYS 620.

ISYS 650 Business Data Mining  
Credits 3.3 Lecture Hours.  
Rationale for business Data Mining through case studies of business applications; process of data mining by using commercial Data Mining software on very large data sets; half of the course devoted to lab training in the use of Data Mining software including SAS Enterprise Miner and SPSS Clementine.  
Prerequisite: STAT 652 or approval of instructor.

ISYS 652 Customer Relationship Management and Technologies  
Credits 3.3 Lecture Hours.  
Theory and application of information technology in customer relationship management, construction of CRM infrastructures in organizations.  
Prerequisite: ISYS 615.

ISYS 654 E-Commerce Technologies  
Credits 3.3 Lecture Hours.  
Theory and application of constructing E-Commerce sites, including n-tier architecture and technologies, web servers, server interactions with databases, and transaction managers.  
Prerequisite: ISYS 615 or equivalent.
ISYS 655 Security Management and Compliance
Credits 3. 3 Lecture Hours.
Familiarization with managerial and legal aspects of business information security; focus on importance of managing business information security and theories to help safeguard an organization’s information systems and IT assets; understanding of Security Architecture and Design, Business Continuity and Disaster Recovery Planning, Laws Investigation and Ethics.
Prerequisite: ISYS 635.

ISYS 656 Global Information Systems
Credits 3. 3 Lecture Hours.
Impact and the central role of Information Systems (IS) on globalization of business; issues of deployment of information systems and technology in international commerce, global IS environmental variables such as technology, legal, political, economic, social and cultural. Classification 6 students may not enroll in this course.
Prerequisite: ISYS 610 or equivalent, or approval of instructor.

ISYS 670 IT Consulting
Credits 3. 3 Lecture Hours.
Concerns with the practice of IT consulting; and develops an understanding of consulting practices, business development and revenue management, client relationships, team-based knowledge, knowledge services, technology evaluation, selection and integration, collaboration tools, business process and organizational change, and large application implementations; involves a full semester client-based project.
Prerequisites: ISYS 615, ISYS 620, and SCMT 660, and approval of instructor.

ISYS 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
A directed internship in an organization to provide students with on-the-job training with professionals in organizational settings appropriate to the student’s professional objectives. May be repeated for credit. Classification 6 students may not enroll in this course.
Prerequisite: Approval of committee chair and department head.

ISYS 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed study on selected problems using recent developments in business research methods. Classification 6 students may not enroll in this course.
Prerequisite: Approval of instructor and graduate advisor.

ISYS 686 Theory and Research in Management Information Systems
Credits 3. 3 Lecture Hours.
Theory, applications and human and organizational issues of Management Information Systems (MIS); current academic research into the analysis, design and implementation of computer information systems. Classification 6 students may not enroll in this course.
Prerequisites: Doctoral classification and approval of instructor.

ISYS 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in identified area of information systems, operations management or management science. Classification 6 students may not enroll in this course. May be repeated for credit.

ITAL - Italian

ITAL 692 Readings
Credits 3. 3 Lecture Hours.
Readings in Italian literary texts in the original language.
Prerequisite: Graduate classification.

ITDE - Interdisciplinary Engr.

ITDE 685 Directed Studies
Credits 1 to 12. 1 to 12 Other Hours.
Research problems of limited scope designed primarily to develop research technique.

ITDE 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation.

KINE - Kinesiology

KINE 601 Reading Research Publications in Kinesiology
Credits 3. 3 Lecture Hours.
Instruction in, and development of, research skills through the study of published reports and readings in kinesiology.

KINE 606 Motor Neuroscience I
Credits 3. 3 Lecture Hours.
Neurophysiology of the neuromuscular system with emphasis on motor control; topics include organization of the CNS; reflexes; integration of sensory information; experimental approaches to study neuromuscular control and neurophysiology of contemporary motor control theories.
Prerequisite: KINE 406 or equivalent.

KINE 622 Supervision of Health and Kinesiology
Credits 3. 3 Lecture Hours.
Principles and processes of supervision; in-service training of personnel.

KINE 623 Administration of Health and Kinesiology
Credits 3. 3 Lecture Hours.
Administration of comprehensive programs of kinesiology in higher education settings.

KINE 624 Pedagogical Research in Teaching/Physical Education
Credits 3. 3 Lecture Hours.
Examine pedagogical research in education and relate to the specialty area of physical education; study key research paradigms that now influence inquiry in physical education and link to current practices in effective teaching.
Prerequisites: Graduate classification and approval of instructor.

KINE 626 Exercise for Clinical Population
Credits 3. 3 Lecture Hours.
Principles relevant to exercise programming for persons with chronic disease/disability; includes information for each condition: pathophysiology, effect on exercise response, effects of exercise on disease process, and recommendation for exercise testing and programming.
Prerequisite: KINE 433 or instructor approval.

KINE 628 Nutrition in Sport and Exercise
Credits 3. 3 Lecture Hours.
Interaction between nutrition, exercise, and athletic performance; including: biochemical and physiological aspects of nutrition and exercise; nutrition for training and competition; exercise and oxidant stress; nutritional supplements and ergogenic acids; and nutritional aspects of body composition and weight control.
Prerequisite: Graduate classification; BIOL 320; KINE 433 or approval of instructor.
KINE 629 Physiology of Strength and Conditioning
Credits 3.3 Lecture Hours.
Physiological, bio-mechanical, and metabolic aspects of muscular strength and conditioning programs for various athletic and non-athletic populations; review of resistance training based on scientific literature; promote the use of a structured scientific approach in the prescription of progressive resistance training.
Prerequisite: Graduate classification, BIOL 320; KINE 433 or approval of instructor.

KINE 631 Specialized Strength and Conditioning Techniques
Credits 3.3 Lecture Hours.
Research based physiological responses and adaptations associated with power, speed, quickness, flexibility and mobility; laboratory demonstration/implementation and specific practical experiences based on available scientific research. Practical mastery as well as theoretical understanding required.
Prerequisite: KINE 629 or approval of instructor.

KINE 637 Exercise Physiology I
Credits 3.3 Lecture Hours.
Functional changes brought about by acute and chronic exercise; topics include muscle structure/function, energy transduction, biochemistry of exercise, muscle mechanics, fatigue and adaptation.
Prerequisite: KINE 433 or equivalent.

KINE 638 Exercise Physiology II
Credits 3.3 Lecture Hours.
Functional changes brought about by acute and chronic exercise; topics include pulmonary and cardiovascular physiology, training and detraining, and special topics.
Prerequisite: KINE 433 or equivalent.

KINE 639 Exercise Electrocardiography
Credits 3.3 Lecture Hours.
Electrocardiography (ECG) for the exercise scientist; emphasis on recognition and interpretation of normal and aberrant ECG patterns encountered during the graded exercise test; physiologic mechanisms underlying the normal and abnormal ECG.
Prerequisites: KINE 638 and 648 or approval of instructor.

KINE 640 Motor Neuroscience II
Credits 3.3 Lecture Hours.
Contemporary theories of motor learning that link behavioral analysis to underlying neural correlates of control; topics include memory, physical, mental and observational practice; internal models, motor planning-programming; and self-organization in perception-action systems; emphasis on cognitive and behavioral neuroscience.
Prerequisite: KINE 406 or equivalent.

KINE 641 Motor Neuroscience: Development Issues
Credits 3.3 Lecture Hours.
Explores the contemporary developmental issues associated with motor behavior (perception to action) across the lifespan; topics include physical and neurological growth, perception, motor control, and environmental influence.
Prerequisite: KINE 307 or equivalent.

KINE 642 Self-organization in Motor Neuroscience
Credits 3.3 Lecture Hours.
Application of the concepts of non-linear dynamical systems theory and self-organization to the study of biological motion and learning; topics include perception-action coupling, phrase transitions and stability, sensori-motor transformations.
Prerequisites: KINE 406 and KINE 641.

KINE 646 Fundamentals of Space Life Sciences
Credits 3.3 Lecture Hours.
Integrates nutrition, physiology, and radiation biology to define major biological problems in long duration space flight; provide an overview of the problems of bone loss, muscle wasting, and radiation-enhanced carcinogenesis along with potential countermeasures; focus on nutritional interventions and exercise protocols.
Cross Listing: NUTR 646 and NUEN 646.

KINE 647 Instrumentation and Techniques in Exercise Physiology I
Credits 2.1 Lecture Hour. 3 Lab Hours.
Theory, experiments and demonstrations in exercise physiology; laboratory experience in the use of metabolic and biochemical instrumentation commonly found in a modern exercise physiology laboratory.
Prerequisite: Concurrent enrollment in KINE 637.

KINE 648 Instrumentation and Techniques in Exercise Physiology II
Credits 2.1 Lecture Hour. 3 Lab Hours.
Theory, experiments and demonstrations in exercise physiology; laboratory experience in the use of metabolic and biochemical instrumentation commonly found in a modern exercise physiology laboratory. A continuation of KINE 647.
Prerequisite: KINE 637 or concurrent enrollment.

KINE 649 Applied Exercise Physiology
Credits 3.3 Lecture Hours.
Investigate how the acute physiological responses to exercise and the chronic physiological adaptations to exercise training are altered by environmental factors—heat, cold, altitude, and microgravity, and by age and sex; addresses the physiological bases for reducing the risk of cardiovascular, metabolic and bone disease through physical activity.
Prerequisite: KINE 433 or equivalent.

KINE 681 Seminar
Credit 1.1 Lecture Hour.
Reports and discussions of topics of current interest in kinesiology.

KINE 682 Seminar in...
Credit 1.1 Other Hour.
Reports and discussions of topics of current interest in kinesiology. Students may register in up to but not more than four sections of this course in the same semester.

KINE 683 Practicum in Kinesiology
Credits 3.3 Other Hours.
Observation and study of rehabilitation and kinesiology programs in schools and other institutions. May be repeated twice for credit.
Prerequisite: Approval of department head.

KINE 684 Professional Internship
Credits 1 to 6.1 to 6 Other Hours.
Supervised experiences in application of formal training to performing professional functions consistent with career goals.
Prerequisites: 12 semester hours of selected graduate work; approval of department head.

KINE 685 Directed Studies
Credits 1 to 12.1 to 12 Other Hours.
Directed study of selected problems in kinesiology not related to thesis. May be repeated for credit.
Prerequisite: Approval of department head.
KINE 689 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.  
Selected topics in an identified area of kinesiology. May be repeated for credit.  
Prerequisite: Approval of department head.

KINE 690/HLTH 690 Theory of Research in Discipline  
Credits 3. 3 Lecture Hours.  
Theory and design of research problems and experiments in various subfields of the discipline; communication of research proposals and results; evaluation of current research of faculty and students and review of current literature. May be repeated for credit.  
Cross Listing: HLTH 690/KINE 690.

KINE 691 Research  
Credits 1 to 23. 1 to 23 Other Hours.  
Research for thesis or dissertation.  
Prerequisite: Approval of committee chair.

LAND - Landscape Architecture  

LAND 601 Landscape Architectural Design Theory and Application I  
Credits 5. 2 Lecture Hours. 9 Lab Hours.  
First design studio course for career-change students; basic theories, principles, applications of landscape architectural design; design process; context-sensitive design; evidence based design; form-making skills; form-function-meaning relationships; spatial scale and dimensions; elements of natural and built environments; behavioral, psychosocial, policy and ecological factors in design; communication of design ideas.  
Prerequisites: Graduate classification and approval of instructor.

LAND 602 Landscape Architectural Design Theory and Application II  
Credits 5. 2 Lecture Hours. 9 Lab Hours.  
Application of ecological concepts to site planning and site design, form and space making using natural features, and practical issues including social and political, technological and economic influences on ecological design.  
Prerequisites: LAND 601.

LAND 603 Principle, Procedures and Techniques of Land Use  
Credits 6. 2 Lecture Hours. 12 Lab Hours.  
A continuation of LAND 601-602 sequence for career-change students; resolution of land problems that typically occur on a site; exploration of land use planning concepts and landscape ecology techniques; application of knowledge and skills acquired during the first year to a complex land development studio project.  
Prerequisites: LAND 602 and approval of instructor.

LAND 612 Landscape Architectural Site Engineering and Development  
Credits 4. 2 Lecture Hours. 6 Lab Hours.  
First construction studio course; concepts, theories and techniques of site development; aspects of site engineering and consideration of earth bound elements in land development; contours, landform, grading design, drainage principles, cut and fill computations, basic hydraulics and hydrology, stormwater management, landscape construction materials.  
Prerequisite: Approval of instructor.

LAND 614 Landscape Architectural Construction  
Credits 3. 2 Lecture Hours. 4 Lab Hours.  
Second construction studio course; sustainable water management techniques in landscape development; theory, principles and techniques of low impact development; basic elements of landscape architectural construction; construction document preparation, working drawings, project layout and design; theory and principles of irrigation and lighting design. Field trips required.  
Prerequisite: LAND 612.

LAND 620 Open Space and Land Use Planning I  
Credits 5. 2 Lecture Hours. 9 Lab Hours.  
Creation of land use planning strategies for large land parcels; site inventory, analysis program formulation and design detailing sequenced into the production of a comprehensive master plan; consideration of issues in sustainability, environmental protection, growth management and resource utilization.  
Prerequisite: LAND 601, LAND 602, LAND 603 or approval by instructor.

LAND 621 Open Space and Land Use Planning II  
Credits 5. 2 Lecture Hours. 9 Lab Hours.  
Projects with various scales; site selection, program formulation, theory, master planning and detailed design applied to topics of community design and development, and healthy communities; evidence based design methodology, techniques of professional design documentation and presentation.  
Prerequisite: LAND 620 or approval by instructor.

LAND 630 Development of Landscape Architecture  
Credits 3. 3 Lecture Hours.  
Overview of the history of human settlement, land use and landscape architecture outside of North America.  
Prerequisite: Graduate classification.

LAND 632/PLAN 632 Design for Active Living  
Credits 3. 3 Lecture Hours.  
(3-0). Understanding the forms and characteristics of the built environment and the influence on human behaviors, lifestyles and health; theoretical and empirical insights into the issues of physical activity, obesity, and automobile dependency; focus on how changes in the built environment help address these issues.  
Prerequisite: Graduate classification or approval of instructor.  
Cross Listing: PLAN 632/LAND 632.

LAND 635/PLAN 635 Concepts in Ecological Planning and Design  
Credits 3. 3 Lecture Hours.  
Reviews selected ecological concepts and explores integration into ecological/landscape planning, design using a historical perspective; historical and contemporary approach to provide and in-depth understanding of how they can better mediate between human actions and natural process.  
Prerequisite(s): Graduate classification.  
Cross Listing: PLAN 635/LAND 635.

LAND 640 Research Methods in Landscape Architecture  
Credits 3. 3 Lecture Hours.  
Research methods including theory, hypothesis formulation, design, data collection, measurement and report writing; equates research activity to landscape architecture and the interaction between people and their physical environment.  
Prerequisite: LAND 603 or equivalent.
LAND 645 Practice Diversity in Landscape Architecture
Credits 3.3 Lecture Hours.
An exploration of the diversity of practice opportunities within the profession of Landscape Architecture; individual roles within those areas of practice and the skills required to function successfully within them. 
Prerequisites: Graduate classification and approval of instructor.

LAND 646 Professional Practice
Credits 3.3 Lecture Hours.
Introduction to the procedures, management and ethical frameworks in which professional landscape architectural practice occurs; topics include forms of practice, employment issues, proposal preparation, fee and contract structures, project management, roles of the landscape architect, presentations and participation, legal and ethical responsibilities. 
Prerequisites: Graduate classification and approval of instructor.

LAND 655 Landscape Architectural Communication
Credits 3.2 Lecture Hours. 4 Lab Hours.
Graphic communication techniques required to expand landscape architectural concepts and designs including plan graphics, analysis and inventory graphics, perspective drawings, sketch composition, rendering media, color scanning, use of software and desktop.

LAND 661 Visual Quality for Design and Planning
Credits 3.3 Lecture Hours.
Emphasis on social science perspectives for analyzing visual quality in built and natural landscapes, and effects of visual surroundings on human well-being and health; the content reflects a balance of theory, scientific research evidence and practical applications in areas of landscape architecture, architecture, urban planning and park design. 
Prerequisite: Graduate classification.

LAND 681 Seminar
Credit 1.1 Lecture Hour.
Analysis and criticism of selected landscape architectural projects. Lectures, reports and discussions. 
Prerequisite: Graduate classification in landscape architecture.

LAND 684 Professional Internship
Credits 1 to 8. 1 to 8 Other Hours.
LAND 684 is sequenced for graduation; must be completed prior to the final year of advanced study in the summer; student is required to take a work position in an approved office for a minimum of ten weeks at forty hours/week. 
Prerequisite: Approval of faculty.

LAND 685 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
Advanced study in an individual landscape architecture course with a selected faculty member; focus on a topic mutually derived by the student and faculty member; requires the production of a professional response solution. 
Prerequisite: Approval of faculty.

LAND 689 Special Topics in...
Credits 1 to 4.1 to 4 Lecture Hours.
Selected topics in an identified area of landscape architecture. May be repeated for credit. 
Prerequisite: Approval of instructor.

LAND 691 Research
Credits 1 to 23.1 to 23 Other Hours.
Research for and preparation of dissertation. 
Prerequisite: Doctoral classification.

LAND 693 Professional Study
Credits 1 to 23.1 to 23 Other Hours.
Terminal studio to be taken by the qualified master of landscape architecture candidate; requires preparation of a proposal describing the topic, an outlined method, procedures and timeline to be submitted to committee; approved and completed study requires a defense and separate public presentation. 
Prerequisite: Approval of landscape architecture faculty.

LAW - Law

LAW 7001 Analysis, Research, and Writing I
Credits 3.3 Lecture Hours.
A study of analysis, research, and writing skills essential to the solution of legal problems and the practice of law. Analytical skills, essential for all of law school and law practice, are covered throughout the course. Students learn the methods of legal research through hands-on library experience. Students will write at least two legal memoranda and a trial brief in the first year.

LAW 7002 Analysis, Research, and Writing II
Credits 3.3 Lecture Hours.
Analysis Research, and Writing II. A study of analysis, research, and writing skills essential to the solution of legal problems and the practice of law. Analytical skills, essential for all of law school and law practice, are covered throughout the course. Students learn the methods of legal research through hands-on library experience. Students will write at least two legal memoranda and a trial brief in the first year.

LAW 7005 Civil Procedure
Credits 4.4 Lecture Hours.
A study of the rules and doctrines that define the process of civil litigation in American courts, with primary emphasis on the U.S. Constitution, the federal judicial code, and the Federal Rules of Civil Procedure. The course may cover topics such as the jurisdiction and competence of courts, conflicts between state and federal law, pleading, discovery, joinder of claims and parties, disposition without trial, trial and post-trial process, appellate review, and the effects of judgment.

LAW 7010 Constitutional Law
Credits 4.4 Lecture Hours.
A study of provisions in the U.S. Constitution governing the form of government and the powers of the federal judiciary, legislature, and executive; the relations between the federal government and the states; the limitations on governmental power over individuals inherent in constitutional provisions relating to due process and equal protection; and the restrictions on private action mandated or permitted by these constitutional provisions.

LAW 7017 Contracts
Credits 4.4 Lecture Hours.
A study of the enforceability of promises, the creation of contractual obligations, performance and breach, the impact of the contract on the legal relationships of nonparties and the examination of contract doctrine in three settings: personal service, sales of goods, and construction contracts.

LAW 7021 Criminal Law
Credits 4.4 Lecture Hours.
An inquiry into the sources and goals of criminal law, the concepts of actus reus and mens rea, characteristics of specific offenses, inchoate crimes, accomplice liability, and general defenses.
LAW 7032 Property
Credits 4.4 Lecture Hours.
An introduction to personal property and real property laws, including estates and future interests in land, landlord-tenant problems, and issues relating to private and public land use.

LAW 7042 Torts
Credits 4.4 Lecture Hours.
A study of basic principles of civil liability for harm to persons or property. Topics include intentional torts, negligence, strict liability, defenses, and damages. Additional topics may be included.

LAW 7056 Business Associations I
Credits 3.3 Lecture Hours.
This course studies the basic principles of the varying business entities used to conduct ventures for profit. The course will cover fundamental agency principles, partnerships, limited liability companies, and corporations. We will study how these business organizations are formed, the powers and responsibilities of their respective partners, members, officers or directors, and their shareholder's rights and liabilities. The course's primary focus will be the corporation and corporate law; including topics such as pre-incorporation issues; the corporate formation process, and corporate capital and financing. Business entity taxation concepts may be covered as well. The course objective is to give students both foundational and practical knowledge of how business organizations work. This includes learning how to make assessments as to which type of business organization is best suited for a particular client's objectives, the legal formalities necessary in forming that business organization, and understanding the rights, duties, and obligations for those affiliated with that organization.
Prerequisite: One year of law school in the full-time or part-time program, including Contracts.

LAW 7057 Business Associations II
Credits 3.3 Lecture Hours.
This course is designed for students who have a particular interest in corporate law and builds upon the basic concepts learned in Business Associations I. This course will focus on the rules and legal principles that govern large corporations and their constituents and is especially recommended to students who are interested in representing public corporations in private practice. Topics to be covered include: mergers and acquisitions, the issuance of corporate debt, executive compensation, the proxy solicitation process, shareholder proposals and other mechanisms of shareholder democracy. The course will also cover indemnification of officers and directors, corporate charitable giving and political speech, and the role of Special Litigation Committees in derivative suits. The course will also address securities law related issues such as securities fraud, insider trading, and ethical issues in the representation of public corporations.
Prerequisite: (1) One year of law school in the full-time or part-time program; (2) Business Associations I or Business Associations (four credit-hour course offered prior to fall 2013).

LAW 7065 Criminal Procedure
Credits 3.3 Lecture Hours.
This course considers issues relating to constitutional constraints on the investigation and prosecution of criminal offenses.
Prerequisites: One year of law school in the full-time or part-time program.

LAW 7076 Wills and Estates
Credits 3.3 Lecture Hours.
This course covers the basics of testate and intestate succession, including the following topics: drafting, execution, and construction of attested and holographic wills, testamentary capacity, undue influence, and fraud; revocation of wills; distribution of intestacy; nonprobate transfers of property; and ethical issues that arise during estate planning. There will be a significant focus on Texas law in the coverage of these topics.
Prerequisites: One year of law school in the full-time or part-time program, including Property.

LAW 7080 Evidence
Credits 4.4 Lecture Hours.
An examination of the problems of proof, including study of the admission and exclusion of evidence on the basis of relevancy, policy, and protection of the individual or the state; the examination of witnesses; substitutes for evidence; and procedural considerations.
Prerequisites: One year of law school in the full-time or part-time program, including Civil Procedure.

LAW 7091 Professional Responsibility
Credits 3.3 Lecture Hours.
A study of the rules regulating the practice of law.
Prerequisites: One year of law school in the full-time or part-time program.

LAW 7104 Advanced Torts
Credits 3.3 Lecture Hours.
Building on the material covered in Torts, this course examines various topics on the law of torts such as products liability, defamation, invasion of privacy, and business torts, including misrepresentation and interference with contractual relations.
Prerequisites: One year of law school in the full-time or part-time program, including Torts.

LAW 7106 Art Law
Credits 2.2 Lecture Hours.
This course provides a thorough introduction to the growing area of legal practice known as art law. Students will examine legal and ethical issues relating to the creation, discovery, ownership, transfer, and use of works of visual art, from the ancient to the contemporary. Stakeholders in this field are diverse: they include artists and their subjects, individual and corporate collectors, museums, dealers, auction houses, cultural institutions, treasure hunters, scholars, indigenous groups, sovereign nations, and the general public. Students will examine, discuss, and debate applicable civil and criminal laws and regulations, case law, international treaties and codes of ethics, as well as contracts and other documents used in the practice of art law.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7108 Accounting for Lawyers
Credits 2.2 Lecture Hours.
This course provides students with a fundamental understanding of accounting principles, highlights the importance of accounting issues to the practice of law, and introduces critical techniques of financial analysis, including time value of money, leverage, return metrics, and business valuation. No prior training in finance or accounting is needed.
Prerequisite: One year of law school in the full-time or part-time program.
LAW 7112 The Art of Lawyering
Credits 3. 3 Lecture Hours.
The Art of Lawyering is designed to help students develop and hone the analytical and problem-solving skills that are required for optimal success in law school, the bar exam, and in the practice of law. To enhance their abilities to bring together the law they are learning in a useful manner, students will undertake several practical assignments individually and in small groups for which they will receive detailed feedback.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7113 Administrative Law
Credits 2 to 3. 2 to 3 Lecture Hours.
A study of the legal principles and procedures to which an unelected bureaucracy must conform to achieve legitimacy. The course reviews the problems inherent in a relatively disunited body of law derived from disparate sources, but concentrates on the Constitution and other federal law as the primary sources of organizing principles for administrative law and procedure. Topics addressed may include the constitutional underpinnings of the federal bureaucracy, judicial review of agency fact finding and legal interpretation, extra-statutory administrative common law, the grounds for dividing administrative actions into adjudication and rule making, the essential components of due process in agency adjudication, and the availability of judicial review of agency action.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7114 Adoption Law
Credits 2. 2 Lecture Hours.
This course covers many aspects of adoption law, including consent of birthparents, termination of parental rights, Indian Child Welfare Act, transracial and transcultural adoption, international adoption, access to information, the effects of adoption, and actions for wrongful adoption.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7120 Ethics for the Criminal Law Practitioner
Credits 1 to 2. 1 to 2 Lecture Hours.
Students will study the unique ethical and moral dilemmas that arise in the criminal law setting from the perspective of both defense counsel and a prosecutor. The course is intended to help fill the gap between the traditional substantive professional responsibility course and the application of the standards in the practice of criminal law. To accomplish this, the course will take a problem-solving approach to the subject.
Prerequisite: One year of law school in the full-time or part-time program, including Criminal Law.

LAW 7122 Agency and Partnership
Credits 2. 2 Lecture Hours.
A study of common law of principal and agent, and the law of unincorporated business entities, including general and limited partnerships and limited liability companies.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7131 Patent Litigation
Credits 2. 2 Lecture Hours.
This is a two-credit course covering patent litigation, or the art of protecting patent claims from infringement. The course will give you a sense of how the patent system works and will emphasize the big issues that you are most likely to encounter in practice, whether you become a patent agent, a patent litigator, a business attorney, or just an all-purpose country lawyer (yes, you may well come across patent issues in that context in this day and age). The course will also integrate materials from the America Invents Act, the new patent law that will be fully effective as of 2013.
Prerequisites: One year of law school in the full-time or part-time program.

LAW 7145 Bankruptcy
Credits 3. 3 Lecture Hours.
A study of the law relating to individual and business liquidations and reorganizations under the Bankruptcy Code.
Prerequisite: One year of law school in the full-time or part-time program, including Contracts and Property.

LAW 7153 Children and the Law
Credits 2. 2 Lecture Hours.
This course studies the three-sided relationship between children, their parents (or other conservators), and the state. It examines the many complex problems inherent in the questions of when a state should, must, or should not interfere in the parent-child relationship. It tries to define what that relationship includes and looks at the ways that relationship is evolving in the United States today. The course examines the parent-child relationship through the many forms of Suits Affecting the Parent-Child Relationship (SAPCR), which are common to most states today in their statutes/codes. It does not include any questions of tort liability of parents to or for their children.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7154 Children and the Law
Credits 3. 3 Lecture Hours.
The course studies the three-sided relationship between children, their parents (or other conservators), and the state. It examines the many complex problems inherent in the questions of when a state should, must, or should not interfere in the parent-child relationship. It tries to define what that relationship includes and looks at the ways that relationship is evolving in the United States today. The course examines the parent-child relationship through the many forms of Suits Affecting the Parent-Child Relationship (SAPCR), which are common to most states today in their statutes/codes. It does not include any questions of tort liability of parents to or for their children.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7162 Civil Rights Litigation
Credits 3. 3 Lecture Hours.
Federal claims against local or state officials alleging violations of U.S. constitution; relevant to lawyers representing school districts, prisons, law enforcement and state government agencies as well as individuals served by these entities.

LAW 7174 Trusts and Fiduciary Responsibilities
Credits 2. 2 Lecture Hours.
A comprehensive study of the law of trusts, including creation, administration, amendment, and termination of trusts; powers, rights and duties of settlors, trustees and beneficiaries; fiduciary duties and liability of trustees; and creditors rights. Emphasis is on Texas law.
Prerequisite: One year of law school in the full-time or part-time program, including Property.

LAW 7188 Construction Law
Credits 2. 2 Lecture Hours.
This course is intended for students interested in acquiring a practice-oriented knowledge of construction law, legal relationships and causes of action between owners, contractors, subcontractors, engineers, architects, and their insurers, and construction contracts. The course will emphasize the practical aspects of construction practice, requiring that students adopt the roles of attorneys representing various players in reenactment of real construction dispute cases.
Prerequisite: One year of law school in the full-time or part-time program, including Contracts.
LAW 7195 Consumer Law
Credits 2. 2 Lecture Hours.
A study of current state of the law as it applies to consumer transactions. Topics include debt collection practices, credit disclosure and regulation, product liability, the Texas Deceptive Trade Practices Act, the work of the Federal Trade Commission, truth in lending laws, and fair credit laws.
Prerequisite: One year of law school in the full-time or part-time program including Torts and Contracts.

LAW 7203 Copyrights
Credits 3. 3 Lecture Hours.
A study of federal and international laws protecting the innovative endeavors of authors. Topics include the history of copyright law, fair use of copyrighted materials, what can be copyrighted and the interaction of copyright law with other concepts of unfair competition and intellectual property.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7204 Advanced Issues in Criminal Justice
Credits 2 to 3. 2 to 3 Lecture Hours.
Critically analyzes processes, other than trials, used in the U.S. criminal justice system to resolve criminal cases including plea bargaining, therapeutic justice, restorative justice and juvenile justice; examines the policy goals supporting continuing, starting or expanding the use of these processes to resolve criminal cases.
Prerequisite: All lockstep courses except Constitutional Law; Criminal Procedure.

LAW 7205 Art Law
Credits 3. 3 Lecture Hours.
This course provides a thorough introduction to the growing area of legal practice known as art law. Students will examine legal and ethical issues relating to the creation, discovery, ownership, transfer, and use of works of visual art, from the ancient to the contemporary. Stakeholders in this field are diverse: they include artists and their subjects, individual and corporate collectors, museums, dealers, auction houses, cultural institutions, treasure hunters, scholars, indigenous groups, sovereign nations, and the general public. Students will examine, discuss, and debate applicable civil and criminal laws and regulations, case law, international treaties and codes of ethics, as well as contracts and other documents used in the practice of art law.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7217 Post-Conviction Actual Innocence Claims
Credits 2. 2 Lecture Hours.
This course will teach the law and the practical applications of the law in petitioning the judiciary for relief, based on facts garnered through an initial post-conviction investigation. Students will learn what a post-conviction claim of actual innocence is and how the United States Supreme Court and the Texas Court of Criminal Appeals have analyzed and dealt with such claims in both death penalty and nondeath cases.
Prerequisite: One year of law school in the full-time or part-time program, including Criminal Law.

LAW 7222S Advanced Dispute Resolution Survey: Negotiation, Mediation, and Arbitration
Credits 3. 3 Lecture Hours.
This course will serve as an introduction to the main three tools of Alternative Dispute Resolution: negotiation, mediation, and arbitration. (Negotiation is when two or more parties work together to achieve a mutually acceptable agreement; mediation is when a neutral third party plays the role of mediator in assisting by asking questions and guiding the conversation of two or more parties as they work together to achieve a mutually acceptable agreement; and arbitration is when a neutral third party takes on the role of judge and decides the outcome of a disputed matter after it is presented to him or her in a setting similar to a court trial). Through the use of lecture, simulations, and exercises, students will learn both theoretical and practical aspects of all three tools.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7223 Internet Law
Credits 3. 3 Lecture Hours.
This course focuses on the transference (or lack of transference) of bricks-and-mortar legal principles to new methods of communications. It looks at recent developments in cyberspace law and provides a survey of legal issues on the internet, including both policy and pragmatic application of jurisdictional principals, intellectual property laws, privacy rights, computer crime, proprietary information, and freedom of speech issues, as well as a full-scale analysis and explication of the question, "Is Google really God?"
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7227 Education Law
Credits 2 to 3. 2 to 3 Lecture Hours.
This course will explore the dynamics of the legal rights, responsibilities and relationships between parents, students, teachers and administrators. It is essential to understand the balance between these rights and the smooth, efficient operation of schools. Topics to be explored include the separation of church and state; the instructional program and the balance between the substantive rights of parents and the compelling interest of the state in educating children, student on-campus First Amendment expression rights, student privacy rights and the application of the Fourth Amendment, rights of students with disabilities, common law student rights, and teacher certification requirements and contractual issues arising from employment relationships.
Prerequisite: (1) One year of law school in the full-time or part-time program; (2) Constitutional Law (may be taken concurrently).

LAW 7248 Employment Discrimination
Credits 3. 3 Lecture Hours.
An in-depth examination of the federal law concerning discrimination in employment on the basis of race, sex, religion, national origin, age, and disability. Topics covered include Title VII of the Civil Rights Act of 1964, the Age of Discrimination in Employment Act, the Reconstruction Era Civil Rights Act, the Equal Pay Act, the Rehabilitation Act of 1973, and the Americans with Disabilities Act of 1990.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7260 Employment Law
Credits 3. 3 Lecture Hours.
A study of law of employer-employee relations in a nonunion context. Students examine issues such as employment at will, retaliatory discharge, and wage and hour laws. The class introduces students to laws relating to the employment relationship.
Prerequisite: One year of law school in the full-time or part-time program.
LAW 7262 International Litigation
Credits 2. 2 Lecture Hours.
A study of disputes touching more than one jurisdiction, including selecting
the proper forum, discovery, parallel law suits, choice of law, sovereign
immunity, the recognition and enforcement of foreign judgments, and
arbitration.

LAW 7263 The Information Society Seminar
Credits 2. 2 Lecture Hours.
This course explores complex interrelationships between technological,
economic, cultural, political, and legal influences that shape the
information society.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7268 Entertainment Law
Credits 2. 2 Lecture Hours.
An examination of basic legal concepts that govern transactions in
the entertainment industry, including the constitutional protections of
entertainment speech, the rights of individuals who restrict it, copyright
fundamentals, contract issues peculiar to the field, and prevailing
standards and practices of "the Business."
Prerequisite: One year of law school in the full-time or part-time program,
including Contracts.

LAW 7277 Environmental Law
Credits 3. 3 Lecture Hours.
A study of various approaches for dealing with adverse environmental
effects, including private litigation, regulation, and financial incentives.
The course surveys air and water pollution, solid and hazardous waste
problems, and the National Environmental Policy Act. Attention is also
paid to judicial review of legislative and administrative action, the special
problems raised by our federal form of government, and the administrative
regulatory process in pollution control.
Prerequisite: One year of law school in the full-time or part-time program,
including Property.

LAW 7283 Estate and Gift Tax
Credits 2. 2 Lecture Hours.
A study of income, gift, estate, and generation-skipping transfer taxes
relevant to the estate planning process. Planning and drafting principles
for complex estate planning are introduced.
Prerequisite: (1) One year of law school in the full-time or part-time
program; (2) Wills and Estates (may be taken concurrently).

LAW 7290 Estate and Gift Tax
Credits 3. 3 Lecture Hours.
A study of income, gift, estate, and generation-skipping transfer taxes
relevant to the estate planning process. Planning and drafting principles
for complex estate planning are introduced.
Prerequisite: (1) One year of law school in the full-time or part-time
program; (2) Wills and Estates (may be taken concurrently).

LAW 7301 Family Law
Credits 3. 3 Lecture Hours.
A study of legal problems related to the establishment, dissolution,
reorganization, and evolving definitions of the family and family-like
relationships in America, including premarital arrangements, marriage
(formal and informal), divorce, parent-child relationship, division of marital
property, spousal and child support, domestic violence within the family,
and same-sex unions.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7302 Federal Courts
Credits 3. 3 Lecture Hours.
A study of the constitutional and practical doctrines that define the judicial
power of the United States with particular emphasis on the role of federal
courts in the American system of government, including the federal courts' 
relationship to the other branches of the federal government and their
relationship to the separate state systems of government. The course
will cover topics such as the constitutional cases and controversies
requirement, congressional control of the federal courts, Supreme
Court review of state court decisions, the power of the federal courts to
create federal law, abstention, suits against state governments, and the
enforcement of federal rights.
Prerequisite: One year of law school in the full-time or part-time program,
including Civil Procedure.

LAW 7303 Agricultural Law
Credits 2 to 3. 2 to 3 Lecture Hours.
Study of major areas of agricultural law; practical approach including
discussions and hands-on assignments; legal issues relating to animal
agriculture, food safety, landowner rights, the interaction between
agriculture and energy production, agricultural leases, agricultural policy
and estate and succession planning for farm families.
Prerequisite: One year of law school in full-time or part-time program.

LAW 7310 Non-Profit Organizations
Credits 3. 3 Lecture Hours.
This course focuses on the laws, policies, and ideas affecting the
creation, operation, and governance of nonprofit organizations, such
as hospitals, universities, churches, social service charities, cultural
institutions, advocacy groups, trade associations, and social clubs.
Nonprofit organizations' role in society raises complex issues that involve
a variety of legal fields, including constitutional law, trust and property law,
corporate law, and tax law. Topics include obtaining tax-exempt status,
restrictions on lobbying and political activity, tax on unrelated business
income, eligibility for charitable contributions, state regulation of charitable
solicitations, oversight of nonprofit governance, and charitable immunity.
Prerequisite: One year of law school in the full-time or part-time program,
including Torts and Contracts.

LAW 7313 Criminal Procedure Trial Rights
Credits 3. 3 Lecture Hours.
This course deals with constitutionally mandated judicial processes for
determining the guilt or innocence of those accused of crime and for
selecting an appropriate penalty. Topics may include bail and pretrial
detention, the prosecutor's charging decision, pretrial publicity, the
defendant's competency to stand trial, jury selection, trial by jury, the
defendant's right of confrontation and compulsory process, the right to
effective assistance of counsel, sentencing, direct attacks on criminal
convictions, and double jeopardy.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7316 First Amendment
Credits 3. 3 Lecture Hours.
A study of the U.S. Constitution's First Amendment. The course addresses
the First Amendment's effect on government attempts to regulate content
of speech and to restrict speech by regulating one's method of speaking.
Also included is the right of free speech in various physical settings. In
addition, the freedoms of assembly and press, free exercise of religion, and
the prohibition on governmental establishment of religion will be
studied.
Prerequisite: (1) One year of law school in the full-time or part-time
program; (2) Constitutional Law.
LAW 7318 Health Law
Credits 3. 3 Lecture Hours.
This course focuses on key concepts in health law such as the structure of health care organizations, quality of health care, and liability of health care providers. It also addresses access to health care; financing mechanisms of health care, including Medicare and Medicaid; regulation of health care; and oversight of managed health care. New developments in health care law concerning reproduction, bioethics, and human genetics are also examined.
Prerequisite: One year of law school in the full-time or part-time program, including Torts.

LAW 7319 Federal Income Taxation
Credits 3. 3 Lecture Hours.
A study of the basic principles of federal income tax, concentrating upon individual taxpayers, business taxpayers, and investors as taxpayers. Particular emphasis is placed on the use of the Internal Revenue Code and federal tax regulations.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7320 Health Care, Technology and the Law
Credits 2 to 3. 2 to 3 Lecture Hours.
Introduction to legal issues that healthcare businesses encounter when using technology to enhance the patient-physician experience; examination of the regulation of patient privacy and security, medical software and mobile applications, electronic medical records, robotic surgery, fraud and abuse, corporate practice of medicine and use of the internet to deliver medicine across state lines.
Prerequisite: One year of law school in full-time or part-time program.

LAW 7332 Immigration Law
Credits 2 to 3. 2 to 3 Lecture Hours.
This course covers basic immigration statutes, including cases and doctrines that control immigration and naturalization. The course also explores the treatment of undocumented immigrants and those seeking protection from persecution.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7339 Water Law
Credits 3. 3 Lecture Hours.
This course examines the legal control of water resources, an issue of increasing concern in Texas and the nation. Topics include riparian rights, the water permit system, groundwater issues, water as a regional and shared resource, beneficial uses v. waste, underground conservation districts, and navigability.
Prerequisite: One year of law school in the full-time or part-time program, including Property.

LAW 7341 Intellectual Property Licensing Practicum
Credits 2. 2 Lecture Hours.
This course addresses issues raised by licensing intellectual property, including motivations for licensing, types of agreements used in licensing transactions, provisions commonly used in licensing contracts, etc. Practical scenarios will be addressed and applied in class. Grades are based on class participation and presentations, in-class exercises, role-plays and written assignments.
Prerequisite: (1) One year of law school in the full-time or part-time program; (2) Copyrights, Intellectual Property, Trademark & Unfair Competition Law, or Patent Law.

LAW 7350 Intellectual Property
Credits 3. 3 Lecture Hours.
An overview of the basic principles of intellectual property law, including coverage of trade secret, trademark, patent, and copyright fundamentals.
Prerequisite: One year of law school in the full-time or part-time program. May be taught as a distance education course. Prerequisite: 28 completed hours.

LAW 7351 International Intellectual Property
Credits 2 to 3. 2 to 3 Lecture Hours.
Presents a study of the international fabric of patent, copyright, and trademark law under both domestic laws and international treaties. Students will examine the foundation of international intellectual property policies underlying medicinal herbs, counterfeit goods, genetic material, and traditional knowledge. The flow of information and content across borders has placed heightened tension on international intellectual property law and has resulted in increased pressure to harmonize diverse legal frameworks.

LAW 7362 International Business Transactions
Credits 2. 2 Lecture Hours.
This course examines the legal issues encountered in private international business transactions through international trade, exploitation of intellectual property rights and direct foreign investment. Topics covered generally include the international sale of goods; bills of lading; letters of credit; government regulation of imports and exports; technology transfer and intellectual property protection; cross border taxation; forms of agreements, industrial works contracts, employment laws; forms and regulation of foreign direct investment; international corruption and the Foreign Corrupt Practices Act. The course will also examine how customary international law, treaties and free trade agreements play a role in these transactions.
Prerequisite: (1) One year of law school in the full-time or part-time program; (2) Business Associations I or Business Associations (four credit-hour course offered prior to fall 2013).

LAW 7368 International Litigation
Credits 2 to 3. 2 to 3 Lecture Hours.
A study of disputes touching more than one jurisdiction, including selecting the proper forum, discovery, parallel law suits, choice of law, sovereign immunity, the recognition and enforcement of foreign judgments, and arbitration.
Prerequisite: One year of law school in the full-time or part-time program, including Civil Procedure.

LAW 7369 Public International Law
Credits 3. 3 Lecture Hours.
Introduction to key doctrines of international law; focuses on fundamental principles and doctrines related to the sources of and bases for international law and international jurisdiction and the law governing treaties and state succession; may cover contemporary topics including the use of force, protection of human rights and international criminal issues.
Prerequisite: One year of law school in the full-time or part-time program.
LAW 7371 International Business Transactions  
Credits 3. 3 Lecture Hours.  
This course examines the legal issues encountered in private international business transactions through international trade, exploitation of intellectual property rights and direct foreign investment. Topics covered generally include the international sale of goods; bills of lading; letters of credit; government regulation of imports and exports; technology transfer and intellectual property protection; cross border taxation; forms of agreements, industrial works contracts, employment laws; forms and regulation of foreign direct investment; international corruption and the Foreign Corrupt Practices Act. The course will also examine how customary international law, treaties and free trade agreements play a role in these transactions.  
Prerequisite: (1) One year of law school in the full-time or part-time program; (2) Business Associations I or Business Associations (four credit-hour course offered prior to fall 2013).

LAW 7378 Death Penalty Litigation  
Credits 3. 3 Lecture Hours.  
Death is different according to the United States Supreme Court in <i>Gregg v. Georgia</i>, 428 U.S. 153 (1976). Death penalty litigation is certainly different and more complex than other criminal litigation. This course will examine the trial of death penalty cases, analyzing each phase from pretrial to execution and scrutinizing the roles of judge, prosecutor, defense attorney, jury, and experts. It will also explore the modern death penalty system by studying seminal Supreme Court cases and key Texas cases and statutes. By the end of the course, you should be able to use appropriate legal theories and applicable laws to critically analyze hypothetical problems.  
Prerequisite: All lockstep courses and Criminal Procedure.

LAW 7381 Juvenile Justice  
Credits 2. 2 Lecture Hours.  
A review of the juvenile's substantive and procedural rights.  
Prerequisite: (1) One year of law school in the full-time or part-time program; (2) Criminal Procedure.

LAW 7383 Juvenile Justice  
Credits 3. 3 Lecture Hours.  
A review of the juvenile’s substantive and procedural rights.

LAW 7383S The Business Negotiator  
Credits 3. 3 Lecture Hours.  
This course provides students the opportunity to develop and strengthen their negotiation skills mostly in the context of business and transactions work. Through lectures, role-plays, and simulations, students will refine their negotiation strategies and techniques in negotiating deals, contracts, and relationships. While the vast majority of the course will focus on improving student ability to engage in transactions work within the United States, the course will also consider various barriers to deal making in a global context, including culture, ideology, and foreign governments and laws.  
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7389 Labor Law  
Credits 3. 3 Lecture Hours.  
A study of the National Labor Relations Act and its implementation.  
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7390S Labor Negotiations Workshop  
Credit 1. 1 Lecture Hour.  
Students will learn the process of contract negotiations in the labor setting in both the private and public sectors. Topics covered will include who has the right to bargain contracts, what can be bargained, bargaining in good faith and legal remedies. Bargaining techniques including data-driven proposals will be discussed. Students will be involved in labor bargaining simulations.  
Prerequisite: One year of law school in the full-time or part-time program, including Contracts.

LAW 7401 Land Use  
Credits 3. 3 Lecture Hours.  
A study of private and public means of controlling land use. Emphasis is placed on the areas of planning and zoning, including the emerging problem of exclusionary land use controls. Further discussion topics include subdivision controls, restrictive deed covenants, eminent domain proceedings, and urban renewal.  
Prerequisite: One year of law school in the full-time or part-time program, including Property.

LAW 7405 Non-Profit Organizations  
Credits 2. 2 Lecture Hours.  
This course focuses on the laws, policies, and ideals affecting the creation, operation, and governance of nonprofit organizations, such as hospitals, universities, churches, social service charities, cultural institutions, advocacy groups, trade associations, and social clubs. Nonprofit organizations' role in society raises complex issues that involve a variety of legal fields, including constitutional law, trust and property law, corporate law, and tax law. Topics include obtaining tax-exempt status, restrictions on lobbying and political activity, tax on unrelated business income, eligibility for charitable contributions, state regulation of charitable solicitations, oversight of nonprofit governance, and charitable immunity.  
Prerequisite: One year of law school in the full-time or part-time program, including Torts and Contracts.

LAW 7408 Energy Law  
Credits 3. 3 Lecture Hours.  
This course provides an introduction to energy law and regulation in the United States. It focuses on the basic principles of public utility regulation, the division of jurisdiction between federal and state governments, and the key regulatory statutes and case law governing energy resources such as water, coal, oil, natural gas, nuclear and renewable energy. We will analyze the environmental, regulatory, land use, and economic concerns as they relate to each energy source. Finally, this course will provide an introduction to electricity and electric power competition in the United States.  
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7412 Law Practice Management  
Credits 2. 2 Lecture Hours.  
A review of the professional, ethical, and management requirements for starting and operating a law practice. The course will review the statutory and regulatory aspects of practice, including labor and employment, partnerships and professional corporations, trust and IOLTA accounts, advertising, and solicitations. The course will also review management skills and technology related to time, billing, accounting docketing, legal research, document preparation, filing, and client development.  
Prerequisite: One year of law school in the full-time or part-time program.
LAW 7415 Legislation
Credits 2. 2 Lecture Hours.
A study of the state and federal legislative systems examining (1) the relationship between the legislative, executive, and judicial process; (2) the philosophies of legislative operations and judicial interpretation; (3) statutory and constitutional issues involved in interpreting and applying legislation; and (4) the principles of drafting legislation. The course includes tracking actual legislative sessions, introduced bills, the activity of a student-selected member of choice in the Texas Legislature, and getting practical experience through conducting a mock session of the Legislature to include committee activity, floor debate, voting, and post-legislative activities by means of four extracurricular volunteer Saturday class meetings.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7416 Legislation
Credits 3. 3 Lecture Hours.
A study of the state and federal legislative systems examining (1) the relationship between the legislative, executive, and judicial processes; (2) the philosophies of legislative operations and judicial interpretation; (3) statutory and constitutional issues involved in interpreting and applying legislation; and (4) the principles of drafting legislation. The course includes tracking actual legislative sessions, introduced bills, the activity of a student-selected member of choice in the Texas Legislature, and getting practical experience through conducting a mock session of the Legislature to include committee activity, floor debate, voting, and post-legislative activities by means of four extracurricular volunteer Saturday class meetings.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7418 Legislation and Regulation
Credits 3. 3 Lecture Hours.
An introduction to the role of statutes and administrative regulations in the practice of law, including their creation, amendment, and interpretation. Students will explore such topics as the interpretive and lawmaking roles of the three branches of government; statutory interpretation; delegation and administrative agency practice; and regulatory governance. The course is a building block for courses in legislation, administrative law, constitutional law and a wide range of specialized courses that rely on statutory and regulatory law including bankruptcy, commercial law, environmental law, intellectual property, securities regulation, and tax law.

LAW 7428 Marital Property
Credits 3. 3 Lecture Hours.
A study of the property rights of husband and wife under the Texas community property system, including coverage of the law relating to homestead.
Prerequisite: One year of law school in the full-time or part-time program. May be offered as a distance education course. Prerequisite: 28 completed hours.

LAW 7428D Marital Property (online)
Credits 3. 3 Lecture Hours.
A study of the property rights of husband and wife under the Texas community property system, including coverage of the law relating to homestead. This course is structured as a distance education course. All of the classes will be conducted in an online format which the student will complete on their own. The final exam will be in-class. A student may complete the online classes any time before the designated deadline set by the professor. Each online class will include one or more slideshow lectures on the assigned materials. In addition, each online class will include one or more written assignments or quizzes. Students must successfully complete all portions of the online class to receive attendance credit for that online class. Additionally, a portion of the student's grade will be based on the student's performance on the written assignments and quizzes for the online classes. The student's grade will also be based on the student's participation in the online class discussion board and the student's performance on the in-class final exam. This is an online class and students are expected to know how to manage computer issues and to have reliable technologies to fulfill course requirements.

LAW 7437 National Security Law
Credits 3. 3 Lecture Hours.
Criminal and civil statutes, Supreme Court cases, executive orders and government policies that impact U.S. national security; relevant to prosecutors, criminal defense attorneys and lawyers representing state and federal agencies, law enforcement, technology companies, as well as individuals served by these entities.

LAW 7440 Insurance Law
Credits 2. 2 Lecture Hours.
A study of fundamental legal principles relating to the construction of various types of liability and first-party insurance contracts. Topics include insurance regulation, application for coverage and acceptance of risk, and the rules of construction, bad faith, and insurance litigation strategy.
Prerequisite: One year of law school in the full-time or part-time program including Contracts and Torts.

LAW 7444 Oil and Gas
Credits 3. 3 Lecture Hours.
A study of oil and gas law with emphasis upon the interests that may be created in oil and gas, the transfer and conveyance of such interests, rights of operators and landowners, provisions in the oil and gas lease, the rights of assignees, regulations dealing with exploration, production, and conservation.
Prerequisite: One year of law school in the full-time or part-time program, including Property.

LAW 7452 Patent Law
Credits 2 to 3. 2 to 3 Lecture Hours.
The study of how proprietary interests in technology are protected by patent law, with a focus on issues relating to validity, the nature of the subject matter protected, and enforcement of proprietary rights.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7454 Payment Systems
Credits 3. 3 Lecture Hours.
This course explores commercial paper, bank deposits, and collections under UCC Articles 3 and 4. Topics covered include negotiability and the rights and obligations of parties to commercial paper, defenses to liability, relationship of banks and customers, check collection, and suretyship.
Prerequisites: One year of law school in the full-time or part-time program, including Torts and Contracts.
LAW 7458 Preparing for the Bar Exam  
**Credits 3. 3 Lecture Hours.**  
This 3-credit hour class is pass/fail, with an exam on the last day of class. Only students who are in their last semester of law school may enroll. The class familiarizes students with the contents of the bar exam and seeks to impart the critical skills and strategies necessary for success on each day of the exam. The class covers selections from several MBE and essay-tested subjects. Students will complete several diagnostic tests that simulate portions of the bar exam and will receive feedback on their performance. Evaluation will be based on homework (the diagnostic tests) and a short exam. The course is not intended as a substitute for a commercial bar review course; students should also take a commercial bar review course.  
**Prerequisite:** 56 completed hours.

LAW 7484 Remedies  
**Credits 3. 3 Lecture Hours.**  
A review of the forms of legal and equitable relief a court is equipped to grant by way of redress to those who have been or may be injured, including alternative choices and tactical advantages of each. The course may also discuss the scope of judges’ powers of contempt.  
**Prerequisite:** One year of law school in the full-time or part-time program, including Contracts and Property.

LAW 7488 Secured Transactions  
**Credits 3. 3 Lecture Hours.**  
A study of personal and commercial financing by loans and credit sales under agreements creating security interests in the debtors’ personal property (Article 9 of the UCC and relevant provisions of the Bankruptcy Code).  
**Prerequisite:** One year of law school in the full-time or part-time program, including Contracts and Property.

LAW 7492 Securities Regulation  
**Credits 3. 3 Lecture Hours.**  
A review of federal and state regulation of the public distribution, offer, and sale of corporate securities. The course includes a study of the Securities Act of 1933 and portions of the Securities Exchange Act of 1934. Types of securities and underwriting techniques are surveyed, and the key definitions and exemptions in the statutes are studied. State securities law is also studied with emphasis on the securities registration and anti-fraud aspects of the Texas Securities Act.  
**Prerequisite:** (1) One year of law school in the full-time or part-time program, (2) Business Associations I or Business Associations (four credit-hour courses offered prior to fall 2013).

LAW 7493 Securities Law Enforcement  
**Credits 2. 2 Lecture Hours.**  
Exploration of the SEC’s enforcement of federal securities laws and related efforts by FINRA and the DOJ; introduction to how the SEC enforces federal securities laws including various aspects of the enforcement process, investigative techniques, the Wells process and the SEC’s litigation efforts in both federal courts and administrative proceedings.  
**Prerequisite:** One year of law school in full-time or part-time program; Business Associations I.

LAW 7500S Sports Law  
**Credits 3. 3 Lecture Hours.**  
A thorough look at both the academic (e.g., labor and antitrust) and practical (e.g., contracts and agents) aspects of professional sports and the emerging field of sports law, including rules governing Olympic competition, the NCAA, and other amateur athletics. This course counts toward the oral skills requirement. This is a limited enrollment course; no online registration is available. You must submit a course add form to Student Services in order to register.

LAW 7516 Taxation of Business Entities  
**Credits 3. 3 Lecture Hours.**  
A study of the federal income tax treatment of C corporations and pass-through entities such as partnerships, S corporations, and limited liability companies. The course examines on a comparative basis the formation, operation, and sales and liquidation of these entities. Corporate reorganizations and related transactions are also covered.

LAW 7532 Texas Criminal Procedure  
**Credits 3. 3 Lecture Hours.**  
A study of laws regulating Texas criminal process, arrest to post-conviction review, emphasizing its unique characteristics.

LAW 7533 Texas Real Property  
**Credits 3. 3 Lecture Hours.**  
This course examines Texas real property law through Texas case law and the Texas statutory law. Topics include conveyances of real property (including contracts and deeds), liens, adverse possession, and servitudes (i.e., easements, real covenants, and equitable servitudes).  
**Prerequisite:** One year of law school in the full-time or part-time program, including Property.

LAW 7540 Texas Pretrial Procedure  
**Credits 3. 3 Lecture Hours.**  
A study of Texas law in civil cases pertaining to processes before trial, including jurisdictions, venue, initiating legal proceedings, obtaining factual information from parties and nonparties, and terminating litigation prior to trial.  
**Prerequisite:** One year of law school in the full-time or part-time program, including Civil Procedure.

LAW 7548 Texas Trials and Appeals  
**Credits 3. 3 Lecture Hours.**  
A study of Texas law in civil cases pertaining to trial and appellate procedure concerning the jury, presentation of the case, motions for instructed verdict, the court’s charge, the verdict, trial before the court, post-trial motions and procedures, final and appealable judgments; appellate jurisdiction, perfection of appeal, the courts of appeal, the Supreme Court of Texas, and original proceedings in appellate courts.  
**Prerequisite:** One year of law school in the full-time or part-time program, including Civil Procedure.

LAW 7550 Trademark and Unfair Competition Law  
**Credits 3. 3 Lecture Hours.**  
Under the principles of unfair competition law, this course will examine the creation, maintenance, and enforcement of trademark rights, as well as related doctrines of rights of publicity, trade dress, trade secrets, and false advertising. It also includes an exploration of public policies and economy underlying trademark law.  
**Prerequisite:** One year of law school in the full-time or part-time program.

LAW 7552 Business Fundamentals for Lawyers  
**Credits 1 to 2. 1 to 2 Lecture Hours.**  
Introduction to business concepts and processes important to law practice; covers areas critical to business lawyers, such as financial statements, business strategy, supply chains, HR management, finance, marketing operations; includes business problem simulations; preparation for upper division business-related courses such as Business Associations and Securities Regulation.  
**Prerequisites:** One year in law school in the full-time or part-time program.
LAW 7560 Sales and Leases
Credits 2. 2 Lecture Hours.
A study of the sale and lease of goods and the principal commercial law governing such transactions. Law dealt with in the course includes Articles 2 and 2A of the uniform Commercial Code as well as the United Nations Convention on Contracts for the International Sale of Goods. Covered topics include sale and lease contract formation, establishment of express and implied contract terms, creation and disclaimer of warranties, risk of loss, and remedies for breach.
Prerequisite: One year of law school in the full-time or part-time program, including Contracts.

LAW 7561 Sales and Leases
Credits 3. 3 Lecture Hours.
A study of the sale and lease of goods and the principal commercial law governing such transactions. Law dealt with in the course includes Articles 2 and 2A of the uniform Commercial Code as well as the United Nations Convention on Contracts for the International Sale of Goods. Covered topics include sale and lease contract formation, establishment of express and implied contract terms, creation and disclaimer of warranties, risk of loss, and remedies for breach.
Prerequisite: One year of law school in the full-time or part-time program, including Contracts.

LAW 7576 Sales and Leases
Credits 2. 2 Lecture Hours.
A study of the sale and lease of goods and the principal commercial law governing such transactions. Law dealt with in the course includes Articles 2 and 2A of the uniform Commercial Code as well as the United Nations Convention on Contracts for the International Sale of Goods. Covered topics include sale and lease contract formation, establishment of express and implied contract terms, creation and disclaimer of warranties, risk of loss, and remedies for breach.
Prerequisite: One year of law school in the full-time or part-time program, including Contracts.

LAW 7577 White Collar Crime
Credits 3. 3 Lecture Hours.
An exploration of the substantive and procedural problems connected with the federal prosecution and defense of white collar crime. The course examines selected federal statutes, including the Racketeer-Influenced and Corrupt Organizations Act (RICO). Topics include mail and wire fraud, securities fraud, money laundering, corporate criminal liability, and grand jury investigations.
Prerequisite: One year of law school in the full-time or part-time program, including Criminal Law.

LAW 7578 Elder Law
Credits 2. 2 Lecture Hours.
This course presents an overview of the law relating to aging individuals and an older American society, including employment and disability discrimination, retirement, property management, guardianship and protection, health care financing, health care decision-making, housing, and family issues unique to grandparents. When possible, Texas law on particular subjects will also be covered.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7580 Animal Law
Credits 2. 2 Lecture Hours.
A seminar that examines the legal, ethical, and policy aspects of current issues in bioethics, including patient autonomy, the right to refuse treatment, euthanasia and physician-assisted suicide, genetics, reproductive technologies, fetal treatment and research, human experimentation, and organ transplantation.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7581 Special Topics
Credits 2. 2 Lecture Hours.
This interdisciplinary seminar will examine the interrelation of the law with science in varying contexts including the courts, legislative and agency action, and societal norms and expectations. It will explore the impact science has on the law and how the law affects scientific research and progress. It will also consider the application of science in legal circumstances as well as the law to various scientific topics. Topics covered in the seminar may include: the role of the public, government, and private sectors in scientific development; the role of courts and the law in managing scientific information; legal and scientific standards and methodologies; risk assessment; scientific misconduct; and science-based regulations. All students will be required to prepare a final paper that will qualify for the rigorous writing requirement. This is a limited enrollment course; no online registration is available. You must submit a course registration form to Student Services to enroll.

LAW 7600 Animal Law
Credits 2. 2 Lecture Hours.
This course provides an overview of the changing relationship between society and animals by examining the development of both civil and criminal law as it relates to animals. The course also explores the philosophical issues that drive the law's evolution and describes the law as an expression of how we share the environment with animals.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7602 Bioethics and the Law Seminar
Credits 2. 2 Lecture Hours.
A seminar that examines the legal, ethical, and policy aspects of current issues in bioethics, including patient autonomy, the right to refuse treatment, euthanasia and physician-assisted suicide, genetics, reproductive technologies, fetal treatment and research, human experimentation, and organ transplantation.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7603 ADR in the Workplace Seminar
Credits 2. 2 Lecture Hours.
In this seminar, you will study workplace dispute resolution with a focus on the legal status and practical application of Alternative Dispute Resolution (ADR) in the workplace. It begins with the most familiar alternative to litigation, labor arbitration. It then examines labor arbitration's first cousin, individual employment arbitration. Then the course will shift into a discussion on mediation of employment disputes. Throughout the course, we will also review litigation of employment disputes as a necessary component of the foundation for exploring the pros and cons of using ADR versus litigation. You will have assigned background reading on all these matters and will perform simulations of arbitration and mediation of these disputes. Taking an employment-related course such as Labor Law, Employment Discrimination or Employment Law is NOT a pre-requisite. However, because the course concentrates on employment issues, you should have a strong intellectual interest in workplace dispute resolution and a desire to write about topics related to the course concentration (either a workplace topic or an ADR topic) in completing the rigorous writing requirement. Prerequisite: All lockstep courses except Constitutional Law.

LAW 7604 Animal Law
Credits 2. 2 Lecture Hours.
This course provides an overview of the changing relationship between society and animals by examining the development of both civil and criminal law as it relates to animals. The course also explores the philosophical issues that drive the law's evolution and describes the law as an expression of how we share the environment with animals.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7605 Bioethics and the Law Seminar
Credits 2. 2 Lecture Hours.
A seminar that examines the legal, ethical, and policy aspects of current issues in bioethics, including patient autonomy, the right to refuse treatment, euthanasia and physician-assisted suicide, genetics, reproductive technologies, fetal treatment and research, human experimentation, and organ transplantation.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7606 Death Penalty Seminar
Credits 2. 2 Lecture Hours.
A study of the law of capital punishment in an effort to understand the guiding legal principles and parameters of this most severe form of criminal sanction. Specific issues addressed include, among others, narrowing capital punishment to certain crimes and particular types of defendants, the role of race in the death penalty, death qualified juries, and the function of "guided discretion" in the use of the sanction.
Prerequisite: All lockstep courses except Constitutional Law.
LAW 7616 Advanced Issues in Criminal Justice Seminar
Credits 2. 2 Lecture Hours.
Advanced Issues in Criminal Justice Sem. Over ninety percent of the criminal cases in the United States are resolved before going to trial. In this two-credit seminar we will consider the most traditional form of dispute resolution in criminal cases: plea bargaining of criminal cases. The course will also look at emerging trends in the criminal justice system such as restorative justice and therapeutic courts including drug courts. This seminar will also examine issues relating to juvenile justice including alternative proceedings and the theory and policy underlying the treatment of juvenile offenders. Students and will gain a basic understanding and critically examine the various forms of criminal case resolution and the underlying policy goals.
Prerequisite: (1) All lockstep courses except Constitutional Law; (2) Criminal Procedure.

LAW 7622 Domestic Violence Seminar
Credits 2. 2 Lecture Hours.
This course examines domestic violence in the criminal justice system and in the family law. The purpose of this seminar is to expose law students to the issue of domestic violence. The goals of this course will be accomplished through text, class discussions, simulated role play, guest speakers, videos, student presentations, and a written, paper or final submitted by each student. As a requirement of the seminar, each student must observe one domestic violence trial or lengthy hearing.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7626 Advanced Topics in Property Seminar
Credits 2. 2 Lecture Hours.
This seminar will explore the concept of property, including its theoretical dimensions and its usefulness in resolving difficult legal and social problems. Some topics discussed in this class will build on introductory material traditionally covered in first-year property courses; other topics will be entirely new for most students. Class readings and discussions will focus on four or five substantive areas that will rotate from semester to semester. Among the topics that may be covered are the following: history and development of property rights; property theory; property rights in the body; housing discrimination; eminent domain and taking law; property in cyberspace; comparative property law; and land use involving religious groups.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7627 National Security Law Seminar
Credits 2. 2 Lecture Hours.
Terrorism affects the lives of all Americans in profound ways. No subject is more dynamic or interesting. Issues involving our security are at the forefront of public debate as we strive to balance national defense with our ideals of justice and liberty. Understanding these issues is essential to the well-being of our nation. This course will provide the legal and political framework for national security law, war powers, the rapidly evolving topic of counterterrorism, the challenges of the intelligence community and the protection of state secrets.
Prerequisite: All lockstep courses.

LAW 7628 Advanced Topics in Intellectual Property Seminar
Credits 2. 2 Lecture Hours.
In contrast to many law school courses, which enable the study of law through excerpted portions of cases on particular topics, this course will dig beneath the surface and explore the depths of intellectual property theory and policy as they manifest in individual cases throughout history. We will not seek to canvass the area of IP, but rather explore foundational aspects of intellectual property through individual case stories, other primary and secondary resource material, and seminal law review articles.
Prerequisites: All lockstep courses except Constitutional Law; (2) two Intellectual Property courses.

LAW 7631 Special Topics in Negotiation Seminar
Credits 2. 2 Lecture Hours.
This seminar will explore a series of topics involved in the theories, strategies, and techniques of effective negotiation. Students will submit a research paper that meets the upper-level rigorous writing requirement. In addition to traditional lecture and class discussion, students will engage in simulations and exercises to learn the material. Topics for the research papers may include (but are not limited to): avoiding being exploited, utilizing competitive negotiation moves, increasing collaboration, biases and cognitive illusions, emotions during the negotiation, principles of influence and persuasion, power in negotiation, culture and gender in negotiation, ethical considerations, and critiques of settlement advocacy.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7634 Oil, Gas and Natural Resource Seminar
Credits 2. 2 Lecture Hours.
This course explores natural resources law. We will examine the body of legal rules and processes that govern the ownership, human use, management, and protection of natural resources including oil and gas and other minerals, wildlife, rivers, national parks, and forests. We will also discuss the history, politics and economics of natural resources law, as well as the practical aspects of practicing in this area. While we cannot cover all natural resource laws in depth, this course will give students the tools needed to find and understand the laws relevant to particular resources. As a seminar, this course will satisfy the rigorous writing requirement.
Prerequisite: All lockstep courses except Constitutional Law.
Prerequisites: LAW 7001, LAW 7002, LAW 7021, LAW 7042, LAW 7017, LAW 7032, LAW 7418, LAW 7005.

LAW 7636 Gender and the Law Seminar
Credits 2. 2 Lecture Hours.
This course explores the historical, comparative, statutory, and especially constitutional dimensions of law’s regulation of sexuality and gender. Students read primarily case law, supplemented with statutory law and articles. Topics to be considered include the critiques and defenses of marriage; the legal and social implications of categories such as bisexuality, intersexuality, and transsexuality; the relationship between feminist, gay and queer politics; and the impact of sexual orientation and gender challenges on the workplace, military policy, family law, and education.
Prerequisite: All lockstep courses except Constitutional Law.
LAW 7638 Islamic Middle East Seminar
Credits 2. 2 Lecture Hours.
This survey course explores secular and Islamic law that serve as the basis of legal systems in various Middle Eastern nations. Students will be introduced to a critical overview of the history and practice of Islamic law, including the origins of Islamic law, the development of the classical schools of thought, and the nature of pre-modern and legal institutions. This will be done by analyzing the various methodologies that are represented in Islamic legal literature, helping to enable the students to identify modern manifestations of these methodologies in contemporary Muslim discourses. Students will then learn how Islamic law intersects with secular laws in the context of modern family law, finance, and human rights.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7639 Law and Science Seminar
Credits 2. 2 Lecture Hours.
This interdisciplinary seminar will examine the interrelation of the law with science in varying contexts including the courts, legislative and agency action, and societal norms and expectations. It will explore the impact science has on the law and how the law affects scientific research and progress. It will also consider the application of science in legal circumstances as well as the law to various scientific topics. Topics covered in the seminar may include: the role of the public, government, and private sectors in scientific development; the role of courts and the law in managing scientific information; legal and scientific standards and methodologies; risk assessment; scientific misconduct; and environmental regulations.
Prerequisites: All lockstep courses except Constitutional Law.

LAW 7641 The Politics of Supreme Court Decision Making
Credits 2. 2 Lecture Hours.
Seminar. This course considers the Supreme Court as a political entity, not merely a court or decision-making body. The students are required to study individual justices, different judicial periods and courts (i.e. the Warren Court, the Burger Court, the Roberts Court) and evaluate how the political nature of decision making affects lawyers and their clients.
Prerequisite: All lockstep courses.

LAW 7643 Jurisprudence Seminar
Credits 2. 2 Lecture Hours.
An introduction to legal philosophy. The major jurisprudential issues, the definition of law, the concept of justice, the relation of law and morality, and the function of legal analysis will be considered in the light of specific theories, including modern American legal philosophies.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7644 Climate Change and Energy Law Seminar
Credits 2. 2 Lecture Hours.
Analysis of evolving climate change control and adaptation policies, both domestic and international; evaluation of policies intersecting with laws regulating energy development; the extent to which laws and policies incentivize technological innovation and encourage sustainable energy development.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7650 Law and Literature Seminar
Credits 2. 2 Lecture Hours.
This seminar examines the nature, practice, and institutions of law as depicted in a variety of literary texts. The course also explores how techniques associated with literary criticism may be applied to selected legal texts.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7655 Law and Psychology Seminar
Credits 2. 2 Lecture Hours.
A study of the intersection between law and psychology, with particular emphasis on the application of forensic psychology in the criminal justice system. Specific issues addressed include, among other topics, the evidentiary standard governing the admissibility of scientific evidence, false confessions, eyewitness testimony, repressed memories, and sex offenders.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7660 Public Health Seminar
Credits 2. 2 Lecture Hours.
This seminar provides an overview of basic principles of public health and its governing law. It examines the legal basis for public health regulation and explores the tensions among public health activities, civil liberties, property rights, and other interests. The course also examines current policy issues, such as immunization, bioterrorism, disease reporting and surveillance, infectious disease control, and tobacco regulation. Students will discuss public health process (measurement, problem definition, strategy, design, implementation, and evaluation) in reference to current issues.
Prerequisite: All lockstep courses except Constitutional Law.

LAW 7666 Race and the Law Seminar
Credits 2. 2 Lecture Hours.
Impact of race and ethnicity on the American legal system from a historical and contemporary standpoint; examination of the role of race in criminal justice, immigration, family affairs, business, education and national security context; preparation to represent diverse clients.

LAW 7675 Supreme Court Seminar
Credits 2. 2 Lecture Hours.
A seminar in which students act as U.S. Supreme Court members, reading briefs in selected cases presently before the Supreme Court, discussing the cases, and writing opinions deciding the cases.
Prerequisite: (1) All lockstep courses; (2) Constitutional Law (may be taken concurrently).

LAW 7676 Texas Search and Seizure Seminar
Credits 2. 2 Lecture Hours.
This seminar examines the issues raised in the Fourth Amendment and the Texas Constitution, Article 1 Section 9. Topics include the expectation of privacy, probable cause, search and arrest warrants, warrantless action, the exclusionary rule, Terry stops, and post 9/11 considerations. The seminar includes student participation in a practical application of the law of search and seizure.
Prerequisite: (1) All lockstep courses except Constitutional law; (2) Criminal Procedure (may be taken concurrently).

LAW 7700F Special Topics
Credits 2. 2 Lecture Hours.
This course explores natural resources law. We will examine the body of legal rules and processes that govern the ownership, human use, management, and protection of natural resources including oil and gas and other minerals, wildlife, rivers, national parks, and forests. We will also discuss the history, politics and economics of natural resources law, as well as the practical aspects of practicing in this area. While we cannot cover all natural resource laws in depth, this course will give students the tools needed to find and understand the laws relevant to particular resources. As a seminar, this course will satisfy the rigorous writing requirement. This is a limited enrollment course; no online registration is available. You must submit a course registration form to Student Services to enroll.
LAW 7700P Special Topics
Credits 2. 2 Lecture Hours.
This is a two credit course covering patent litigation, or the art of protecting patent claims from infringement. The course will give you a sense of how the patent system works and will emphasize the big issues that you are most likely to encounter in practice, whether you become a patent agent, a patent litigator, a business attorney, or just an all-purpose country lawyer (yes, you may well come across patent issues in that context in this day and age). The course will also integrate materials from the America Invents Act, the new patent law that will be fully effective as of 2013.

LAW 7704 Guardianship Practicum
Credits 1 to 2. 1 to 2 Lecture Hours.
This course is designed to teach students about Texas guardianship law. It will teach how to determine if a guardianship is needed or if there are less restrictive alternatives to a guardianship and what those alternatives entail. Students will learn how to draft applications and orders for a guardianship of the person and/or estate along with all supporting documents. Students will draft inventory, appraisements, list of claims, annual accountings, reports of attorneys or guardians ad litem, and final accountings for guardianships of the estate. The course will provide a practical look at how to represent an applicant for guardianship as well as how to represent the proposed incapacitated person.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7706 Electronic Research Practicum
Credits 2. 2 Lecture Hours.
This hands-on course focuses on how to use electronic resources to conduct legal research. Focus will be on Westlaw, LexisNexis, subscription databases, and free legal web sites. The goal is to sharpen students' research skills so they will be prepared to research in legal practice. The course will cover database content, search syntax, effective search queries using Boolean operators and/or fields and segments, and cost-effective search strategies.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7707 Criminal Procedure Practicum
Credits 2. 2 Lecture Hours.
This course enables students to put into practice the concepts first studied in Criminal Procedure. Students will be required to draft motions to suppress and habeas corpus petitions challenging timely topics.
Prerequisite: (1) One year of law school in the full-time or part-time program; (2) Criminal Procedure.

LAW 7707S Negotiation Theory and Practice Practicum
Credits 3. 3 Lecture Hours.
This course offers students the opportunity to further develop their negotiation skills. It will focus on simulations and negotiation exercises intended to give students first-hand experience in applying interest-based negotiation techniques. The course examines the skills, constraints, and dynamics of negotiation. Students will also learn a theoretical framework for understanding negotiation practice in a variety of contexts through readings from the fields of law, psychology, business, and communication.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7724 Texas Criminal Law Practicum
Credits 2. 2 Lecture Hours.
Students function as prosecuting and defense attorneys taking a hypothetical case from arrest through post-conviction remedies. The course may include such topics as legal limits on criminal investigation, the grand jury process, setting bail, negotiating pleas bargains, drafting pretrial motions, the discovery process, trial rights, and tactics, habeas corpus, and appeals.
Prerequisite: (1) One year of law school in the full-time or part-time program, including Criminal Law; (2) Criminal Procedure.

LAW 7725 Texas Criminal Law Practicum
Credits 3. 3 Lecture Hours.
Students function as prosecuting and defense attorneys, taking a hypothetical case from arrest through post-conviction remedies. The course may include such topics as legal limits on criminal investigation, the grand jury process, setting bail, negotiating plea bargains, drafting pretrial motions, the discovery process, trial rights, and tactics, habeas corpus, and appeals.
Prerequisite: (1) One year of law school in the full-time or part-time program, including Criminal Law; (2) Criminal Procedure.

LAW 7727 Business Law Seminar
Credits 2. 2 Lecture Hours.
A seminar exploring the various areas of business law, including areas of corporate, commercial, securities, tax, and regulatory law in both domestic and international settings. The seminar is designed to reflect the fact that complex business problems often involve the intersection of several bodies of law. Each student will be required to produce a paper on a topic of his or her choice in any area of business-related law, and will be expected to present the paper to the class and lead a discussion. We will explore the links between papers relating to very diverse areas of the law.
Prerequisite: (1) All lockstep courses except Constitutional Law; (2) Business Associations I or Business Associations (four credit-hour course taught before fall 2013).

LAW 775S Trial Advocacy Practicum
Credits 3. 3 Lecture Hours.
A study of civil and criminal trials, taught through lectures, demonstrations, and simulations. Each trial segment is examined separately, and accompanying exercises are conducted with students acting as attorneys and witnesses. The course culminates in a mock trial at a local courthouse, where students have the opportunity to present an entire case through verdict.
Prerequisite: (1) All lockstep courses except Constitutional Law; (2) Evidence (may be taken concurrently).

LAW 7776 Texas Legal Research Practicum
Credits 2. 2 Lecture Hours.
This course will focus on advanced legal research methodologies, costs and strategies within the context of Texas law. It includes coverage of the Texas court system, legislation and legislative history, regulations and regulatory history, agency decisions and websites, treatises, electronic databases, free online resources, court rules, jury instructions, practice materials, and strategies for making sure that your research is thorough. Students complete various assignments, including drafting exercises, using Texas practice materials. A final project is required.
Prerequisite: One year of law school in the full-time or part-time program, including LARW I & II.

LAW 7779 LARW III: Estate Planning and Drafting
Credits 2. 2 Lecture Hours.
This course involves working through hypothetical clinical problems, including extensive drafting and working closely with the professor. The problems involve comprehensive planning and drafting of estate planning documents to effectuate the plan.
Prerequisites: (1) One year of law school in the full-time or part-time program; (2) Wills and Estates; and (3) Trusts & Fiduciary Responsibilities (may be taken concurrently).
LAW 7780 LARWill: Contract Drafting
Credits 2. 2 Lecture Hours.
This hands-on course covers contemporary commercial drafting of contracts, an essential skill for transactional practice that is also useful for litigators. Topics include translation of a client’s business deal into contract language; the organizational paradigm for a formal contract; drafting definitions, covenants, representations, and warranties; deconstructing and marking up contracts; transactional and formbook research; and proper use of boilerplate provisions. Students will draft at least two major contracts and will have smaller drafting and research assignments throughout the course.
Prerequisites: One year of law school in the full-time or part-time program, including LARW I & II and Contracts.

LAW 7781 LARWill: Patent Law Drafting
Credits 2. 2 Lecture Hours.
This skills-based writing course introduces students to the practice of patent prosecution, which is the process of obtaining a patent from the United States Patent and Trademark Office. The course follows the process from the initial client interview through the issuance of a patent and through post-issuance filings. Writing assignments include a patentability opinion letter, an original patent application, and a response to an Office Action. Some scientific or technical expertise may be helpful, but is not required.
Prerequisites: (1) One year of law school in the full-time or part-time program, including LARW I & II; (2) Patent Law.

LAW 7782 LARWill: Litigation Drafting
Credits 2. 2 Lecture Hours.
LAW III: Litigation Drafting. This practical course deals with drafting litigation documents. Using a state trial court forum and the Texas Rules of Civil Procedure, students draft litigation documents that they can expect to prepare in typical civil litigation cases. Topics covered include conducting client interviews; drafting petitions, answers, and affirmative defenses; propounding written discovery; objecting to and answering written discovery; preparing and arguing motions; and preparing other litigation-related documents. Students will draft a major persuasive motion and will have several smaller drafting and research assignments throughout the course.
Prerequisites: One year of law school in the full-time or part-time program, including LARW I & II and Civil Procedure.

LAW 7783 LARWill: Real Estate Drafting
Credits 2. 2 Lecture Hours.
LAW III: Real Estate Drafting. This practice skills course covers drafting commonly used real estate documents. The focus is on Texas practice and both personal and commercial transactions are covered. Students will draft several substantive documents during the course.
Prerequisites: One year of law school in the full-time or part-time program, including LARW I & II and Property.

LAW 7784 LARWill: Trademark Practice
Credits 2 to 3. 2 to 3 Lecture Hours.
LAW III: Trademark Practice. This skills-based writing course introduces students to the practice of trademark prosecution, which is the process of registering trademarks with the United States Patent and Trademark Office. Trademark prosecution is a significant aspect of a legal practice in intellectual property, and this course seeks to develop students’ practical, analytical, and counseling skills in this area through a series of contextualized writing assignments.
Prerequisites: (1) One year of law school in the full-time or part-time program, including LARW I & II; (2) Trademark and Unfair competition (may be taken concurrently).

LAW 7785 LARWill: Appellate Drafting
Credits 2. 2 Lecture Hours.
LARW III: Appellate Drafting. This course hones students analytical and persuasion skills through a focus on appellate brief writing and oral advocacy in the appellate court setting. Students will have numerous smaller writing projects during the course, which will culminate in a large brief-writing project due near the end of the semester. Students will also participate in significant oral argument exercises.
Prerequisites: One year of law school in the full-time or part-time program, including LARW I and II.

LAW 7786 LARWill: Family Law Drafting
Credits 2. 2 Lecture Hours.
LARW III: Family Law Drafting. This practice skills course covers drafting documents for family law litigation. All aspects of litigation are covered from pre-trial to appeal. Students will draft several substantive documents during the course.
Prerequisites: (1) One year of law school in the full-time or part-time program, including LARW I & II; (2) Family Law.

LAW 7787 LARWill: Estate Administration Drafting
Credits 2. 2 Lecture Hours.
LARW III: Estate Administration Drafting. This course is designed to teach students how to open, conduct and close an administration of a decedent's estate under Texas law. Topics include independent and dependent administrations; probate of the decedent's will; powers, rights, and duties of the personal representative; payment of creditor's claim; and informal probate procedures. This course will provide a practical look at how to represent a client who is serving as the personal representative of a decedent's estate or who is a beneficiary of a decedent's estate.
Prerequisites: (1) One year of law school in the full-time or part-time program, including LARW I & II; (2) Wills and Estates.

LAW 7788 LARWill: Drafting for the General Practitioner
Credits 2. 2 Lecture Hours.
This two-credit practical skills class introduces students to the drafting of legal documents that are common to the general practitioner. The course is designed to provide students with general knowledge of and proficiency with the typical documents lawyers are asked to draft by practicing the drafting techniques common to the various types of legal documents lawyers encounter. The course is based on “small firm” simulations during which students will represent one client in a variety of legal matters including contract drafting, will drafting, negotiation, and settlement of a dispute. In addition to learning new drafting skills, students will hone writing and oral advocacy skills already learned through the production of client letters, lawyer-to-lawyer email communications, and oral settlement negotiations.
Prerequisites: One year of law school in the full-time or part-time program, including LARW I & II.

LAW 7789 LARWill: How the Deals Get Done
Credits 2 to 3. 2 to 3 Lecture Hours.
Designed for those planning on practicing transactional law; uses a hypothetical start-up business to help deal with the transactional issues in this context; combines theory and practice to prepare for typical matters confronted in a transactional law practice.
Prerequisites: One year in law school in the full-time or part-time program including LARW I and LARW II; Business Associations I or Business Associations (four credit-hour course offered prior to Fall 2013).
LAW 7791 LARW III: Business Collections  
Credits 2. 2 Lecture Hours.  
Writing and analysis skills for business collection lawsuits; drafting a demand letter, petition, answer, interrogatories, judgment order, application for writ of garnishment and motions for substituted service, default judgment and summary judgment; introduction to negotiation, settlement and trial advocacy skills.  
Prerequisite: One year in law school in the full-time or part-time program, including Contracts, LARW I and LARW II.

LAW 7792 LARW III: Criminal Procedure  
Credits 2. 2 Lecture Hours.  
Concepts first studied in Criminal Procedure will be put into practice; includes draft motions to suppress and habeas corpus petitions; challenging timely topics.  
Prerequisite: One year of law school in full-time or part-time program; Criminal Procedure.

LAW 7800F Special Topics  
Credits 2. 2 Lecture Hours.  
In depth discussion of some emerging issues in American Family Law, with emphasis on possible Texas solutions. Topical issues will include (as a minimum) the still unsettled issues of: 1) Surrogate Motherhood (baby selling?) (now illegal in Texas when birth mother is also the genetic ancestor of the child); 2) moving from prohibition of “domestic partnering” = “marriage-like contracting” to recognition of the same, now void in Texas; 3) allowing two unmarried adults (or “marital-like” same-sex couples) to adopt the same child (now not recognized in Texas); 4) developing the issue of whether the U.S. Supreme Court is likely to require “full faith/credit” accord to recognition of divorces and adoptions from a state that recognizes same-sex marriages or marital-partner arrangements by a state that doesn’t recognize the legality of the arrangements; and 5) the evolving development by the legislature of “true alimony” in Texas and what that will entail with regard to just and right standard of community property division on divorce, and deciding how the Legislature will get around the Texas Constitution property definition issues. This course may be used to satisfy the rigorous writing requirement. This is a limited enrollment course; no online registration is available. You must submit a course registration form to Student Services in order to register.

LAW 7800P Special Topics  
Credits 1 to 3. 1 to 3 Lecture Hours.  
Students will study the unique ethical and moral dilemmas that arise in the criminal law setting. The course is designed to fill the gap between the traditional substantive professional responsibility course and the application of the standards in the practice of criminal law. This course is intended to sensitize students to issues of ethical conduct in criminal practice and teach both recognition of the issue and the proper course of conduct in handling the matter. For this reason, the course takes a problem solving approach to the subject and the students will engage in simulations and role play.

LAW 7800S Special Topics  
Credits 1 to 3. 1 to 3 Lecture Hours.  
This course addresses issues raised by the licensing of intellectual property, including motivations for licensing, types of agreements used in licensing transactions, provisions commonly used in licensing contracts, etc. Practical scenarios will be addressed and applied in class. Grades are based on a combination of attendance, class participation and presentations, in-class exercises and role plays, and written assignments. This class counts toward the oral skills requirement. This is a limited enrollment course; no online registration is available. You must submit a course registration form to Student Services to enroll.

LAW 7816 Independent Study  
Credit 1. 1 Lecture Hour.  
An opportunity for students to do specialized reading or research in an area of interest to the student under a full-time faculty member’s supervision.  
Prerequisites: All lockstep courses.

LAW 7835 Externship  
Credit 1. 1 Lecture Hour.  
This course is designed to provide students with learning opportunities, through placements in approved legal settings, in which students may 1) increase understanding of the range of skills necessary for effective lawyering; 2) improve abilities to perform lawyering skills (e.g., applying an area of law to an actual case); 3) begin to identify and reflect upon the strengths and weaknesses as a practicing student attorney; 4) develop productive working relationships with supervisors, clients, support staff, and peers; and 5) reflect on placement experiences through journals and class discussions. Placements can be in either courts, public interest organizations, corporate or government offices, or law firms. Students can earn 1, 2 or 3 pass/fail credit hours for every 60, 120 or 180 hours of fieldwork completed, respectively. Students will keep timesheets and journals that must be submitted every two weeks. In addition, students must complete a classroom component the first time they register for an externship. The classroom component consists of in-class meetings and online discussions. Online discussions will consist of students responding to topics posted by the professor and responding to fellow student postings. Some minor outside reading and/or activity may be required.  
Prerequisite: Approval of instructor.
LAW 7837 Externship
Credits 3. 3 Lecture Hours.
This course is designed to provide students with learning opportunities, through placements in approved legal settings, in which students may 1) increase understanding of the range of skills necessary for effective lawyering; 2) improve abilities to perform lawyering skills (e.g., applying an area of law to an actual case); 3) begin to identify and reflect upon the strengths and weaknesses as a practicing student attorney; 4) develop productive working relationships with supervisors, clients, support staff, and peers; and 5) reflect on placement experiences through journals and class discussions. Placements can be in either courts, public interest organizations, corporate or government offices, or law firms. Students can earn 1, 2 or 3 pass/fail credit hours for every 60, 120 or 180 hours of fieldwork completed, respectively. Students will keep timesheets and journals that must be submitted every two weeks. In addition, students must complete a classroom component the first time they register for an externship. The classroom component consists of in-class meetings and online discussions. Online discussions will consist of students responding to topics posted by the professor and responding to fellow student postings. Some minor outside reading and/or activity may be required.
Prerequisite: Approval of instructor.

LAW 7838 Externship
Credits 4. 4 Lecture Hours.
This course is designed to provide students with learning opportunities, through placements in approved legal settings, in which students may 1) increase understanding of the range of skills necessary for effective lawyering; 2) improve abilities to perform lawyering skills (e.g., applying an area of law to an actual case); 3) begin to identify and reflect upon the strengths and weaknesses as a practicing student attorney; 4) develop productive working relationships with supervisors, clients, support staff, and peers; and 5) reflect on placement experiences through journals and class discussions. Placements can be in either courts, public interest organizations, corporate or government offices, or law firms. Students can earn 1, 2 or 3 pass/fail credit hours for every 60, 120 or 180 hours of fieldwork completed, respectively. Students will keep timesheets and journals that must be submitted every two weeks. In addition, students must complete a classroom component the first time they register for an externship. The classroom component consists of in-class meetings and online discussions. Online discussions will consist of students responding to topics posted by the professor and responding to fellow student postings. Some minor outside reading and/or activity may be required.
Prerequisite: Approval of instructor.

LAW 7839 Legislative Externship
Credits 12. 12 Lecture Hours.
The Legislative Externship is an immersion experience in the Texas Legislature for a small number of carefully selected law students (1-4). These students will earn 12 pass/fail academic credit hours by working full-time during the legislative session in Austin, Texas on either a legislative committee or in the office of a house or senate member. In addition to this fieldwork component, participating students will also work directly with a professor on substantive, procedural, and ethical topics relating to their externship. Selected students will receive exposure to the legislative and political processes that take place within the Texas Legislature. They will also develop in-depth experience and understanding in particular subject matter areas of interest through work on policy development. Their committee work or work in legislative offices will also provide students an opportunity to further develop their professional identities, working through the ethical challenges that arise in this unique work environment.
Prerequisite: Approval of instructor.

LAW 7850S Family Mediation Clinic
Credits 3. 3 Lecture Hours.
Students learn mediation skills through lecture and role-play, and attend some classes in the courtrooms of two family judges. Students observe and mediate real family disputes at local mediation centers. An exam and a mediation journal are used in grading this pass/fail course. A family mediation certificate is given on completion of this course and the Mediation Clinic.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7862S Employment Mediation Clinic
Credits 2. 2 Lecture Hours.
This course provides students who have already received basic mediation training with opportunities to co-mediate workplace disputes that arise at the Federal Aviation Administration or other agencies. Each student will be required to co-mediate three to five disputes, with the assistance of an experienced and trained mediator, during the course of the semester. Before each mediation, students will review available background documents, meet with their co-mediator, and prepare for the mediation. At the conclusion of each mediation, students will draft a memorandum to the file describing the outcome of the mediation. Students will also keep a journal and participate in classroom sessions to reflect on their experiences.
Prerequisite: One year of law school in the full-time or part-time program. Prior academic or professional exposure to mediation and/or employment law is preferred but not required.

LAW 7863S Criminal Prosecution Clinic
Credits 3. 3 Lecture Hours.
This clinic will (1) educate and train students on the law, legal ethics, and skills involved in state criminal prosecutions and (2) expose students to the unique duties and responsibilities of criminal prosecutors as both advocates and ministers of justice. Students will complete a biweekly classroom component taught by adjunct professors who work in the Tarrant County district attorney’s office. These sessions will cover substantive, procedural, and ethics-related law relevant to the daily work of prosecutors, as well as lawyering skills employed by prosecutors. In addition, students will be required to complete at least 180 hours of supervised fieldwork during the semester in the Tarrant County district attorney’s office.
Prerequisite: One year of law school in the full-time or part-time program. Prerequisite: (1) Completion of at least 45 credit hours; (2) Evidence; and (3) either Texas Criminal Procedure or Texas Criminal Law Practicum (may be taken concurrently).

LAW 7864S Law Clinic
Credits 2. 2 Lecture Hours.
The Law Clinic is both a credit course and a functioning law office, allowing students to practice law while in law school. Students represent indigent clients in court under direct faculty supervision. A classroom component meets twice weekly to study the substantive law, to learn essential practical skills, and to discuss client cases. Students may not drop the class after the first week of class, and a student who drops the class after that date will receive a grade of F. This rule is necessary because the Clinic has ethical obligations to clients, and interruption of representation caused by insufficient staffing of the Clinic may result in a breach of fiduciary obligations to those clients.
Prerequisite: Approval of instructor.
LAW 7865S Law Clinic
Credits 3. 3 Lecture Hours.
The Law Clinic is both a credit course and a functioning law office, allowing students to practice law while in law school. Students represent indigent clients in court under direct faculty supervision. A classroom component meets weekly to study the substantive law, to learn essential practical skills, and to discuss client cases. Students may not drop the class after the first week of class, and a student who drops the class after that date will receive a grade of F. This rule is necessary because the Clinic has ethical obligations to clients, and interruption of representation caused by insufficient staffing of the Clinic may result in a breach of fiduciary obligations to those clients.
Prerequisite: Approval of instructor.

LAW 7867 Entrepreneurship Law Clinic
Credits 2 to 3. 2 to 3 Other Hours.
Offers the ability to work with entrepreneurs on transactional matters in connection with the founding and/or development of a small business; focus on legal issues involved in starting a business including choice of entity, entity formation and founding agreements. May be taken three times for credit.
Prerequisites: One year in law school in the full-time or part-time program; Business Associations I.

LAW 7868S Intellectual Property and Technology Clinic
Credits 2 to 3. 2 to 3 Lecture Hours.
Trademarks section focuses on general trademark issues; patent section focuses on general patent issues; includes counseling clients, conducting registrability or patentability searches and preparing trademark or patentability opinions for clinic clients, drafting and filing of trademark or patent applications and response to Office Actions. May be taken two times for credit.
Prerequisites: One year of law school in full-time or part-time program; trademark section: Intellectual Property, or Trademark and Unfair Competition or concurrent enrollment.

LAW 7869 Innocence Clinic
Credits 2 to 3. 2 to 3 Lecture Hours.
Opportunities to investigate claims of actual innocence on behalf of Texas inmates including document/transcript review, examining new evidence and locating and re-interviewing witnesses; work closely with innocence Project of Texas attorneys if cases move into litigation; weekly classroom component explores causes and cures of wrongful convictions. May be taken two times for credit.
Prerequisites: One year of law school in full-time or part-time program.

LAW 7881S Mediation Clinic
Credits 3. 3 Lecture Hours.
This course follows the standards for mediation training promulgated by the Texas Mediation Trainers Roundtable. To pass the course and receive credit, the student must attend the entire 40 hours of classroom training and participate in the role-plays, performing as a mediator and as a disputant. The student must also satisfactorily complete the clinic portion of the training, which consists of mediations or observations at Dispute Resolution Centers and other locations. In addition, students must submit a journal for each case mediated or observed.
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7887S Deposition Skills Workshop
Credit 1. 1 Lecture Hour.
This course gives students the opportunity to learn the art of deposition practice and the strategy behind taking depositions. Students will learn and practice fundamental depositions skills; rules pertaining to depositions in federal and state court; how to properly notice a deposition; and how to depose parties, fact witnesses, and experts. The course will conclude with a final deposition performance class in which each student will be provided the opportunity to take and defend a deposition.
Prerequisite: One year of law school in the full-time or part-time program, including Civil Procedure.

LAW 7888S Civil Motion Workshop
Credit 1. 1 Lecture Hour.
This class will focus not on civil trials (which are becoming increasingly rare) but on civil motion practice (which is still a very active component of a trial lawyer’s work). Students will be provided with written motions and responses that were filed in actual nonactive lawsuits. Students will then prepare to argue the motions and responses. At each session, students will be called on to argue either the response or the motion, within appropriate time constraints, in front of a sitting district court judge in Tarrant County. Afterwards each student will receive critique and feedback from fellow students and the professor. Students will be exposed, and must quickly understand, the law related to each motion. However, the focus of this course will be on oral argument skills and developing a level of comfort arguing motions in an actual courtroom.

LAW 7889S Scientific Criminal Evidence Workshop
Credit 1. 1 Lecture Hour.
Students in this class will learn the theory and practice of using scientific evidence in criminal trials. Specific topics to be covered may include the value and use of DNA, mental health, polygraph, and autopsy evidence. Particular attention will be paid to understanding, preparing for, and conducting “Daubert hearings,” which involve challenges to the admissibility of scientific expert testimony. The format of the class will include lecture by the professor and guest speakers, as well as simulations involving students who will be required to assume the roles of both prosecutors and defense lawyers.
Prerequisite: (1) One year of law school in the full-time or part-time program; (2) Civil Procedure (may be taken concurrently).

LAW 7890 Courthouse Perspectives
Credit 1. 1 Lecture Hour.
This course will provide students with a practical, hands-on study of various courts in the Tarrant County area, including the Court of Appeals, District Courts (civil, criminal, and family), County Courts (civil, criminal, and probate), and Justice of the Peace Courts. Students will learn about the function, jurisdiction, and personnel of each court. Each day will begin with a lecture at the Court of Appeals by Justice McCoy, which will be followed by visits to the various courts. During the various visits, students will be introduced to judges, court coordinators, and court reporters. If possible, students will be allowed to observe proceedings in each court they visit. This course will also stress proper courtroom etiquette and nuts-and-bolts procedural training on topics such as how to actually file a document with a court.
Prerequisite: One year of law school in the full-time or part-time program.
LAW 7891S Civil Evidence Workshop
Credit 1. 1 Lecture Hour.
This skills practicum focuses on practical subjects related to courtroom evidence. The workshop provides instruction, demonstration, and practice in offering common forms of evidence in civil and criminal trials; common objections and responses to courtroom evidence; depositions, statements, and sworn testimony; and preserving the record and offers of proof. This workshop is open to all students and is recommended for all law students interested in law school mock trial competition or careers in trial advocacy. 
Prerequisite: (1) One year of law school in the full-time or part-time program; (2) Evidence (may be taken concurrently).

LAW 7892S Pretrial Motion Workshop
Credit 1. 1 Lecture Hour.
Students will learn about and draft three pre-trial motions: Motion to Transfer Venue; Motion to Compel Discovery; and Special Appearance 120a. Students will then argue the motions in class. 
Prerequisite: One year of law school in the full-time or part-time program, including Civil Procedure (may be taken concurrently).

LAW 7900 Special Topics
Credits 1 to 4. 1 to 4 Lecture Hours.
Special topics in identified areas of law. May be repeated for credit. 
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7900F Special Topics
Credits 2. 2 Lecture Hours.
This two-credit practical skills class introduces students to the drafting of legal documents that are common to the general practitioner. The course is designed to provide students with general knowledge of and proficiency with the typical documents lawyers are asked to draft by practicing the drafting techniques common to the various types of legal documents lawyers encounter. The course is based on “small firm” simulations during which students will represent one client in a variety of legal matters including contract drafting, will drafting, negotiation, and settlement of a dispute. In addition to learning new drafting skills, students will hone writing and oral advocacy skills already learned through the production of client letters, lawyer-to-lawyer email communications, and oral settlement negotiations. This is a limited enrollment course; no online registration is available. You must submit a course registration form to Student Services to enroll.

LAW 7900P Special Topics
Credits 2. 2 Lecture Hours.
This course will focus on (1) forming the class (class certification, notice to class members, and the lawyers’ fiduciary obligations to the class); (2) different categories of class actions including civil rights, employment law, tort damages, and economic claims such as antitrust and securities fraud; (3) litigating the class action, (discovery, pretrial motions, trial structure, and evidentiary issues); and (4) settlement mechanics. The course will also have lighter coverage of the history of class actions, multi-state class actions, appellate review, and other procedural concerns. Issues will be approached from both plaintiffs’ and defendants’ perspectives.

LAW 7900S Special Topics
Credits 1 to 3. 1 to 3 Lecture Hours.
Special topics in identified areas of law. May be repeated for credit. 
Prerequisite: One year of law school in the full-time or part-time program.

LAW 7910 Academic Support Teaching Assistant
Credit 1. 1 Lecture Hour.
Student teaching assistants for the Academic Support Program are assigned to work with first-year students in small study groups. Their responsibilities include helping students with the basic skills necessary to succeed in law school. Teaching assistants also hold weekly office hours in which they meet with students on an individual basis.

LAW 7920 LARW Teaching Assistant
Credit 1. 1 Lecture Hour.
Student teaching assistants work with the first-year Legal Analysis Research and Writing (LARW) classes. The teaching assistants help both the professor and the students. Their responsibilities include attending and monitoring first-year LARW classes, distributing handouts, collecting assignments, reviewing citation exercises and research assignments, having weekly office hours, and meeting with students as needed.

LAW 7930 Law Review
Credit 1. 1 Lecture Hour.
The Law Review encourages legal scholarship on issues of interest to academicians, practitioners, and law students. Student editors publish the Texas A&M Law Review with faculty cooperation. Participation is limited to those who meet specific academic requirements and those who are selected through a writing competition.

LAW 7931 Law Review Board
Credits 2. 2 Lecture Hours.
The Law Review encourages legal scholarship on issues of interest to academicians, practitioners, and law students. The Board of Editors is responsible for the operation, supervision, editing, and publication of the Law Review with faculty cooperation.

LAW 7932 Journal of Real Property Law Board
Credits 2. 2 Lecture Hours.
The Journal of Real Property Law is a scholarly publication dedicated to promoting academic discussions of real property law. The organization explores the relationships arising from ownership, possession, and use of real property. The Board of Editors is responsible for the operation, supervision, editing, and publication of the Journal of Real Property with faculty cooperation.

LAW 7933 Journal of Real Property Law
Credit 1. 1 Lecture Hour.
The Journal of Real Property Law is a scholarly publication dedicated to promoting academic discussions of real property law. The organization explores the relationships arising from ownership, possession, and use of real property. Participation is limited to those who meet specific academic requirements and those who are selected through a writing competition.

LAW 7957S ADR Competition
Credit 1. 1 Lecture Hour.
Participation in this competition gives students an opportunity to develop advocacy skills while competing against students from other law schools across the nation.

LAW 7960S Mock Trial Competition
Credits 2. 2 Lecture Hours.
Participation in this competition gives students an opportunity to develop advocacy skills while competing against students from other law schools at the state and national level. Participation is limited to those who meet specific academic requirements and those who are selected through a competition.
LAW 7961S Mock Trial Competition
Credit 1. 1 Lecture Hour.
Participation in this competition gives students an opportunity to develop advocacy skills while competing against students from other law schools at the state and national level. Participation is limited to those who meet specific academic requirements and those who are selected through a competition.

LAW 7963S Mock Trial Competition
Credits 3. 3 Lecture Hours.

LAW 7970S Moot Court Competition
Credit 1. 1 Lecture Hour.
Participation in this competition gives students an opportunity to develop advocacy skills while competing against students from other law schools at the state and national level. Participation is limited to those who meet specific academic requirements and those who are selected through a competition.

LAW 7971S Moot Court Competition
Credits 2. 2 Lecture Hours.
Participation in this competition gives students an opportunity to develop advocacy skills while competing against students from other law schools at the state and national level. Participation is limited to those who meet specific academic requirements and those who are selected through a competition.

LAW 7972 Mock Trial Competition Brief Writer
Credit 1. 1 Lecture Hour.
Participation in this competition gives students an opportunity to develop written appellate advocacy skills while competing against students from other law schools at the state and national level. Participation is limited to those who meet specific academic requirements and those who are selected through a competition.

LAW 7973 Mock Trial Competition Brief Writer
Credits 2. 2 Lecture Hours.
Participation in this competition gives students an opportunity to develop written appellate advocacy skills while competing against students from other law schools at the state and national level. Participation is limited to those who meet specific academic requirements and those who are selected through a competition.

LDEV - Land Development

LDEV 661 Development and the Environment
Credits 3. 3 Lecture Hours.
Land development in the context of environment sustainability, human well being and business profitability to foster a restorative economy; environmental easement and site analysis; state, federal and international regulatory issues; and human ecology and the future of land development.
Prerequisite: Graduate classification.

LDEV 663 Introduction to Project Management
Credits 3. 3 Lecture Hours.
Project management processes for planning, scheduling, cost estimating resource leveling, cost control and post-completion evaluation; issues in project organizational environments, documentation, quality control safety.
Prerequisite: Graduate classification.

LDEV 664 Market Analysis for Development
Credits 3. 3 Lecture Hours.
Techniques and data sources for market analysis for development; analysis for housing development; trade area analysis and market analysis for retail development; analysis for office, industrial parks and for specialized development.
Prerequisite: Graduate classification.

LDEV 665 Land Development Trends
Credits 3. 3 Lecture Hours.
Exploration of a variety of specialized topics associated with emerging trends in the land development industry.
Prerequisite: Graduate classification.

LDEV 666 Land Development Practice
Credits 3. 3 Lecture Hours.
Strategies, methods and techniques of land development including: site selection criteria, urban infrastructure; market evaluation; conceptual arrangement of land uses and structures; conceptual design and regulatory considerations; lending institutions; location theory; value theories; regulatory agencies.
Prerequisite: LDEV 667.

LDEV 669 Income Property Land Development
Credits 3. 3 Lecture Hours.
Exploration of the characteristics of real estate as an investment, venture and capital structures, the development process, site and financial feasibility, and project funding; strategies, methods and technologies for investment property development utilizing current developments.
Prerequisite: Graduate classification.

LDEV 671 Sustainable Development
Credits 3. 3 Lecture Hours.
Sustainability perspectives about values, rights, property and what constitutes an optimum human environment; sustainability principles and case studies emphasizing on-the ground, incentive-based land development that balances economic growth with environmental quality.
Prerequisite: Graduate classification.
LDEV 672 Public-Private Project Funding  
Credits 3. 3 Lecture Hours.  
Financing and related issues in public-private development projects; 
exploring structuring, valuing and managing projects and investigates 
the interaction between suppliers, operators, lenders and contractors; 
troduction to financial tools: loans, credit, interest rates and financial 
models.

LDEV 673 International Development Planning  
Credits 3. 3 Lecture Hours.  
International variations in urban growth and land development strategies: 
savings, aid and trade policy options for cities and regions; international 
co-development programs; application of planning and urban land 
development professions in contemporary global context.  
Prerequisite: Graduate classification.

LDEV 681 Seminar  
Credit 1. 1 Lecture Hour.  
College of Architecture research activities pertaining to land and real 
estate development; preparation and presentation of required final paper 
for MS in Land Development examination.  
Prerequisite: Graduate classification in land development.

LDEV 684 Professional Internship  
Credits 1 to 12. 1 to 12 Other Hours.  
Professional practice under approved arrangement with public or private 
land or real estate development agencies in the United States or abroad.  
Prerequisites: Approval of committee chair and program coordinator.

LDEV 685 Directed Studies  
Credits 1 to 12. 1 to 12 Other Hours.  
Individual and group problems dealing with application of strategic plan 
development theory in practice; opportunities to select international or 
domestic development projects of special interest.  
Prerequisite: Approval of instructor.

LDEV 687 Development Feasibility and Design I  
Credits 3. 1 Lecture Hour. 6 Lab Hours.  
Selected residential and non-residential development projects of varying 
size analyzed by teams with respect to the following: economic feasibility 
and cash flow; site analysis; and design concept.  
Prerequisite: Approval of instructor.

LDEV 688 Development Feasibility and Design II  
Credits 3. 1 Lecture Hour. 6 Lab Hours.  
Plans and venture structures for selected residential and non-residential 
development projects of varying size analyzed by multidisciplinary teams 
with respect to the following; economic feasibility and cash flow and site 
and design plans and costs.  
Prerequisite: LDEV 687 or approval of instructor.

LDEV 689 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours.  
Selected topics in an identified area of land development. May be 
repeated for credit.  
Prerequisite: Approval of instructor.

LDEV 691 Research  
Credits 1 to 23. 1 to 23 Other Hours.  
PhD research and preparation of dissertation.  
Prerequisite: Doctoral classification.

LDEV 693 Professional Study  
Credits 1 to 6. 1 to 6 Other Hours.  
Approved professional case study of project organization in the USA or 
abroad undertaken as terminal requirement for the Master of Science in 
land development degree, non-thesis option.  
Prerequisites: Approval of committee chair and associate department 
head.

LING -Linguistics

LING 602 Topics in Sociolinguistics  
Credits 3. 3 Lecture Hours.  
Topics in the study of language and society; may focus on language use 
and change; how social variable affect language use and change; different 
theoretical approaches; issues and controversies. May be taken three 
times for credit as content varies.

LING 610/ENGL 610 Topics in the History of the English Language  
Credits 3. 3 Lecture Hours.  
Topics in the development of the English language; may include 
phonological, grammatical and lexical histories; study of social and political 
contexts; relationships between English and other languages.  
Cross Listing: ENGL 610/LING 610. May be taken three times for credit 
as content varies.

LING 670 Topics in Discourse Analysis  
Credits 3. 3 Lecture Hours.  
Topics in linguistic and discourse analysis; possible topics include 
discourse and identity, language and gender, register studies, 
ethnography of communication, linguistics and literature. May be taken 
three times for credit as content varies.

LING 685 Directed Studies  
Credits 1 to 6. 1 to 6 Other Hours.  
Readings to supplement the student’s knowledge of English language and 
linguistics in areas not studied in other courses.  
Prerequisites: Graduate classification and approval of department head.

MATH - Mathematics

MATH 601 Methods of Applied Mathematics I  
Credits 3. 3 Lecture Hours.  
Methods of linear algebra, vector analysis and complex variables.  
Prerequisite: MATH 308 or equivalent.

MATH 602 Methods and Applications of Partial Differential Equations  
Credits 3. 3 Lecture Hours.  
Classification of linear partial differential equations of the second order; 
Fourier series, orthogonal functions, applications to partial differential 
equations; special functions, Sturm-Liouville theory, application to 
boundary value problems; introduction to Green’s functions; finite Fourier 
transforms.  
Prerequisites: MATH 601 or MATH 308 and MATH 407.

MATH 603 Methods of Applied Mathematics II  
Credits 3. 3 Lecture Hours.  
Tensor algebra and analysis; partial differential equations and boundary 
value problems; Laplace and Fourier transform methods for partial 
differential equations.  
Prerequisite: MATH 601 or MATH 311.
MATH 604 Mathematical Foundations of Continuum Mechanics
Credits 3. 3 Lecture Hours.
Mathematical description of continuum mechanics principles, including: tensor analysis, generalized description of kinematics and motion, conservation laws for mass and momentum; invariance and symmetry principles; application to generalized formulation of constitutive expressions for various fluids and solids.
Prerequisites: MATH 410; MATH 451 or equivalent.

MATH 605 Mathematical Fluid Dynamics
Credits 3. 3 Lecture Hours.
Derivation of basic equations of motion; Navier-Stokes equations; potential equations; some exact solutions in two and three dimensions; equations of boundary layer theory; vorticity-stream function formulation and vortex dynamics; introduction to hydrodynamic stability; introduction to equations of turbulence.
Prerequisite: MATH 601 or equivalent.

MATH 606 Theory of Probability I
Credits 3. 3 Lecture Hours.
Measure and integration, convergence concepts, random variables, independence and conditional expectation, laws of large numbers, central limit theorems, applications.
Prerequisite: MATH 607 or approval of instructor.

MATH 607 Real Variables I
Credits 3. 3 Lecture Hours.
Lebesgue measure and integration theory, differentiation, Lp-spaces, abstract integration, signed measures; Radon-Nikodym theorem, Riesz representation theorem, integration on product spaces.
Prerequisite: MATH 447 or equivalent.

MATH 608 Real Variables II
Credits 3. 3 Lecture Hours.
Banach spaces, theorems of Hahn-Banach and Banach-Steinhaus, the closed graph and open mapping theorems, Hilbert spaces, topological vector spaces and weak topologies.
Prerequisite: MATH 607.

MATH 609 Numerical Analysis
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Interpolation, numerical evaluation of definite integrals and solution of ordinary differential equations; stability and convergence of methods and error estimates.
Prerequisite: Knowledge of computer programming (C or FORTRAN).

MATH 610 Numerical Methods in Partial Differential Equations
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Introduction to finite difference and finite element methods for solving partial differential equations; stability and convergence of methods and error bounds.
Prerequisite: MATH 417 or MATH 609 or equivalent; knowledge of computer programming.

MATH 611 Introduction to Ordinary and Partial Differential Equations
Credits 3. 3 Lecture Hours.
Prerequisite: MATH 410 or equivalent or instructor's approval.

MATH 612 Partial Differential Equations
Credits 3. 3 Lecture Hours.
Theory of linear partial differential equations; Sobolev spaces; elliptic equations (including boundary value problems and spectral theory); linear evolution equations of parabolic and hyperbolic types (including initial and boundary value problems). As time permits, additional topics might be included.
Prerequisite: MATH 611 and MATH 607 or MATH 641, or approval of instructor.

MATH 613 Graph Theory
Credits 3. 3 Lecture Hours.
One or more broad areas of graph theory or network theory, such as planarity, connectivity, Hamiltonian graphs, colorings of graphs, automorphisms of graphs, or network theory.
Prerequisite: MATH 431 or equivalent or approval of instructor.

MATH 614 Dynamical Systems and Chaos
Credits 3. 3 Lecture Hours.
Discrete maps; continuous flows; dynamical systems; Poincaré maps; symbolic dynamics; chaos, strange attractors; fractals; computer simulation of dynamical systems.
Prerequisites: MATH 308; MATH 601 or equivalent.

MATH 615 Introduction to Classical Analysis
Credits 3. 3 Lecture Hours.
Set-theoretic preliminaries; Cantor-Schröder-Bernstein Theorem; review of sequences; limit inferior and limit superior; infinite products; metric spaces; convergence of functions; Dini's Theorem, Weierstrass Approximation Theorem; monotone functions; bounded variation; Helly's Selection Theorem; Riemann-Stieltjes integration; Fourier series; Fejer's Theorem; Parseval's Identity; Bernstein's Theorem on absolutely convergent Fourier series.
Prerequisite: MATH 409 or equivalent.

MATH 616 Theory of Functions of a Complex Variable I
Credits 3. 3 Lecture Hours.
Holomorphic functions, complex integral theorems, Runge's theorem, residue theorem, Laurent series, conformal mapping, harmonic functions.
Prerequisite: MATH 410.

MATH 617 Theory of Functions of a Complex Variable II
Credits 3. 3 Lecture Hours.
Infinite products, Weierstrass factorization theorem, Mittag-Leffler's theorem, normal families, Riemann mapping theorem, analytic continuation, Picard's theorems and selected topics.
Prerequisite: MATH 617.

MATH 618 Theory of Functions of a Complex Variable III
Credits 3. 3 Lecture Hours.
Measure Theory; Lebesgue integration; random variables; expectation; condition expectation martingales and random walks; designed for beginning graduate students in mathematics, statistics, the sciences and engineering and students in economics and finance with a strong mathematical background.
Prerequisites: MATH 409 and MATH 411.

MATH 619 Applied Probability
Credits 3. 3 Lecture Hours.
Measure Theory; Lebesgue integration; random variables; expectation; condition expectation martingales and random walks; designed for beginning graduate students in mathematics, statistics, the sciences and engineering and students in economics and finance with a strong mathematical background.
Prerequisite: MATH 653 or approval of instructor.

MATH 620 Algebraic Geometry I
Credits 3. 3 Lecture Hours.
Affine and projective varieties; sheaves; cohomology; Riemann-Roch Theorem for curves.
Prerequisite: MATH 653 or approval of instructor.
MATH 622 Differential Geometry I
Credits 3. 3 Lecture Hours.
Surfaces in 3-D space and generalizations to submanifolds of Euclidean space; smooth manifolds and mappings; tensors; differential forms; Lie groups and algebras; Stokes' theorem; deRham cohomology; Frobenius theorem; Riemannian manifolds.
Prerequisite: MATH 304 or equivalent; approval of instructor.
MATH 623 Differential Geometry II
Credits 3. 3 Lecture Hours.
Curvature of Riemannian manifolds; vector bundles; connections; Maurer-Cartan Form; Laplacian; geodesics; Chern-Gauss-Bonnet theorem; additional topics to be selected by the instructor.
Prerequisites: MATH 622 or approval of instructor.
MATH 625 Combinatorics
Credits 3. 3 Lecture Hours.
Stochastic integration, Ito Calculus and applications of stochastic differential equations to finance and engineering.
Prerequisite: MATH 619.
MATH 626 Analytic Number Theory
Credits 3. 3 Lecture Hours.
Analytic properties of the Riemann zeta function and Dirichlet L-functions; Dirichlet characters; prime number theorem; distribution of primes in arithmetic progressions; Siegel's theorem; the large sieve inequalities; Bombieri-Vinogradov theorem.
Prerequisite: MATH 617.
MATH 627 Algebraic Number Theory
Credits 3. 3 Lecture Hours.
Algebraic number fields and rings of algebraic integers; arithmetic in algebraic number fields; ideals; unique factorization of ideals; ideal classes and the class group; finiteness of the class number; Minkowski's theorem; Dirichlet's unit theorem; quadratic and cyclotomic number fields; splitting of primes in extension fields.
Prerequisite: MATH 653 or approval of instructor.
MATH 628 Mathematics of Finance
Credits 3. 3 Lecture Hours.
Review of preliminary concepts; sequence and function spaces; normed linear spaces, inner product spaces; spectral theory for compact operators; fixed point theorems; applications to integral equations and the calculus of variations.
Prerequisite: MATH 641 or approval of instructor.
MATH 629 History of Mathematics
Credits 3. 3 Lecture Hours.
Major events in the evolution of mathematical thought from ancient times to the present, the development of various important branches of mathematics, including numeration, geometry, algebra, analysis, number theory, probability, and applied mathematics.
Prerequisite: MATH 304 or equivalent.
MATH 630 Combinatorics
Credits 3. 3 Lecture Hours.
This is an introduction at the graduate level to the fundamental ideas and results of combinatorics, including enumerative techniques, sieve methods, partially ordered sets and generating functions.
Prerequisite: undergraduate discrete math course or permission of instructor.
MATH 631 Analysis for Applications I
Credits 3. 3 Lecture Hours.
Introduction to basic theory and numerical methods for first order nonlinear partial differential equations; basic existence-uniqueness theory for scalar conservation laws; special equations and systems of interest in various applications and Riemann problem solutions for such systems; design of numerical methods for general hyperbolic systems; stability and convergence properties of numerical methods.
Prerequisite: MATH 610 or MATH 612 or approval of instructor.
MATH 632 Analysis for Applications II
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Numerical methods for solving linear and nonlinear equations and systems of equations; eigenvalue problems.
Prerequisites: Elementary linear algebra and knowledge of computer programming (C or FORTRAN).
MATH 633 Linear Algebra for Applications
Credits 3. 3 Lecture Hours.
Review of linear algebra; spectral theory in inner product spaces; decomposition theorems; duality theory and multilinear algebra; tensor products; applications. May be taken concurrently with MATH 641.
Prerequisite: MATH 304 or equivalent.
MATH 634 Analysis for Applications I
Credits 3. 3 Lecture Hours.
Review of preliminary concepts; sequence and function spaces; normed linear spaces, inner product spaces; spectral theory for compact operators; fixed point theorems; applications to integral equations and the calculus of variations.
Prerequisites: MATH 447 and MATH 640 or approval of instructor.
MATH 635 Analysis for Applications II
Credits 3. 3 Lecture Hours.
Distributions and differential operators; transform theory; spectral theory for unbounded self-adjoint operators; applications to partial differential equations; asymptotics and perturbation theory.
Prerequisite: MATH 641.
MATH 636 Topology I
Credits 3. 3 Lecture Hours.
Set theory, topological spaces, generalized convergence, compactness, metrization, connectedness, uniform spaces, function spaces.
Prerequisite: Approval of instructor.
MATH 637 Topology II
Credits 3. 3 Lecture Hours.
Continuation of MATH 636.
Prerequisite: MATH 636 or approval of instructor.
MATH 638 Hyperbolic Conservation Laws
Credits 3. 3 Lecture Hours.
Introduction to basic theory and numerical methods for first order nonlinear partial differential equations; basic existence-uniqueness theory for scalar conservation laws; special equations and systems of interest in various applications and Riemann problem solutions for such systems; design of numerical methods for general hyperbolic systems; stability and convergence properties of numerical methods.
Prerequisite: MATH 610 or MATH 612 or approval of instructor.
MATH 653 or approval of instructor.
MATH 646 A Survey of Mathematical Problems II
Credits 3.3 Lecture Hours.
A survey of problems in various branches of mathematics such as algebra, geometry, differential equations, real analysis, complex analysis, calculus of variations.
Prerequisite: MATH 645 or approval of instructor.

MATH 647 Mathematical Modeling
Credits 3.3 Lecture Hours.
The process and techniques of mathematical modeling; covers a variety of application areas and models such as ordinary and partial differential equations, stochastic models, discrete models and problems involving optimization.
Prerequisite: MATH 442 or approval of instructor.

MATH 648 Computational Algebraic Geometry
Credits 3.3 Lecture Hours.
Broad introduction to algorithmic algebraic geometry, including numerical and complexity theoretic aspects; theory behind the most efficient modern algorithms for polynomial system solving and the best current quantitative/geometric estimates on algebraic sets over various rings is derived.
Prerequisite: MATH 653 or approval of instructor.

MATH 650 Several Complex Variables
Credits 3.3 Lecture Hours.
Introduction to function theory in several complex variables with an emphasis on the analytic and partial differential equations aspects of the subject.
Prerequisites: MATH 608 and MATH 618 or equivalents.

MATH 651 Optimization I
Credits 3.3 Lecture Hours.
Fundamentals of mathematical analysis underlying theory of constrained optimizations for a finite number of variables, necessary and sufficient conditions for constrained extrema of equality constraint problems, sufficient conditions for fulfillment of constraint qualification, computational methods for concave programming problems and applications.
Prerequisite: MATH 410 or approval of instructor.

MATH 652 Optimization II
Credits 3.3 Lecture Hours.
Necessary conditions of calculus of variations, elementary theory of games, formulation of basic control problem, Hestenes’ necessary conditions for optimal control, transformations, methods of computation and applications.
Prerequisite: MATH 651.

MATH 653 Algebra I
Credits 3.3 Lecture Hours.
Survey of groups, rings, ideals.
Prerequisite: MATH 415 or approval of instructor.

MATH 654 Algebra II
Credits 3.3 Lecture Hours.
Survey of modules, field extensions, Galois theory.
Prerequisite: MATH 653 or approval of instructor.

MATH 655 Functional Analysis I
Credits 3.3 Lecture Hours.
Normed linear spaces, duality theory, reflexivity, operator theory. Banach algebras, spectral theory, representation theory.
Prerequisite: MATH 608.

MATH 656 Functional Analysis II
Credits 3.3 Lecture Hours.
Topological linear spaces, locally convex spaces, duality in locally convex spaces, ordered topological vector spaces, distribution theory, applications to analysis.
Prerequisite: MATH 655.

MATH 657 Advanced Mathematical Modeling
Credits 3.3 Lecture Hours.
Problems, methods and recent developments in algebra. May be repeated for credit.

MATH 658 Applied Harmonic Analysis
Credits 3.3 Lecture Hours.
Fourier series and Fourier Transform; discrete (fast) Fourier transform; discrete cosine transform; local cosine transform; Radon transform; filters; harmonic analysis on the sphere; radial, periodic and spherical basis functions; applications.
Prerequisites: MATH 304; MATH 308 or equivalent.

MATH 660/CSCE 660 Computational Linear Algebra
Credits 3.3 Lecture Hours.
Techniques in matrix computation: elimination methods, matrix decomposition, generalized inverses, orthogonalization and least-squares, eigenvalue problems and singular value decomposition, iterative methods and error analysis.
Prerequisite: MATH 417 or equivalent or CSCE 442 or equivalent.
Cross Listing: CSCE 660/MATH 660.

MATH 661 Mathematical Theory of Finite Element Methods
Credits 3.3 Lecture Hours.
Will develop basic mathematical theory of finite element method; construction of finite element spaces and piece-wise polynomial approximation; Ritz-Galerkin methods and variational crimes; energy and maximum norm estimates; mixed finite element method; applications to diffusion-reaction problems.

MATH 662 Seminar in Algebra
Credits 3.3 Lecture Hours.
Problems, methods and recent developments in algebra. May be repeated for credit.
Prerequisite: Approval of instructor.

MATH 663 Seminar in Analysis
Credits 3.3 Lecture Hours.
Problems, methods and recent developments in analysis. May be repeated for credit.
Prerequisite: Approval of instructor.

MATH 664 Seminar in Applied Mathematics
Credits 3.3 Lecture Hours.
Problems, methods and recent developments in applied mathematics. May be repeated for credit.
Prerequisite: Approval of instructor.

MATH 665 Seminar in Geometry
Credits 3.3 Lecture Hours.
Problems, methods and recent developments in geometry. May be repeated for credit.
Prerequisite: Approval of instructor.

MATH 666 Seminar in Approximation
Credits 3.3 Lecture Hours.
Existence, uniqueness and characterization of best approximations; polynomial and rational approximants; Bernstein polynomials; Bernstein and Markov inequalities; ridge functions; approximation from shift-invariant subspaces; orthogonal polynomials; neural networks, radial basis functions, scattered-data surface fitting; subdivision analysis.
Prerequisites: MATH 407 and MATH 409.
MATH 669 Seminar in Mathematical Biology
Credits 3.3 Lecture Hours.
Problems, methods and recent developments in Mathematical Biology. May be repeated for credit.
Prerequisite: Approval of instructor.

MATH 670 Applied Mathematics I
Credits 3.3 Lecture Hours.
Mathematical tools of applied mathematics; Fredholm alternative; integral operators; Green's functions; unbounded operators; Stone's theorem; distributions; convolutions; Fourier transforms; applications.
Prerequisite: MATH 642 or equivalent.

MATH 672 Hydrodynamic Stability
Credits 3.3 Lecture Hours.
Instability mechanisms; instability of interfacial and free surface flows; thermal instability; centrifugal instability; instability of inviscid and viscous parallel shear flows; fundamental concepts and applications of nonlinear instability; the onset of turbulence; various transitions to turbulence.
Prerequisites: MATH 601 or equivalent; MATH 605 or equivalent.

MATH 673 Information, Secrecy and Authentication I
Credits 3.3 Lecture Hours.
Preliminaries; probability, information, entropy, signals, channels: group-theoretic view of messages: contemporary secrecy and digital signature systems; one-time pads, DES, RSA, DSS, wheels, LFSR-based systems; analog scramblers; key exchange, key management, secret sharing, access structures; measures of security.
Prerequisites: Graduate classification and approval of instructor.

MATH 676 Finite Element Methods in Scientific Computing
Credits 3.3 Lecture Hours.
Basic finite element methods; structure of finite element codes; assembling linear systems of equations and algorithmic aspects; linear iterative solvers; adaptive mesh refinement; vector-valued and mixed problems; visualization; parallelization aspects. Additional topics may be chosen by instructor.
Prerequisites: MATH 610; ENGR finite element class on MATH 419 or MATH 609; approval of instructor. Knowledge of C++.

MATH 684 Professional Internship
Credits 1 to 6; 1 to 6 Other Hours.
Directed internship in an organization to provide students with professional experience in organization settings appropriate to the student's career objectives.
Prerequisite: Approval of department head.

MATH 685 Directed Studies
Credits 1 to 6; 1 to 6 Other Hours.
Offered to enable students to undertake and complete, with credit, limited investigations not within their thesis research and not covered by any other courses in the curriculum.
Prerequisite: Approval of instructor.

MATH 689 Special Topics in...
Credits 1 to 4; 1 to 4 Lecture Hours.
Selected topics in an identified area of mathematics. May be repeated for credit.
Prerequisite: Approval of instructor.

MATH 691 Research
Credits 1 to 23; 1 to 23 Other Hours.
Research for thesis or dissertation.

MATH 695 Frontiers in Mathematical Research
Credits 3.3 Lecture Hours.
This course is designed to acquaint the graduate student with the present status of investigative work in a variety of mathematical fields. Content will depend on the availability of visiting lecturers who will be selected because of distinguished international recognition in their fields of research. May be taken two times for credit.
Prerequisite: Graduate classification.

MATH 696 Mathematical Communication and Technology
Credits 3.3 Lecture Hours.
Techniques of oral, written and electronic communication of mathematics; effective classroom and seminar presentation; LATEX, HTML and Javascript; developing Internet applications; Maple and Matlab; classroom use of computer graphics.
Prerequisite: Approval of instructor.

MCMD - Molecular Cell Medicine

MCMD 625/BICH 625 Nucleic Acid-Protein Interactions
Credit 1.1 Lecture Hour.
Mechanisms of nucleic acid-protein interactions involved in fundamental biochemical processes such as DNA replication and rearrangement, transposition, transcription, RNA splicing and translation; original research articles presented focusing on experimental approaches, interpretation of results and overall significance.
Prerequisite: Approval of the department head.
Cross Listing: BICH 625/MCMD 625.

MCMD 671/BICH 671 Macromolecular Folding and Design
Credit 1.1 Lecture Hour.
The Macromolecular Folding and Design Journal Club is to serve as a mechanism for oral dissemination of current knowledge regarding the structure and function of biological macromolecules.
Prerequisite: Approval of the department head.
Cross Listing: BICH 671/MCMD 671.

MCMD 672/BICH 672 Biological Membranes
Credit 1.1 Lecture Hour.
Seminar-based course examining recent discoveries in the structure, function and assembly of biological membranes; students give an oral presentation on current literature in molecular biology, biochemistry and/or biophysics.
Prerequisite: Approval of the department head.
Cross Listing: BICH 672/MCMD 672.

MCMD 674/BICH 674 Protein Folding and Stability
Credit 1.1 Lecture Hour.
Selected topics from recent literature in the general areas of protein folding, structure and stability.
Prerequisite: Approval of the department head.
Cross Listing: BICH 674/MCMD 674.

MCMD 675 Molecular Pathogenesis
Credit 1.1 Lecture Hour.
Oral presentations and discussions from current literature in the general area of the molecular mechanisms involved in disease. May be taken 12 times.
Prerequisite: Approval of the department head.
MCMD 676 Frontiers in Regenerative Medicine  
Credit 1. 1 Lecture Hour.  
This course will follow a "journal club" format in which a student will serve as the discussion leader for the weekly journal meeting at the Institute for Regenerative Medicine. Papers will be elected from the recent literature in the areas of regenerative medicine/stem cell research. The primary purpose of the course is oral dissemination of recent knowledge of regenerative medicine. Secondarily, it will serve as a training mechanism for students who wish to improve their presentation skills with a wide spectrum of scientists at various levels of expertise.  
Prerequisite: MSCI 601.

MCMD 677/GENE 677 Genes and Diseases  
Credits 3. 3 Lecture Hours.  
Molecular and genetic basis for human disease; structure, function and evolution of chromosomes; epigenetics; gene mapping; complex genetic traits; cancer genetics; neurodegenerative disorders, animal models (yeast, mouse, worms, fruitflies); ethics.  
Cross Listing: GENE 677/MCMD 677.

MCMD 681 Seminar  
Credit 1. 1 Lecture Hour.  
Focus will be on critical scientific thinking. Emphasis placed on oral communications, scientific writing and grant preparation.  
Prerequisite: Graduate student in medical science. Approval of department head.

MCMD 685 Directed Studies  
Credits 1 to 6. 1 to 6 Lecture Hours.  
Limited investigation in fields other than those chosen for thesis or dissertation.  
Prerequisite: Approval of instructor.

MCMD 689 Special Topics  
Credits 1 to 4. 1 to 4 Lecture Hours.  
Selected topics in an identified area of biochemistry and genetics. May be repeated for credit when topics vary.

MCMD 914 Medical Biochemistry, Genetics and Nutrition  
Credits 10. 10 Lecture Hours.  
Properties and metabolism of proteins, nutritional biochemistry, nutritional deficiencies, diet and disease. The metabolic basis of inherited disease. Metabolism of lipids, carbohydrates, amino acids, purines and pyrimidines. Properties and metabolism of DNA and RNA. Fundamentals of medical genetics, including diseases resulting from inborn errors of metabolism, chromosomal abnormalities, human gene mapping and applications of recombinant DNA technology to problems of human genetics.  
Prerequisite: Admission to the medical curriculum.

MEEN - Mechanical Engineering  

MEEN 601 Advanced Product Design  
Credits 3. 3 Lecture Hours.  
Design methodology, functional design, innovation, parameter analysis, design for reliability, manufacturability and strength; design project.  
Prerequisite: MEEN 402 or equivalent.

MEEN 603/AERO 605 Theory of Elasticity  
Credits 3. 3 Lecture Hours.  
Analysis of stress and strain in two and three dimensions, equilibrium and compatibility equations, strain energy methods; torsion of noncircular sections; flexure; axially symmetric problems.  
Prerequisite: Mechanics of Materials, Advanced Calc Different Equations.  
Cross Listing: AERO 605/MEEN 603.

MEEN 606/MSEN 626 Polymer Laboratories  
Credits 3. 2 Lecture Hours.  
Introductory to basic experimental skills relating to polymers; experiments include polymerization, molecular weight determination, FTIR, tensile test, NMR, DSC, swelling index, viscosity, x-ray diffraction.  
Cross Listing: MSEN 626/MEEN 606.

MEEN 607/MSEN 607 Polymer Physical Properties  
Credits 3. 3 Lecture Hours.  
Macromolecular concepts, molecular weight characterization; solubility parameters; phase diagrams; viscoelasticity; rheology; thermal behavior; damage phenomena, morphology; crystallization; liquid crystallinity; nanocomposites.  
Prerequisite: MEEN 222 or equivalent.  
Cross Listing: MSEN 607/MEEN 607.

MEEN 608/MEMA 602 Continuum Mechanics  
Credits 3. 3 Lecture Hours.  
Development of field equations for analysis of continua (solids as well as fluids); conservation laws: kinematics, constitutive behavior of solids and fluids; applications to aerospace engineering problems involving solids and fluids.  
Prerequisite: Graduate classification.  
Cross Listing: MEMA 602/AERO 603.

MEEN 609 Materials Science  
Credits 3. 3 Lecture Hours.  
Structure and properties of solid materials.  
Prerequisites: Undergraduate level Materials, Science and Engineering course.

MEEN 610 Applied Polymer Science  
Credits 3. 3 Lecture Hours.  
Macromolecular concepts, molecular weight, tacticity, theory of solutions, rubber elasticity, thermal transitions, rheology, crystallinity, heterogeneous systems and relation of mechanical and physical characteristics to chemical structure; applications to polymer blends, thermosetting resins, structural adhesives and composites; design and processing of fibrous composites.  
Prerequisite: Graduate classification; ENGR 213.

MEEN 612 Mechanics of Robot Manipulators  
Credits 3. 3 Lecture Hours.  
Kinematics, dynamics and control of industrial robot manipulators.  
Prerequisites: MEEN 364 and MEEN 411 or approval of instructor.

MEEN 613 Engineering Dynamics  
Credits 3. 3 Lecture Hours.  
Three dimensional study of dynamics of particles and rigid bodies and application to engineering problems; introduction to Lagrange equations of motion and Hamilton's principle.  
Prerequisites: MEEN 363; MATH 308.

MEEN 614 Design and Modeling of Viscoelastic Structures  
Credits 3. 3 Lecture Hours.  
To provide the mechanical and mathematical basis for modeling linear viscoelastic materials.  
Prerequisite: CVEN 305 or equivalent.

MEEN 615 Advanced Engineering Thermodynamics  
Credits 3. 3 Lecture Hours.  
Theories of thermodynamics and their application to more involved problems in engineering practice and design; equilibrium, Gibbs’ function, nonideal gases and various equations of state; second law analysis and statistical theory.  
Prerequisite: MEEN 421 or equivalent.
MEEN 616/MSEN 616 Surface Science
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Properties of surfaces, principles of classic and contemporary surface characterization techniques, recent development and roles of surface science in advanced technology.
Prerequisite: Graduate classification.
Cross Listing: MSEN 616/MEEN 616.

MEEN 617 Mechanical Vibrations
Credits 3. 3 Lecture Hours.
Prerequisites: MEEN 364; MATH 308.

MEEN 618 Energy Methods
Credits 3. 3 Lecture Hours.
Principles of virtual work, minimum total potential energy and extremum mixed variational principles; energy theorems of structural mechanics; Hamilton's principle for dynamical systems; Rayleigh-Ritz Galerkin, and weighted-residual methods; applications to linear and nonlinear problems in mechanics (bars, beams, frames, plates and general boundary value problems).
Prerequisites: MATH 601 or registration therein.

MEEN 619 Conduction and Radiation
Credits 3. 3 Lecture Hours.
Solutions of steady and transient problems with method of separation of variables, finite difference numerical methods, Duhamel's Theorem, Green's function, and Laplace transform, the phase change problems. View factors; radiative properties of surfaces and participating media, radiative exchange; gas radiation; and advanced solution methods for thermal radiation.
Prerequisite: MEEN 461.

MEEN 620/MSEN 620 Kinetic Processes in Materials Science
Credits 3. 3 Lecture Hours.
Atomistic and mesoscale levels; foundation for microstructural evolution and behavior of materials; basic and irreversible thermodynamics; diffusion equations solutions; atomicistic diffusion, nucleation; phase transformations: gas-solid, liquid-solid and solid-solid reactions; FiPy (finite volume solver for PDE) to simulate kinetic processes.
Prerequisites: MEEN 222 or equivalent materials science course; preliminary general thermodynamics course is not necessary.
Cross Listing: MSEN 620/MEEN 620.

MEEN 621 Fluid Mechanics
Credits 3. 3 Lecture Hours.
Dynamics of two-dimensional incompressible and compressible fluids; viscous flow in laminar and turbulent layers, the Navier-Stokes equations and boundary layer theory.
Prerequisite: MEEN 344 or equivalent.

MEEN 622 Advanced Fluid Mechanics
Credits 3. 3 Lecture Hours.
Laminar viscous flows; hydrodynamic stability; transition to turbulence; special topics include atomization, two-phase flows and non-linear theories.
Prerequisites: MEEN 621 or equivalent; MATH 601 or equivalent.

MEEN 624 Two-Phase Flow and Heat Transfer
Credits 3. 3 Lecture Hours.
Current status of two-phase flow and heat transfer for application to design; basic one dimensional treatment of two-phase flows and the current state of the art in liquid-vapor phase change heat transfer.
Prerequisite: Undergraduate courses in fluid mechanics and heat transfer.

MEEN 625/MSEN 625 Mechanical Behavior of Materials
Credits 3. 3 Lecture Hours.
Examination of deformation and microstructure mechanisms responsible for deformation and failure in metals; fatigue, creep, and fracture mechanisms of materials; emphasis on microstructural-mechanical property relationship.
Prerequisite: Undergraduate-level materials science course.
Cross Listing: MSEN 625/MEEN 625.

MEEN 626 Lubrication Theory
Credits 3. 3 Lecture Hours.
Development of Reynolds equation from Navier-Stokes equation for study of hydrodynamic lubrication theory as basis for bearing design; application to simple thrust and journal bearings and pads of various geometries; hydrostatic lubrication, floating ring bearing, compressible fluid (gas) lubrication, grease lubrication, dynamically loaded bearings, half speed whirl and stability.
Prerequisites: MEEN 344 or equivalent; MATH 308.

MEEN 627 Heat Transfer-Conduction
Credits 3. 3 Lecture Hours.
Mathematical theory of steady-state and transient heat conduction; solution of the governing differential equations by analytical and numerical methods; applications to various geometric configurations.
Prerequisites: MEEN 461; MATH 601 or registration therein.

MEEN 628 Heat Transfer-Convection
Credits 3. 3 Lecture Hours.
Mathematical theory of convection energy transport; applications to the design of heat-transfer apparatus.
Prerequisites: MEEN 461; MATH 601 or registration therein.

MEEN 629 Heat Transfer-Radiation
Credits 3. 3 Lecture Hours.
Mathematical theory of thermal radiation with design applications; ideal and nonideal radiating surfaces, heat transfer in enclosures, solar radiation; analytical, numerical and analogical methods stressed in problem solving.
Prerequisites: MEEN 461; MATH 601 or registration therein.

MEEN 630 Intermediate Heat Transfer
Credits 3. 3 Lecture Hours.
Application of basic laws to the analysis of heat and mass transfer; exact and approximate solutions to conduction, convection and radiation problems; current status of single and two-phase heat transfer for application to design.
Prerequisites: Undergraduate courses in fluid mechanics and heat transfer.

MEEN 631 Microscale Thermodynamics
Credits 3. 3 Lecture Hours.
An understanding of thermodynamics and transport properties from a microscopic viewpoint; principles of quantum mechanics; atomic and molecular contribution to thermodynamic properties; kinetic theory and transport properties.
Prerequisite: Graduate classification.
MEEN 632 Advanced Computer-Aided Engineering
Credits 3. 3 Lecture Hours.
An integrated learning environment that is responsive to industrial need for mechanical engineers with multi-disciplinary design skills; three essentials emphasized in strong teamwork environment; design concept development, design optimization and effective communication via engineering drawings.
Prerequisite: Graduate classification in mechanical engineering.
MEEN 633 Combustion Science and Engineering
Credits 3. 3 Lecture Hours.
Fuels and combustion, mass transfer, transport properties, conservation laws, droplet, particle and slurry combustion, sprays, combustion in flow systems flammability, ignition, extinction, flame stability, laminar and detonation waves, premixed flames, application to burners--residential, utility and transportation, fluidized bed combustors, and fire and flame spread of modern building materials.
Prerequisites: MEEN 421, MEEN 344, MEEN 461 or equivalents.
MEEN 634 Dynamics and Modeling of Mechatronic Systems
Credits 3. 3 Lecture Hours.
Prerequisites: MEEN 364, MATH 308, MEEN 357.
MEEN 635 Flow and Fracture of Polymeric Solids
Credits 3. 3 Lecture Hours.
Relationship of molecular structure to flow and fracture in polymeric materials; introduction of viscoelastic fracture mechanics; micromechanisms of fracture including crazing; fatigue behavior of polymeric materials.
MEEN 636 Turbulence: Theory and Engineering Applications
Credits 3. 3 Lecture Hours.
Characteristics, concepts, and relationships of detailed turbulent flow analysis and measurement; turbulence origin, energy production, cascade and dissipation; correlation functions, spectra and length scales; closure modeling of the Reynolds-averaged governing equations.
Prerequisites: MEEN 621.
MEEN 637 Turbulence Measurement and Analysis
Credits 3. 3 Lecture Hours.
Instrumentation and measurement techniques used in turbulent flow field analysis with emphasis on understanding the characteristics of the turbulence. Pressure probes, hot-wire/hot-film anemometry, laser anemometry, spectral and temporal analysis techniques, conditional sampling and computer applications.
Prerequisite: MEEN 344.
MEEN 638 Mechanics of Non-Linear Fluids
Credits 3. 3 Lecture Hours.
Introduction to classifications of flows, constitutive theory, fluids of the differential type.
Prerequisites: Graduate classification and approval of instructor.
MEEN 639 Dynamics of Rotating Machinery
Credits 3. 3 Lecture Hours.
Dynamic stability, critical speeds and unbalanced response of rotor-bearing systems; special problems encountered in modern applications operating through and above critical speeds.
Prerequisites: MEEN 363 or equivalent and graduate classification or approval of the instructor.
MEEN 640/MSEN 640 Thermodynamics in Materials Science
Credits 3. 3 Lecture Hours.
Use of thermodynamic methods to predict behavior of materials; codification of thermodynamic properties into simplified models; principles, methods, and models to generate accurate equilibrium maps through computational thermodynamics software; applications to bulk metallic, polymeric and ceramic materials, defects, thin films, electrochemistry, magnetism.
Prerequisites: MEEN 222 or equivalent; graduate classification.
Cross Listing: MSEN 640/MEEN 640.
MEEN 641 Quantitative Feedback Theory
Credits 3. 3 Lecture Hours.
Benefits of feedback and cost of feedback; understanding extent to which available design theories meet realistic design constraints; treating the synthesis problem from a quantitative viewpoint; quantitative feedback theory as an effective tool for realistic feedback design problems for multivariable systems having both minimum and non-minimum phase zeros.
Prerequisite: MEEN 651 or equivalent.
MEEN 642 Gas Turbine Heat Transfer and Cooling Technology
Credits 3. 3 Lecture Hours.
Focus on the range of gas turbine heat transfer issues and associated cooling technologies; fundamentals, turbine heat transfer, turbine film cooling, turbine internal cooling with rotation, experimental methods, numerical modeling and final remarks; provide solid background for research and design in turbomachinery heat transfer.
Prerequisites: MEEN 344, MEEN 461, and graduate standing.
MEEN 643 Experimental Methods in Heat Transfer and Fluid Mechanics
Credits 3. 3 Lecture Hours.
Experimental methods including experiment planning and design, mechanics of measurements, error and uncertainty analysis, standards and calibration, temperature measurement, interferometry, flow rate measurement, hot wire anemometry, subsonic and supersonic flow visualization and data analysis; selected experiments conducted.
Prerequisite: Graduate classification.
MEEN 644/NUEN 644 Numerical Heat Transfer and Fluid Flow
Credits 3. 3 Lecture Hours.
Convection-diffusion, up-wind, exponential, exact solution, power law schemes, false diffusion; staggered grid concept; development of simple and simpler algorithms; periodically developed flows.
Prerequisites: MEEN 357 and MEEN 461; NUEN 430 or equivalent.
Cross Listing: NUEN 644/MEEN 644.
MEEN 645 Engineering Applications of Solid Mechanics
Credits 3. 3 Lecture Hours.
Mechanical and mathematical basis for modeling response of solid bodies undergoing coupled mechanical and non-mechanical effects, analysis of stress and deformation for structural members subjected to axial, torsional and bending loads, design of multifunctional systems.
Prerequisites: CVEN 305, MEEN 368, or equivalent.
MEEN 646 Aerothermodynamics of Turbomachines
Credits 3. 3 Lecture Hours.
Fluid mechanics and thermodynamics as applied to the design of rotating systems; development of turbomachinery equations; detailed aerodynamic design of compressors and turbines.
Prerequisites: MEEN 414 and MEEN 472; MATH 601 or approval of instructor.
MEEN 648/ISEN 654 Manufacturing Systems Planning and Analysis
Credits 3. 3 Lecture Hours.
The system perspective of a computer integrated manufacturing system; manufacturing and its various levels and the planning and control of product movement through the production system in the context of using realtime control, multiprocessor systems, network architectures and databases.
Prerequisite: ISEN 420.
Cross Listing: ISEN 654/MEEN 648.

MEEN 649 Nonlinear Vibrations
Credits 3. 3 Lecture Hours.
Exact and approximate solutions to nonlinear differential equations in mechanical vibrations; application of classical methods in nonlinear analysis such as the Method of Perturbations and Variation of Parameters; virtual Work Technique and the Modified Galerkin Method; applications to selected nonlinear problems.
Prerequisites: Course in differential equations; graduate classification.

MEEN 650/ISEN 655 Control Issues in Computer Integrated Manufacturing
Credits 3. 3 Lecture Hours.
Examines the nature of computer aided manufacturing systems with emphasis in control; presentation of architecture for control of CAM systems; control issues; study and development of problems and procedures to control CAM systems.
Prerequisite: ISEN 654/MEEN 648 or approval of instructor.
Cross Listing: ISEN 655/MEEN 650.

MEEN 651 Control System Design
Credits 3. 3 Lecture Hours.
Frequency domain design of SISO systems for performance and sensitivity reduction; applications of Kalman filter and LQG/LTR techniques; design of sample-data systems; active control of vibration in distributed parameter systems; describing function and relay controls; application of control principles to engineering design.
Prerequisite: MEEN 411.

MEEN 652 Multivariable Control System Design
Credits 3. 3 Lecture Hours.
Advanced issues relevant to the design of multivariable control systems using hybrid (time and frequency domain) design methodologies; design using the LQG/LTR method and advanced practical applications using various robust control system design techniques.
Prerequisite: MEEN 651 or ECEN 605.

MEEN 653 Scientific Writing
Credits 3. 3 Lecture Hours.
Topics include origin and development of scientific writing, research methods, outlines, paper organization, journal selection, strategies to build a productive personal writing culture, effective communication, critical reviews and submission; preparation of an original manuscript for submission to a peer-reviewed journal by the end of the semester.
Prerequisites: Graduate classification and approval of instructor.

MEEN 655 Design of Nonlinear Control Systems
Credits 3. 3 Lecture Hours.
Design controllers for nonlinear and uncertain systems; apply the designs to mechanical systems.
Prerequisites: Graduate classification, MEEN 651 or equivalent.

MEEN 656/MSEN 656 Mechanical and Physical Properties of Thin Films
Credits 3. 3 Lecture Hours.
Mechanical properties (hardness, stress, strain, delamination, fracture) of films; nanomechanical testing techniques; electrical properties of thin films; electrical properties measurement techniques; magnetic properties of films; magnetic properties measurement techniques; laboratory includes (1) thin film fabrication (sputtering, PVD); (2) nanomechanical testing; (3) electrical/magnetic measurement.
Prerequisite: MEEN 222, MSEN 601, or basic materials science background.
Cross Listing: MSEN 656/MEEN 656.

MEEN 657 Viscoelasticity of Solids and Structures I
Credits 3. 3 Lecture Hours.
Linear, viscoelastic mechanical property characterization methods, time-temperature equivalence, multiaxial stress-strain equations; viscoelastic stress analysis; the correspondence principle, approximate methods of analysis and Laplace transform inversion, special methods; static and dynamic engineering applications; nonlinear behavior.
Prerequisite: Mechanics of Materials (CVEN 305 or equiv).

MEEN 658/MSEN 658 Fundamentals of Ceramics
Credits 3. 3 Lecture Hours.
Atomic bonding; crystalline and glassy structure; phase equilibria and ceramic reactions; mechanical, electrical, thermal, dielectric, magnetic, and optical properties; ceramic processing.
Prerequisite: MEEN 222 or equivalent or approval of instructor.
Cross Listing: MSEN 658/MEEN 658.

MEEN 659 Vibration Measurement in Rotating Machinery and Machine Structures
Credits 3. 3 Lecture Hours.
Transducers, instruments, measurement techniques, data acquisition methods, data reduction methods for modal analysis, applications to rotating machines, turbomachinery rotordynamics, bearings, gears and machine foundations.
Prerequisites: MEEN 459, MEEN 617 or MEEN 639; graduate classification.

MEEN 661/MEMA 613 Principles of Composite Materials
Credits 3. 3 Lecture Hours.
Classification and characteristics of composite materials; micromechanical and macromechanical behavior of composite laminae; macromechanical behavior of laminates using classical laminate theory; interlaminar stresses and failure modes; structural design concepts, testing and manufacturing techniques.
Prerequisites: CVEN 305 or equivalent.
Cross Listing: MEMA 613.

MEEN 662 Energy Management in Industry
Credits 3. 3 Lecture Hours.
Energy systems and components frequently encountered in industrial environments; application of basic principles of thermodynamics, heat transfer, fluid mechanics and electrical machinery to the analysis and design of industrial system components and systems. Improved energy utilization.
Prerequisites: MEEN 421 and MEEN 461 or approval of instructor.
MEEN 663 Cogeneration Systems  
Credits 3. 3 Lecture Hours.  
Design and analysis of cogeneration systems; selection of prime mover—steam turbine, gas turbine, or reciprocating engine; environmental assessments; economic and financial evaluations; legal and institutional considerations; case studies.  
Prerequisite: MEEN 421 or equivalent.

MEEN 664 Energy Management in Commercial Buildings  
Credits 3. 3 Lecture Hours.  
Basic heating, ventilating and air conditioning system design/selection criteria for air conditioning and heat system and design/selection of central plant components and equipment.  
Prerequisites: MEEN 421 and MEEN 461 or approval of instructor.

MEEN 665 Application of Energy Management  
Credits 3. 3 Lecture Hours.  
Continuation of MEEN 662 and 664; case studies by students of energy conservation opportunities using energy audits and building load computer simulation.  
Prerequisites: MEEN 662 and MEEN 664 or approval of instructor.

MEEN 666 Plasticity Theory  
Credits 3. 3 Lecture Hours.  
Theory of plastic yield and flow of two and three-dimensional bodies; classical plasticity theories, unified viscoplastic theories, numerical considerations; applications and comparisons of theory to experiment.  
Prerequisite: MEMA 602/AERO 603, MEEN 689 or equivalent.  
Cross Listing: MSEN 641 and MENS 641.

MEEN 667 Mechatronics  
Credits 3. 2 Lecture Hours.  3 Lab Hours.  
Mechatronics; logic circuits in mechanical systems; electrical-mechanical interfacing; analysis and applications of computerized machinery.  
Prerequisite: Graduate classification in engineering.

MEEN 668 Rotordynamics  
Credits 3. 3 Lecture Hours.  
Teaches the phenomena which occur in rotordynamics of turbomachinery, modeling techniques for turbomachines, and analysis techniques for rotordynamics analysis of real machines.  
Prerequisite: Graduate classification.

MEEN 672 Introduction to Finite Element Method  
Credits 3. 3 Lecture Hours.  
Weak or variational formulation of differential equations governing one- and two- dimensional problems of engineering; finite element model development and analysis of standard problems of solid mechanics (bars, beams, and plane elasticity), heat transfer and fluid mechanics; time-dependent problems; computer implementation and use of simple finite element codes in solving engineering problems.  
Prerequisite: Senior or graduate classification.

MEEN 673/MEMA 648 Nonlinear Finite Element Methods in Structural Mechanics  
Credits 3. 3 Lecture Hours.  
Tensor definitions of stress and strain, finite strain, geometric and material nonlinearities; development on nonlinear finite element equations from virtual work; total and updated Lagrangian formulations; solution methods for nonlinear equations; computational considerations; applications using existing computer programs.  
Prerequisites: MEMA 647/MEEN 670.  
Cross Listing: MEMA 648.

MEEN 674/MENA 608 Modern Control  
Credits 3. 3 Lecture Hours.  
Vector Norms, Induced Operator Norm; Lp stability; the small gain theorem; performance/robustness tradeoffs; Hz and H00 optimal control as operator norm minimization; H2 optimal control.  
Prerequisite: ECE 605 or equivalent.  
Cross Listing: ECE 608/MEEN 674.

MEEN 675/MENA 609 Adaptive Control  
Credits 3. 3 Lecture Hours.  
Basic principles of parameter identification and parameter adaptive control; robustness and examples of instability; development of a unified approach to the design of robust adaptive schemes.  
Prerequisite: ECE 605 or equivalent.  
Cross Listing: ECE 609/MEEN 675.

MEEN 676/CSEE 639 Fuzzy Logic and Intelligent Systems  
Credits 3. 3 Lecture Hours.  
Introduces the basics of fuzzy logic and its role in developing intelligent systems; topics include fuzzy set theory, fuzzy rule inference, fuzzy logic in control, fuzzy pattern recognition, neural fuzzy systems, and fuzzy model identification using genetic algorithms.  
Prerequisite: CSCE 625 or approval of instructor.  
Cross Listing: CSCE 639/MEEN 676.

MEEN 677/NUE 677 Aerosol Science  
Credits 3. 3 Lecture Hours.  
Multidisciplinary survey of methods for describing aerosol particles and systems: gas kinetics and transport theory, formation and growth thermodynamics, electrical properties, coagulation, light scattering; selected topics from current literature.  
Prerequisite: Graduate classification in engineering or approval of instructor.  
Cross Listing: NUE 677/MEEN 677.

MEEN 678 Aerosol Mechanics  
Credits 3. 3 Lecture Hours.  
Provides the basis for understanding and modeling aerosol behavior; mechanical, fluid dynamical, electrical, optical and molecular effects are considered; applications include sprays and atomization, aerosol collection, aerosol sampling and visibility.  
Prerequisite: Graduate classification in engineering or approval of instructor.

MEEN 679 Spectral Methods in Heat Transfer and Fluid Flow  
Credits 3. 3 Lecture Hours.  
Introduces theoretical and applications aspects of spectral and multidomain spectral methods for computational heat transfer and fluid flow problems.  
Prerequisites: MEEN 357, MEEN 344, MEEN 461; graduate classification.

MEEN 681 Seminar  
Credit 1. 1 Lab Hour.  
Current research in a wide range of fields described by guest lecturers who are prominent in their fields. Discussion period at the end of each lecture will permit the students to learn more about the lecturer and his/her work.  
Prerequisite: Graduate classification in mechanical engineering.

MEEN 684 Professional Internship  
Credits 1 to 16. 1 to 16 Other Hours.  
Supervised work in an area closely related to the specialized field of study undertaken by a Master of Engineering candidate.  
Prerequisite: Admission to a specialized Master of Engineering program in mechanical engineering.
MEEN 685 Directed Studies  
Credits 1 to 12. 1 to 12 Other Hours.  
Content will be adapted to interest and needs of group enrolled.

MEEN 686/MSEN 618 Composite Materials Processing and Performance  
Credits 3. 3 Lecture Hours.  
Fundamental science and design; processing and design interaction regarding multiphase composites; processing science, experimental characterization, laminate analysis; design structure and process.  
Prerequisite: Elasticity, continuum mechanics, or equivalent.  
Cross Listing: MSEN 618/MEEN 686.

MEEN 688 Advanced Solid Mechanics  
Credits 3. 3 Lecture Hours.  
Derive approximate solutions of engineering mechanics problems by using suitable assumptions; understand the nature of the approximations and their effects on the accuracy of the resulting mechanics-of-materials solutions; apply the principles of advanced mechanics of materials to analyze deformation and failure problems common in engineering design and materials science; prepare for success in more advanced mechanics courses such as elasticity, energy methods, continuum mechanics and plasticity.  
Prerequisite: Mechanics of materials, advanced calculus, differential equations.

MEEN 689 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours.  
Special topics in an identified area of mechanical engineering. May be repeated for credit.  
Prerequisite: Approval of instructor.

MEEN 691 Research  
Credits 1 to 15. 1 to 15 Lecture Hours. 0 to 15 Lab Hours.  
Methods and practice in mechanical engineering research for thesis or dissertation.

MEEN 692 Professional Study  
Credits 1 to 9. 1 to 9 Other Hours.  
Approved professional study or project; may be taken more than once, but not to exceed 6 hours of credit toward a degree. Must be taken on a satisfactory/unsatisfactory basis.  
Prerequisite: Approval of instructor.

MEID - Medicine-Interdisci

MEID 600 Becoming A Physician I  
Credits 5. 5 Lecture Hours.  
The course will consolidate the humanities subjects into one, case-based course. Cases will be used to help students learn and apply the following humanities subjects: history of medicine, medical ethics, spirituality, communication skills, cultural competence, medical law, palliative care, end-of-life care, evidence-based medicine, professionalism, and systems-based practice.

MEID 601 Core Principles of Medicine I  
Credits 8. 5.5 Lecture Hours. 2.5 Lab Hours.  
This block includes integrated material in basic principles of Biochemistry, Cell Physiology, Pharmacology, and Micro/Gross Anatomy related to structures in the thorax, back, upper extremity and abdomen.  
Prerequisite: Admission to medical school.

MEID 602 Core Principles of Medicine II  
Credits 7. 5.5 Lecture Hours. 1.5 Lab Hour.  
This block includes integrated material in basic principles of Biochemistry, Genetics, Pharmacology, and Micro/Gross Anatomy related to structures in Pelvis, Lower Extremity and Head/Neck.  
Prerequisite: Completion of Core Principles in Medicine I.

MEID 603 Neuroscience  
Credits 7. 7 Lecture Hours.  
The purpose of this course is to correlate the pathophysiology and/or psychopathology of central and peripheral nervous system diseases and dysfunction with the clinical presentation of common neurological or psychiatric medical problems. Common presentation, diagnosis and treatments are discussed.  
Prerequisite: MEID 601 and MEID 602.

MEID 604 Introduction to Disease  
Credits 9. 9 Lecture Hours.  
The Phase II Introduction to Disease Block introduces students to fundamental topics in immunology, microbiology, pathology, pharmacology, humanities, and patient interactions. These fundamental topics form a foundation for learning during the organ system-based blocks.  
Prerequisite(s): Completion of Phase I Curriculum.

MEID 605 Foundations of Medicine I  
Credits 1 to 15. 1 to 15 Lecture Hours. 0 to 15 Lab Hours.  
Basic principles of histology and physiology of human organ systems in an integrated fashion; understanding how organ structure and function of the human body interrelate; core knowledge provides a foundation for examining the pathophysiologic basis of human disease.  
Prerequisite: Admission to medical school.

MEID 606 Foundations of Medicine II  
Credits 1 to 15. 1 to 15 Lecture Hours. 0 to 15 Lab Hours.  
Integrated material in basic principles of medical biochemistry, genetics and pharmacology.  
Prerequisite: Admission to medical school.

MEID 607 Medical Gross Anatomy  
Credits 1 to 15. 1 to 15 Lecture Hours. 0 to 15 Lab Hours.  
Human gross anatomy including integrated dissection-based teaching and application of anatomic principles to patient care.  
Prerequisite: Admission to medical school.

MEID 608 Neurosceince  
Credits 1 to 15. 1 to 15 Lecture Hours. 0 to 15 Lab Hours.  
Correlation of the basic knowledge of central and peripheral nervous system structure and function with vulnerability to injury/disease and the resulting dysfunctional consequences and pharmacotherapeutics available to clinicians caring for patients with common neurological or psychiatric disorders; common presentation, diagnosis and treatments.  
Prerequisite: Admission to medical school.

MEID 610 Humanities Ethics Altruism and Leadership I  
Credits 1 to 15. 1 to 15 Lecture Hours.  
Reinforces knowledge of important physician attributes including humanities, ethics, altruism and leadership; cases used to learn and apply concepts of history of medicine, medical ethics, spirituality, communication skills, cultural competence, medical law, palliative care, end-of-life care, evidence-based medicine, professionalism and systems-based practice.  
Prerequisite: Admission to medical school.
MEID 612 Introduction to Clinical Skills I  
Credits 1 to 15. 1 to 15 Lecture Hours.  
Introduction to the basic concepts and skills needed for patient care including medical vocabulary, professional conduct, patient interviewing, taking and recording a medical history and clinical reasoning based on the chief complaint.  
Prerequisite: Admission to medical school.

MEID 613 Introduction to Clinical Skills II  
Credits 1 to 15. 1 to 15 Lecture Hours.  
Fundamentals of performing a complete physical examination; integration of history and physical examination findings and use of information for clinical problem solving and formulation of a basic differential diagnosis.  
Prerequisite: Admission to medical school.

MEID 614 Evidence Based Medicine, Scholarship and Research I  
Credits 0 to 15. 0 to 15 Lecture Hours.  
Develop research, investigative skills and problem solving, and support skill development in critical appraisal of medical literature as it relates to patient care.

MEID 618 Medical Student Grand Rounds  
Credits 0 to 15. 0 to 15 Lecture Hours.  
Apply, primarily knowledge of biochemistry and genetics; receive didactic instruction in literature search skills and examine a specific medically relevant topic in depth; give presentation about this topic to peers and faculty in a small group setting.

MEID 700 Becoming a Physician II  
Credits 5. 5 Lecture Hours.  
This course is designed to be the link between the science of medicine and the art of patient care. Course topics address aspects of the human experience that pertain to medicine and correspond to the scientific topics taught in the second year of the Phase II curriculum. This course will demonstrate how even in the molecular and microscopic dimension of medicine, human values are manifest in the life of the patient and the patient's family.

MEID 701 Hematology/Oncology  
Credits 4. 4 Lecture Hours.  
This block covers relevant and important topics in Hematology and Oncology. Using a variety of teaching formats, the pathophysiology and clinical presentation of hematologic and oncologic diseases will be discussed. The student will also be introduced to therapy for such diseases.  
Prerequisite: Completion of Phase I Curriculum.

MEID 702 Cardiovascular  
Credits 5. 5 Lecture Hours.  
The block covers the normal physiology, pathophysiology and diseases of the heart and vascular system. Some of the abnormalities to be discussed in detail include hypertension, atherosclerosis, congenital and valvular heart diseases and diseases of cardiac muscle and its electrical system. An emphasis will also be devoted to how cardiovascular disease impacts the individual patient as well as society.  
Prerequisite: Completion of Phase I Curriculum.

MEID 703 Respiratory  
Credits 3. 3 Lecture Hours.  
This block covers the normal physiology, pathophysiology and diseases of the respiratory system. The clinical presentation, diagnosis and treatment of various types of respiratory diseases such as obstructive, inflammatory, neoplastic and other pulmonary and upper respiratory conditions will also be included.  
Prerequisites: Completion of Phase I Curriculum.

MEID 704 Renal/Genitourinary  
Credits 4. 4 Lecture Hours.  
This block covers the normal physiology, pathophysiology and diseases of the body fluids, kidney and lower genitourinary tract excluding the reproductive system. Included will be a discussion of fluid and electrolyte and acid-base disorders. Discussion of renal diseases will include clinical presentation, diagnosis and treatment as well as students having the opportunity to visit a renal dialysis unit.  
Prerequisite: Completion of Phase I Curriculum.

MEID 705 Seminar Day  
Credits 0.5. 0.5 Lecture Hours.  
Medical Student Grand Rounds. In this course, students will apply, primarily, their knowledge of biochemistry and genetics. Students will receive didactic instruction in literature search skills and examine a specific medically relevant topic in depth. Students will then give a presentation about this topic to their peers and faculty in a small group setting.  
Prerequisite: Completion of Phase I curriculum.

MEID 706 Metabolism/Gastrointestinal/Nutrition  
Credits 5. 5 Lecture Hours.  
This block covers the normal physiology, pathophysiology and diseases of the gastrointestinal system and its associated glands. Diseases will also be discussed with the respect to biochemical aspects, clinical presentations, diagnostic tests and treatment. In addition, selective topics on nutrition relative to the cause of disease and clinical disease management will also be covered.  
Prerequisite: Completion of Phase I Curriculum.

MEID 707 Endocrinology/Repro Science/Human Sexuality  
Credits 5. 5 Lecture Hours.  
This block covers the normal physiology, pathophysiology and diseases that affect the endocrine and reproductive systems. The clinical presentation, diagnosis and treatment of these diseases will also be included. In addition, relevant topics on human sexuality will also be presented in various formats.  
Prerequisites: Completion of Phase I Curriculum.

MEID 708 Integument/Musculoskeletal  
Credits 2. 2 Lecture Hours.  
This block covers the basic physiology of muscle and pathophysiology and diseases involving the skeleton, joints, soft tissues and skin. Included as well will be disease related to calcium and bone metabolism, and autoimmune disease. The clinical presentation, diagnosis and treatment of these diseases will also be covered.  
Prerequisites: Completion of Phase I Curriculum.

MEID 800 Professionalism IV  
Credits 2.5. 2.5 Other Hours.  
Required two-week capstone course for all fourth year medical students. The course is designed to educate students about relevant aspects of medical jurisprudence, including state and federal regulations and applicable laws and risk management. In addition to law, the course addresses other topics of practical relevance to their professional careers and provides a refresher on medical topics which will be needed as they begin internship such as pain management, dosing and proper prescribing techniques. The course also provides advice on practice management, personal and professional financial planning and reviews the process for licensure and credentialing. Ethics and professionalism are also addressed.
MEID 801 Healthcare Advocacy and Public Policy  
Credits 2.50 to 7. 2.50 to 7 Lecture Hours.  
Work with designated faculty, staff at the medical school, in advocacy and legal affairs offices such as those of the Texas Medical Association and/or physician specialty organizations surrounding advocacy issues that are topical and/or relevant to their interests. Specific duties may include conducting research background, meeting with legislators, constituencies and key community stakeholders, developing and/or implementing a communications strategy (including fact sheets and ‘elevator’ speeches), and drafting a report, analysis, or model legislation. Non-legislative community advocacy activities may include visiting with non-profit community based programs dependent on public or private funding and identifying an opportunity for a longitudinal advocacy project or contribution to an existing project on a short term basis.  

Prerequisite: Satisfactory completion of year three of the medical school curriculum.  

MEID 802 Problem Based Learning  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
Introductory experience in the practice of neurosciences.  

MEID 803 Multidisciplinary Clinical Neuroscience  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
Introductory experience in the practice of neurosciences.  

Prerequisite: Satisfactory completion of year three of the medical school curriculum.  

MEID 804 USMLE Mentorship  
Credits 1.25 to 6.3. 1.25 to 6.3 Other Hours.  
Provide fourth year students with an opportunity to teach and develop curricular materials related to the USMLE Step 1 exam. Students will receive instruction on the management and instruction of small groups, prepare for and lead small groups of M2 studying for the USMLE Step 1 exam, and develop curricular materials related to USMLE Step 1 exam. Small groups will meet in Temple and BCS. This course will involve a shift schedule with students required to complete a prescribed number of hours to receive credit. Must be taken on a satisfactory/unsatisfactory basis.  

Prerequisite: 4th year status.  

MEID 805 Computer Resources for Professional Development  
Credits 1.25 to 6.3. 1.25 to 6.3 Other Hours.  
Familiarize students with lifelong learning tools that will assist them as residents and future leaders. Students will use online resources to find, organize, and create information to support their professional development and lifelong learning goals. This elective will focus on the following: communication and conflict management; professional career development; recognizing deficiencies in your knowledge; utilizing information resources in lifelong learning and understanding the importance of scholarly work within residency. These concepts are introduced through self-paced and self-directed modules, which give students an opportunity to reflect on their own needs for now and for their future as physicians. The graded exercises are short answer; document creation (personal statement outline; CV; budget spreadsheet etc.) and self-reflection pieces.  

MEID 806 Wilderness and Disaster Medicine  
Credits 1.25 to 6.3. 1.25 to 10 Other Hours.  
Wilderness and disaster medicine both require meeting the challenges of working in a low resource environment. In wilderness medicine, this environment could result from being in a remote location with few resources, while disaster medicine typically results in having your resources overwhelmed. Both require a need to look at delivering medical care from a unique perspective that is not readily taught in most hospital or clinic based practices. In addition, both require exceptional leadership and teamwork to achieve optimum outcomes. Must be taken on a satisfactory/unsatisfactory basis.  

Prerequisite: 4th year status.  

MEID 807 Internship Bootcamp  
Credits 1.25 to 2.5. 1.25 to 2.5 Other Hours.  
Participation in 1-2 weeks of simulated patient encounters that cover top calls can expect on night call; cases match and cover Core Entrustable Professional Activities set by the AAMC which should be possessed at graduation; ethical scenarios, interpersonal communication with families and interdisciplinary professional communication topics; formative assessment, self-assessment and summative assessment. Must be taken on a pass/fail basis.  

Prerequisite: Completion of third year medical school requirements.  

MEID 850 Professionalism IV  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
This course is a required 2-week capstone course for all fourth year medical students. The course is designed to educate students about relevant aspects of medical jurisprudence, including state and federal regulations and applicable laws and risk management. In addition to law, the course addresses other topics of practical relevance to their professional careers and provides a refresher on medical topics which will be needed as they begin internship such as pain management, dosing and proper prescribing techniques. The course also provides advice on practice management, personal and professional financial planning and reviews the process for licensure and credentialing. Ethics and professionalism are also addressed.  

MEID 974 Systems Based Practice IV  
Credit 1.5. 1.5 Other Hour.  
The System Based Practice (SBP) thread (SBPI, SBPII, SBPIII, and SBPIV) consists of 17 IHI Open School for Health Professions courses as well as a team based approach to integrating the concepts through the TBL sessions. This material and interaction will provide students the skills to become change agents in health care improvement. The focus is: quality improvement, patient safety, teamwork, leadership, and patient-centered care.  

MEID 985 Special Topic  
Credits 1.25 to 12. 1.25 to 12 Other Hours.  
Formally described elective courses at another medical school or off-campus opportunities that are not formally approved electives. The College of Medicine requires that each of these electives be approved prior to the rotation.  

MEID 989 Special Topics in Interdisciplinary Medicine  
Credits 1.25 to 12. 1.25 to 12 Lecture Hours.  
Connecting topics and issues across disciplines to enhance what is learned in clinical clerkships by applying interdisciplinary perspectives; develop knowledge, skills, and professional values in an ongoing reflective manner throughout the clinical years of medical school.  

MEID 999 Medicine Interdisciplinary – Problems  
Credits 1.25 to 12. 1.25 to 12 Other Hours.  
This is an on-campus, interdisciplinary opportunity in the College of Medicine that is not defined herein. Experiences may include clinical research, basic science research, library research, other basic science activities, and other clinical activities. Students interested in developing an elective of this type should contact the heads of the appropriate departments for additional details.
MEMA - Mechanics and Materials

MEMA 602/AERO 603 Continuum Mechanics
Credits 3.3 Lecture Hours.
Development of field equations for analysis of continua (solids as well as fluids); conservation laws; kinematics, constitutive behavior of solids and fluids; applications to aerospace engineering problems involving solids and fluids.
Prerequisite: Graduate classification.
Cross Listing: AERO 603/MEMA 602.

MEMA 606 Multifunctional Materials
Credits 3.3 Lecture Hours.
In-depth analysis of multifunctional materials and composites, and their novel applications.
Prerequisites: MEMA 602/AERO 603/AERO 603/MEMA 602, MSEN 601.
Cross Listing: AERO 606 and MSEN 606.

MEMA 608 Nanomechanics
Credits 3.3 Lecture Hours.
Application of mechanics concepts to nano-scale behavior of materials. Review of continuum mechanics; Extensions to generalized continua; Nonlocal elasticity; Nano-scale plasticity. Focus on multi-scale modeling: Dislocation Dynamics; Quasi-Continuum method; Molecular dynamics with introductions to quantum mechanics and statistical mechanics.
Prerequisite: AERO 603/MEMA 602.
Cross Listing: AERO 608 and MSEN 608.

MEMA 611 Fundamentals of Engineering Fracture Mechanics
Credits 3.3 Lecture Hours.
Understanding of the failure of structures containing cracks with emphasis on mechanics; linear elastic fracture mechanics, complex potentials of Muskhelishvili and Westergaard, J-integral, energy release rate, R-curve analysis, crack opening displacement, plane strain fracture toughness testing, fatigue crack propagation, fracture criteria, fracture of composite materials.
Prerequisite: AERO 603/MEMA 602.

MEMA 613 Principles of Composite Materials
Credits 3.3 Lecture Hours.
Classification and characteristics of composite materials; micromechanical and macromechanical behavior of composite laminae; macromechanical behavior of laminates using classical laminate theory; interlaminar stresses and failure modes; structural design concepts, testing and manufacturing techniques.
Prerequisite: MEMA 602/AERO 603.

MEMA 616 Damage and Failure in Composite Materials
Credits 3.3 Lecture Hours.
Mechanisms and models related to damage and failure in composite materials subjected to mechanical loads.
Prerequisite: Courses in composite materials, elasticity.
Cross Listing: AERO 616 and MSEN 636.

MEMA 625/AERO 617 Micromechanics
Credits 3.3 Lecture Hours.
Eigenstrains; inclusions, and inhomogeneities; Eshelby's solution for an ellipsoidal inclusion; Eshelby's equivalent inclusion method. Effective elastic properties of composites; composite spheres and cylinders models; bounds on effective moduli; Hashin-Shtrikman bounds; applications to fiber, whisker and particulate reinforced composites; introduction to micromechanics of inelastic composites and solids with damage.
Prerequisite: MEMA 602/AERO 603.
Cross Listing: AERO 617/MEMA 625.

MEMA 626/AERO 618 Mechanics of Active Materials
Credits 3.3 Lecture Hours.
Introduction to coupled field theories: constitutive response of materials with thermal and electromagnetic coupling; microstructural changes due to phase transformations; shape memory alloys; piezoelectric and magnetostrictive materials; active polymers and solutions. Micromechanics of active composites.
Prerequisite: MEMA 602/AERO 603.
Cross Listing: AERO 618/MEMA 626.

MEMA 634/CVEN 753 Damage Mechanics of Solids and Structures
Credits 3.3 Lecture Hours.
Damage mechanics; constitutive modeling of damage behavior of materials; application of thermodynamic laws; computational techniques for predicting progressive damage and failure; plasticity; viscoplasticity; viscoelasticity; cohesive zone modeling; fatigue and creep damage; damage in various brittle and ductile materials (e.g., metal, concrete, polymer, ceramic, asphalt, biomaterial, composites).
Prerequisite: CVEN 633 or approval of instructor.
Cross Listing: CVEN 753/MEMA 634.

MEMA 635 Structural Analysis of Composites
Credits 3.3 Lecture Hours.
Formulation and analysis structural response of laminated composite components; bending, vibration and stability of laminated composite plates; interlaminar stresses, effect of shear deformation on structural response; numerical modeling of laminated plates.
Prerequisite: MEMA 613.

MEMA 641 Plasticity Theory
Credits 3.3 Lecture Hours.
Theory of plastic yield and flow of two and three-dimensional bodies; classical plasticity theories, unified viscoplastic theories, numerical considerations; applications and comparisons of theory to experiment.
Prerequisite: MEMA 602/AERO 603.
Cross Listing: MSEN 641 and MEEN 666.

MEMA 646 Introduction to the Finite Element Method
Credits 3.3 Lecture Hours.
Weak or variational formulation of differential equations governing one- and two-dimensional problems of engineering; finite element model development and analysis of standard problems of solid mechanics (bars, beams and plane elasticity), heat transfer and fluid mechanics; time-dependent problems; computer implementation and use of simple finite element codes in solving engineering problems.
Prerequisite: Senior or graduate classification.

MEMA 647 Theory of Finite Element Analysis
Credits 3.3 Lecture Hours.
Finite elements models of a continuum; virtual work principle; plane stress and plane strain finite element models; bending of plates; axisymmetric problems; three-dimensional stress analysis; isoparametric formulations; finite element computer programs to solve typical structural problems.
Prerequisite: Graduate classification or approval of instructor.

MEMA 648 Nonlinear Finite Element Methods in Structural Mechanics
Credits 3.3 Lecture Hours.
Tensor definitions of stress and strain, finite strain, geometric and material nonlinearities; development of nonlinear finite element equations from virtual work; total and updated Lagrangian formulations; solution methods for nonlinear equations; computational considerations; applications using existing computer programs.
Prerequisite: MEMA 647 or equivalent.
MEMA 649/AERO 649 Generalized Finite Element Methods
Credits 3. 3 Lecture Hours.
Systemic introduction to the theory and practice of generalized finite element (FE) methods, including GFEM, the hp-cloud method, particle methods and various meshless methods with similar character; precise formulation of the methods are presented; known theoretical results for convergence; important issues related to implementation, issues of numerical integration.
Prerequisite: Graduate student status.
Cross Listing: AERO 649/MEMA 649.

MEMA 670 Computational Materials Science and Engineering
Credits 3. 3 Lecture Hours.
Modern methods of computational modeling and simulation of materials properties and phenomena, including synthesis, characterization, and processing of materials, structures and devices; quantum, classical, and statistical mechanical methods, including semi-empirical atomic and molecular-scale simulations, and other modeling techniques using macroscopic input.
Prerequisites: Approval of instructor; graduate classification.
Cross Listing: MSEN 670 and CHEN 670.

MEMA 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of mechanics and materials. May be repeated for credit.
Prerequisite: Approval of instructor.

MEPS-Molecular & Env Plant Sci

MEPS 601 Physiology of Plants
Credits 3. 3 Lecture Hours.
Advanced physiology of higher plants, includes water relations, mineral metabolism, biochemistry, growth, development, hormones, environmental signals and stress physiology. Emphasis on current literature and research trends; cellular and sub-cellular mechanisms related to whole plant behavior.
Prerequisites: BICH 410 and MEPS 313 or approval of instructor.

MEPS 605 Plant Biochemistry
Credits 3. 3 Lecture Hours.
Major metabolic pathways in plant metabolism; emphasis on biochemistry unique to plants.
Prerequisites: BICH 410; MEPS 313.

MEPS 610/HORT 610 Physiological and Molecular Basis for Plant Stress Response
Credits 3. 3 Lecture Hours.
Provide the tools to understand the molecular and physiological consequences caused by environmental factors (abiotic and biotic) on plant growth and development and the mechanisms of stress adaptation to stress.
Prerequisite: MEPS 313 or equivalent.
Cross Listing: HORT 610/MEPS 610.

MEPS 618/HORT 618 Root Biology
Credits 3. 3 Lecture Hours.
Basic concepts and current topics in root-soil ecology; managed and natural ecosystems including grasslands, cropping systems and forests; role of roots in the rhizosphere, the effects of soil, nutrient and water stress and climate change in C and N cycling and carbon sequestration; participate in discussions and critique recent literature.
Prerequisite: Approval of instructor.
Cross Listing: HORT 618/MEPS 618.

MEPS 619 Plant-Associated Microorganisms
Credits 3. 3 Lecture Hours.
Basic concepts and current topics in plant-microbe interactions including the diversity of plant-associated microorganisms; the plant as a microbial environment; endophytes; microbial roles in plant nutrition and fitness; uses of microorganisms for improved plant health and sustainable agriculture; microbial roles in food safety and future challenges; discussion of current literature.
Prerequisites: Basic plant biology or plant ecology is recommended; microbiology is helpful, but not required. Cross listed with HORT 619 and MEPS 619.

MEPS 620 Plant Cell Structure and Function
Credits 3. 3 Lecture Hours.
Overview of plant cell organization, function and physiology to incorporate whole-plant processes with sub-cellular, molecular and genetic mechanisms; origin of eukaryotic cells, nuclear organization and processes, cell cycle, organelle biogenesis and inheritance, photosynthesis, endomembrane system, cell trafficking, symplast, cytoskeleton, extracellular matrix, cell wall, disease, plant microbe interaction, development and differentiation.
Prerequisites: MEPS 313 or equivalent, graduate classification, or permission of the instructor.

MEPS 650 Plant Cell Culture for Crop Improvement
Credits 3. 3 Lecture Hours. 1 Lab Hour.
Focus on techniques in plant cell culture which can be applied to all crop plants, including agronomic crops, horticulture and forestry crops for germplasm improvement.
Prerequisites: MEPS 313; CHEM 101; graduate classification.

MEPS 654 Analysis of Complex Genomes
Credits 3. 3 Lecture Hours.
History and current status of genetic and molecular analysis of higher eukaryotic genomes; coverage of techniques for dissection of genomes into manageable parts; investigations in genetics, breeding and evolution; emphasis on quantitative inheritance, genetic mapping, physical mapping, map-based cloning, with examples drawn from a wide range of organisms.
Prerequisite: GENE 603.
Cross Listing: GENE 654 and SCSC 654.

MEPS 655 Analysis of Complex Genomes—Lab
Credits 3. 7 Lab Hours.
Analysis of Complex Genomes—Lab. Laboratory methods in molecular genetic techniques for genetic mapping, physical mapping, and map-based cloning of both qualitative and quantitative phenotypes.
Prerequisite: GENE 603 or equivalent or approval of instructor.
Cross Listing: SCSC 655 and GENE 655.

MEPS 671/SCSC 671 Plant Growth and Development
Credits 3. 3 Lecture Hours.
Comprehensive analysis of plant development primarily focused on the molecular and cellular processes underlying morphogenesis, vegetative growth and reproduction; role of the major phytohormones as coordinators of development will be analyzed; plastic development responses to conditioning environmental signals.
Prerequisites: MEPS 601 or approval of instructor.
Cross Listing: SCSC 671/MEPS 671.

MEPS 681 Seminar
Credit 1. 1 Other Hour.
Professional development for students pursuing careers in plant physiology; oral and poster presentations, writing skills, grantsmanship, job search and the promotion and tenure process.
MEPS 685 Directed Studies  
Credits 1 to 4. 1 to 4 Other Hours.  
Individual problems or research not pertaining to thesis or dissertation.  
Prerequisite: MEPS 313.

MEPS 689 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours. 1 to 4 Lab Hours.  
Selected topics in an identified area of plant physiology. May be repeated for credit.  
Prerequisite: Approval of instructor.

MEPS 691 Research  
Credits 1 to 23. 1 to 23 Other Hours.  
Original investigations in support of thesis or dissertation.

MFCM - Family & Community Medicine

MFCM 600 Introduction to Clinical Skills I  
Credits 2. 2 Lecture Hours.  
Introduction to patient care: medical vocabulary, professional conduct, patient interviewing, how to take and record a medical history, clinical reasoning based on the chief complaint.  
Prerequisite: Admission to Medical school.

MFCM 601 Introduction to Clinical Skills II  
Credits 2. 2 Lecture Hours.  
Performing the physical exam, integrating history and physical exam to formulate the differential diagnosis.

MFCM 700 O.C. Cooper Preceptorship  
Credits 4. 4 Lecture Hours.  
Students rotate through primary care experiences in family medicine, internal medicine, pediatrics, gynecology, otolaryngology, obstetrics, ophthalmology, dermatology and orthopedics.  
Prerequisite: Completion of Phase I.

MFCM 800 Family Medicine Clerkship  
Credits 7.5. 7.5 Other Hours.  
5. To provide an introductory experience in the practice of family medicine.  
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

MFCM 801 Family Medicine Outpatient Clinic  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This elective will provide a conducive learning environment for advanced experience in managing common ambulatory illness. It will expose the student to clinical learning situations that provide an opportunity for the students to enhance and improve the skills required of a family practitioner, including history, physical, differential diagnosis, evaluation and treatment regimens. It will illustrate the broad aspects of the practice of Family Medicine as a specialty that strives for continuity, quality, and comprehensive care, and an emphasis on the patient with a disease in the context of his environment. It will allow the student to become comfortable with his assessments and develop confidence in his therapeutic decisions. The student will be mentored in a fashion that clearly demonstrates that the Family Physician plays a vital role as a patient advocate that honors life.

MFCM 802 Family Medicine Acting Internship  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
Look at the demands and rewards of primary care. Night call is required.

MFCM 803 Palliative Medicine and End of Life Care  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. In this course, the faculty will strive to provide basic information on the interdisciplinary approach to palliative and end-of-life care. The student will be taught skills needed to improve communication with patients with chronic or terminal diseases and appropriate methods of delivering bad news. The student will learn medical management of pain and selected non-pain symptoms in patients with life limiting illness. The student will develop understanding of the comprehensive nature of end-of-life care, the distinctive nature of its patient care model, and its significant place in today's healthcare arena. No night call required.

MFCM 804 Wound Care  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This course offers extensive clinical experience in comprehensive wound care, including the use of the latest dressings, sharp debridement, administration and interpretation of transcutaneous oxygen monitoring, application of bioengineered skin products, application of total contact casting, compression therapy and hyperbaric oxygen therapy. At the end of the elective, the student should be able to distinguish between various types of wounds, determine the etiology of common wounds, and understand the various reasons chronic wounds do not heal. Night or weekend call will not be required, but may be optional if student wishes to be called for emergency Hyperbaric Oxygen Treatments. No night call required.
MFCM 809 Indigent Care  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. Participants will actively be involved in the management of patients at the Healing Hands Ministries Medical Clinic. The clinic is the medical home for many uninsured patients, helping them avoid expensive area hospital ER visits for primary care. Patients receive comprehensive medical and dental services including pediatric care, well-woman care, diabetic education, laboratory services, asthma education, prescription drug benefits, monthly immunizations, social service referral, and specialty care clinics such as orthopedics and arthritides. Healing Hands collaborates with other community providers to coordinate referrals outside its scope of services including extensive diagnostic testing and surgical services. The elective is designed to expose students to the scope of health issues of the medically uninsured and underinsured. Students will become familiar with various community organizations striving to improve the health of its citizens. Students will understand the importance of promoting public health and gain insight into the practice of preventative medicine and the impact it will have on patients’ health in the future. All aspects occur under direct, on-site supervision by faculty. Night call is not required.

MFCM 810 Healthcare for the Underserved  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. The elective is designed to expose students to the scope of health issues of patients who are indigent and lack access to health insurance. Students will become familiar with various community organizations striving to improve the health of its underserved citizens. Students will understand the importance of promoting public health and gain insight into the practice of preventative medicine and the impact it will have on patients’ health in the future. Clinical experiences will primarily be at the Baylor Community Care clinics, with some exposure to home visits with the home visit team. Students will work with family medicine and internal medicine physicians, nurse practitioners, community health workers and social workers to understand the importance of a multidisciplinary team approach to patient care.

MFCM 811 Intensive Care Unit  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This elective will strive to: provide fourth year medical students with the opportunity to function as an “acting Intern” in the Intensive Care Unit supervised by upper level residents, Hospitalist Fellows and Attending Faculty. Teach fourth year students an evidence based approach to the care of critically ill patients in the ICU. Provide fourth year students with an in depth exposure to a variety of medical illnesses encountered in Internal Medicine. Allow the student to perform diagnostic procedures on their patients when indicated.

MFCM 812 Geriatric Medicine  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This elective will strive to: increase student awareness of the unique characteristics of the elderly, understand the normal aging process, and differentiate this from disease. Improve the student’s ability to assess and treat frail and acutely ill elderly patients, and recognize the unique aspects of drug therapy in the elderly. Expose the student to the concept of the multidisciplinary care team, in which a variety of health care professionals work together in order to enhance the care of complex patients. Team members include nurses, social workers, chaplains, physical therapist and others. Expose students to comprehensive geriatric assessment, community home services and other services that help to avoid or delay institutional care.

MFCM 813 Family Medicine Acting Internship  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This elective will strive to: Expose fourth year medical students to the broad variety of patients, multiple challenges and rewarding lifestyle offered to a Family Physician. Provide students with inpatient and outpatient experiences, which will enhance their skills and prepare them for the duties of a First Year Resident. Provide students with increased responsibility for the care and management of patients with direct supervision from faculty and upper level residents. Provide ample opportunities for community activities to raise awareness of the social, political and economic barriers to health care.

MFCM 814 Inpatient Family Medicine Elective  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. Offered at Memorial Hermann Southwest. The faculty will strive to provide students with a broad spectrum of patients and conditions; provide constructive feedback and guidance; provide increasing independence as appropriate; and familiarize the student with the benefits of an electronic medical record.

MFCM 815 Ambulatory Family Medicine  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. Offered at Physicians at Sugar Creek. The faculty will strive to provide students with a broad spectrum of patients and conditions; provide one-on-one mentoring during the rotation; provide increasing independence as appropriate; and familiarize the student with the benefits of an electronic medical record.

MFCM 817 Indigent Health Care - Community Health  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. The faculty will strive to expose senior medical student to the scope of health issues of the homeless and indigent. Students will gain insight to the mechanics and complexities of operating and organizing a primary care clinic. They will also interact with a variety of medical services including the Department of Health, Child/Adult Protective Services, and Mental Health and Mental Retardation.

MFCM 818 Family Practice Acting Internship  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. For students to become familiar with issues in hospital-based health care delivery, including DRG’s, effective utilization of resources, and improving quality of care. Students will also have time in outpatient care, developing similar strategies. Opportunities exist for scrubbing in on minor surgical cases and performing bedside procedures such as central venous line placement, lumbar puncture, paracentesis, and thoracentesis.

MFCM 820 Indigent Health Care  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. The elective is designed to expose students to the scope of health issues of the homeless and indigent. Students will become familiar with various community organizations striving to improve the health of its citizens. Students will understand the importance of promoting public health and gain insight into the practice of preventative medicine and the impact it will have on patients’ health in the future.
MFCM 821 Family Practice Clinic Outpatient Clerkship
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. Students will be assigned to a Family Medicine Clinic, have a patient roster, and be responsible for evaluating, treating and following a variety of out-patients with close staff supervision. Hours are 8 - 5 PM, five days a week in the clinic, plus hospital rounds if the student admits a patient. This rotation is offered specifically to students who have a keen interest in Family Medicine, intend to seek residencies in Family Medicine or wish to sharpen their skills and broaden their knowledge in a primary care area. In addition, fourth year clerks from other institutions may take this rotation in order to acquaint themselves with the Scott and White Family Medicine Residency program.

MFCM 824 Family Medicine Acting Internship
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. Need course description.

MFCM 850 Family Medicine Acting Internship
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. The Family Medicine Acting Internship will provide additional in-depth experience in Family Medicine that allows the student to function as an intern while under supervision. The student will become familiarized with both the duties of internship as well as achieving proficiency in the skills requisite of a first-year resident.

MFCM 985 Off Campus Student Initiated Elective Credits 1.25 to 15. 1.25 to 15 Other Hours.
25 to 15. Formally described elective courses at another medical school or off-campus opportunities that are not formally approved electives. The College of Medicine requires that each of these electives be approved prior to the rotation.

MFCM 998 On Campus Student Initiated Elective Credits 1.25 to 15. 1.25 to 15 Other Hours.
25 to 12. This is an on-campus opportunity in the department of Family and Community Medicine in the College of Medicine that is not defined herein. Experiences may include clinical research, basic science research, library research, other basic science activities, and other clinical activities. Students interested in developing an elective of this type should contact the head of the appropriate department for additional details.

MGMT - Management

MGMT 602 Markets and Public Policy
Credits 3. 3 Lecture Hours.
Theoretical underpinnings of business decision making; function and structure of markets; effects of public policy on business activities; includes: antitrust; securities; labor discrimination; products liability.
Prerequisite: Graduate classification.

MGMT 610 Business and Public Policy
Credits 3. 3 Lecture Hours.
Role of business organizations in the United States and other countries; topics pertaining to the external political and social environment of business and the implications for business managers including market failures and political failures as well as equity and ethical issues; case studies with business/government problems.
Prerequisite: Graduate classification.

MGMT 611 Microfoundations of Business Behavior
Credits 1 to 3. 1 to 3 Lecture Hours.
A multi-disciplinary analysis of the foundations of business behavior discussing business interaction with customers under alternative market conditions and interaction with suppliers, investors, employees and other stakeholders, considered in the context of alternative legal, political and social institutional arrangements. Classification 6 students may not enroll in this course.
Prerequisites: Enrollment is limited to BUAD classification 7.

MGMT 612 Business Applications of Price Theory
Credits 3. 3 Lecture Hours.
Application of price theory framework to decisions facing managers. Topics include political, legal and regulatory environments of business; corporate governance and antitrust regulations; principal-agent problems in large corporations.
Prerequisite: Doctoral classification.

MGMT 613 Managerial Macroeconomics
Credits 1 to 3. 1 to 3 Lecture Hours.
Analysis of domestic and global macroeconomic issues from a managerial perspective; analysis of current and historical macroeconomic events at the national and global levels; analysis of business cycles and monetary and fiscal policies; managerial decisions in the context of changing macroeconomic environment.
Prerequisite: Enrollment is limited to BUAD classification 7.

MGMT 614 Managing People in Organizations
Credits 1 to 3. 1 to 3 Lecture Hours.
Procurement and management of people in organizations including human resource management principles and analysis of how organizations function; performance appraisal, compensation, training, leadership, group dynamics, decision-making, control mechanisms and organizational change processes. Classification 6 students may not enroll in this course.
Prerequisite: Enrollment is limited to BUAD classification 7.

MGMT 618 Corporate Strategy and the Political Environment of Business
Credits 1 to 3. 1 to 3 Lecture Hours.
Formulation and implementation of corporate strategy with consideration of the political environment of business. Classification 6 students may not enroll in this course.
Prerequisites: Enrollment is limited to BUAD classification 7.

MGMT 620 Managing Human Resources
Credits 3. 3 Lecture Hours.
Survey of human resource management; formulation and implementation of human resource strategy addressed for areas including planning, recruitment, selection, job choice, training, development, appraisal, compensation, benefits, labor relations, international human resource issues and legal compliance.
Prerequisite: Graduate classification.

MGMT 621 Research Methods for HR Professionals
Credits 3. 3 Lecture Hours.
Direct experience in formulation of HRM issues as hypotheses and selection and implementation of appropriate research designs and statistical tools to evaluate such hypotheses; properties of appropriate criteria, measures, designs and statistical tests in context of contemporary HRM issues; ethical issues in HRM research.
Prerequisites: STAT 651 or equivalent; graduate classification.
MGMT 622 Organizational Staffing
Credits 3.3 Lecture Hours.
Foundations and operating aspects of recruitment, selection and placement in various types of organizations; coverage of scientific and legal issues affecting human resource selection decisions from a managerial perspective; examination of the usefulness of various methods used in job analysis, selection, and performance appraisal; introduction to "job match" from various perspectives.
Prerequisite: Graduate classification.

MGMT 623 Compensation Management
Credits 3.3 Lecture Hours.
Strategic and technical considerations in the management of employee compensation in organizations; including job evaluation systems, legal issues, comparable worth, rewards as a consideration in motivation and satisfaction, wage levels and structures, merit ratings, individual and group incentives and benefit plans.
Prerequisite: Graduate classification.

MGMT 624 Seminar in Human Resources
Credits 3.3 Other Hours.
Seminar on theory and research in human resource management; includes: planning, search and decision theory, organizational entry and socialization, staffing theories, validity generalization, utility theory, performance measurement and evaluation, reward systems, organizational justice and employee rights, employee development and employee withdrawal.
Prerequisite: Doctoral classification or approval of instructor.

MGMT 625 Human Resource Development
Credits 3.3 Lecture Hours.
Examination of training, education and development within organizations from both a strategic and operational perspective; analysis of needs, program design and methods, program implementation and evaluation, including transfer or learning issues; legal and ethical human resource development issues; implications and practices of human resource development for enhancing global competitiveness.
Prerequisite: Graduate classification.

MGMT 626 Teams in Organizations
Credits 3.3 Lecture Hours.
Cutting edge thinking on leading in team-based organizations including the organizational changes required to move to a team-based structure and the organizational factors required to create successful work teams.
Prerequisite: Graduate classification.

MGMT 628 Contemporary Human Resource Management Issues
Credits 3.3 Lecture Hours.
Application of human resource theory to contemporary human resource management issues; impact of these issues for the organization and on the strategic role of the human resource professional; guest speakers; student projects.
Prerequisite: Second-year enrollment in the Master of Science in management program or approval of instructor.

MGMT 630 Behavior in Organizations
Credits 3.3 Lecture Hours.
Organizational behavior theory, research and applications; focuses on the individual and group levels of analysis; includes: learning principles, perceptions, attitudes and job satisfaction, work motivation, job design, group properties and processes, leadership, conflict, communication, personality influences on work attitudes and behaviors, work-life issues and job stress.
Prerequisite: Graduate classification.

MGMT 632 Technology Commercialization
Credits 3.3 Lecture Hours.
Focus on technology, process of evaluating technology viability, converting raw technology into commercially viable products and services; includes model on Small Business Innovation Research (SBIR) grant program; develops competencies skills to evaluate technology's commercial viability; brings viable technologies to commercial success.
Prerequisite: Graduate classification.

MGMT 633 Organizational Change and Development
Credits 3.3 Lecture Hours.
Organizational change theory, processes and models; the role of change agents; organizational diagnosis and intervention; culture, process, strategy, structure and technology changes in organizations; evaluation research on organizational change; problems and issues in organizational change.
Prerequisite: Graduate classification.

MGMT 634 Seminar In Organizational Behavior
Credits 3.3 Other Hours.
Theory and research in organizational behavior; includes: operant and social learning theories, work motivation, job satisfaction and affect at work, task design, absenteeism and turnover, prosocial behavior, leadership, group properties and processes and work linkages and job stress.
Prerequisites: MGMT 630 or equivalent; doctoral classification or approval of instructor.

MGMT 635 Employment Regulation
Credits 3.3 Lecture Hours.
Overview of regulatory environment of human resource management; topics include: equal employment opportunity and affirmative action, benefits regulation, workplace safety, workers' compensation, labor relations, and international aspects of employment regulation.
Prerequisite: Graduate classification.

MGMT 636 Seminar in Organization Theory
Credits 3.3 Lecture Hours.
Research literature in organization theory focusing on major theoretical perspectives and content areas; includes: design of organizational structure and control systems; analysis or organization-environment relations, including interorganizational relationships; managing organizational technology and innovation; information processing and decision making; and organizational culture, conflict and power.
Prerequisite: Doctoral classification or approval of instructor.

MGMT 637 Foundations of Entrepreneurship
Credits 3.3 Lecture Hours.
Process of launching a new venture; process by which opportunities can be discovered and selected; attributes of entrepreneurs and new venture teams; process of developing business plan; core entrepreneurial strategies--business level, organizational design, marketing, financial; strives to develop competencies, concepts, operational tools relevant to creating, implementing new ventures.
Prerequisite: Graduate classification.
MGMT 638 Strategic Entrepreneurship
Credits 1 to 3. 1 to 3 Lecture Hours.
Emphasis on a firm’s need to be both entrepreneurial (identifying opportunities in the market) and strategic (taking actions to gain a competitive advantage) in order to create value for stakeholders; includes: developing an entrepreneurial mindset; building an entrepreneurial culture; managing resources (building a resource portfolio, bundling resources to create capabilities and leveraging the capabilities to exploit the opportunities identified); creating innovations.
Prerequisite: Graduate classification.

MGMT 639 Negotiations in Competitive Environments
Credits 1 to 3. 1 to 3 Lecture Hours.
Understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multi-party negotiations, to buyer-seller transactions, dispute resolution, development of negotiation strategy and management of integrative and distributive aspects of the negotiation process.
Prerequisite: Graduate classification.

MGMT 640 Managing for Creativity and Innovation
Credits 3. 3 Lecture Hours.
Examines factors that may foster or stifle individual, team, or organizational creative performance, and presents techniques that may improve the student's creative thinking skills.
Prerequisite: Graduate classification.

MGMT 643 Foundations of Managerial Law
Credits 3. 3 Lecture Hours.
Basic legal relationships and issues encountered by managers and organizations; American legal system, administrative law, alternative dispute resolution and selected substantive areas of law (e.g., environmental protection, discrimination, negotiable instruments).
Prerequisite: Graduate classification.

MGMT 645 Legal and Ethical Issues in Business
Credits 1 to 3. 1 to 3 Lecture Hours.
An overview of legal compliance programs, business ethics and social responsibility issues.
Prerequisite: Approval of instructor.

MGMT 650 Human Relations and Collective Bargaining in Industry
Credits 3. 3 Lecture Hours.
Labor management relationship and human relations problems encountered during union administration; labor history; basic construction of the National Labor Relations Act; alternative dispute resolution; contemporary labor relations issues; international labor relations issues.
Prerequisite: Graduate classification.

MGMT 655 Survey of Management
Credits 3. 3 Lecture Hours.
Management concepts and applications important to managers in all types and sizes of organizations; includes: strategic planning, goal setting, control and managerial ethics; decision making, organizing, human resource management, including staffing, performance appraisal and compensation; leadership, motivation, communication and group processes; achieving organizational quality and managing in a global environment.
Prerequisite: Graduate classification. Note: Course may not be used for elective credit by a master's candidate in business administration.

MGMT 658 Managing Projects
Credits 3. 3 Lecture Hours.
Application of management processes to complex interdisciplinary organizational environments through the study of program and project management; adoptions of traditional management theories to the project environment; master typical project management microcomputer software for project planning; resource allocation; project budgeting; and control of project cost, schedule and performance.
Prerequisite: Graduate classification.

MGMT 660 Global Human Resource Management
Credits 3. 3 Lecture Hours.
Examines HRM in a global context; emphasis given to global HR functions such as international staffing, training, and compensation; focus on global HRM trends and challenges; addresses issues and choices HR managers face in multinational enterprises.
Prerequisite: Graduate classification.

MGMT 663/INTA 663 International Transfer Pricing
Credits 3. 3 Lecture Hours.
Valuation of cross-border transactions between units of a multinational enterprise; includes internal and external motivations for transfer pricing, managerial and economic approaches, estimates of transfer manipulation, arm's length standard, U.S. and OECD rules and procedures, tax court cases, and ethical dilemmas.
Prerequisite: Graduate classification.
Cross Listing: INTA 663/MGMT 663.

MGMT 667/IBUS 667 Multinational Enterprises
Credits 3. 3 Lecture Hours.
Graduate seminar in international business; multinational enterprises (MNEs) are studied from various perspectives including economics, management, entry and expansion strategies, contractual agreements, transfer pricing, impacts on home and host countries, MNE-state relations, regional integration, public policies towards MNEs.
Prerequisite: Graduate classification.
Cross Listing: IBUS 667/MGMT 667.

MGMT 673 Advanced Research Methods in Management
Credits 3. 3 Lecture Hours.
Introduces PhD students in Management to the multivariate methods commonly used in management research. Applications emphasized; journal publications; projects and critiques required.
Prerequisite: STAT 608.

MGMT 675 Leadership in Organizations
Credits 1 to 3. 1 to 3 Lecture Hours.
Review of research on procedures, styles and methods of leadership, supervision, management and administration; all aspects of leader role behavior, both in practice and in research; areas in need of further research. May be repeated for up to 3 hours credit.
Prerequisite: Graduate classification.

MGMT 676 Strategic Management Survey
Credits 3. 3 Lecture Hours.
Management concepts and applications important to strategy; includes: concept of strategy; the environment, and performance; the role of top management teams; business-level strategies; competitive strategy and dynamics; corporate strategy formulation and implementation; mergers; acquisitions; governance and control systems; international strategies; cooperative strategies; technology strategies; corporate entrepreneurship.
Prerequisite: Doctoral classification or approval of instructor.
MGMT 677 Strategy Implementation
Credits 3. 3 Lecture Hours.
Concepts, research and applications regarding issues central to strategy implementation; includes: the nature of managerial work; inertia, organizational change and adaptation; innovation; strategic leadership; power; top management teams in implementation roles; organizational cultures; the relationship between strategy and structure; executive succession; institutional contexts; governance; agency theory; boards of directors; executive compensation; use of leverage and cash flow; implementation of mergers, acquisitions, and restructuring.
Prerequisite: Doctoral classification or approval of instructor.

MGMT 678/IBUS 678 International Management
Credits 3. 3 Lecture Hours.
Survey of the issues, problems, challenges and opportunities facing organizations competing in a global economy; includes: the environment of international management, international strategies, forms of organization design used by multinational firms, managing human resources in an international context, and cultural and control issues facing the international manager.
Prerequisite: Graduate classification.
Cross Listing: IBUS 678/MGMT 678.

MGMT 679/IBUS 679 International Business Policy
Credits 3. 3 Lecture Hours.
Determinants of U.S. competitiveness in international markets; the international environment of business; introduction to multinational enterprises, global competition, international organizations, protection of intellectual property; international trade regulation; strategic trade theory.
Prerequisite: Graduate classification.
Cross Listing: IBUS 679/IBUS 679.

MGMT 680 Business and Corporate Strategy
Credits 3. 3 Lecture Hours.
Prerequisite: Graduate classification.

MGMT 681 Seminar
Credit 1. 1 Lecture Hour.
Critical examination of subject matter presented in current journals, monographs and bulletins in field of management. Classification 6 students may not enroll in this course.
Prerequisite: Graduate classification.

MGMT 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
Directed internship in an organization to provide students with on-the-job training with professionals in organizational settings appropriate to the students’ professional objectives. Classification 6 students may not enroll in this course.
Prerequisites: Approval of MS program coordinator and department head.

MGMT 685 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
Directed study on selected problems using recent developments in business research methods. Classification 6 students may not enroll in this course.
Prerequisites: Graduate classification and approval of instructor.

MGMT 686 Research Methods in Organizational Science II
Credits 3. 3 Lecture Hours.
Continuation of topics introduced in Management 687; additional topics include survey research methodology, quantitative and qualitative field methods; archival data collection; measurement and methods across time; issues in peer review and publication.
Prerequisites: Doctoral classification and MGMT 687 or approval of instructor.

MGMT 687 Research Methods in Organizational Science I
Credits 3. 3 Lecture Hours.
Philosophy of science, theory development; survey of research methodology applicable to the study of organizational phenomena; research strategy and design; measurement and sampling issues; data collection methods; problems and issues in organizational research.
Prerequisites: Doctoral classification or approval of instructor; STAT 651 or equivalent.

MGMT 689 Special Topics in...
Credits 1 to 23. 1 to 23 Other Hours.
Selected topics in an identified area of management. May be repeated for credit.
Prerequisite: Graduate classification.

MGMT 690 Theory of Research in Management
Credits 3. 3 Lecture Hours.
Research practicum; application of research methodology learned in MGMT 687; advanced readings in research methods; fundamental skills and concepts needed to design and conduct dissertation research.
Classification 6 students may not enroll in this course.
Prerequisites: Doctoral classification or approval of instructor; MGMT 687 or equivalent.

MGMT 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation. Classification 6 students may not enroll in this course.
Prerequisite: Graduate classification.

MHUM - Humanities In Medicine

MHUM 801 Practical Medical Law and Ethics for Physicians
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Enhance each participant’s knowledge of state and federal laws that affect physicians’ medical practice. Topics include malpractice, consent, confidentiality, HIPPA compliance, business entities, contracts and regulatory matters. Expose students to the legal issues, responsibilities and expectations associated with physicians in various practice settings. Examine legal and ethical issues that arise in the normal course of medical practice, hospital privileges and committee service.

MHUM 802 Directed Research in History of Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Offered in London. Explore firsthand an area of individual interest or specialty in history medicine; further student understanding of the relevance of medical history to contemporary clinical practice and biomedical ethics; enhance student international awareness of medical practice in a different cultural setting (London, England) with no language barrier; broaden student perspective by exposure to the rich medical as well as cultural and artistic heritage in London, UK; and provide experience in interpretation, communication, and evaluation of a medical subject in its proper historical context, which may be submitted for publication.
MHUM 803 Medical Humanities Directed Research
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Explore a specific area of individual interest and gain knowledge by discovery, which may also be relevant to their future residency; sharpen students’ analytic and communication skills and critical judgment in developing a coherent thesis out of their area of interest; broaden student understanding of the medical profession, clinical practice and physician-patient relations through the insights provided by the humanities disciplines; increase student understanding of how cultural, psychological and other non-medical factors affect clinical practice; stimulate curiosity, questioning of assumptions and accepted notions, tolerance of differing values; and encourage self-reflection and lifelong learning to balance stresses of professional life.

MHUM 804 Medical Education
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Analyze current Phase I and Phase II courses for content, delivery, opportunities for improvement; apply information learned from course analysis to development of curricular improvement project; help produce student reports for LCME; demonstrate clinical teaching skills with M3 students during clerkships, and simulation classes; and develop one innovation for use during Phase I, II, or III of the curriculum.

MHUM 805 Public Affairs Intern – TMA
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Public Affairs Elective at Texas Medical Association in Austin. This provides the learner the opportunity to experience health policy creation and implementation in Texas through the work of the Advocacy Division of the Texas Medical Association. When the Texas Legislature is in session, the experience includes legislative hearings and passage of laws. When the Legislature is not in session, the experience will be with the regulatory agencies and how they implement the laws.

MHUM 806 Palliative Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The faculty will strive to provide basic information on interdisciplinary approach to palliative and end-of-life care; teach skills needed to improve communication with patients with chronic or terminal diseases and appropriate methods of delivering bad news; provide basic information on pain assessment and management; and demonstrate comprehensive nature of end-of-life care, the distinctive nature of its patient care model, and its significant place in today’s healthcare arena.

MHUM 807 Fellowships in Leadership
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Experience in leadership; learn from and develop a professional relationship with a leader. The leader serves as a role model, offering students an opportunity to share his or her professional life.

MHUM 808 Medical History and Humanities
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Historical aspects of medicine and how the humanities are integrated into medical education and patient care. Sessions will be devoted to interactive discussions using role models and key historical events. Values, their role in guiding our behavior, our interpretations of others, and the way we make sense of the world in general, will be considered. Sacred Vocation, one path to promoting the art of medicine, is an evidence-based complement to the science of medicine. Sessions focusing on this approach will include the following: what gives meaning to life, exploring the power to heal or harm, and creating coping mechanisms for dealing with difficult work situations.

MHUM 809 Healthcare Administration
Credits 1.25 to 10.
This course will introduce the student to the administrative aspects of health care delivery. The student will gain experience with the medical staff appointment and reappointment process; peer review process; physician health and wellness; hospital policy and procedure rationale, development and implementation; health information management, including electronic medical records; health care financing; health care expense allocation; third-party pay or systems, including alternative options such as accountable care organization; and various regulatory and compliance agencies, including The Joint Commission, Centers for Medicare and Medicaid Services, and Texas Department of State Health Services. The student will also gain experience with various internal and external health care improvement initiatives, patient safety projects, and issues related to institutional risk management.

MHUM 810 Self and Culture
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Exploration of ideas about culture and its role in Medicine. Culture has many implications and could never be defined in a one to three week elective, so our goal is to assist students in understanding the importance of broad culture and help them understand their own perceptions and how they apply it to their role as a physician. This elective aims to promote self-awareness to enhance professional understanding and compassion for everyone.

MHUM 811 Practical Medical Law and Ethics
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Examines the ethical responsibilities of and issues for physicians in complex patient care delivery systems and considers the moral and ethical dimensions of professional life.

MHUM 812 Lead in Medical Program: Healthcare Delivery and Financing
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Daily operations of a community health plan; provide resources in review of healthcare delivery and financing; provide guidance to selection of topic of investigation; and serve as mentor for production of scholarly paper for peer-reviewed publication.

MHUM 985 Off Campus Student Initiated Elective
Credits 1 to 10. 1 to 10 Other Hours.
Formally described elective courses at another medical school or off-campus opportunities that are not formally approved electives. The College of Medicine requires that each of these electives be approved prior to the rotation.

MHUM 999 On Campus Student Initiated Elective
Credits 1.25 to 12. 1.25 to 12 Other Hours.
This is an on-campus opportunity in the department of Humanities in the College of Medicine that is not defined herein. Experiences may include clinical research, basic science research, library research, other basic science activities, and other clinical activities. Students interested in developing an elective of this type should contact the head of the appropriate department for additional details.

MICR - Microbiology

MICR 681 Seminar
Credit 1. 1 Other Hour.
Detailed reports on specific topics in field chosen. Students may register in up to but no more than three sections of this course in the same semester.
MKTG 665 Branding and Marketing Communication  
Credits 3. 3 Lecture Hours.  
Customer-based brand equity and positioning, brand objectives, communication processes, customer decision stages, creative and media strategies including traditional, grassroot, and social media, measuring advertising effectiveness and return on marketing investment.  
Prerequisite: MKTG 613 or MKTG 621 or equivalent.

MKTG 660 Marketing Consulting  
Credits 3. 1 Lecture Hour. 4 Lab Hours.  
Application of marketing knowledge through the planning and execution of marketing projects for businesses. May be repeated one time for credit.  
Prerequisite: MKTG 621 or equivalent.

MKTG 665 Research for Marketing Decisions  
Credits 3. 3 Lecture Hours.  
Methodology for generating and using information related to problems in marketing decision-making; primary and secondary research methodology and analytical techniques; guidelines for designing and conducting research projects. Classification 6 students may not enroll in this course.  
Prerequisites: MKTG 613 or MKTG 621 or equivalent; basic statistics course.

MKTG 670 Marketing Leadership  
Credit 1. 1 Lecture Hour.  
Seminar on the application of marketing concepts and theories through guest lectures and discussions with marketing-thought leaders in business and academia. May be repeated one time for credit.  
Prerequisite: MKTG 621 or equivalent.

MKTG 671 Product Innovation  
Credits 3. 3 Lecture Hours.  
Strategy and management of the new product development process, portfolio management and innovation charters for new products; topics include creativity, trade-off analysis, concept testing, design and launch. Classification 6 students may not enroll in this course.  
Prerequisite: MKTG 613 or MKTG 621 or equivalent.

MKTG 673 Services Marketing  
Credits 3. 3 Lecture Hours.  
Marketing concepts and strategy as applied to service organizations, unique characteristics of services, marketing challenges posed by those characteristics and ways to meet those challenges effectively. Special emphasis on service quality. Classification 6 students may not enroll in this course.  
Prerequisite: MKTG 613 or MKTG 621 or equivalent, or approval of instructor.

MKTG 675 Marketing Strategy  
Credits 1 to 3. 1 to 3 Lecture Hours.  
Marketing management as it relates to overall organizational goals: marketing strategy concepts and interdependencies with strategy at the corporate and business unit levels and in other functional areas; impact of digital technologies and environmental sustainability on marketing strategy. Classification 6 students may not enroll in this course.  
Prerequisites: MKTG 613 or MKTG 621 or equivalent; graduate classification in business administration.

MKTG 677/IBUS 677 Multinational Marketing Management  
Credits 3. 3 Lecture Hours.  
Theoretical and empirical materials on multinational marketing; nature and justification of international trade, analysis of environments faced by multinational firms and formulation of multinational marketing strategy. Classification 6 students may not enroll in this course.  
Prerequisite: MKTG 613 or MKTG 621 or equivalent.  
Cross Listing: IBUS 677/MKTG 677.
MKTG 680 Seminar in Buyer Behavior
Credits 3. 3 Lecture Hours.
Detailed examination of the literature in consumer and industrial buyer behavior with emphasis on conceptual and empirical issues; critical analysis of buyer behavior theory. Classification 6 students may not enroll in this course.
Prerequisites: MKTG 650 or equivalent; doctoral classification.

MKTG 682 Seminar in Marketing Strategy Research
Credits 3. 3 Lecture Hours.
Review of research on marketing strategy content; formulation process and implementation related issues; includes antecedents, outcomes, mediators and moderators of the relationship between marketing strategy and performance; strategic marketing alliances; market pioneering; multicompany competition; global competitive strategy; interdependencies between marketing, business and corporate strategy. Classification 6 students may not enroll in this course.
Prerequisite: Doctoral classification.

MKTG 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
Directed internship in an organization to provide students with on-the-job training with professionals in organizational settings appropriate to the students’ professional objectives. Classification 6 students may not enroll in this course.
Prerequisite: Approval of committee chair and department head.

MKTG 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed study of selected problems using recent developments in business research methods. Classification 6 students may not enroll in this course.
Prerequisite: Approval of instructor.

MKTG 687 Seminar in Marketing Models
Credits 3. 3 Lecture Hours.
Review and discussion of the foundations of modeling and recent developments in research using marketing models. The seminar is designed to provide participants with new ways to think about modeling phenomena and enable them to generate new ideas, research topics, and modeling applications for marketing problems.
Prerequisite: Doctoral classification.

MKTG 688 Doctoral Seminar
Credits 3. 3 Other Hours.
Historical development of the conceptual framework of marketing theory and practices; analysis of current research and controversial issues in the field. May be repeated for credit three times. Students may take up to two sections of this course in the same semester. Classification 6 students may not enroll in this course.
Prerequisite: Doctoral classification.

MKTG 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in an identified area of marketing. Classification 6 students may not enroll in this course. May be repeated for credit.

MKTG 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation. Classification 6 students may not enroll in this course.

MPAT - Pathology & Lab Medicine

MPAT 801 Anatomic and Clinical Pathology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 2- or 4-week elective course will serve to familiarize the student with the organization and clinical activity of Anatomic and Clinical Pathology. The course will reinforce the students’ knowledge in anatomy, histology, and basic Anatomic Pathology. The student will be introduced to the principles of diagnosis in surgical biopsies, surgical resections, cytology material, and post-mortem examinations. The elective will acquaint the student with the clinical laboratory and methodologies of procedures, their interpretation, and their application of patient management in areas of blood bank, microbiology, specimen handling, forensic toxicology, hematology, body fluids, chemistry, and immunology.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

MPAT 802 Anatomic and Clinical Pathology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 2- or 4-week elective course will serve to familiarize the student with the organization and clinical activity of Anatomic and Clinical Pathology. The course will reinforce the students’ knowledge in anatomy, histology, and basic Anatomic Pathology. The student will be introduced to the principles of diagnosis in surgical biopsies, surgical resections, cytology material, and post-mortem examinations. The elective will acquaint the student with the clinical laboratory and methodologies of procedures, their interpretation, and their application of patient management in areas of blood bank, microbiology, specimen handling, forensic toxicology, hematology, body fluids, chemistry, and immunology.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

MPAT 803 Anatomic and Clinical Pathology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 2- or 4-week elective course will serve to familiarize the student with the organization and clinical activity of Anatomic and Clinical Pathology. The course will reinforce the students’ knowledge in anatomy, histology, and basic Anatomic Pathology. The student will be introduced to the principles of diagnosis in surgical biopsies, surgical resections, cytology material, and post-mortem examinations. The elective will acquaint the student with the clinical laboratory and methodologies of procedures, their interpretation, and their application of patient management in areas of blood bank, microbiology, specimen handling, forensic toxicology, hematology, body fluids, chemistry, and immunology.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

MPAT 804 Anatomic and Clinical Pathology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 2- or 4-week elective course will serve to familiarize the student with the organization and clinical activity of Anatomic and Clinical Pathology. The course will reinforce the students’ knowledge in anatomy, histology, and basic Anatomic Pathology. The student will be introduced to the principles of diagnosis in surgical biopsies, surgical resections, cytology material, and post-mortem examinations. The elective will acquaint the student with the clinical laboratory and methodologies of procedures, their interpretation, and their application of patient management in areas of blood bank, microbiology, specimen handling, forensic toxicology, hematology, body fluids, chemistry, and immunology.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.
MPAT 985 Off Campus Student Initiated Elective
Credits 1.25 to 15. 1.25 to 15 Other Hours.
Formally described elective courses at another medical school or off-campus opportunities that are not formally approved electives. The College of Medicine requires that each of these electives be approved prior to the rotation.

MPAT 999 On Campus Student Initiated Elective
Credits 1.25 to 12. 1.25 to 12 Other Hours.
This is an on-campus opportunity in the department of Pathology in the College of Medicine that is not defined herein. Experiences may include clinical research, basic science research, library research, other basic science activities, and other clinical activities. Students interested in developing an elective of this type should contact the head of the appropriate department for additional details.

**MPED - Pediatrics**

**MPED 800 Core Clerkship in Pediatrics**
Credits 7.5. 7.5 Other Hours.
To provide an introductory experience in the practice of pediatrics.
**Pre-requisite:** satisfactory completion of year three of the medical school curriculum.

**MPED 801 Primary Pediatric Care in the Community Setting**
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The faculty will strive to provide the medical student with an educational experience in the primary community setting which gives comprehensive clinical care to patients of the pediatric age group, newborn-18 years; enable the student to broaden his educational base in well child care and in recognition and management of acute and chronic pediatric conditions/ diseases in ambulatory and inpatient settings; and provide the student with broader exposure to the practice of pediatrics and its linkage to Scott and White, Temple Campus as a tertiary care provider.

**MPED 802 Neonatal Intensive Care Unit**
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The course will provide support and experience necessary for transition from basic understanding of common pediatric problems to assumption of primary patient care. The student will be encouraged to refine his/her neonatal skills and knowledge and introduce them to appropriate use of specialty and sub-speciality consultation. The course will also encourage further development of skills needed to define, locate, and evaluate valuable sources of information dealing with various aspects of neonatal knowledge. Night Call is required, and housing is not provided.

**MPED 803 Neonatal Intensive Care Unit**
Credits 1.25 to 10. 1.25 to 10 Other Hours.
While working in the NICU, the student will develop skills in the assessment, stabilization, diagnosis, and management of critically ill term and premature newborn infants. Throughout this elective, students are immersed in both didactics as well as patient care. Students take patients in rotation with the other trainees and he/she is also responsible for patient evaluation, examination and management. Along with this goes the responsibility of reading in depth about the patients and their problems, checking on lab work, seeing them each day and for adequate documentation in each medical record. The student is responsible for supervised communication with the families of babies assigned to him/her as well as participation in parent education regarding their newborn. There is a variety of weekly conferences and activities to take part in, including morning rounds, high risk deliveries, morning report, observation of neonatal ante partum consultations and neonatal resuscitation programs as well as multiple topic-specific conferences. A PICO assignment is required throughout the course as well as delivering case presentation regarding cases that are selected by faculty.

**MPED 804 Pediatric Cardiology**
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Distinguish normal from abnormal cardiovascular signs and symptoms; teach importance of recognizing and managing, if necessary refer, the cardiac conditions in children.

**MPED 805 Child Neurology**
Credits 1.25 to 10. 1.25 to 10 Other Hours.
All aspects of the practice of Child Neurology. Demonstrate accurate history and physical assessment skills as pertains to neurological problems in children. Provide daily brief discussions on a clinical neurology topic. Make learning resources readily available to the student; model problem solving approaches to neurologic complaints in children.

**MPED 806 Pediatric Intensive Care Unit**
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Acquaint the student to pediatric critical care medicine. Explain the rationale for initial treatment of critically ill pediatric patients with common disease process.

**MPED 807 Infectious Disease**
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Provide an environment conducive to learning. Offer a logical approach to the most common pediatric infectious disease problems. Provide guidance for the student to find appropriate literature pertaining to the patients followed by the service.

**MPED 808 Cardiovascular Surgery**
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Expose student to surgical correction of congenital heart defects (CHD); Instruct in the anatomy, physiology and pathology of CHD; Preoperative evaluation of CHD patient and Postoperative care of CHD patient.

**MPED 809 Pediatric Diabetes Camp**
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Learn first-hand diabetes management through an intense exposure to children and adolescents with diabetes mellitus and to enable the student to observe common childhood problems and illnesses in a residential camp setting.
MPED 810 Pediatric Emergency Medicine  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
Exercise clinical thinking and develop differential diagnosis, management and disposition for pediatric patients presenting with medical illness; comprehensive clinical experience in acute management of various urgent care concerns for pediatric patients, initial treatment and stabilization, and management/transfer.

MPED 811 General Inpatient Pediatrics  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
Learn common pediatric practices during an inpatient setting. Students must receive approval from the Elective Director for this elective.

MPED 812 Pediatric Endocrinology and Diabetes  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
Learn pediatric practices with an emphasis in endocrinology and diabetes. Students must receive approval from the Elective Director for this elective.

MPED 813 Pediatric  
Credits 1.25 to 6.3. 1.25 to 6.3 Other Hours.  
This is a 4-week elective in allergy and immunology that will provide experience in managing common adult and pediatric allergy and immunology ambulatory illness, and provide experience in managing common pediatric allergy ambulatory illnesses. It will introduce students to uncommon allergic diseases, illustrate broader aspects of pediatric care, as it relates to the care of the child with a chronic allergic condition, and encourage the student to develop skills in carefully evaluating children with allergic or immunologic problems. This elective will also introduce students to an ambulatory health care system dealing with children who have chronic illnesses and require chronic management. There is no night call during this elective, and housing is the responsibility of the student.

MPED 814 Pediatric and Adult Immunology Outpatient Care  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
This is a 2- or 4-week elective in allergy and immunology that will provide experience in managing common adult and pediatric allergy and immunology ambulatory illness. It will introduce students to uncommon allergic diseases and illustrate broader aspects of adult and pediatric care, as it relates to the care of patients with chronic allergic conditions. The elective will encourage students to develop skills in carefully evaluating patients with allergic or immunological problems and introduce them to an ambulatory healthcare system dealing with patients who have chronic illnesses and require chronic management. Approximately 70% of patient encounters will be with adults and 20% with children. There is no night call during this elective, and housing is the responsibility of the student.

MPED 815 Pediatric Gastroenterology  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
This 2- or 4-week elective is designed to provide the student with experience in the diagnosis and management of common problems encountered in the outpatient and inpatient practice of Pediatric Gastroenterology. Students will independently evaluate new patients in the outpatient clinic for presentation to and review by the attending physicians. Students will also follow patients admitted to the hospital and make daily rounds with the inpatient attending. The elective will also provide the opportunity to participate in Pediatric Gastroenterology endoscopic procedures. Housing is not provided, and no night call is required.

MPED 816 Pediatric Gastroenterology  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
Offered at Scott and White. This 2- or 4-week elective is designed to provide the student with experience in the diagnosis and management of common problems encountered in the outpatient and inpatient practice of Pediatric Gastroenterology. Students will independently evaluate new patients in the outpatient clinic for presentation to and review by the attending physicians. Students will also follow patients admitted to the hospital and make daily rounds with the inpatient attending. The elective will also provide the opportunity to participate in Pediatric Gastroenterology endoscopic procedures. Housing is not provided, and no night call is required.

MPED 817 Primary Pediatric Care in the Community Setting  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
This is a 4-week elective in primary pediatric care within the community setting. It will provide the medical student with an educational experience in the primary community setting which gives comprehensive clinical care to patients of the pediatric age group, newborn - 18 years. It will enable the student to broaden his/her educational base in well child care and in recognition and management of acute and chronic pediatric conditions/ diseases in ambulatory settings, as well as expose them to various pediatric education activities. There is no night call, and housing will not be provided in Round Rock.

MPED 818 Neonatal Intensive Care Unit  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
Through participation as an acting intern, the student will develop skills in the assessment, stabilization, diagnosis, and management of critically ill term and premature newborn infants.

MPED 819 Neonatal Intensive Care Unit - Externship  
Credits 5. 5 Lecture Hours.  
Housing is the responsibility of the student. Night call will be required. The faculty will provide support and experience necessary for transition from basic understanding of common pediatric problems to assumption of primary patient care. The student will be encouraged to refine his/her neonatal knowledge and skills and further develop skills needed to define, locate, and evaluate valuable sources of information dealing with a variety of neonatal knowledge. Introduction of appropriate use of specialty and sub-specialty consultation can be expected.

MPED 820 Pediatric Gastroenterology  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
Broad spectrum of pediatric gastroenterology outpatient care including failure to thrive, abdominal pain, constipation, inflammatory bowel disease, cystic fibrosis, pediatric nutrition, and liver transplantation (pre- and post- operative) care; teach the indications of pediatric endoscopy including expectation of attendance to all morning and endoscopic procedures; provide both spontaneous lectures and scheduled pediatric gastroenterology lectures; and teach pediatric chronic medical care including gastrostomy tube care and attendance in both the cerebral palsy and pediatric cystic fibrosis clinic.

MPED 821 Pediatric Endocrinology and Diabetes  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
Senior medical student exposure to the evaluation and management of common pediatric endocrine problems in an outpatient setting. This includes the impact of chronic illness on tasks of daily living. Both inpatient and outpatient endocrinology is covered, though the rotation is primarily outpatient.
**MPED 822 Pediatric and Internal Medicine Combined Ward - Acting Internship**

**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
Provide fourth year medical students with the opportunity to function as an “acting intern” in Internal Medicine and Pediatrics on general Medicine and Pediatrics service with supervision by senior residents and faculty; help prepare medical students for responsibilities and skills necessary during internship; and provide an opportunity for medical students to get a better experience in Internal Medicine and Pediatrics if they are considering Combined Internal Medicine and Pediatrics or primary care as a possible career.

**MPED 823 Medical Genetics**

**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
Enable the student to recognize patient in need of genetic services; provide an approach to evaluate patients with Genetic disease; provide students with a basic knowledge of cytogenetics and molecular medicine; and provide students with ethical dilemmas in genetics.

**MPED 824 Pediatric Hematology and Oncology**

**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
Provide an introduction to the diseases and common complications seen in the practice of Pediatric Hematology/Oncology; a reinforcement of the basic concepts regarding the pathophysiology, clinical evaluation, and management of the problems common in this practice; a familiarity to the student of proper utilization of physical assessment, laboratory, and radiologic tools in diagnosis of hematologic and oncologic childhood diseases; an introduction to the concept of cancer chemotherapy and the rationale of investigational treatment; and a strengthening of the student’s ability to assess morphology of peripheral blood and bone marrow, to understand coagulation studies, and to interpret abnormalities of each.

**MPED 825 Pediatric Cardiology**

**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
Distinguish normal from abnormal cardiovascular signs and symptoms; importance of recognizing and managing the cardiac conditions in children; and review and discuss available catheter and interventional surgical procedures for congenital and acquired pediatric heart disease.

**MPED 826 Pediatric Intensive Care**

**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
Introduce the student to the care of critically ill children for the purposes of instructing them in how to approach a critically ill child with multiple problems and a primary focus on teaching the approach to these children and how to apply it to each individual case; to provide more in-depth teaching of pediatric pulmonary management, acute pediatric cardiovascular problems, severe systemic infections, and complicated fluid management; to provide a guide for the appropriate use of sub-specialty consultation; and to provide further experience in neuro-intensive care.

**MPED 827 Pediatric Subspecialties Externship**

**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
Further the educational experience in the clinical care of pediatric subspecialties and improve the clinical acumen of students in recognizing these subspecialty problems; provide students with an experience which will enable those considering pediatrics as a career choice to further evaluate this decision; and provide students with a broad exposure to the various pediatric education activities.

**MPED 828 Neonatal Intensive Care Unit**

**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
Support and experience necessary for transition from basic understanding of common pediatric problems to assumption of primary patient care; encourage students to refine his or her neonatal knowledge and skills; introduce appropriate use of specialty and sub-specialty consultation; and encourage further development of skills needed to define, locate and evaluate valuable sources of information dealing with various aspects of neonatal knowledge.

**MPED 829 Pediatric Ward Acting Internship**

**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
Provide support and experience necessary for transition from basic understanding of common pediatric problems to assumption of primary patient care; encourage student to refine his or her pediatric knowledge and skills; introduce appropriate use of pediatric specialty and sub-specialty consultants; encourage further development of skills needed to define and locate valuable sources of information dealing with various aspects of pediatric knowledge; introduce student to management of uncommon pediatric diseases; and allow in depth look at the specialty of pediatrics as a possible career choice.

**MPED 830 Acting Internship in Pediatrics**

**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
Function as a pediatric intern on the inpatient service at Dell Children’s Hospital of Central Texas. He/she will be assigned to a team comprised of an attending physician (faculty) and a senior resident, as well as junior residents and third-year medical students. The student will be assigned patients for which he/she will have primary patient care responsibilities, with appropriate supervision. The student will have the opportunity to interact with residents, attending, subspecialists, and other members of the healthcare team.

**MPED 831 Developmental - Behavioral Pediatrics**

**Credits 1.25 to 10. 1.25 to 10 Other Hours.**
Enhancement of skills in identifying typical from atypical development and behaviors in infants and children. The student will have the opportunity to participate with the faculty in the assessment and diagnosis of children presenting with developmental delays and/or behavioral problems. The student will encounter a wide spectrum of developmental disabilities, including Autism, Spectrum Disorders, ADHD, Language Disorders, Learning Disabilities, Intellectual Disabilities (formerly mental retardation), genetic syndromes, behavioral health disorders like anxiety and depression, among others. The student will become familiar with the role of medications in children with disabilities. The student will be assigned key reading material as part of independent study.

**MPED 832 Off Campus Student Initiated Elective**

**Credits 1.25 to 15. 1.25 to 15 Other Hours.**
Formally described elective courses at another medical school or off-campus opportunities that are not formally approved electives. The College of Medicine requires that each of these electives be approved prior to the rotation.

**MPED 999 On Campus Student Initiated Elective**

**Credits 1.25 to 12. 1.25 to 12 Other Hours.**
On-campus opportunity in the Department of Pediatrics in the College of Medicine that is not defined herein. Experiences may include clinical research, basic science research, library research, other basic science activities, and other clinical activities. Students interested in developing an elective of this type should contact the head of the appropriate department for additional details.
MPHY - Medical Physiology

MPHY 601 Experimental Techniques in Cell and Molecular Biology I
Credits 4. 2 Lecture Hours. 4 Lab Hours.
Lectures, demonstrations and hands-on laboratories focusing on both basic and advanced techniques utilized in modern biomedical research: optical, fluorescence, confocal/multiphoton, TIRF, and atomic force microscopic techniques; calcium imaging; patch-clamp; cell culture and transfection; DNA/RNA preparation; molecular cloning; RT-PCR; RNAi; protein biochemistry; Southern/northern/western blotting.

MPHY 612 Experimental Techniques in Cell and Molecular Biology II
Credits 2 to 4. 2 to 4 Lab Hours.
This course is designed as a hands-on laboratory course to introduce the beginning graduate student to a variety of quantitative, analytical, cellular, histological, as well as ex vivo and in vivo techniques utilized in biomedical research. Information is relayed through lectures, demonstrations, and hands-on experience with the techniques discussed. The objective of this course is to help the student gain some laboratory experience and, at the same time, become familiar with basic protocols for biomedical techniques utilized in biological research.
Prerequisite: Graduate classification and approval of course coordinator.

MPHY 613 Medical Physiology I
Credits 1 to 5. 1 to 5 Lecture Hours.
This course is a comprehensive survey of the functions of the human body: transport processes, feedback control systems and homeostasis; general structure and function of the central nervous system, electrophysiology, autonomic nervous system; musculoskeletal system; and cardiovascular system. Format includes lectures, labs, field trips, and student projects/presentations. The overall goal is for students to understand, integrate, and appreciate the numerous and complex interactions between the components of the intact system.
Prerequisite: MSCI 601 or equivalent.

MPHY 614 Medical Physiology II
Credits 1 to 5. 1 to 5 Lecture Hours.
This course is a continuation of MPHY 613. Students will study Neurophysiology II: gastrointestinal system; respiratory system; renal/excretory system; endocrine and reproductive systems; integration of human organ systems.
Prerequisite: MPHY 613 or equivalent.

MPHY 615 Pathobiology and Therapeutics
Credits 4. 4 Lecture Hours.
This course is designed to help students develop the ability to learn by themselves, with the oversight of a group of faculty mentors. Each student will choose a disease model system from a chosen list of diseases/model systems that affect multiple systems of the body. Students will collect and present information on how their chosen disease or integrative model system affects various organ systems. Students will put together an integrative proposal to present to the class, followed by a final written proposal.
Prerequisite: MPHY 613 and MPHY 614 or equivalent.

MPHY 616 Computational Systems Biology
Credits 4. 4 Lecture Hours.
This course is designed as the first of a two-semester, multi-disciplinary graduate course targeted at students with an interest in computational aspects of systems biology. The course will be constructed in a modular fashion, such that either semester may be taken independently. MPHY 616 is an introduction to methods used to acquire, extract, organize, analyze, store and interpret the major types of data of interest in systems biology. It will consist of two main units: (1) exploration, analysis and interpretation of experimental data and (2) bioinformatics.

MPHY 617 Nervous System I/Musculoskeletal System
Credits 2. 2 Lecture Hours.
This course is a separate module within the course MPHY 613.

MPHY 618 Cardiovascular System
Credits 3. 3 Lecture Hours.
This course is a separate module within the course MPHY 613.

MPHY 619 Nervous System II
Credit 1. 1 Lecture Hour.
This course is a separate module within the course MPHY 614.

MPHY 620 Gastrointestinal System
Credit 1. 1 Lecture Hour.
This course is a separate module within the course MPHY 614.

MPHY 621 Excretory System
Credit 1. 1 Lecture Hour.
This course is a separate module within the course MPHY 614.

MPHY 622 Endocrine System
Credit 1. 1 Lecture Hour.
This course is a separate module within the course MPHY 614.

MPHY 623 Respiratory System
Credit 1. 1 Lecture Hour.
This course is a separate module within the course MPHY 614.

MPHY 624 Biostatistics
Credits 2. 2 Lecture Hours.
Introduction to methods used to acquire, extract, organize, analyze, store and interpret the major types of data of interest in systems biology.

MPHY 625 Bioinformatics
Credits 2. 2 Lecture Hours.
Introduction to methods used to acquire, extract, organize, analyze, store and interpret the major types of data of interest in systems biology.

MPHY 631 Cardiovascular Science
Credits 4. 4 Lecture Hours.
Prerequisites: MSCI 601 or equivalent.
MPHY 632 Cardiovascular Pathobiology
Credits 4. 4 Lecture Hours.
The Cardiovascular Pathobiology course is an exploration of the pathophysiology underlying cardiovascular diseases, including atherosclerosis, cardiomyopathies, heart failure, hypertension, congenital abnormalities and valvular disorders. The conceptual foundation is the tissue response to injury (inflammation) and the integrated reactions at the cellular, organ, system and whole organism levels initiated by a specific insult or disorder. Presentation and critique of journal articles in the cardiovascular field and development of research proposals are emphasized.
Prerequisite: MPHY 631 or equivalent.

MPHY 633 Advanced Techniques in Cardiovascular Research
Credits 1 to 4.
This course emphasizes mastering of a specific technique used in modern cardiovascular research under the guidance of a faculty expert. Topics span intact animal to single cell techniques. Examples include animal models of human disease, advanced physiological imaging, mouse echocardiography, direct mouse intra-cardiac pressure-volume measurements, isolated intact papillary muscles, isolated microvessels/lymphatics, intracellular biosensors, induced pluripotent stem cells, patch clamping and flow cytometry.
Prerequisites: Contact course coordinator for prerequisites and topic availability.

MPHY 634 The Lymphatic System
Credits 3. 3 Lecture Hours.
This course explores the myriad functions of the second circulation of the human body, the lymphatic system. Topics covered include lymphatic development; lymphangiogenesis; morphology and function of lymphatic capillaries, muscular lymphatics and lymph nodes; mechanisms of lymph formation and propulsion; intrinsic and extrinsic mechanisms of lymphatic pumping and flow regulation; role of the lymphatic system in inflammation and immunity; primary and secondary lymphatic disorders. Emphasis is on critique of the literature and self-directed integration of concepts and data into a research proposal.

MPHY 681 Seminar
Credit 1. 1 Lecture Hour.
Focus will be on critical scientific thinking. Emphasis placed on oral communications, scientific writing and grant preparation.
Prerequisite: Approval of instructor.

MPHY 685 Directed Studies
Credits 1 to 6. 1 to 6 Lecture Hours.
Limited investigation in fields other than those chosen for thesis or dissertation.
Prerequisite: Approval of instructor.

MPHY 689 Special Topics
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of physiology and associated basic sciences. May be repeated for credit when topics vary.
Prerequisite: Approval of instructor.

MPHY 691 Research Credit
Credits 1 to 15. 1 to 15 Lab Hours.

---

MPHY 632 Cardiovascular Pathobiology
Credits 4. 4 Lecture Hours.
The Cardiovascular Pathobiology course is an exploration of the pathophysiology underlying cardiovascular diseases, including atherosclerosis, cardiomyopathies, heart failure, hypertension, congenital abnormalities and valvular disorders. The conceptual foundation is the tissue response to injury (inflammation) and the integrated reactions at the cellular, organ, system and whole organism levels initiated by a specific insult or disorder. Presentation and critique of journal articles in the cardiovascular field and development of research proposals are emphasized.

MPHY 633 Advanced Techniques in Cardiovascular Research
Credits 1 to 4.
This course emphasizes mastering of a specific technique used in modern cardiovascular research under the guidance of a faculty expert. Topics span intact animal to single cell techniques. Examples include animal models of human disease, advanced physiological imaging, mouse echocardiography, direct mouse intra-cardiac pressure-volume measurements, isolated intact papillary muscles, isolated microvessels/lymphatics, intracellular biosensors, induced pluripotent stem cells, patch clamping and flow cytometry.

MPHY 634 The Lymphatic System
Credits 3. 3 Lecture Hours.

MPHY 689 Special Topics
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of physiology and associated basic sciences. May be repeated for credit when topics vary.

---

MPIM - Microbial Pathogen Imm

MPIM 601 Microbial Pathogenesis of Human Disease
Credits 3. 3 Lecture Hours.
Principles of microbe-host interactions at the molecular level. Selected medically important infectious diseases serve as paradigms for understanding how multiple pathogenic mechanisms contribute to disease.
Prerequisite: Approval of instructor.

MPIM 602 Immunoregulation
Credits 3. 3 Lecture Hours.
In-depth exploration of the genetic, cellular and molecular mechanisms by which humoral and cellular immune responses are regulated; regulatory T cell circuits, molecules (interleukins, lymphokines), isotypic and idiootypic regulation, hormonal effects, immunoregulatory defects, experimental manipulation of immunoregulatory networks.
Prerequisites: VTM 649/POSC 649, BIOL 610 and approval of instructor.

MPIM 607 Applied Epidemiology
Credits 4. 4 Lecture Hours. 3 Lab Hours.
Application of epidemiologic concepts to the study of disease occurrence; descriptive epidemiologic methods in the study of diseases.
Prerequisite: Graduate classification.

MPIM 620 The Scientific Basis of Medicine
Credit 1. 1 Other Hour.
A Journal Club in which recent research papers relevant to Medicine are presented by students and discussed by students and faculty.

MPIM 663/VTMI 663 Molecular Biology of Animal Viruses
Credits 3. 3 Lecture Hours.
In-depth studies of the biochemistry and replication strategies of animalviruses and molecular mechanisms of pathogenesis for selected viral systems.
Prerequisite: Graduate classification in virology, molecular biology, biochemistry or approval of the instructor.

MPIM 666/VTMI 666 Molecular Biology of Animal Viruses
Credits 3. 3 Lecture Hours.
In-depth studies of the biochemistry and replication strategies of animalviruses and molecular mechanisms of pathogenesis for selected viral systems.
Prerequisite: Graduate classification in virology, molecular biology, biochemistry or approval of the instructor.

MPIM 667 Viral Vectors and Gene Therapy
Credits 3. 3 Lecture Hours.
This course will describe various viral vector systems, their development, and their use as research tools in biotechnology and in gene therapy. The course will consist of a mixture of short lectures and discussion of papers from the literature.

MPIM 685 Directed Studies
Credits 1 to 6. 1 to 6 Lab Hours.
Limited investigation in fields other than those chosen for thesis or dissertation.
Prerequisite: Approval of instructor.

MPIM 689 Special Topics
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of medical sciences. May be repeated for credit.
Prerequisite: Approval of instructor.
MPSY - Psychiatry

MPSY 800 Core Clerkship in Psychiatry
Credits 7.5. 7.3 Other Hours.
To provide an introductory experience in the practice of psychiatry.
Prerequisite: Satisfactory completion of year two of the medical school curriculum.

MPSY 801 Bereavement Issues in Clinical Practice
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 4-week elective will provide the opportunity to experience and practice primary psychiatric care of patients under the close supervision of a staff physician. It will increase the student’s familiarity with the basic “tasks” of mourning and emotional/psychological processes; enable the student to discriminate between uncomplicated and complicated bereavement especially identifying those factors that contribute to complications in grieving; increase student awareness of and vigilance toward bereaved patients’ increased morbidity/mortality rates; help the student develop increased skill in conducting a sensitive clinical inquiry with bereaved individuals regarding their loss experience; familiarize the student with the current treatment principles described in the grief and bereavement psychological literature; acquaint the student with the role of self-help groups among the bereaved; develop the students’ appreciation of how various members of the health care team participate in the psychosocial need of patients and families at the time of death in an acute care setting.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

MPSY 802 Child and Adolescent Psychiatry
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 2- or 4-week elective will introduce the student to child psychiatry. The student will learn the process of child psychiatric evaluation, and will be introduced to issues related to diagnostic classification in children and adolescents. They will be exposed to various treatment modalities used in child psychiatry, including exposure to the issues surrounding the use of psychotropic medications in children.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

MPSY 804 Child and Adolescent Psychiatry
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 2- or 4-week elective will introduce the student to child psychiatry. The student will learn the process of child psychiatric evaluation, and will be introduced to issues related to diagnostic classification in children and adolescents. They will be exposed to various treatment modalities used in child psychiatry, including exposure to the issues surrounding the use of psychotropic medications in children.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

MPSY 806 Outpatient Psychiatry
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 4-week elective will provide the opportunity to experience and practice primary psychiatric care of patients under the close supervision of a staff physician. It will increase the student’s familiarity and knowledge with the use of psychoactive medications, help the student gain further knowledge and experience in determination of individual patient treatment regimens, and help gain experience in the interactions between patients, therapists and family members.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

MPSY 807 Consultation/Liaison Psychiatry
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 4-week elective will provide the student the opportunity to experience and practice primary psychiatric care of patients under the close supervision of a senior staff physician. Increase the student’s familiarity and knowledge with the use of psychoactive medications; help the student gain further knowledge and experience in determination of individual patient treatment regimens; help the student gain experience in the complex interactions between patients, therapists, and family members; help the student gain experience in evaluating emergency patients through the opportunity to be the first physician evaluating patients in the emergency room; help the student gain experience as a co-therapist in group psychotherapy; help the student gain experience in longer term care with the patients via the opportunity to participate in follow up outpatient appointments.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

MPSY 808 General Adult Psychology and Geriatric Psychology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Multidisciplinary assessment of elderly patients, including medical, social and family history; assessment of cognitive function; evaluation and management of older patients with Alzheimer’s disease and other causes of Dementia, affective disorders and late life psychoses and of the elderly patient’s family and the determination of their roles in the treatment of the older patient.

MPSY 809 Advanced Inpatient Psychiatry
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 4-week elective will provide the advanced student the opportunity to experience and practice primary psychiatric care of patients under the close supervision of a senior staff physician. Increase the student’s familiarity and knowledge with the use of psychoactive medications; help the student gain further knowledge and experience in determination of individual patient treatment regimens; help the student gain experience in the complex interactions between patients, therapists, and family members; help the student gain experience in evaluating emergency patients through the opportunity to be the first physician evaluating patients in the emergency room; help the student gain experience as a co-therapist in group psychotherapy; help the student gain experience in longer term care with the patients via the opportunity to participate in follow up outpatient appointments.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

MPSY 810 Consultation/Liaison Psychiatry
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 4-week elective will provide the student the opportunity to experience and practice primary psychiatric care of patients under the close supervision of a senior staff physician. Increase the student’s familiarity and knowledge with the use of psychoactive medications; help the student gain further knowledge and experience in determination of individual patient treatment regimens; help the student gain experience in the complex interactions between patients, therapists, and family members; help the student gain experience in evaluating emergency patients through the opportunity to be the first physician evaluating patients in the emergency room; help the student gain experience as a co-therapist in group psychotherapy; help the student gain experience in longer term care with the patients via the opportunity to participate in follow up outpatient appointments.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

MPSY 811 Advanced Outpatient Psychiatry
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This 4-week elective will provide the advanced student the opportunity to experience and practice primary psychiatric care of patients under the close supervision of a senior staff physician. Increase the student’s ability to gain further knowledge and experience in determination of individual patient treatment regimens; introduce and further the student experience as a co-therapist in group psychotherapy; help the student practice recognizing and managing issues of a therapeutic nature in the group setting.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.
MPSY 812 Advanced Inpatient Psychiatry  
Credits 1.25 to 10. 1.25 to 10 Other Hours. 
This 4-week elective will provide the advanced student the opportunity to experience and practice primary psychiatric care of patients under the close supervision of a senior staff physician. It will increase the student’s familiarity and knowledge with the use of psychoactive medications, help the student gain further knowledge and experience in determination of individual patient treatment regimens, and help gain experience in the interactions between patients, therapists and family members. 
**Prerequisite:** Satisfactory completion of year three of the medical school curriculum.

MPSY 985 Off Campus Student Initiated Elective  
Credits 1.25 to 12. 1.25 to 12 Other Hours. 
Formally described elective courses at another medical school or off-campus opportunities that are not formally approved electives. The College of Medicine requires that each of these electives be approved prior to the rotation.

MPSY 999 On Campus Student Initiated Elective  
Credits 1.25 to 12. 1.25 to 12 Other Hours. 
This is an on-campus opportunity in the department of Psychiatry in the College of Medicine that is not defined herein. Experiences may include clinical research, basic science research, library research, other basic science activities, and other clinical activities. Students interested in developing an elective of this type should contact the head of the appropriate department for additional details.

**MRAD - Radiology**

MRAD 800 Core Clerkship in Radiology  
Credit 1. 1 Other Hour. 
The Radiology Clerkship course provides students with knowledge of the methods of medical imaging; conventional radiology, ultrasound, computerized tomography, magnetic resonance imaging, interventional radiology and nuclear radiology, and application of these methods to specific clinical problems.

MRAD 801 Diagnostic Radiology  
Credits 1.25 to 10. 1.25 to 10 Other Hours. 
To provide an introductory experience in the practice of radiology. 
**Prerequisite:** Satisfactory completion of year three of the medical school curriculum.

MRAD 802 Radiation Oncology  
Credits 1.25 to 10. 1.25 to 10 Other Hours. 
To provide an introductory experience in the practice of radiology. 
**Prerequisite:** Satisfactory completion of year three of the medical school curriculum.

MRAD 803 Introduction to Radiation Oncology  
Credits 1.25 to 10. 1.25 to 10 Other Hours. 
This 2- to 4-week elective is designed for students to become familiar with an overview of cancer, its pathogenesis, statistics, and treatment modalities. Students will gain experience and become familiar with the role of radiation therapy in a multidisciplinary modality setting. 
**Prerequisite:** Satisfactory completion of year three of the medical school curriculum.

MRAD 804 Diagnostic Radiology  
Credits 1.25 to 10. 1.25 to 10 Other Hours. 
This 2- to 4-week elective provides students with a broad understanding of radiology principles, various diagnostic modalities, their respective value and limitations as well as the overall role of radiology in medicine today. Students will gain exposure through a combination of daily didactic lectures presented by faculty, residents, fellows and guests as well as through clinical learning experiences gained alongside faculty in one of many subspecialty bases including CT Scan, Ultrasound, Gastrointestinal, Emergency Department, Nuclear Medicine, MRI, Vascular/Interventional Radiology (VIR), Neuro MRI, Neuro CT Scan, Breast Imaging and Outpatient Imaging. Students are encouraged to express any special interest in a subspecialty before the beginning of the course in order to configure their rotation schedule accordingly. 
**Prerequisite:** Satisfactory completion of year three of the medical school curriculum.

MRAD 805 General Radiology at St. Luke/St. Joseph Medical Center  
Credits 1.25 to 10. 1.25 to 10 Other Hours. 
To provide an introductory experience in the practice of radiology. 
**Prerequisite:** Satisfactory completion of year three of the medical school curriculum.

MRAD 806 Clinical Research Design and Application  
Credits 1.25 to 10. 1.25 to 10 Other Hours. 
This 2- to 4-week elective is designed for students to participate in a clinical research project. This elective will increase the student’s familiarity and knowledge of the student to principles of study design, data collection, data management and analysis. Students will participate in developing a professional manuscript preparation, review, and submission for publication. 
**Prerequisite:** Satisfactory completion of year three of the medical school curriculum.

MRAD 807 Body Imaging  
Credits 1.25 to 10. 1.25 to 10 Other Hours. 
The 4-week elective in Body Imaging is designed for motivated students planning a career in radiology. The course is organized as one-week rotations in Thoracic Imaging, Abdominopelvic CT, Body and Musculoskeletal MR, and Ultrasound. Students frequently encounter the opportunity to submit an interesting case to the American College of Radiology Case in Point repository for potential peer reviewed online publication. 
**Prerequisite:** Satisfactory completion of the year three of the medical school curriculum.

MRAD 808 Diagnostic Radiology  
Credits 1.25 to 10. 1.25 to 10 Other Hours. 
This 2-week elective is intended to re-familiarize the medical student with the basic principles of radiologic imaging. Students will be shown the many different modalities used within the Department of Radiology and will become familiar with interpreting medical diagnosis results using those modalities. 
**Prerequisite:** Satisfactory completion of the year three of the medical school curriculum.
MRAD 809 Neuroradiology  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
This 2-week elective in Neuroradiology is designed for motivated students planning a career in radiology. The course allows for flexibility within the department, but is primarily based on CT and MR imaging of the brain and spine. Experience with CT and MR angiography and a range of neurointerventional procedures is also available. Students frequently encounter the opportunity to submit an interesting case to the American College of Radiology Case in Point repository for potential peer-reviewed online publication.  
**Prerequisite:** Satisfactory completion of the year three of the medical school curriculum.

MRAD 810 Current Concepts in Nuclear Medicine  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
This 2-week elective is an introduction to common Nuclear Medicine procedures and techniques. This elective is designed to familiarize the student with the appropriate utilization of these techniques for diagnosis and prognosis in selected common problems in clinical medicine. Students will gain experience in correlating results of the Nuclear Medicine procedures and tests with pertinent clinical evaluation, pathophysiology, and anatomy.  
**Prerequisite:** Satisfactory completion of the year three of the medical school curriculum.

MRAD 811 Pediatric Imaging  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
This 2-week elective in Pediatric Imaging is designed for motivated students planning a career in radiology. The course allows for flexibility within the department, but is based around a multimodality experience in all facets of pediatric imaging, including radiographs, sonography, body CT and MR studies, and fluoroscopy. The integration of multiple imaging modalities and interaction with referring clinicians allows more comprehensive understanding of disease processes unique to children. Students will lead to a better understanding of the many services provided by Radiology.  
**Prerequisite:** Satisfactory completion of the year three of the medical school curriculum.

MRAD 812 Radiation Oncology  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
This 2- to 4-week elective is designed for students to participate in interpretation of history, physical, laboratory and radiological findings in the management of cancer patients. Students will gain exposure with role of radiotherapy in multi-disciplinary cancer therapy and its integration with other disciplines like surgery and medical oncology.  
**Prerequisite:** Satisfactory completion of the year three of the medical school curriculum.

MRAD 813 Diagnostic Radiology  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
This 2- to 4-week elective is designed for students to gain experience in the proper radiographic approach in evaluating clinical problems. This elective is designed to familiarize the student with the basic skills in interpretation of the more common x-ray examinations, CT scans, and ultrasound scans. Students will also become familiar with the proper performance of basic diagnostic imaging procedures, particularly the order performing the procedures.  
**Prerequisite:** Satisfactory completion of the year three of the medical school curriculum.

MRAD 814 Diagnostic Radiology - Non Chosen Specialty  
**Credits 1.25 to 10. 1.25 to 10 Other Hours.**  
This 2- to 4-week elective is designed for students to gain experience to re-familiarize the student with the basic principles of radiologic imaging. Students will be shown the many different modalities used within the department of Radiology and will become familiar with interpreting medical diagnosis results using those modalities. It is our hope that this course will lead to a better understanding of the many services provided by Radiology.

MRAD 985 Off Campus Student Initiated Elective  
**Credits 1.25 to 12. 1.25 to 12 Other Hours.**  
Formally described elective courses at another medical school or off-campus opportunities that are not formally approved electives. The College of Medicine requires that each of these electives be approved prior to the rotation.

MRAD 999 On Campus Student Initiated Elective  
**Credits 1.25 to 12. 1.25 to 12 Other Hours.**  
This is an on-campus opportunity in the department of Radiology in the College of Medicine that is not defined herein. Experiences may include clinical research, basic science research, library research, other basic science activities, and other clinical activities. Students interested in developing an elective of this type should contact the head of the appropriate department for additional details.

**MSCI - Medical Sciences**

MSCI 601 Contemporary Topics in Advanced Cell Biology I  
**Credits 5. 5 Lecture Hours.**  
Advanced cell and molecular biology course examining the molecular basis of cellular functions relevant to human health. Specific topics will vary but the course will focus on the basic structures, functions and properties of proteins, nucleic acids and lipids. There will be an emphasis on recent developments and the primary literature.  
**Prerequisites:** BIOL 413, BICH 303 or equivalent.

MSCI 602 Contemporary Topics in Advanced Cell Biology II  
**Credits 5. 5 Lecture Hours.**  
Continuation of MSCI 601. Advanced cell and molecular biology course examining the molecular basis of cellular functions relevant to human health. Specific topics will vary but the course will focus on emergent properties of complex cellular systems. There will be an emphasis on recent developments and the primary literature.  
**Prerequisites:** MSCI 601 or equivalent.

MSCI 606 Application of Clinical Quality Improvement and Patient Safety Principles  
**Credits 4. 4 Lecture Hours.**  
This interdisciplinary “case-based” learning course introduces the student to principles of patient safety and quality improvement and then provides the opportunity to apply these principles to clinical situations. Students engage in discussion and case reviews that promote critical thinking skills, team communication, recognition of systems issues impacting patient care and current issues impacting clinical quality improvement and patient safety.  

MSCI 607 Life Science Entrepreneurship  
**Credits 3. 3 Lecture Hours.**  
Independent study designed as an introduction and overview of the commercialization process involved in moving a research discovery from the bench to the market.
MSCI 608 Development and Commercialization of Human Therapeutics
Credits 2. 2 Lecture Hours.
Survey the principles and concepts of commercializing a human pharmaceutical drug within the context of a startup biotechnology; emphasis on the issues and concepts encountered in either academic or industrial careers in moving potential pharmaceutical drug towards approved therapeutic.

MSCI 609 Responsible Conduct of Research
Credit 1. 1 Lecture Hour.
Responsible Conduct of Research (RCR) is defined by NIH as the practice of scientific investigation with integrity. It involves the awareness and application of established professional norms and ethical principles in the performance of all activities related to scientific research. Responsible conduct of research is an essential component of research training. This course is designed as a survey of basic topics that trainees will need to understand as they enter into the practice of research. The course will utilize outside reading assignments, online modules, class presentation and discussion of cases associated with each topic.

MSCI 610 Pathogenesis of Human Disease
Credits 1 to 4. 4 Lecture Hours.
Molecular mechanisms of human disease processes; the main goal of the course is to provide students with an understanding of basic disease processes such as cardiovascular disease, cancer, inflammatory disease, AIDS, tuberculosis, diabetes, Alzheimer's disease and spinal cord injury.

MSCI 611 Experimental Design for Biomedical Science
Credits 3. 3 Lecture Hours.
Students learn about the principles of experimental design. By the end of the course, the student should be able to incorporate appropriate design features into their own experiments and critically evaluate the experimental literature for design flaws and inappropriate use of statistics.
Prerequisite: Undergraduate or graduate statistics 3 hours.

MSCI 612 Current Topics in Cell Signaling
Credits 3. 3 Lecture Hours.
The course provides an overview of intracellular signal transduction pathways utilized by various classes of growth factor, cytokine, integrin and G-protein coupled receptors. The course also will provide a clear understanding of the importance of these pathways in regulating cell growth, differentiation, apoptosis and other cellular processes, both under normal physiologic conditions as well as diseases.

MSCI 620 The Scientific Basis of Medicine
Credit 1. 1 Other Hour.
This course is a journal club in which recent research papers relevant to medicine are presented by students and discussed by students and faculty. May be repeated for credit four times.

MSCI 630 Pathogenesis of Human Disease
Credits 4. 4 Lecture Hours.
Upon completion of this course, the student will be able to recognize and describe the molecular events responsible for various human diseases. The student will be able to differentiate between various types of diseases and independently assemble a concise presentation on a particular disease topic.

MSCI 631 Pathogenesis of Human Disease – Introduction to Inflammation and Human Disease
Credit 1. 1 Lecture Hour.
Upon completion of this course, the student will be able to recognize and describe the molecular events that occur in inflammation, along with innate and adaptive immune responses. Various inflammatory mediators and signaling events will be discussed in the context of inflammation alongside a general introduction to immune responses. A relevant clinical condition will be discussed to reinforce these concepts.

MSCI 632 Pathogenesis of Human Disease – Cardiovascular Disease
Credit 1. 1 Lecture Hour.
Upon completion of this course, the student will be able to recognize and describe the molecular events that occur in the most frequent cardiovascular diseases afflicting the Western world, including coronary artery disease, ischemia, atherosclerosis, myocardial infarction, stroke, hypertension, cardiac hypertrophy, and heart failure.

MSCI 633 Pathogenesis of Human Disease – Infectious Disease
Credit 1. 1 Lecture Hour.
Upon completion of this course, the student will be able to recognize and describe the molecular events that occur in response to bacterial and viral pathogens responsible for respiratory, gastrointestinal and urogenital disease, as well as AIDS and other viral infections.

MSCI 634 Pathogenesis of Human Disease – Neurodegenerative and Genetic Disease
Credit 1. 1 Lecture Hour.
Upon completion of this course, the student will be able to recognize and describe the molecular events that occur in Alzheimer's, Parkinson's neurodegenerative disease in women, Muscular Dystrophy, neoplasia, tumor metastasis and dissemination, and breast cancer.

MSCI 635 Basic Immunology
Credits 2. 2 Lecture Hours.
This course is designed to give students a basic and current understanding of the immune system. The course consists of lectures as well as presentations by a student (or teams of students) where the student/team describes the accepted paradigm for the lecture topic; identifies and discusses the historical references for the paradigm; and reviews and discusses current publications in the field, with the goal of determining if current data and research remain consistent or are inconsistent with the accepted paradigm in that area of immunology.

MSCI 636 Intermediate and Translational Immunology
Credits 2. 2 Lecture Hours.
This course is designed to build on students' basic understanding of the immune system. Course consists of lectures on a clinical problem/disease by the director/guest lecturer; followed by student presentations describing how the immune system may impact the disease of interest, either positively or negatively, and a group discussion on how to modify clinical outcomes with immune-based interventions that translate basic understanding to clinical treatments. All participants will review and discuss current publications in the field.

MSCI 681 Seminar
Credit 1. 1 Lecture Hour.
Focus will be on critical scientific thinking. Emphasis placed on oral communications, scientific writing and grant preparation.
Prerequisite: Approval of instructor.

MSCI 685 Directed Studies
Credits 1 to 6. 1 to 6 Lecture Hours.
Limited investigation in fields other than those chosen for thesis or dissertation.
Prerequisite: Approval of instructor.
MSCI 687 Professionalism and Ethics
Credit 1. 1 Lecture Hour.
Students learn about professionalism and ethics in the medical sciences.

MSCI 689 Special Topics
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of medical sciences. May be repeated for credit when topics vary.
Prerequisite: Approval of instructor.

MSCI 690 Theory of Medical Science Research
Credits 2. 2 Lecture Hours.
(2-0) Design of research experiments in various fields of medical sciences; evaluation of end results with the aid of examples taken from current scientific literature.
Prerequisites: Approval of instructor.

MSCI 691 Research Credit: Medical Science
Credits 1 to 15. 1 to 15 Lab Hours.
Research for thesis or dissertation.
Prerequisites: Approval of supervisory professor in chosen field.

MSCI 695 Frontiers in Medical Science Research
Credits 2. 2 Lecture Hours.
Present status of research in a variety of significant medical sciences fields. Content depends on the availability of visiting lecturers who are selected because of distinguished international recognition in their field of research. May be repeated for credit.
Prerequisite: Graduate classification.

MSCI 920 The Scientific Basis of Medicine
Credit 1. 1 Other Hour.
This course is a journal club in which recent research papers relevant to medicine are presented by students and discussed by students and faculty. May be repeated for credit four times.

MSEN - Materials Science & Engr

MSEN 601 Fundamental Materials Science and Engineering
Credits 4. 4 Lecture Hours.
Fundamentals of microstructure- properties and relationship of materials. Topics will include: electronic and atomic structure of solids, structure of crystalline materials, imperfections in crystalline materials, introduction to dislocation theory, mechanical properties, fundamental thermodynamics of materials, phase equilibria and diagrams, diffusion, and kinetics of phase transformations.
Prerequisite: Graduate classification.

MSEN 602 Advanced Materials Science and Engineering
Credits 4. 4 Lecture Hours.
Fundamentals of quantum mechanics, physics of solid state, and physical electronics and photonics for advanced materials. Topics will include: basic quantum mechanical problems, quantum basis for structural and physical properties of solids, lattice vibrational effects in solids, free electron model for magnetism in solids, semiconductor materials and devices, nanostructures and mesoscopic phenomena, superconductivity, recent advances in new types of materials.
Prerequisite: MSEN 604, undergraduate quantum mechanics course, or approval of instructor.

MSEN 603 Fundamentals of Soft and Biomaterials
Credits 3. 3 Lecture Hours.
Introductory graduate-level survey on the general areas of soft materials and biomaterials; includes basic concepts of colloidal particle physics, polymer physics and chemistry, and general concepts in biomaterials.
Prerequisites: Undergraduate general chemistry course; graduate classification.

MSEN 604 Quantum Mechanics for Materials Scientists
Credits 3. 3 Lecture Hours.
Provides a background in quantum mechanics for graduate materials scientists or engineers with little or no quantum mechanics background. The following topics will be covered: origins of quantum theory, interpretation, Schrödinger equation and its applications, operator mechanics, approximation methods, angular momentum, the hydrogen atom, and quantum statistics.
Prerequisites: MATH 601, MATH 311 or approval of instructor; graduate classification.

MSEN 606 Multifunctional Materials
Credits 3. 3 Lecture Hours.
In-depth analysis of multifunctional materials and composites, and their novel applications.
Prerequisites: MEMA 602/AERO 603/AERO 603/MEMA 602, MSEN 601.
Cross Listing: AERO 606 and MEMA 606.

MSEN 607/MEEN 607 Polymer Physical Properties
Credits 3. 3 Lecture Hours.
Macromolecular concepts; molecular weight characterization; solubility parameters; phase diagrams; viscoelasticity; rheology; thermal behavior; damage phenomena; morphology; crystallization; liquid crystallinity; nanocomposites.
Prerequisites: MEEN 222 (or other intro to materials science course).
Cross Listing: MEEN 607/MSEN 607.

MSEN 608 Nanomechanics
Credits 3. 3 Lecture Hours.
Application of mechanics concepts to nano-scale behavior of materials. Review of continuum mechanics; Extensions to generalized continua; Nonlocal elasticity; Nano-scale plasticity. Focus on multi-scale modeling: Dislocation Dynamics; Quasi-Continuum method; Molecular dynamics with introductions to quantum mechanics and statistical mechanics.
Prerequisite: AERO 603/MEMA 602.
Cross Listing: AERO 608 and MEMA 608.

MSEN 612/BIOL 602 Fundamentals of Transmission Electron Microscopy
Credits 3. 2 Lecture Hours. 6 Lab Hours.
(2-6) State-of-the-art fundamentals in TEM; theoretical background supporting a strong hands-on course component comprising specimen preparation and image acquisition/interpretation; practical experience to attain a proficiency level permitting independent operation of one of the transmission electron microscopes in the Microscopy and Imaging Center.
Prerequisite: Graduate classification or approval of instructor.
Cross Listing: BIOL 602/MSEN 612.
MSEN 613/BIOI 603 Advanced Transmission Electron Microscope (TEM) Methodologies in Life and Materials Science (TEM II)
Credits 3. 1 Lecture Hour. 6 Lab Hours.
Advanced TEM methodologies, including specimen preparation and TEM imaging/analysis techniques as applicable to both biological and material samples; theory designed to support a strong hands-on component comprising specimen preparation, different imaging/diffraction/spectroscopic techniques and data interpretation.
**Prerequisite:** BIOL 602/MSEN 612 or MSEN 612/BIOI 602.
 **Cross Listing:** BIOI 603/MSEN 613.

Credits 2. 1 Lecture Hour. 3 Lab Hours.
Fundamentals of Scanning Electron Microscopy (SEM) and Environmental Scanning Electron Microscopy (ESEM). Provides biologists, material scientists and students from other disciplines with the techniques of operation of the scanning electron microscope (SEM) and the environmental SEM (ESEM) coupled with the appropriate theoretical background knowledge; individual instruction in support of their research endeavors involving SEM/ESEM.
**Prerequisite:** Graduate classification.
 **Cross Listing:** BIOI 604/MSEN 614.

MSEN 616/MEE 616 Surface Science
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Properties of surfaces, principles of classic and contemporary surface characterization techniques, recent development and roles of surface science in advanced technology.
**Prerequisite:** Graduate classification.
 **Cross Listing:** MEE 616/MSEN 616.

MSEN 618/MEE 686 Composite Materials Processing and Performance
Credits 3. 3 Lecture Hours.
Fundamental science and design; processing and design interaction regarding multiphase composites; processing science, experimental characterization, laminate analysis; design structure and processing.
**Prerequisite:** Elasticity, continuum mechanics, or equivalent; graduate classification.
 **Cross Listing:** MEE 686/MSEN 618.

MSEN 619 Materials Modeling of Phase Transformation and Microstructural Evolution
Credits 3. 3 Lecture Hours.
Computer modeling and simulation of microstructural evolution during various phase transformation processes in solid materials, including spinodal decomposition, ordering, martensitic transformation, ferroelectric and ferromagnetic domain evolution, dislocation dynamics, and crack propagation.
**Prerequisite:** Graduate classification and approval of instructor.

MSEN 620/MEE 620 Kinetic Processes in Materials Science
Credits 3. 3 Lecture Hours.
Atomistic and mesoscale levels; foundation for microstructural evolution and behavior of materials; basic and irreversible thermodynamics; diffusion equations solutions; atomistic diffusion, nucleation; phase transformations: gas-solid, liquid-solid and solid-solid reactions; FiPy (finite volume solver for PDE) to simulate kinetic processes.
**Prerequisite:** MEE 622 or equivalent materials science course; preliminary general thermodynamics course is not necessary.
 **Cross Listing:** MEE 620/MSEN 620.

MSEN 625/MEE 625 Mechanical Behavior of Materials
Credits 3. 3 Lecture Hours.
Examination of deformation and microstructure mechanisms responsible for deformation and failure in metals; fatigue, creep, and fracture mechanisms of materials; emphasis on microstructural-mechanical property relationship.
**Prerequisite:** Undergraduate-level materials science course.
 **Cross Listing:** MEE 625/MSEN 625.

MSEN 626/MEE 606 Polymers Laboratories
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Introduction to basic experimental skills relating to polymers; experiments include polymerization, molecular weight determination, FTIR, tensile test, NMR, DSC, swelling index, viscosity, x-ray diffraction.
**Prerequisite:** Graduate classification.
 **Cross Listing:** MEE 606/MSEN 626.

MSEN 636 Damage Mechanics and Failure in Composite Materials
Credits 3. 3 Lecture Hours.
Mechanisms and models related to damage and failure in composite materials subjected to mechanical loads.
**Prerequisites:** Courses in composite materials, elasticity; graduate classification.
 **Cross Listing:** AERO 616 and MEMA 616.

MSEN 640/MEE 640 Thermodynamics in Materials Science
Credits 3. 3 Lecture Hours.
Use of thermodynamic methods to predict behavior of materials; codification of thermodynamic properties into simplified models; principles, methods, and models to generate accurate equilibrium maps through computational thermodynamics software; applications to bulk metallic, polymeric and ceramic materials, defects, thin films, electrochemistry, magnetism.
**Prerequisites:** MEE 222 or equivalent; graduate classification.
 **Cross Listing:** MEE 640/MSEN 640.

MSEN 641 Plasticity Theory
Credits 3. 3 Lecture Hours.
Theory of plastic yield and flow of two and three-dimensional bodies; classical plasticity theories, unified viscoplastic theories, numerical considerations; applications and comparisons of theory to experiment.
**Prerequisite:** MEMA 602/AERO 603.
 **Cross Listing:** MEE 666 and MEMA 641.

MSEN 656/MEE 656 Mechanical and Physical Properties of Thin Films
Credits 3. 3 Lecture Hours.
Mechanical properties (hardness, stress, strain, delamination, fracture) of films; nanomechanical testing techniques; electrical properties of thin films; electrical properties measurement techniques; magnetic properties of films; magnetic properties measurement techniques; laboratory includes (1) thin film fabrication (sputtering, PVD); (2) nanomechanical testing; (3) electrical/magnetic measurement.
**Prerequisite:** MEE 222, MSEN 601, or basic materials science background.
 **Cross Listing:** MEE 656/MSEN 656.

MSEN 658/MEE 658 Fundamentals of Ceramics
Credits 3. 3 Lecture Hours.
Atomic bonding; crystalline and glassy structure; phase equilibria and ceramic reactions; mechanical, electrical, thermal, dielectric, magnetic, and optical properties; ceramic processing.
**Prerequisite:** MEE 222 or equivalent or approval of instructor.
 **Cross Listing:** MEE 658/MSEN 658.
MSEN 670 Computational Materials Science and Engineering
Credits 3. 3 Lecture Hours.
Modern methods of computational modeling and simulation of materials properties and phenomena, including synthesis, characterization, and processing of materials, structures and devices; quantum, classical, and statistical mechanical methods, including semi-empirical atomic and molecular-scale simulations, and other modeling techniques using macroscopic input.
Prerequisite: Approval of instructor; graduate classification.
Cross Listing: CHEN 670 and MEMA 670.

MSEN 681 Seminar
Credit 1. 1 Lecture Hour.
Selected research topics in materials science and engineering presented by faculty, students, and outside speakers.
Prerequisite: Graduate classification.

MSEN 684 Professional Internship
Credits 1 to 9. 1 to 9 Other Hours.
Directed internship in an industrial or laboratory setting under the supervision of successful, experienced personnel; work related to the student's career aspirations and areas of specialization. May be taken 2 times for credit.
Prerequisite: Graduate classification.

MSEN 685 Directed Studies
Credits 1 to 12. 1 to 12 Other Hours.
Special topics not within the scope of thesis research and not covered by other formal courses.
Prerequisite: Graduate classification.

MSEN 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of materials science and engineering. Potential topics include: advanced phase transformations, advanced materials and processing, nanomaterials and nanotechnologies, computational modeling of materials, advanced techniques of spectroscopy, surface and interface phenomena, thin film processing, ceramic engineering, organic materials for electronic and photonic devices, biomedical microdevices, materials fabrication, processing and fabrication of semiconductors, and materials and processing for MEMS. May be repeated for credit.
Prerequisite: Approval of instructor.

MSEN 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research toward thesis or dissertation.

NEXT 604 Special Regional Human Dissections
Credits 1 to 3. 1 to 3 Lecture Hours.
Dissection of special regions with more detail than the medical gross anatomy course; histological, neural and gross anatomical material utilized.
Prerequisites: Approval of instructor.

NEXT 605 Molecular Mechanisms of Drug and Toxin Action I
Credits 4. 4 Lecture Hours.
Introduction to the major tools and concepts of pharmacology. This is a two part series. By the end of these courses, the student will understand how selectivity of drug action is determined by pharmacological principles and will have a scientific basis for a rational approach to the study of drug actions and side effects.
Prerequisite: Approval of instructor.

NEXT 606 Molecular Mechanisms of Drug and Toxin Action II
Credits 4. 4 Lecture Hours.
Survey of ocular drugs, overview of molecular signaling mechanisms and selected topics in developmental neuropharmacology.
Prerequisite: Approval of instructor.

NEXT 607 Molecular Mechanisms of Drug and Toxin Action III
Credits 4. 4 Lecture Hours.
Interaction of drugs and toxins with neurotransmitter systems with primary emphasis on mechanisms involving receptor function that impacts central nervous system integration.
Prerequisite: Approval of instructor.

NEXT 608 Methods in Neurohistology
Credits 2. 2 Lecture Hours.
Instruction in anesthetization, perfusion of animals; removal of neural tissues; histological processing, staining of tissues, including immunohistochemistry.
Prerequisites: Approval of instructor.

NEXT 620 Gross Anatomy
Credits 8. 8 Lecture Hours.
This course will study the relationship of structures and the functional significance of the human body during its development and adult form as revealed through dissection.
Prerequisite: Approval of instructor.

NEXT 621 Teaching Gross Anatomy
Credits 2. 8 Lab Hours. 3 Other Hours.
Provides teaching and supervisory experience for graduate students; instructs students in teaching and supervising medical students in Gross Anatomy; students observe in the laboratory and present at least one lecture.
Prerequisites: Approval of instructor.

NEXT 622 Teaching Medical Histology
Credit 1. 4 Lab Hours. 2 Other Hours.
Provides teaching and supervisory experience for graduate students; instructs students in teaching and supervising medical students in Microscopic Anatomy.
Prerequisite: Approval of instructor.

NEXT 623 Teaching in Medical Neuroscience
Credits 2. 3 Lab Hours. 5 Other Hours.
Assist in the teaching of Medical Neuroscience, to include lectures, laboratories and examination setup and proctoring.
Prerequisites: Approval of instructor.
NEXT 681 Seminar
Credit 1. 1 Lecture Hour.
Focus will be on critical scientific thinking. Emphasis placed on oral communications, scientific writing and grant preparation.
Prerequisite: Graduate student in medicine. Approval of instructor.

NEXT 685 Directed Studies
Credits 1 to 6. 1 to 6 Lab Hours.
Limited investigation in fields other than those chosen for thesis or dissertation.
Prerequisite: Approval of instructor.

NEXT 689 Special Topics
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of pharmacology and toxicology. May be repeated for credit when topics vary.
Prerequisite: Approval of instructor.

NEXT 999 NEXT Problems
Credits 1.25 to 12. 1.25 to 12 Other Hours.
This is an on-campus opportunity in the Neuroscience and Experimental Therapeutics department in the College of Medicine that is not defined herein. Experiences may include clinical research, basic science research, library research, other basic science activities, and other clinical activities. Students interested in developing an elective of this type should contact the head of the appropriate department for additional details.

NRSC - Neuroscience

NRSC 601/BIOL 627 Principles of Neuroscience I
Credits 3. 3 Lecture Hours.
Detailed introduction to the basic fundamentals of cellular and molecular neuroscience; topics include membrane potentials, action potential generation, and the mechanisms underlying synaptic transmission, as well as their molecular basis.
Prerequisites: Graduate classification or approval of instructor.
Cross Listing: BIOL 627/NRSC 601.

NRSC 602 Principles of Neuroscience II
Credits 3. 3 Lecture Hours.
Fully integrated overview of nervous system organization and systems-level neurobiology; broad topics include sensory systems and sensory systems function, motor systems and neuromuscular function, central pattern generation and locomotion, homeostatic regulation, motivation, emotions, learning and memory, and circadian rhythms.
Prerequisites: Graduate classification or approval of instructor.
Cross Listing: BIOL 628/NRSC 602.

NRSC 603/VIBS 603 Neuroanatomy
Credits 4. 2 Lecture Hours. 6 Lab Hours.
Gross, developmental and microscopic anatomy of nervous system of selected laboratory and domestic animals.
Prerequisite: Approval of instructor.
Cross Listing: VIBS 603/NRSC 603.

NRSC 604/VIBS 604 Biomedical Neuroendocrinology and Endocrine Disorders
Credits 3. 3 Lecture Hours.
Prerequisite: Approval of instructor.
Cross Listing: VIBS 604/NRSC 604.

NRSC 605/VIBS 606 Neuroanatomical Systems
Credits 3. 3 Lecture Hours.
Emphasis on major neural systems that govern identifiable physiological functions, behavior and neurodegenerative disease; whole-brain anatomy is approached from a “systems” perspective, wherein components of defined functional systems are described in terms of their location, inputs and outputs, and physiological/behavioral significance in health and disease.
Prerequisite: Approval of instructor.
Cross Listing: VIBS 605/NRSC 606.

NRSC 606/PSYC 606 Learning
Credits 3. 3 Lecture Hours.
Procedural and theoretical issues in study of basic learning mechanisms in animals and humans, including Pavlovian and instrumental conditioning. Application of this work to other domains and relevant biological mechanisms also discussed.
Prerequisites: PSYC 340/NRSC 340 or approval of instructor.
Cross Listing: VIBS 606/NRSC 606.

NRSC 609/PSYC 609 Physiological Psychology
Credits 3. 3 Lecture Hours.
Current research and methodological procedures on physiological bases of sensation-perception, memory and learning, arousal-sleep attention, emotions and motivation.
Prerequisite: PSYC 335/NRSC 335.
Cross Listing: VIBS 609/NRSC 609.

NRSC 611 Molecular Biology of Differentiation and Development
Credits 3. 3 Lecture Hours.
Major paradigms of eukaryotic gene regulation in terms of the role of gene expression during ontogeny and the effect of dysfunction in these processes on the neoplastic state.

NRSC 615/PSYC 615 Perceptual Processes
Credits 3. 3 Lecture Hours.
Perpetual Processes. Complex sensory and perceptual phenomena with emphasis on the relationship between perception and motivation, cognition, creativity and instinctive/ethological; learning/experiential factors in higher level perceptual processes.
Cross Listing: PSYC 615/NRSC 615.

NRSC 616/VIBS 616 Advanced Developmental Neurotoxicology
Credits 3. 3 Lecture Hours.
(3-0) Study of mechanisms of toxicity of substances potentially devastating to the developing brain and spinal cord including lead, mercury and other heavy metals, alcohol, nicotine (smoking), pesticides, flame retardants and others.
Prerequisite: Graduate classification or approval of instructor.
Cross Listing: VIBS 616.
NRSC 621/VIBS 621 Functional Neuroanatomy
Credits 4. 4 Lecture Hours.
A comprehensive review of the neuroanatomical determinants of function; rigorous neuroanatomical foundation relevant for research investigating changes in neural pathways and/or networks involved in sensory and motor functions, learning and memory, perception, selective attention, as well as recovery of function following brain damage.
Cross Listing: VIBS 621/NRSC 621.

NRSC 636/BIOL 615 Neuroethology
Credits 4. 4 Lecture Hours.
Topics such as evolution of nervous systems and their diverse structure and function are dealt with. A comparative approach to subject matter is stressed.
Cross Listing: BIOL 615/NRSC 621.

NRSC 635/BIOL 601 Biological Clocks
Credits 3. 3 Lecture Hours.
Introduction to the formal properties of biological rhythms; cellular and molecular bases for rhythmicity; temporal adaptations of organisms using clocks. Prerequisites: Graduate classification or approval of department head.
Cross Listing: BIOL 601/NRSC 635.

NRSC 630/BIOL 615 Signaling in Behavior and Development
Credits 3. 3 Lecture Hours.
Will focus on signaling pathways used in multicellular animals. In each lecture, major signaling pathways used in behavior, physiology, and development will be introduced at the molecular level, and then be discussed in the context of organismal biology. Prerequisite: Graduate classification.
Cross Listing: BIOL 615/NRSC 636.

NRSC 640/VIBS 640 Neurobiology
Credits 1 to 5. 1 to 5 Lecture Hours.
Biology of the mammalian central nervous system with emphasis on cellular and molecular interactions; contemporary research topics in areas such as neuron-glia interactions, neuroimmunology, neuroendocrinology, developmental neurobiology and neurogenetics; extensive readings from primary literature. Prerequisites: Undergraduate or graduate cell biology, genetics and biochemistry or approval of instructor.
Cross Listing: VIBS 640/NRSC 640.

NRSC 641 Principles of Neuropsychology
Credits 3. 3 Lecture Hours.
Review of major areas of cognitive functioning including concentration, memory, language, visuospatial/construction skills and executive functions; review of neurobehavioral syndromes including dementia, epilepsy, head injury, stroke, drug toxicity, etc.; assessment of deficits associated with disorders. Prerequisites: PSYC 624 or PSYC 627 or equivalent as approved by instructor.

NRSC 644/BIOL 644 Neural Development
Credits 3. 3 Lecture Hours.
Classical and current research literature to explore the major events in the development of a nervous system, including topics ranging from neurogenesis to synapse information. Prerequisite: Graduate classification.
Cross Listing: BIOL 644/NRSC 644.

NRSC 649/PSYC 649 Seminar in Behavioral Neuroscience
Credits 3. 3 Lecture Hours.
Behavioral neuroscience; including behavioral pharmacology, neuropsychopharmacology, methods and techniques, drug reinforcement, behavioral toxicology, pain-perception and ingestive behavior. May be repeated up to three times for credit. Prerequisite: PSYC 609 or equivalent; PSYC 606/NRSC 606 or equivalent; PSYC 606/NRSC 609; graduate classification.
Cross Listing: PSYC 649/NRSC 649.

NRSC 650/PSYC 650 Clinical Psychopharmacology
Credits 3. 3 Lecture Hours.
Survey of topics in clinical psychopharmacology, including pharmacodynamics, major neurotransmitter systems, and therapeutic applications and limitations. Prerequisite: Graduate classification or approval of instructor.
Cross Listing: PSYC 650/NRSC 650.

NRSC 671/PSYC 671 Experimental Design for Behavioral Scientists
Credits 3. 3 Lecture Hours.
Lab Hours. Intensive practical study of designs of special interest to behavioral scientists; repeated measures designs. Prerequisites: STAT 652 or equivalent. Cross Listing: PSYC 671/NRSC 671.

NRSC 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed individual study of selected problems in the field of neuroscience. Prerequisites: Graduate classification and approval of department head.

NRSC 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of neuroscience. May be repeated for credit. Prerequisite: Graduate classification.

NRSC 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research in neuroscience for thesis or dissertation credit. Prerequisite: Graduate classification.

NRSC 698/BIOL 698 Behavior, Genes, and Evolution
Credits 3. 3 Lecture Hours.
Introduces an integrative approach to the study of animal behavior, complementing evolutionary and ecological perspectives with molecular and genetic approaches and methodologies. Prerequisite: Graduate classification.
Cross Listing: BIOL 698/NRSC 698.
NUEN - Nuclear Engineering

NUEN 601 Nuclear Reactor Theory
Credits 3. 3 Lecture Hours.
Neutron-nucleus interactions; neutron energy spectra; transport and diffusion theory; multigroup approximation; criticality calculations; cross-section processing; buildup and depletion calculations; modern reactor analysis methods and codes.
Prerequisite: Approval of instructor.

NUEN 604 Radiation Interactions and Shielding
Credits 3. 3 Lecture Hours.
Basic principles of radiation interactions and transport, especially as related to the design of radiation shields. Radiation sources, nuclear reactions, radiation transport, photon interactions, dosimetry, buildup factors and fast neutron shielding.
Prerequisites: NUEN 302 or equivalent; MATH 308; BS in engineering or physical sciences.

NUEN 605 Radiation Detection and Nuclear Materials Measurement
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Laboratory-based course studying the fundamentals of nuclear materials measurements; advanced radiation detection instrumentation with a specific focus on measuring nuclear materials (uranium, plutonium, and other actinides); nuclear material measurements include detection, identification, and quantification of the materials in a fuel cycle facility and in the field.
Prerequisite: Graduate classification.

NUEN 606 Reactor Analysis and Experimentation
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Perturbation theory; delayed neutrons and reactor kinetics; lattice physics calculations; full core calculations; analysis and measurement of reactivity coefficients; analysis and measurement of flux distribution; analysis and measurement of rod worths; critical and subcritical experiments.
Prerequisite: Approval of instructor.

NUEN 609 Nuclear Reactor Safety
Credits 3. 3 Lecture Hours.
Analysis and evaluation applied to reactor design for accident prevention and mitigation; protective systems and their reliability, containment design, emergency cooling requirements, reactivity excursions and the atmospheric dispersion of radioactive material; safety problems associated with light-water power reactors and proposed fast reactor systems.
Prerequisites: NUEN 601 and NUEN 623 or approval of instructor.

NUEN 610 Design of Nuclear Reactors
Credits 4. 4 Lecture Hours.
Application of fundamentals of nuclear physics and reactor theory with engineering fundamentals to design of nuclear reactors.
Prerequisites: NUEN 602 or registration therein; NUEN 410 or approval of instructor.

NUEN 611 Radiation Detection and Measurement
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Interactions of radiation with matter behavior of various nuclear radiation detectors studied both theoretically and experimentally in the laboratory; properties of radionuclides useful to industry and medicine considered and evaluated from an engineering point of view.
Prerequisite: Graduate classification, enrollment in NUEN 613 or instructor approval.

NUEN 612 Radiological Safety and Hazards Evaluation
Credits 3. 3 Lecture Hours.
State and Federal regulations concerning radioactive materials; radiation safety as applied to accelerators, nuclear reactors, medical therapy and diagnostic devices, and radioactive byproducts; rigorous methods of analysis applied to computation of biological radiation dose and dose rates from various sources and geometries; radiation effects on physical systems.
Prerequisites: NUEN 613; MATH 308.

NUEN 613 Principles of Radiological Safety
Credits 3. 3 Lecture Hours.
Rigorous mathematical and physical approach to various aspects of radiological safety; derivation of equations involving radiation absorption, radiation dosimetry and calculations of radiation dose due to internal emitters; mathematical models relating to radionuclide concentrations in tumor, normal tissue, air or water to whole body dose.
Prerequisite: NUEN 409.

NUEN 614 Probabilistic Risk Assessment Techniques in Nuclear Systems
Credits 3. 3 Lecture Hours.
Current and proposed techniques for determining the reliability of nuclear plant systems and the risk associated with the operation of these advanced technology systems.
Prerequisites: NUEN 612 and NUEN 613.

NUEN 615 Theory and Applications of Microdosimetry
Credits 3. 3 Lecture Hours.
Theory, measurement, and calculation of microdosimetric spectra; practical applications of microdosimetry in the determination of absorbed dose distribution within tissue, the statistical fluctuations of absorbed dose at the cellular and subcellular level, and the impact of microdosimetry on radiation protection guidelines.
Prerequisite: NUEN 613.

NUEN 618 Multiphysics Computations in Nuclear Science and Engineering
Credits 3. 3 Lecture Hours.
Tightly coupled multiphysics simulation techniques and application to typical problems arising in nuclear science and engineering (reactor dynamics and safety transients, conjugate heat transfer, radiative transfer, fluid structure interaction).
Prerequisites: MATH 609 and NUEN 606.

NUEN 623 Nuclear Engineering Heat Transfer and Fluid Flow
Credits 3. 3 Lecture Hours.
Thermodynamics and unified treatment of mass, momentum and energy transport with applications to nuclear engineering systems; velocity and temperature distributions in laminar and turbulent flow; flow and thermal stability.
Prerequisites: MEEN 334, MATH 346 or MATH 461 and MATH 601 or registration therein or approval of instructor.

NUEN 624 Nuclear Thermal Hydraulics and Stress Analysis
Credits 3. 3 Lecture Hours.
Unified treatment of advanced heat transport in solids and fluids including boiling phenomena; thermal stress phenomena with applications to nuclear sources; isothermal elasticity; thermoelasticity; viscoelasticity; plasticity.
Prerequisites: NUEN 623 or equivalent; MATH 601 or registration therein.
NUEN 625 Neutron Transport Theory
Credits 4.4 Lecture Hours.
Analytical treatment of neutron transport theory; solution methods of integrodifferential and integral Boltzmann equations, adjoints; energy independent methods using singular eigennfunctions, variational methods, orthogonal polynomials and thermalization; current analytical techniques in transport theory.
Prerequisites: NUEN 606; MATH 602.

NUEN 627 Radiation-Hydrodynamics
Credits 3.3 Lecture Hours.
Coupling of the Euler equations of compressible fluid dynamics with the equations of thermal radiation transport; the equilibrium-diffusion limit; radiative shock waves; and numerical methods for one-dimensional calculations.
Prerequisite: MATH 602.

NUEN 629 Numerical Methods in Reactor Analysis
Credits 4.4 Lecture Hours.
Solution of variable dimension multigroup discrete representation problems including Sn, Pn, An, variational and Monte Carlo techniques; techniques in reactor kinetics, fuel cycle and optimization.
Prerequisites: NUEN 430; NUEN 606 or equivalent.

NUEN 630 Monte Carlo Methods for Particle Transport
Credits 3.2 Lecture Hours, 2 Lab Hours.
Principles of Monte Carlo method; random number generation; random variable sampling; particle tracking; statistical error estimation; ACE format cross-sections; introduction to MCNP code; MCNP applied to radiation shielding, criticality safety, reactor physics and detector modeling; MCNP output analysis, statistical tests, and tallying procedures; variance reduction techniques; Monte Carlo algorithm development.
Prerequisites: Approval of Instructor, MCNP/MCNPX code single user license from RSICC, ORNL, USA.

NUEN 633 Radiation Measurements and Calibrations
Credits 3.3 Lecture Hours.
Measurement of radiation dose and protection quantities in realistic radiation fields will be studied; specific characteristics of radiation sources will be discussed in the context of accurate measurement and radiation protection; examples from a wide variety of radiation environments will illustrate radiation measurement requirements for medical, industrial, and research sources.
Prerequisite: NUEN 613.

NUEN 640 Severe Accident Analysis of Nuclear Facilities
Credits 3.3 Lecture Hours.
Severe accident phenomena from initial fuel heat up to the source term; complexity of accident progression and safety issues; severe accident codes with respect to the modeling philosophy, techniques, assumptions and limitations; development of skills in analysis methodologies/techniques.
Prerequisite: Graduate classification in the college of engineering or approval of instructor.

NUEN 644/MEEN 644 Numerical Heat Transfer and Fluid Flow
Credits 3.3 Lecture Hours.
Convection-diffusion, up-wind, exponential, exact solution, power law schemes, false diffusion; staggered grid concept; development of simple and simpler algorithms; periodically developed flows.
Prerequisites: NUEN 430 or equivalent; MEEN 357 and MEEN 461.
Cross Listing: MEEN 644/NUEN 644.

NUEN 646 Fundamentals of Space Life Sciences
Credits 3.3 Lecture Hours.
Integrates nutrition, physiology, and radiation biology to define major biological problems in long duration space flight; provide an overview of the problems of bone loss, muscle wasting, and radiation-enhanced carcinogenesis along with potential countermeasures; focus on nutritional interventions and exercise protocols.
Cross Listing: NUTR 646 and KINE 646.

NUEN 650 Nuclear Nonproliferation and Arms Control
Credits 3.3 Lecture Hours.
Studies the political and technological issues associated with nuclear proliferation and arms control; history of arms control treaties and verification, proliferation resistance in the nuclear fuel cycle, international and domestic safeguards, material accountability, containment and surveillance, and physical protection.
Prerequisite: NUEN 601.

NUEN 651 Nuclear Fuel Cycles and Nuclear Material Safeguards
Credits 3.3 Lecture Hours.
Study of civilian and military nuclear fuel cycles and application of nuclear material safeguards to secure these cycles; topics include the physics of the fundamental fuel cycle components; the application of nuclear material measurements systems; and the technical and legal basis for material protection, control and accounting systems.
Prerequisite: NUEN 601 or equivalent.

NUEN 656 Critical Analysis of Nuclear Security Data
Credits 4.4 Lecture Hours.
A project-based course studying the analysis of nuclear security events, threats, and data; assigned project requires an analysis of data for a hypothetical case of interest to U.S. national security; focuses on detailed technical analysis using diverse datasets and country/organization profiles.
Prerequisites: NUEN 650, NUEN 601 or equivalent.

NUEN 661 Nuclear Fuel Performance
Credits 3.3 Lecture Hours.
Reviews basic phenomena that govern nuclear fuel performance; includes structural changes and rate controlling phenomena for oxide and metal fuels as well as cladding and other structural materials.
Prerequisites: Graduate classification or consent of the instructor.

NUEN 662 Nuclear Materials Under Extreme Conditions
Credits 3.3 Lecture Hours.
Fundamentals of materials degradation under reactor environments; linkage from radiation induced microstructure changes to materials thermal properties, mechanical properties, corrosion resistance, swelling, creep, and overall integrities; materials issues of nuclear fuel, cladding, out-core structural components and waste storage managements.
Prerequisite: Graduate classification or approval of instructor.

NUEN 663 Fundamentals of Ion Solid Interactions
Credits 3.3 Lecture Hours.
Fundamentals of neutron and ion interactions with solid state materials, and subsequent damage cascade formation, defect clustering, and structural changes; electronic stopping and nuclear stopping mechanisms based on classic and quantum mechanics treatments; development of basic modeling capabilities to carry out simulations for relevant research topics.
Prerequisite: Graduate classification or approval of instructor.
NUEN 669/INTA 669 Nuclear Terrorism Threat Assessment and Analysis
Credits 3. 3 Lecture Hours.
Study the manner in which we conduct threat assessments and the analysis of non-state actors in the fields of nuclear and radiological security; examine the history of threats and security issues in an effort to better understand terrorist groupings, their motivations and attack methodologies.
Prerequisite: Graduate classification.
Cross Listing: INTA 669/NUEN 669.

NUEN 670 Introduction to Radiotherapy Physics
Credits 4. 3 Lecture Hours. 4 Lab Hours.
Examination of radiation physics necessary for understanding modern radiation therapy; perform theoretical foundations of physical dose calculation for megavoltage energy photons and electrons, biological predictions of therapy outcomes, and brachytherapy; methods of modeling and implementing radiation therapy treatment includes planning, evaluation, and delivery; emphasis on intensity modulated radiation therapy and TomoTherapy.
Prerequisites: Graduate classification; NUEN 613 or approval from academic advisor.

NUEN 671/BMEN 672 Introduction to Diagnostic Radiology Physics
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Concepts of radiation physics used in diagnostic radiology; introduction to the theory behind the different imaging modalities as it relates to mammography, planar X-ray imaging, computed tomography (CT), single photon emission tomography (SPECT), and positron emission tomography (PET).
Prerequisite: NUEN 611, NUEN 613 or approval of academic advisor.
Cross Listing: BMEN 672/NUEN 672.

NUEN 673 Radiation Biology
Credits 3. 3 Lecture Hours.
Response of biological systems to ionizing radiation at the molecular, cellular, tissue and organismal levels; effects of different doses and dose rates with emphasis on the underlying mechanisms relevant to accidental, environmental and medical exposures.
Prerequisite: NUEN 409 or graduate classification.

NUEN 674 Radiation Carcinogenesis
Credits 3. 3 Lecture Hours.
Examines the experimental models and mathematical simulations for the investigation of radiation-induced cancer, the current scientific literature concerning the intersection of risk analysis and the interpretation of disparate data from varied biological systems.
Prerequisite: Graduate classification.

NUEN 675 Internal Dose Techniques
Credits 3. 3 Lecture Hours.
Current and proposed techniques for assessing the absorbed dose due to internally deposited radionuclides; techniques recommended for international and national bodies, as well as those used in nuclear medicine.
Prerequisites: NUEN 612 and NUEN 613.

NUEN 676 Radiation Physics Instrumentation
Credits 3. 1 Lecture Hour. 6 Lab Hours.
Advanced course in instrumentation intended for radiation professionals and researchers; provides an in-depth knowledge of the components of radiation monitoring and measurement systems; includes quality assurance and quality control concepts for the safe and efficient use of radiation sources.
Prerequisite: NUEN 402.

NUEN 677/MEEN 677 Aerosol Science
Credits 3. 3 Lecture Hours.
Multidisciplinary survey of methods for describing aerosol particles and systems: gas kinetics and transport theory, formation and growth thermodynamics, electrical properties, coagulation, light scattering; selected topics from current literature.
Prerequisite: Graduate classification in engineering or approval of instructor.
Cross Listing: MEEN 677/NUEN 677.

NUEN 678 Waste Management in the Nuclear Industry
Credits 3. 3 Lecture Hours.
Management of radioactive, hazardous and mixed waste generated by all segments of the nuclear fuel cycle and users of radioisotopes; includes treatment, storage and disposal technologies and the political and socioeconomic issues; evaluation of current practices and regulations using a holistic approach.
Prerequisites: Graduate classification and approval of instructor.

NUEH 681 Seminar
Credit 1. 1 Lecture Hour.
Topics in nuclear engineering and health/medical physics not covered by formal coursework; whenever possible, guest lectures will discuss topics which they have personally investigated.
Prerequisite: Graduate classification.

NUEN 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
Training under the supervision of practitioners in settings appropriate to the student's professional objectives.
Prerequisites: Approval of chair of student's advisory committee and department head.

NUEN 685 Directed Studies
Credits 1 to 12. 1 to 12 Other Hours.
Offered to enable students to undertake and complete limited investigations not within their thesis research and not covered by any other courses in curriculum.
Prerequisite: Graduate classification.

NUEN 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in an identified area of nuclear engineering. May be repeated for credit.
Prerequisite: Approval of instructor.

NUEN 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research toward thesis or dissertation.

NURS - Nursing

NURS 501/EDHP 501 Curriculum Design
Credits 3. 3 Lecture Hours.
Various models of curriculum development and design based on educational philosophy and professional standards will be investigated. Students will demonstrate knowledge of program development including scope and sequence, curriculum alignment, and mapping. Program development through topic identification and generation of content outlines/syllabi, objectives, and outcome measures are included in this course.
NURS 502/EDHP 502 Assessment and Evaluation in Education
Credits 3. 3 Lecture Hours.
Practical and theoretical issues involved in evaluating student performance, teacher performance and educational programs will be explored. Students will explore various means of performance-based assessments applicable to didactic, simulated and clinical learning environments. Students will examine a variety of assessment instruments and strategies and the role each has in the evaluation process. The course will enable students to plan, execute and interpret educational assessments.

NURS 503/EDHP 503 Teaching Strategies
Credits 3. 3 Lecture Hours.
Best practices research on instructional pedagogy and adult learning will be examined. The course focuses on recommended principles, concepts and theories used in practice that create effective learning environments. Teaching strategies responsive to diverse learning styles and needs of learners will be explored as well as reflective practices and self-assessment. A variety of practical classroom, simulation and clinical teaching strategies consistent with current evidence will be discussed emphasizing teaching methods using technology.
Cross Listing: EDHP 503/NURS 503.

NURS 504 Teaching Practicum
Credits 2. 2 Lab Hours.
This course allows the student to synthesize knowledge gained in the education track courses by working with a faculty mentor to actualize the faculty role. The student will implement effective teaching strategies in content/curriculum development, test construction and clinical supervision in a variety of settings. Interprofessional collaborative teaching strategies will be evidence based and promote critical thinking scholarship and innovation.

NURS 508 Advanced Clinical Practicum and Project
Credits 4. 4 Lab Hours.
This course provides the opportunity for the student to develop advanced clinical proficiency in a population interest or professional role. Using direct or indirect care approaches, the student will develop and implement a plan to improve patient outcomes, utilizing a variety of advanced skills and knowledge including health promotion, wellness management, quality improvement, health care finance, leadership, policy and evidence based practice and informatics. This course will include 105 hours of clinical practice.

NURS 512 Advanced Pathophysiology
Credits 3. 3 Lecture Hours.
Advanced concepts of pathophysiology of health problems across the lifespan, preparing the student at the level of advanced nursing practice will be emphasized.

NURS 516 Advanced Pharmacology
Credits 3. 3 Lecture Hours.
Advances Pharmacology. Advanced pharmacotherapeutic principles related to the management of health problems will be presented. The focus is on pharmacologic treatments utilized by the advanced practice nurse.

NURS 520 Advanced Practice Nursing Roles
Credits 3. 3 Lecture Hours.
Analysis and synthesis of multi-dimensional role and responsibilities of advanced practice nursing.
Prerequisite: NURS 556/HCPI 556.

NURS 521 Diagnostics and Procedures
Credits 2. 2 Lecture Hours.
Development of knowledge and skills associated with common procedures and diagnostics in primary care; focus on diagnostics and procedures appropriate to the role of the advanced practice nurse including collaborative, ethical, legal and regulatory considerations.

NURS 522 Primary Care of Families I
Credits 6. 3 Lecture Hours. 9 Lab Hours.
First course of three; advanced knowledge of acute and chronic health problems in the context of family; emphasis on epidemiology, pathology, assessment, diagnosis, therapeutic modalities and evaluation related to health promotion and health problems of adults across the lifespan.
Prerequisites: NURS 512, NURS 553.
Corequisite: NURS 516.

NURS 523 Primary Care of Families II
Credits 6. 3 Lecture Hours. 9 Lab Hours.
Second course of three; advanced knowledge of acute and chronic health problems in the context of family; emphasis on epidemiology, pathology, assessment, diagnosis, therapeutic modalities and evaluation related to health promotion and health problems of women and children.
Prerequisite: NURS 522.

NURS 524 Primary Care of Families III
Credits 6. 3 Lecture Hours. 9 Lab Hours.
Third course of three; advanced knowledge of acute and chronic health problems in the context of family; emphasis on epidemiology, pathology, assessment, diagnosis, therapeutic modalities and evaluation related to health promotion and health problems of adults and older adults.
Prerequisite: NURS 523.

NURS 525 Primary Care of Families Practicum
Credits 4. 12 Other Hours.
Culmination and integration of all previous course work; opportunity to continue to master domains and competencies of the family nurse practitioner; addresses professional practice issues needed for transition to the advanced practice nurse role and workforce.
Prerequisites: NURS 524, NURS 554, NURS 521, NURS 520.

NURS 551/HCPI 551 Healthcare Quality Improvement and Informatics
Credits 3. 3 Lecture Hours.
Overview of health care from the viewpoint of quality improvement and health care informatics; using the science of quality measurement and improvement in conjunction with information science to propose a quality improvement initiative; legal and ethical implications of current trends in information technology and safety.
Cross Listing: HCPI 551.

NURS 552/HCPI 552 Scholarship: Integration and Application
Credits 3. 3 Lecture Hours.
Integrate theory, evidence, clinical judgment, research and inter-professional perspectives using translation processes to improve patient outcomes; application of available evidence to interdisciplinary clinical practice; identification of gaps in knowledge and development of a spirit of inquiry and lifelong scholarship.
Cross Listing: HCPI 552/NURS 552.

NURS 553 Advanced Health Assessment
Credits 3. 2 Lecture Hours. 1 Lab Hour.
This course will focus on the application of advanced assessment techniques and skills for comprehensive evaluation of patients across the life span using a common symptom approach. Emphasis will be placed on common deviations from normal assessment findings within the context of holistic practice. The course includes 45 hours of clinical practice.
NURS 554 Clinical Prevention and Population Health
Credits 3.3 Lecture Hours.
Leadership skills will be developed in the design of clinical prevention interventions and population based care that promotes health and reduces the risk of chronic illness and disease. The student will plan care that is responsive to unique cultural and ethnic identities, socioeconomic conditions and the needs and values of individuals and populations.

NURS 556/HCPI 556 Leadership and Health Policy II
Credits 3.3 Lecture Hours.
The development of skills essential to leadership and policy processes, including communication, collaboration, negotiation, delegation and coordination by applying systems theory and complexity science will be promoted. The student will be prepared to assume a leadership role in the management and evaluation of human, fiscal and physical health resources. Students will develop skills in political efficacy and the ability to improve the systems and population outcomes through the development of health policy.
Cross Listing: HCPI 556/NURS 556.

NUTR - Nutrition

NUTR 601/ANSC 601 General Animal Nutrition
Credits 3.3 Lecture Hours.
Comparative nutrition of animal species contrasting digestive, metabolic and physiological functions involved in processing and using nutrients.
Prerequisite: ANSC 303 or 318 or equivalent.
Cross Listing: ANSC 601/NUTR 601.

NUTR 602/ANSC 602 Energetics of Metabolism and Growth
Credits 3.3 Lecture Hours.
Current fundamental concepts in protein and energy metabolism relating to nutrients required for maintenance, growth and development of animals.
Prerequisite: BICH 410 or approval of instructor.
Cross Listing: ANSC 602/NUTR 602.

NUTR 610/FSTC 610 Nutritional Pharmacometrics of Food Compounds
Credits 3.3 Lecture Hours.
Introduction into nutritional pharmacokinetics and pharmacodynamics of food compounds; specific examples of toxicological and pharmacological effects of food compounds.
Prerequisite: NUTR 202 or NUTR 203 or FSTC 201 or CHEM 227 or CHEM 222 or approval of instructor.
Cross Listing: FSTC 610/NUTR 610.

NUTR 613/ANSC 613 Protein Metabolism
Credits 3.3 Lecture Hours.
Basic concepts and recent advances in protein metabolism in animals with emphasis on physiological and nutritional significances; discussion of protein digestion; absorption of peptides; absorption, synthesis and degradation of amino acids; hormonal and nutritional regulation of protein turnover; determination of protein quality and requirements.
Prerequisite: BICH 411 or BICH 601 or equivalent or approval of instructor.
Cross Listing: ANSC 613/NUTR 613.

NUTR 614 Fermentation and Gastrointestinal Microbiology
Credits 3.3 Lecture Hours.
Fermentation and gastrointestinal ecosystems in terms of microorganisms present, their activities and requirements and their interactions in a dynamic system.
Prerequisite: Beginning microbiology and/or biochemistry or approval of instructor.
Cross Listing: POSC 614 and VTMI 614.

NUTR 617/ANSC 617 Experimental Techniques in Meat Science
Credits 3.1 Lecture Hour. 6 Lab Hours.
Methods used in separating and identifying muscle proteins and fats; techniques for determining postmortem changes of muscle tissue as a result of antemortem treatments.
Prerequisite: ANSC 607/FSTC 607; BICH 411.
Cross Listing: ANSC 617/NUTR 617.

NUTR 618/ANSC 618 Lipids and Lipid Metabolism
Credits 3.3 Lecture Hours.
Chemical nature of various classes of lipids and lipid-derived hormones; absorption and metabolism of fatty-acids and lipids; regulation of lipid biosynthesis and obesity; relationship between lipid metabolism and cholesterol homeostasis; lipids as hormones.
Prerequisite: BICH 410 or approval of instructor.
Cross Listing: ANSC 618/NUTR 618.

NUTR 630 Nutrition in Disease
Credits 3.3 Lecture Hours.
Human nutritional requirements in health and disease, emphasizing effects of disease states on intake, digestion, absorption, metabolism and excretion of nutrients; relationship of diet to development of certain diseases.
Prerequisites: NUTR 202; BICH 410 or equivalent.

NUTR 640/FSTC 640 Therapeutic Microbiology I
Credits 3.3 Lecture Hours.
Alimentary (gastrointestinal) microbiology including: (i) the "normal" intestinal microbiota; (ii) probiotic and prebiotic nutritional supplements; (iii) recombinant pharmabiotics; (iv) gut-associated lymphoid tissue and mucosal immunity; (v) foodborne gastrointestinal pathogens; and (vi) fermented products as functional foods.
Prerequisite: Undergraduate survey course in microbiology (or instructor's consent).
Cross Listing: FSTC 640/NUTR 640.

NUTR 641 Nutritional Biochemistry I
Credits 3.3 Lecture Hours.
Integration of the intermediary metabolism of glucose, amino acids and lipids with nutrition, physiology and pathophysiology in animals; regulation of metabolic pathways in cells, tissues and the whole body under normal and disease conditions; functions of vitamins and minerals in nutrient metabolism and health.
Prerequisite: BICH 411 or BICH 604. Offered during the fall semester.

NUTR 642 Nutritional Biochemistry II
Credits 3.3 Lecture Hours.
Mechanisms through which specific nutrients modulate intracellular signal transduction and gene expression; molecular mechanisms by which nutrition modulates disease states such as atherosclerosis, cancer and arthritis.
Prerequisites: BICH 411; BICH 431/GENE 431 or equivalent.
NUTR 645/POSC 645 Nutrition and Metabolism of Vitamins
Credits 3. 3 Lecture Hours.
Chemistry and metabolism of the fat soluble and water soluble vitamins and their roles in animals; integrates cellular biochemistry and metabolism of the vitamins in vertebrate animal.
Prerequisites: POSC 411 or ANSC 303/NUTR 303; BICH 410 or BICH 603.
Cross Listing: POSC 645/NUTR 645.

NUTR 646 Fundamentals of Space Life Sciences
Credits 3. 3 Lecture Hours.
Integrates nutrition, physiology, and radiation biology to define major biological problems in long duration space flight; provide an overview of the problems of bone loss, muscle wasting, and radiation-enhanced carcinogenesis along with potential countermeasures; focus on nutritional interventions and exercise protocols.
Cross Listing: NUEN 646 and KINE 646.

NUTR 647/WFSC 647 Nutritional Biochemistry of Fishes
Credits 3. 3 Lecture Hours.
Principles of nutritional biochemistry including nutrient metabolism and biochemical energetics with special emphasis on finfish and shell fish.
Prerequisite: BICH 410 or equivalent.
Cross Listing: WFSC 647/NUTR 647.

NUTR 650/POSC 650 Nutrition and Metabolism of Minerals
Credits 3. 3 Lecture Hours.
Nutritional significance of minerals in animal metabolism; chemical, biochemical and physiological role of minerals and homeostatic control in animal metabolism.
Prerequisites: POSC 411 or ANSC 303/NUTR 303; BICH 410 or BICH 603.
Cross Listing: POSC 650/NUTR 650.

NUTR 659/FSTC 669 Experimental Nutrition & Food Science Laboratory
Credits 4. 1 Lecture Hour. 6 Lab Hours.
Experimental Nutrition & Food Science Laboratory. Nutritional intervention in animal models of metabolic or emotional disorders; genetic modifications or pathogens in food products; analyses of gene expression and behavior.
Prerequisite: BICH 432/GENE 432/GENE 432/BICH 432 recommended; graduate classification in nutrition or related major.
Cross Listing: FSTC 669/NUTR 669.

NUTR 671/FSTC 671 Critical Evaluation of Nutrition and Food Science Literature: Evidence Based Reviews
Credits 3. 3 Lecture Hours.
Evaluation of scientific literature, research methods within the literature, and the quality of scientific studies to produce an evidence-based review in areas specific to nutrition and food science.
Prerequisites: NUTR 202 or NUTR 203 and STAT 302; knowledge of nutrition, statistics, and technical writing helpful.
Cross Listing: FSTC 671/NUTR 671.

NUTR 681 Seminar
Credit 1. 1 Lecture Hour.
Current developments in the field of nutrition; review of current literature and oral presentation of scientific papers on selected nutrition topics.
Prerequisite: Graduate classification.

NUTR 684 Professional Internship
Credits 1 to 16. 1 to 16 Other Hours.
Experience in application of formal training to applied nutrition under supervision of nutritionists, dietitians and faculty member. Student will investigate matter of mutual interest and report results in a professional paper approved by the graduate committee.
Prerequisite: Graduate classification.

NUTR 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Nutrition problems and procedures; problems assigned according to experience, interest and need of individual student.
Prerequisite: Approval of instructor prior to registration.

NUTR 689 Special Topics in...
Credits 1 to 4. 0 to 4 Lecture Hours. 0 to 4 Lab Hours.
Special topics in an identified area of nutrition. May be repeated for credit.
Prerequisites: Graduate classification and approval of instructor.

NUTR 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Investigations leading to thesis or dissertation in various areas of nutrition.
Prerequisite: Graduate classification.

OBYG - Obstetrics & Gynecology

OBYG 800 Obstetrics and Gynecology Clerkship
Credits 7.5. 7.5 Other Hours.
To provide an introductory experience in the practice of obstetrics and gynecology.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

OBYG 801 Obstetrics and Gynecology Clerkship
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This elective will strive to: Introduce students to the ambulatory setting of Obstetrics and Gynecology in a private practice setting. Reinforce and review the student's basic fund of knowledge in Obstetrics and Gynecology. Introduce the student to gynecological surgery by observation and participating as a first assistant in this practice. Familiarize the student with preventative medicine in Obstetrics and Gynecology.

OBYG 802 Obstetrics and Gynecology Clerkship
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This course offers a general obstetrics-gynecology experience in the context of a private practice. Working with one or more faculty, the student will see peri-partum patients, well-woman exams, peri-operative patients in a clinic setting. Hospital rounds and assisting in patient deliveries, including C/Sections and Gyn Surgery, are expected.

OBYG 803 Gynecologic Oncology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The elective in Gynecologic Oncology will expose fourth year medical students to the comprehensive treatment of patients with gynecologic malignancies in the operating room, on the hospital wards, and in the office settings.

OBYG 804 Maternal-Fetal Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This course will introduce the student to high-risk pregnancy setting. The student's educational experience will be furthered in the clinical care of patients with high risk pregnancies. The course will serve to improve the clinical acumen of students in managing the high-risk obstetrical patient, and introduce the student to advanced technologies in the monitoring of the high-risk pregnancy.
OBGY 805 Reproductive Endocrinology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
This course will allow the student to develop a knowledge of and competency in the care of the patient with endocrine and infertility problems. This will include a knowledge of basic endocrine physiology including: the CNS and hypothalamic pituitary system, biosynthesis, metabolism, physiology and pharmacology of steroid hormones, gonadotropins, releasing factors, and other substances that regulate the reproductive system, endocrine dynamics in pregnancy and the menstrual cycle, thyroid-adrenal physiology and general metabolism relating to reproduction, physiology of conception and the reproductive tract related to fertility and reproduction, as well as general endocrinologic principles.

OBGY 806 Obstetrics and Gynecology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The faculty will strive to introduce students to the ambulatory setting of Obstetrics and Gynecology in a private practice setting; reinforce and review the student’s basic fund of knowledge in Obstetrics and Gynecology; introduce the student to gynecological surgery by observation and participating as a first assistant in this practice; and familiarize the student with preventative medicine in Obstetrics and Gynecology.

OBGY 807 Clinical Research - OB/GYN
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The faculty will strive to assist the student with identifying an appropriate translational research project in obstetrics, gynecology, or reproductive biology that realistically can be completed within the available time; provide direction in organizing the essential elements of research to assure successful completion of the project; introduce the student to principles of study design, data collection, data management and analysis, and manuscript preparation; provide insight into specific issues related to translational research in Obstetrics and Gynecology, including potential sources of bias and ethical considerations important to human research; and provide an opportunity to learn the ropes of professional proposal and manuscript preparation, review, and submission for publication.

OBGY 808 Maternal - Fetal Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The faculty will strive to introduce student to the management of high-risk pregnancies; further the educational experience in the clinical care of patients with complex pregnancies; improve the clinical acumen of students in managing perinatal complications; introduce student to technology/monitoring high-risk pregnancy.

OBGY 809 Obstetrics and Gynecology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
The faculty will strive to further the educational experience in the clinical care of patients with obstetric and gynecologic disorders and improve the clinical acumen of students in recognizing and managing the problems of these patients; encourage the student to enhance his/her educational base and to make decisions about the care of patients with OB/GYN problems; provide student with a broad experience in OB/GYN for continued evaluation of career decisions; and provide students with exposure to the various OB/GYN education activities of Scott and White and affiliated programs.

OBGY 810 Reproductive Endocrinology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
Knowledge of and competence to care for endocrine and infertility problems; a knowledge of basic endocrine physiology including; the CNS and hypothalamic pituitary system, biosynthesis, metabolism, physiology and pharmacology of steroid hormones, gonadotropins, releasing factors, and other substances that regulate the reproductive system; endocrine dynamics in pregnancy and the menstrual cycle; thyroid adrenal physiology and general metabolism relating to reproduction; physiology of conception and the reproductive tract related to fertility and reproduction; and general endocrinologic principles.

OBGY 985 Off Campus Student Initiated Elective
Credits 1.25 to 12. 1.25 to 12 Other Hours.
Formally described elective courses at another medical school or off-campus opportunities that are not formally approved electives. The College of Medicine requires that each of these electives be approved prior to the rotation.

OBGY 999 On Campus Student Initiated Elective
Credits 1.25 to 12. 1.25 to 12 Other Hours.
This is an on-campus opportunity in the department of Obstetrics and Gynecology in the College of Medicine that is not defined herein. Experiences may include clinical research, basic science research, library research, other basic science activities, and other clinical activities. Students interested in developing an elective of this type should contact the head of the appropriate department for additional details.

OCEN - Ocean Engineering

OCEN 630 Dynamics of Ocean Vehicles
Credits 3. 3 Lecture Hours.
Dynamics and stability of motion of immersed and floating structures and ocean vehicles; maneuverability and control; behavior of ocean vehicles and stationary platforms in waves. Design considerations leading to motion reduction; applications to surface vessels, submersibles and drilling rigs.
Prerequisites: CVEN 311, MEEN 459 or equivalent, or approval of instructor.

OCEN 671 Ocean Wave Mechanics
Credits 3. 3 Lecture Hours.
Wave theory and applications to engineering problems; linear and non-linear theories of regular gravity waves; wave properties and transformation in shoaling water; spectral analysis of irregular waves; forecasting, hindcasting and theoretical spectra.
Prerequisite: Prerequisite: CVEN 311 or equivalent.

OCEN 672 Coastal Engineering
Credits 3. 3 Lecture Hours.
effects of waves on coastal structures; design of seawalls breakwaters, jetties, harbors, ship channels and pipelines; intentional and accidental discharge of pollutants; diffusion and spreading; oil spill containment and collection.
Prerequisite: OCEN 671.

OCEN 673 Nonlinear Hydrodynamic Problems in Ocean Engineering
Credits 3. 3 Lecture Hours.
Nonlinear hydrodynamic problems involved with the complex offshore structures in high sea environment; nonlinear waves application of Volterra model to weakly nonlinear systems; generation of nonlinear model waves; nonlinear hydrodynamic interaction between waves and structure; dynamic analysis of nonlinear response of integrated offshore structures.
Prerequisites: OCEN 671 and OCEN 678.
OCEN 674 Ports and Harbors
Credits 3. 3 Lecture Hours.
Basic port planning including site selection, environmental factors and economic conditions; design of wharves, quays, jetties, breakwaters, terminals, navigational channels and fenders; harbor sedimentation and maintenance dredging; design of fishing, small craft and recreation boat harbors.
Prerequisite: Approval of instructor.

OCEN 675 Nonlinear Wave Dynamics
Credits 3. 3 Lecture Hours.
Nonlinear wave-wave interactions in deep ocean waves significantly affect wave properties and long-term wave evolution. Strong and weak wave interactions and their respective effects on waves are studied, using various perturbation methods. Applications are shown through using Hybrid Wave Models to analyze wave measurements and predict wave loads on structures.
Prerequisite: OCEN 671.

OCEN 676 Dynamics of Offshore Structures
Credits 3. 3 Lecture Hours.
Review of concepts of linear structural dynamic analysis for time and frequency domain simulations, functional design of off-shore platforms, pipelines, floating structures and moorings; environmental loading problems; hydrodynamic phenomena including wind and current interaction, vortex shedding and wave forces; structure-fluid interaction models.
Prerequisites: OCEN 671 or approval of the instructor.

OCEN 677 Environmental Fluid Mechanics
Credits 3. 3 Lecture Hours.
Introduction to fluid and mass transport in naturally occurring flows; topics include molecular and turbulent diffusion; dispersion; river, estuary, and ocean mixing; dissolution boundary layers; tidal mixing; offshore wastewater outfalls; introduction to environmental quality numerical modeling.
Prerequisite: CVEN 311 or equivalent.

OCEN 678 Fluid Dynamics for Ocean and Environmental Engineering
Credits 3. 3 Lecture Hours.
General conservation laws; Navier-Stokes equations; steady and unsteady Bernoulli's equation; potential flow theory and basics of panel methods; laminar and turbulent boundary layer; dispersion and diffusion processes in laminar and turbulent flow; flow past a body of any shape.
Prerequisite: Prerequisite: CVEN 311 or equivalent.

OCEN 681 Seminar
Credit 1. 2 Lab Hours.
Reports and discussion of current research and selected published technical articles.

OCEN 682 Coastal Sediment Processes
Credits 3. 3 Lecture Hours.
Sediment properties and size distribution, fluvial sediment transport equations, movement of material by the sea, review of pertinent wave theories, littoral drift, inlet stability, coastal protection structures, similarity in sediment transport, movable bed models, sediment tracing, Aeolian sand transport, case studies.
Prerequisite: OCEN 671 or approval of instructor.

OCEN 683 Estuary Hydrodynamics
Credits 3. 3 Lecture Hours.
Development of applicable equations for tidal dynamics applied to real estuaries; technology for determination of mean velocities, circulation patterns, water depths, turbulent dispersion patterns, etc. for solution of environmental problems in estuaries; physical and mathematical models.
Prerequisites: OCEN 678 or approval of instructor.

OCEN 685 Directed Studies
Credits 1 to 12. 1 to 12 Other Hours.
Special topics not within scope of thesis research and not covered by other formal courses.

OCEN 688 Marine Dredging
Credits 3. 3 Lecture Hours.
Dredge pump selection; pump and system characteristics; cavitation; types of dredges; continental shelf and deep-ocean dredging; head loss in horizontal and vertical pipes for two and three-phase flow; design of disposal methods for dredged material; environmental effects of dredging.
Prerequisite: Approval of instructor.

OCEN 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of ocean engineering. May be repeated for credit.

OCEN 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation.

OCNG - Oceanography

OCNG 600 Survey of Oceanography
Credits 3. 3 Lecture Hours.
General survey of the scientific framework of oceanographic study; applications of ocean research to social and economic problems; interrelations between the ocean disciplines and other fields of study.
Prerequisite: Approval of instructor.

OCNG 603 Communicating Ocean Science
Credits 3. 3 Lecture Hours.
Instruction and practice with presenting scientific information on the ocean to a variety of audiences under different time constraints; critical components for any presentation; knowing your audience; designing effective visual aids and graphics; leading your audience through complex concepts; and communication with non-scientists.

OCNG 604 Ocean Observing Systems
Credits 3. 3 Other Hours.
Investigate the rationale behind ocean observing systems; familiarize with the relevant social, scientific design, technology, and policy issues associated with observing systems.

OCNG 605 Oceanography Cruise
Credits 2. 2 Other Hours.
Specialized experience in research methods and analysis in oceanography via preparation for and participation in a research cruise of at least two weeks duration under the supervision of a Texas A&M oceanography faculty member. May be taken up to two times for MS candidates and four times for PhD candidates.
Prerequisite: Approval of instructor.
OCNG 608 Physical Oceanography
Credits 3. 3 Lecture Hours.
Observations, instruments; physical properties of seawater; property distributions; characteristics of water masses; heat budget; kinematics; gravity, pressure, hydrostatics, stability; horizontal flow; Coriolis force, geostrophy; friction, wind drift; general circulation; wave motions; tides.
Prerequisite: MATH 172 or equivalent; PHYS 219.

OCNG 609 Dynamical Oceanography
Credits 3. 3 Lecture Hours.
Systematic treatment of the kinematics, dynamics and thermodynamics of the ocean; integral conservation relations; solenoidal versus conservative vector fields; potential vorticity; geostrophic adjustment; inertial and buoyancy modes; Bernoulli-Montgomery potential; energetics in a rotating system; available potential energy; natural temporal and spatial scales.
Prerequisites: OCNG 608 or ATMO 435; MATH 601.

OCNG 610 Mathematical Modeling of Marine Ecosystems
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Theory and technique of model development for marine ecosystems; mathematical representation of interactions among nutrients, phytoplankton, zooplankton, fish and the physical environment; scrutiny of biological concepts and mathematical structure of existing models; laboratory segment to focus on computational techniques applicable to classroom problems.
Prerequisites: OCNG 608 and OCNG 620, calculus or approval of instructor.

OCNG 611 Global Scale Oceanography
Credits 3. 3 Lecture Hours.
A balanced description of the ocean's large-scale circulation and water mass structure based on the interpretation of modern observations, with emphasis on the ocean's role in global climate, and physical-chemical property fluxes in basin to global scale budgets.

OCNG 612 Elements of Ocean Wave Theory
Credits 3. 3 Lecture Hours.
Theories of simple harmonic surface gravity, capillary and internal waves. Wave propagation, dispersion and energy; modifications due to rotation, variable depth and finite amplitude.
Prerequisites: OCNG 608 and MATH 601 or approval of instructor.

OCNG 615 Numerical Modeling of Ocean Circulation I
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Mathematical theory and numerical technique of model development for ocean circulation; concepts of numerical consistency and stability; Lax equivalence theorem; commonly used finite difference schemes in ocean modeling; finite element and spectral methods as alternative means of discretisation; positivity and CFT method; relaxation and direct methods for solving elliptic equations.
Prerequisite: OCNG 608.

OCNG 616 Numerical Modeling of Ocean Circulation II
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Quasigeostrophic ocean circulation models; Arakawa's energy and enstrophy conserving scheme; spectral barotropic vorticity model on sphere; shallow water primitive equation models; geostrophic adjustment on different numerical grids; boundary conditions in numerical models; introduction to ocean general circulation models; mixed models and sub-gridscale parameterization; oceanic data assimilation.
Prerequisite: OCNG 615.

OCNG 617 Theories of Ocean Circulation
Credits 3. 3 Lecture Hours.
Theories of wind-driven circulation, Sverdrup solution, frictional and inertial boundary regimes; instabilities, meanders and mesoscale features; role of stratification, topography and time dependence; Thermohaline circulation.
Prerequisite: Graduate classification.

OCNG 620 Biological Oceanography
Credits 3. 3 Lecture Hours.
Critical analysis of contribution of biological science to our understanding of sea; discernible interrelationships between organisms and physicochemical parameters.
Prerequisites: General prerequisites for oceanography.

OCNG 625 Current Topics in Biological Oceanography
Credit 1. 1 Lecture Hour.
Areas of current research; plankton processes; microbial food web; benthic communities; fisheries; global change. May be taken up to three times.
Prerequisite: OCNG 620 or approval of instructor.

OCNG 627 Ecology of the Continental Shelf
Credits 3. 3 Lecture Hours.
Environments, populations and communities of the continental shelf. Interactions of the shelf with the estuaries and the deep sea; man's impact on the shelf ecosystems.
Prerequisite: Approval of instructor.

OCNG 630 Geological Oceanography
Credits 3. 3 Lecture Hours.
Survey of marine geology, structure and composition of ocean basins and continental margins, properties of marine sediments.
Prerequisites: General prerequisites for oceanography.

OCNG 632 Sea-Level Change
Credits 3. 3 Lecture Hours.
Modern sea level: topography, measurement, meteorologic and oceanographic contributions, periodic and non-periodic changes; long-term changes: determination, Cenozoic history, Quaternary glacial-interglacial fluctuations; changes during the past century and decade; observations, natural and anthropogenic influences; estimates of future changes and societal implications.
Prerequisite: Graduate classification; approval of instructor.

OCNG 640 Chemical Oceanography
Credits 3. 3 Lecture Hours.
Prerequisites: General prerequisites for oceanography.

OCNG 641 Inorganic Aquatic Geochemistry
Credits 3. 3 Lecture Hours.
Chemical composition and properties of waters in the near Earth surface environment and their interactions with sedimentary minerals; major topics: thermochemical properties of natural waters, equilibrium and kinetic controlling ion speciation; geochemical processes at mineral surfaces; kinetics of mineral-water interactions; applications to modeling early diagenesis.
Prerequisite: Approval of instructor.
OCNG 644 Isotope Geochemistry
Credits 3. 3 Lecture Hours.
Stable and radioactive isotope variations in natural materials; applications
to geochronometric, geothermometric and paleoclimatologic studies of the
marine environment.
Prerequisite: Approval of instructor.

OCNG 645 Marine Organic Geochemistry
Credits 3. 3 Lecture Hours.
Origins, fates and distribution of organic compounds in contemporary
marine environments and in recent and ancient sediments. Specific
analytical techniques.
Prerequisite: Approval of instructor.

OCNG 646 Dynamics of Colloids in the Environment
Credits 3. 3 Lecture Hours.
Equilibrium and dynamic aspects of the physics and chemistry of
such colloidal particles and macromolecules and the implications for
environmental systems, relevant for organic carbon flux and cycling,
fate and transport of pollutants, bioavailability of pollutants, or mobility of
pollutants in groundwater.
Prerequisites: Physical Chemistry, Thermodynamics, Aquatic and
Organic Chemistry.

OCNG 649 Estuarine Biogeochemistry
Credits 3. 3 Lecture Hours.
Geomorphology; physical oceanography and sedimentation dynamics of
estuaries; chemistry of nutrients; trace metals and organic matter;
major controls in estuarine productivity and interactions among estuaries,
marshes and coastal waters.
Prerequisites: OCNG 620 and OCNG 640.

OCNG 650 Aquatic Microbial Ecology
Credits 3. 3 Lecture Hours.
Microbes in natural environments, including both water and sediment
habitats in marine, fresh and ground water systems; process studies of
microbial foodwebs and biogeochemical cycling; current methods and
research directions.
Prerequisites: OCNG 620 and WFSC 414 or approval of instructor.

OCNG 651 Meteorological Oceanography
Credits 3. 3 Lecture Hours.
Interaction between the ocean and atmosphere; major features of the two
systems; heat budget, teleconnections between ocean and atmosphere, El
Niño and related phenomena.
Prerequisite: OCNG 608.

OCNG 652 Sedimentary Biogeochemistry
Credits 3. 3 Lecture Hours.
An interdisciplinary approach to understanding complex processes that
occur near the marine sediment-water interface in marine and estuarine
environments. Composition of marine sediments, pore water chemistry,
role of organisms in chemical transformations and pelagic-benthic
coupling. Carbon, nitrogen and sulfur cycling in sediments. Modeling
biogeochemical processes at the sediment-water interface and during
early burial diagenesis.
Prerequisites: OCNG 620 and OCNG 640 or approval of instructor.

OCNG 654 Plankton Ecology
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Elective course, overview of phytoplankton and zooplankton; taxonomy;
physiology; ecology; sampling design; current methods of investigation.
Prerequisite: OCNG 620.

OCNG 657 Data Methods and Graphical Representation in
Oceanography
Credits 3. 3 Lecture Hours.
Provide the basic tools and techniques to process, analyze, and
visualize oceanographic data sets; multi-disciplinary approach; real-world
applications to physical, biological, chemical and geological oceanographic
data; basic instruction in the MATLAB programming language.
Prerequisite: Knowledge of vector calculus and basic statistics.

OCNG 658 Ocean Computational Analysis Lab
Credit 1. 4 Lab Hours.
Laboratory course designed to train in computational techniques using
modern (Python) and classic (FORTRAN) programming languages and
scientific software packages (Generic Mapping Tools and MATLAB); labs
focus on real oceanographic applications.
Prerequisites: Encourage concurrent with OCNG 657.

OCNG 659 Ocean Observing Applications
Credits 3. 3 Lecture Hours.
Conceptualization, design, and construction of oceanographic observing
systems; practical experience with the Texas Automated Buoy System
including system design, instrumentation setup and calibration,
telecommunication systems, and data management.
Prerequisites: Master or doctoral classification in OCNG or related field
by approval of instructor.

OCNG 662 Coastal and Marine Sedimentary Processes
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Sedimentary processes (erosion, transport and deposition) from the
coastline to the deep sea; development of estuaries, deltas, continental
shelves, submarine canyons, fans; behavior of fluids and particles in
boundary layers. Lab: recirculating flume, field and lab instrumentation.
Prerequisite: Approval of instructor.

OCNG 666 Principles of Geodynamics
Credits 4. 4 Lecture Hours.
Geological and geophysical methods and phenomena pertinent to
geodynamics; plate tectonics; seismicity and seismology; magnetics;
gravity; heat flow; igneous, metamorphic and sedimentary petrology;
paleontology; and rock mechanics.
Prerequisite: Approval of instructor.

OCNG 668 Geology and Geophysics of Small Ocean Basins
Credits 3. 3 Lecture Hours.
Geology and geophysics of the Gulf of Mexico, Caribbean, Mediterranean,
Arctic Ocean, Red Sea and Philippine Sea; the regional geology, sediment
distribution, general structure and origin of each basin.
Prerequisite: OCNG 630.

OCNG 670 Deep Sea Sediments
Credits 3. 3 Lecture Hours. 0 Lab Hours.
Formation process, core description, physical properties, lithostratigraphy,
seismic stratigraphy and paleoceanographic significance of deep marine
sediments.

OCNG 673 High-Resolution Marine Geophysics
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Introduction to the geophysical nature of the seafloor and marine
substratum to 1.5 seconds two-way travel time; generation, use and
interpretation of reflection and side-scan sonar records and magnetic
anomalies of various marine environments and seafloor features.
Prerequisite: Approval of instructor.
OCNG 674 Paleoceanography
Credits 3. 3 Lecture Hours.
History of oceans through geologic time; marine paleontological, geochemical, sedimentological and geophysical evidence; inferred changes in seawater properties, ocean circulation and sea level; relation to climate, tectonic processes, atmospheric chemistry and evolution of life.
Prerequisite: OCNG 630 or approval of instructor.

OCNG 677/ATMO 677 Geophysical Data Assimilation
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Modern data assimilation methods applied to oceanic and atmospheric circulation models, as well as in other simple models; methods to interpolate one-, two- and three-dimensional randomly spaced data to regular grids for use in numerical models of atmospheric and oceanic circulation.
Prerequisites: OCNG 657, ATMO 632, STAT 601.
Cross Listing: ATMO 677/OCNG 677.

OCNG 678 Coastal Dynamics
Credits 3. 3 Lecture Hours.
Surveys dynamical processes that determine estuarine and continental shelf circulation; geophysical scale flow where Earth's rotation and buoyancy effects are important; analytical and numerical methods used to isolate and study these processes.
Prerequisite: OCNG 609.

OCNG 679 Proxy Reconstruction of Late Cenozoic Climate: Calibrations and Applications
Credits 3. 3 Lecture Hours.
Paleo-proxy calibration and application in reconstructing Late Cenozoic climate history; issues related to geochemical and sedimentological proxies used in the field of paleoclimatology/ paleoceanography.
Prerequisite: Graduate classification.

OCNG 681 Seminar
Credit 1. 1 Lecture Hour.
Presented by faculty, students, staff and visiting scientists; based on recent scientific research.
Cross Listing: MARB 681 and MARS 681.

OCNG 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
A directed internship in a professional setting to provide on-the-job training in ocean observing systems skills appropriate to the student's professional objectives.
Prerequisites: Approval of student's committee chair; OCNG 684, OCNG 657.

OCNG 685 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
Special topics to suit small group requirements. Problems not within thesis research and not covered by any other course in established curriculum.
Prerequisites: General prerequisites for oceanography.

OCNG 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in an identified area of oceanography. May be repeated for credit.
Prerequisite: Approval of instructor.

OCNG 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
For thesis or dissertation.

OMFP - Oral & Maxillofac Path

OMFP 5113 Current Issues in Oral and Maxillofacial Pathology
Credits 0 to 10. 0 to 10 Lecture Hours.
Seminar discussion of current and past literature in oral and maxillofacial pathology.

OMFP 5303 General Pathology
Credits 0. 0 Lecture Hours.
Introduction to the basic principles of pathology as applied to the entire body, followed by a comprehensive review of diseases of the various specific organ systems, including the pathology of infectious diseases.

OMFP 5V00 Oral and Maxillofacial Pathology Seminar
Credits 0 to 10. 0 to 10 Lecture Hours.
Seminar format on surgical anatomic pathology. The student interacts daily with faculty, utilizing multiheaded teaching microscopes, to discuss all pathology cases accessioned daily. These are supplemented with more diagnostically challenging cases. All aspects of the diseases and conditions are discussed as well as current and historical literature.

OMFP 5V01 Anatomic Pathology and Autopsy - Baylor University Medical Center
Credits 0 to 10. 0 to 10 Other Hours.
Baylor University Medical Center rotation in Department of Pathology. Anatomic pathology, clinical pathology, autopsy service, cytology, selected electives.

OMFP 5V05 Oral and Maxillofacial Pathology Service
Credits 0. 0 Lab Hours. 0 Other Hours.
Independent study in surgical anatomic oral and maxillofacial pathology. Gross tissue preparation, microscopic analysis of routine surgical head and neck biopsies, special study sets and microscopic description.

OMFP 5V13 Current Issues in Oral and Maxillofacial Pathology
Credit 1. 1 Lecture Hour.
Seminar discussion of current and past literature in oral and maxillofacial pathology.

OMFP 5V21 Advanced Oral Pathology
Credits 0 to 10. 0 to 10 Other Hours.
Disease of the head and neck; developmental malformations, oral signs of systemic diseases, salivary gland disorders; neoplasms of odontogenic and nonodontogenic origin. Three semester hours credit plus 1 additional hour for optional laboratory.

OMFP 5V22 Advanced Oral Pathology Laboratory
Credits 0 to 10. 0 to 10 Lab Hours.
Advances Oral Pathology Laboratory. Elective laboratory that complements OMFP 5V21. It is designed for post-graduate students that might need to view and interpret biopsy results. Histologic correlation for the clinical pathologic lesions discussed in OMFP 5V21 is presented. Students learn basic interpretation skills of histopathologic sections as viewed under the microscope.

OMFR - Oral & Maxillofac Radio

OMFR 5010 Radiation Physics and Biology for Radiology Residents
Credits 0. 0 Lecture Hours.
Non-credit. This course will provide instruction in radiation physics, advanced imaging technology, radiobiology, and radiation safety. The student/resident will develop the skills necessary to understand the scientific basis of imaging systems and successfully challenge the certification examination of the American Board of Oral and Maxillofacial Radiology. Must be taken on a satisfactory/unsatisfactory basis.
OMFR 5020 Case Conference  
Credits 0. 0 Other Hours.  
Non-credit. Case presentations of complicated clinical cases encountered while on clinical radiology services which require advanced skills by students/residents and graduate faculty in a prescribed format. Participants will review the literature, present selected imaging studies, and discuss salient points relative to the diagnosis and management of specific diagnostic entities. Must be taken on a satisfactory/unsatisfactory basis.

OMFR 5200 Advanced Radiology Interpretation in Oral and Maxillofacial Radiology  
Credits 2. 2 Lecture Hours.  
Advanced Radiology Interpretation in Oral and Maxillofacial Radiology. Advance interpretation of oral and maxillofacial radiology imaging studies. Topics include recognition of normal anatomy and its variants, diseases, conditions, abnormalities as they appear on imaging studies of different modalities. Skills in differential diagnosis based on interpretive findings will be developed along with assessing the clinical significant of findings.

OMFR 5210 Advanced Imaging Technology in Oral and Maxillofacial Radiology  
Credits 1 to 2. 1 to 2 Lab Hours.  
Topics include acquisition techniques using ionizing radiation, nonionizing radiation, and other imaging modalities. Specific discussions will include plain radiography image projects, panoramic radiology, cone beam computed tomography, multi-detector computed tomography, magnetic resonance imaging, nuclear medicine/molecular imaging, and ultrasonography, as well as imaging displays. Must be taken on a satisfactory/unsatisfactory basis.

OMFR 5250 Advanced Oral and Maxillofacial Radiology  
Credit 1. 1 Lecture Hour.  
This course is intended to provide the student with an advanced review of medico-legal aspects of radiology, advanced interpretation principles, comparison and selection of digital imaging systems, advanced imaging techniques, and radiation risk. Must be taken on a satisfactory/unsatisfactory basis.

OMFR 5300 Clinical Teaching  
Credits 0. 0 Other Hours.  
Non-credit. Students/residents give clinical instruction in contact with second-, third- and fourth-year dental students. Four hours per week per semester of clinical instruction, including technical/acquisition, interpretation of imaging studies, and clinical significance of findings. Must be taken on a satisfactory/unsatisfactory basis.

OMFR 5V01 Literature Review Journal Club  
Credits 0.5-1. 0.5-1 Other Hours.  
Detailed review of significant literature on all subjects related to oral and maxillofacial radiology. Critical evaluation of the scientific literature will be stressed. Students are assigned recent or classical articles from selected journals for critical review for scientific merit and relevance. Must be taken on a satisfactory/unsatisfactory basis.

OMFR 5V06 Clinical Oral and Maxillofacial Radiology Service  
Credits 2 to 6. 2 to 6 Other Hours.  
This course will prepare the student/resident for the clinical practice of oral and maxillofacial radiology. The student/resident will develop the skills necessary to order, acquired, and interpret diagnostic imaging studies. This will include the formulation and dictation of interpretation reports and interactions with other health care professionals and patients. Must be taken on a satisfactory/unsatisfactory basis.

OMFR 5V20 Medical Clinical Radiology Service  
Credits 1 to 4. 1 to 4 Other Hours.  
This clinical course will familiarize the student/resident with the imaging modalities used in contemporary medical radiology and their application to diseases of the head and neck. The course includes specialty level modality selection, study acquisition, and interpretation. Must be taken on a satisfactory/unsatisfactory basis.

OMFS - Oral & Maxillofac Surg  
OMFS 5000 Oral and Maxillofacial Surgery Rotations  
Credit 1. 1 Other Hour.  
Surgical rotations in Oral and Maxillofacial Surgery. Can be repeated each academic term.

OMFS 5218 Conscious Sedation  
Credit 1. 1 Other Hour.  
Pain and anxiety control methodologies; pharmacology of sedative-hypnotic, anxiolytic drugs and nitrous oxide; routes of administration.

OMFS 5221 Internal Medicine  
Credits 1 to 2. 1 to 2 Other Hours.  
Oral manifestations of systemic disease and influence of systemic disease requiring modification of treatment planning and critical care.

OMFS 5233 Physical Diagnosis  
Credit 1. 1 Other Hour.  
Patient evaluation and examination, history-taking medical consultation and physical diagnosis and treatment modification in dental patients.

ORDI - Oral Diagnosis  
ORDI 5250 Oral Radiology  
Credits 0.5-1. 1 Other Hour.  
Generation of X-rays; operation of X-ray unit; factors in the production of radiographic images, intraoral, extraoral and specialized radiographic techniques; basic concepts of radiation physics, biology and protection.

ORTH - Orthodontics  
ORTH 5031 Orthodontic-Periodontic Seminar  
Credits 0.5. 0.5 Other Hours.  
An interdisciplinary course directed at topics relevant to orthodontics and periodontics. The effect of orthodontics on the supporting tissues, oral hygiene and periodontal assessment, and interdisciplinary approaches to treatment are topics of discussion.

ORTH 5042 TMD Clinic  
Credits 0. 0 Other Hours.  
A series of lectures, guest speakers, demonstrations, laboratory exercises and patient care activities are conducted to enable the student to diagnosis, plan treatment and treat patients with occlusal discrepancies, compromised muscle function and TMJ abnormalities.

ORTH 5050 Craniofacial Anomalies Clinic  
Credits 0. 0 Other Hours.  
During the second and third years, students rotate through the local children's hospital for the purpose of participating in the treatment of patients with a wide array of syndromes and craniofacial defects. From newborn to adult, a large number of patients are treated. Orthodontics is integrated with plastic surgery in this clinic.
ORTH 5103 Biomechanics I  
Credits 0.5-1. 0.5-1 Lecture Hours.  
Mechanical principles and biological factors affecting tooth movement, introduction to forces, statics, and dynamics, scalars and vectors, and analysis of force systems. Force and movement; basic concepts fundamental to an understanding of tooth movement.

ORTH 5107 Material Science in Orthodontics  
Credits 0.5-1. 0.5-1 Lecture Hours.  
Evaluation and utilization of dental materials used in clinical orthodontics.

ORTH 5108 Advanced Cephalometrics  
Credit 1. 1 Lecture Hour.  
Advanced topics relating to the cephalometric technique are presented, including superimposition, growth and treatment prediction, treatment assessment, consideration of error, orthognathic surgery treatment planning, and image enhancement techniques.

ORTH 5109 Orthognathic Surgery Conference I  
Credits 0 to 10. 0 to 10 Other Hours.  
This seminar/conference series involves the departments of Orthodontics and Oral and Maxillofacial Surgery in a multidisciplinary approach to the treatment of those patients with substantial craniofacial deformities. The course begins in the first year with a series of lectures/seminars on specific diagnostic and treatment procedures, followed by assignment of patients that will be supervised jointly by both specialties. Regular conferences are held to discuss pertinent literature, review patient progress, plan treatment and present completed cases. Each student is involved in all phases of treatment: presurgical orthodontics, the surgical procedure, finishing and retention.

ORTH 5110 Orthognathic Surgery Conference II  
Credits 0 to 10. 0 to 10 Other Hours.  
This seminar/conference series involves the departments of Orthodontics and Oral and Maxillofacial Surgery in a multidisciplinary approach to the treatment of those patients with substantial craniofacial deformities. The course begins in the first year with a series of lectures/seminars on specific diagnostic and treatment procedures, followed by assignment of patients that will be supervised jointly by both specialties. Regular conferences are held to discuss pertinent literature, review patient progress, plan treatment and present completed cases. Each student is involved in all phases of treatment: presurgical orthodontics, the surgical procedure, finishing and retention.

ORTH 5111 Orthognathic Surgery Conference III  
Credits 0. 0 Other Hours.  
This is a seminar course in which senior orthodontic and oral surgery residents work jointly to diagnose and treatment plan patients who are anticipating combined orthodontic/orthognathic surgery treatment to correct a dental/skeletal imbalance. The diagnosis and treatment plan(s) will be presented to the residents from both programs as well as attending faculty for critique and evaluation.

ORTH 5112 Orthognathic Surgery Seminar  
Credits 0.5.  
Surgical rotations in Oral and Maxillofacial Surgery. Can be repeated each academic term.

ORTH 5115 Clinical Specialty Seminars I  
Credits 0 to 3. 0 to 3 Other Hours.  
This series of courses is a companion to clinical training in orthodontics and involves faculty and student evaluation of historically significant as well as contemporary literature. In other sessions, lectures and seminars complement the clinic experience with topics including patient management, treatment of variously aged patients and types of malocclusions, and various types of orthodontic and orthopedic appliances. The students also are exposed to the historical development of orthodontics, additional treatment philosophies through guest speakers and new developments in treatment. Students present their cases through descriptions of diagnosis, treatment planning and treatment results.

ORTH 5125 Clinical Specialty Seminars II  
Credits 0 to 10. 0 to 10 Other Hours.  
This series of courses is a companion to clinical training in orthodontics and involves faculty and student evaluation of historically significant as well as contemporary literature. In other sessions, lectures and seminars complement the clinic experience with topics including patient management, treatment of variously aged patients and types of malocclusions, and various types of orthodontic and orthopedic appliances. The students also are exposed to the historical development of orthodontics, additional treatment philosophies through guest speakers and new developments in treatment. Students present their cases through descriptions of diagnosis, treatment planning and treatment results.

ORTH 5126 Clinical Specialty Seminars III  
Credits 0 to 10. 0 to 10 Other Hours.  
This series of courses is a companion to clinical training in orthodontics and involves faculty and student evaluation of historically significant as well as contemporary literature. In other sessions, lectures and seminars complement the clinic experience with topics including patient management, treatment of variously aged patients and types of malocclusions, and various types of orthodontic and orthopedic appliances. The students also are exposed to the historical development of orthodontics, additional treatment philosophies through guest speakers and new developments in treatment. Students present their cases through descriptions of diagnosis, treatment planning and treatment results.

ORTH 5129 Advanced Orthodontic Practice Management  
Credits 0 to 2. 0 to 2 Lecture Hours.  
This course considers the ethical approach to practice promotion and professional interactions in addition to the basic principles of office management. The latter include consideration of staff selection, office design, accounting methods, insurance considerations, inventory control and financial planning.

ORTH 5143 Principles of Scientific Methodology/Thesis Protocol  
Credits 0.5. 0.5 Lecture Hours.  
Basic precepts of research and the methodology off critical literature review in preparation of a research proposal.

ORTH 5144 Scientific Writing  
Credits 0.5. 0.5 Other Hours.  
A series of courses designed to assist the student in the preparation of a research proposal, a proposal to secure extramural funding and the thesis. When the research is concluded, instruction is given to enable the preparation of a manuscript suitable for publication.

ORTH 5148 Independent Research  
Credits 0 to 10. 0 to 10 Other Hours.  
Activity related to definition of a research problem, searching the literature, conducting the research, analyzing the results and preparing the thesis.
ORTH 5199 Thesis  
Credit 1. 1 Other Hour.  
During the term in which the thesis is defended, the student must elect this course. It includes activities related to the completion of the thesis.

ORTH 5200 Introduction to Orthodontics I  
Credits 0.50 to 1.5. 0.50 to 1.5 Lecture Hours.  
A course covering the basic topics related to the specialty of orthodontics. This series of lectures covers material presented in a textbook directed toward graduate education.

ORTH 5201 Introduction to Orthodontics II  
Credits 1 to 2. 1 to 2 Lecture Hours.  
Courses covering the basic topics related to the specialty of orthodontics. This series of lectures covers material presented in textbooks directed toward graduate education.

ORTH 5202 Introduction to Cephalometrics (Advanced Cephalometrics)  
Credit 1. 0.5 Lecture Hours. 0.5 Lab Hours.  
This course provides a thorough understanding of craniofacial radiographic techniques with emphasis on cephalometric roentgenography. This course is designed to acquaint the student with the use of X-rays, radiation hygiene, pathology and cephalometric techniques to assure proficiency in technical skills and in interpretation as needed for diagnostic procedures. This course includes both lecture and laboratory instruction.

ORTH 5230 Craniofacial Growth and Development  
Credits 1 to 1.5. 1 to 1.5 Lecture Hours.  
The clinical implications of changes in craniofacial form and function are presented. A critical review of the literature is conducted relating knowledge of facial growth and clinical practice.

ORTH 5248 Independent Research  
Credits 0 to 2. 0 Lecture Hours. 0 to 2 Other Hours.  
The course provides the guidance and time necessary for the residents to successfully complete the journal article summarizing the methods and results of their Master's research projects. Orthodontic residents should endeavor to publish their research projects. To that end, they need to know how to prepare their work for publication. Publication requires a good understanding of the IMRAD structure. By working closely with their mentors, committees and Dr. Buschang, the residents will learn how to outline the manuscript, prepare tables and figures, and write the text of the manuscript. This will be accomplished primarily by one-to-one interactions with Dr. Buschang.

ORTH 5352 Orthodontic Techniques  
Credits 2. 2 Other Hours.  
This offering includes basic preclinical exercises designed to prepare the student for clinical practice. A series of exercises are performed involving wire bending, soldering, impressions and model trimming, and the manipulation of acrylic. An edgewise course is conducted on typodonts simulating the treatment of various malocclusions.

ORTH 5533 Clinical Orthodontics I  
Credits 0 to 10. 0 to 10 Other Hours.  
Diagnosis and treatment of patients with a broad variety of malocclusions. Patients with typical malocclusions and requiring early treatment, dentofacial orthopedics, orthognathic surgery, and interdisciplinary care are selected as educational models. Techniques focus on standard edgewise technique including pretorqued and preangled brackets and lingual orthodontics.

ORTH 5534 Clinical Orthodontics II  
Credits 0 to 10. 0 to 10 Other Hours.  
Diagnosis and treatment of patients with a broad variety of malocclusions. Patients with typical malocclusions requiring early treatment, dentofacial orthopedics, orthognathic surgery, and interdisciplinary care are selected. Emphasis is on the edgewise appliances system with its many variations including pretorqued and preangled brackets, self-ligation systems and lingual orthodontics.

ORTH 5535 Clinical Orthodontics III  
Credits 1 to 3.  
Clinical Orthodontics entails the core clinical education of the orthodontic program. Treatment of malocclusions requiring early treatment, dentofacial orthopedics, orthognathic surgery and multidisciplinary care are selected as educational models. Clinical Orthodontics follows a structured, yet flexible, course outline to ensure that the resident becomes familiar with all aspects of contemporary clinical practice as presented by the various well-qualified clinical instructors. It is envisaged that no one treatment technique or philosophy will outrank another; a complete orthodontic education is of the essence. A broad range of appliance usage is taught ranging from removable appliances to the more sophisticated fixed preangled brackets and lingual orthodontics (018 and 022). The clinics include the screening of potential orthodontic patients, underling the importance of obtaining ABO standard clinical records, complete case diagnosis, case analysis, treatment techniques, individualization of appliances, evidence-based treatment procedures, a pursuit of ABO treatment outcomes, as well as proven retention protocols. Furthermore, the course also places an emphasis on the attendance of continuing education in orthodontic private practice; a philosophy of continued learning is encouraged. This clinical course provides an opportunity to consolidate the basic principles of case analysis and treatment planning, communication between clinician and patient, as well as interaction between different specialties to ensure competency in multidisciplinary treatment. Planning for long-term esthetic, healthy, functional and stable treatment is the order of the day.

PEDD - Pediatric Dentistry

PEDD 5V11 Pediatric Dentistry I  
Credits 3. 3 Other Hours.  
Basic techniques of pediatric dentistry, including restoration of primary teeth, behavior management, pulp therapy and assessment of the developing dentition.

PEDD 5V12 Pediatric Dentistry II  
Credits 3. 3 Other Hours.  
A continuation of further topics in pediatric dentistry, including child development, treatment of traumatic injuries and appliance construction for space maintenance.

PEDD 5V13 Pediatric Dentistry III  
Credits 3 to 3.5. 3 to 3.5 Other Hours.  
This course focuses on the assessment and treatment of developmental problems in the mixed dentition, materials used in pediatric dentistry and common oral lesions seen in the pediatric patient.

PEDD 5V14 Pediatric Dentistry IV  
Credits 2.5. 2.5 Other Hours.  
PEDIATRIC DENTISTRY. This course investigates the developing dentition along with more advanced concepts in pediatric dentistry.
PEDD 5V15 Pediatric Dentistry V  
Credits 4 to 5. 4 to 5 Other Hours.  
This course investigates the developing dentition along with more advanced concepts in pediatric dentistry.

PEDD 5V16 Pediatric Dentistry VI  
Credits 4. 4 Other Hours.  
A summary of topics in pediatric dentistry are presented, along with preparation for the American Board of Pediatric Dentistry.

PEDD 5V21 Hospital Dentistry I  
Credits 2. 2 Other Hours.  
Introduction to hospital protocol, charting and the delivery of dental treatment to the medically compromised child.

PEDD 5V22 Hospital Dentistry II  
Credits 2.5. 2.5 Other Hours.  
Introduction to conscious sedation and the treatment of traumatic injuries along with the delivery of dental care in the hospital environment.

PEDD 5V23 Hospital Dentistry III  
Credits 3. 3 Other Hours.  
Evaluation and treatment of specific patient populations, including the neurologically handicapped and the medically compromised patient. In addition, there is an introduction to clinical anesthesia for children.

PEDD 5V24 Hospital Dentistry IV  
Credits 3.5. 3.5 Other Hours.  
Further study and literature review that supports the clinical practice of dental care for the special-needs child are presented in this course.

PEDD 5V25 Hospital Dentistry V  
Credits 3 to 4. 3 to 4 Other Hours.  
This course continues to discuss topics relevant to the care of the special-needs child and the delivery of pediatric dental care in the hospital setting.

PEDD 5V26 Hospital Dentistry VI  
Credits 4. 4 Other Hours.  
This is intended to be a summary course that explores the interrelationship between medicine and dentistry in the care of pediatric patients.

PEDD 5V98 Research for Master’s Thesis  
Credits 1 to 5. 1 to 5 Other Hours.  
Activity to establish a research problem, search the literature, define and limit the problem and explore technical difficulties involved in the pursuit of research for the master’s degree. Restricted to master’s degree candidates.

PEDD 5V99 Thesis Preparation  
Credits 1 to 5. 1 to 5 Other Hours.  
Restricted to master’s degree candidates.

PERF - Performance Studies

PERF 600 Graduate Scholarship in Performance Studies  
Credits 3. 3 Lecture Hours.  
Overview of history, key issues, and major arguments in performance studies.  
Prerequisites: Admission to the MA in Performance Studies or approval of instructor.

PERF 601 Theories of Performance Studies  
Credits 3. 3 Lecture Hours.  
Overview of major theories of performance studies and related disciplines; also includes major critical and cultural theories that contribute to the field.  
Prerequisites: Admission to the MA in Performance Studies or approval of instructor.

PERF 602 Research Methods in Performance Studies  
Credits 3. 3 Lecture Hours.  
Examination and assessment of primary research methods in performance studies; emphasis on post-positivist methods; includes examination of ethical imperatives in research.  
Prerequisite: Admission to the MA in Performance Studies or approval of instructor.

PERF 603 Performance, Power, and Identity  
Credits 3. 3 Lecture Hours.  
Issues in, and production of, power and identity in expressive culture, examines how forms of power and varieties of social identity shape, and are shaped by, performance.  
Prerequisites: PERF 602 or approval of instructor.

PERF 604 Performing Vernacular Culture  
Credits 3. 3 Lecture Hours.  
Examines populist and counter-traditions in expressive culture; emphasis on contemporary cultures of performance and/as practices of everyday life.  
Prerequisites: PERF 602 or approval of instructor.

PERF 605 Topics in Globalization and Performance Studies  
Credits 3. 3 Lecture Hours.  
Examines expressive cultures in global contexts; theoretical and methodological approaches to globalization and/in performance. May be taken two times for credit.  
Prerequisites: PERF 602 or approval of instructor.

PERF 610 Graduate Studies in Dance Research  
Credits 3. 3 Lecture Hours.  
Examines key theoretical and methodological issues in dance studies from a performance studies perspective.  
Prerequisite: PERF 602 or approval of instructor.

PERF 611 Contemporary Religions and Performance  
Credits 3. 3 Lecture Hours.  
Examines the intricate relationship between religious traditions and performance. Focus on contemporary religious movements.  
Prerequisite: Graduate classification.

PERF 612 Music Capitalism  
Credits 3. 3 Lecture Hours.  
Explores the production, distribution, and consumption of music genres as a performance of capitalism.  
Prerequisite: Graduate classification.

PERF 613 Performing Texas  
Credits 3. 3 Lecture Hours.  
Examines “Texas” as a set of complex performances that construct specific identities and communities.  
Prerequisite: Graduate classification.

PERF 614 Soundscapes  
Credits 3. 3 Lecture Hours.  
Explores sound in social life; sound as performative of identity; sound performance.  
Prerequisite: Graduate classification.

PERF 615 Spectacle, Performance, and Politics  
Credits 3. 3 Lecture Hours.  
Interdisciplinary and international exploration of spectacle as political performance.  
Prerequisite: Graduate classification.
PERF 616 Sport as Performance  
Credits 3.3 Lecture Hours.  
Explores sport as manifold modes of cultural performance; focus on embodiment, gender, race, nationalism, spectacle, politics, warfare, and media.  
Prerequisite: Graduate classification.

PERF 620 Critical Ethnographic Methods in Performance Studies  
Credits 3.3 Lecture Hours.  
Critical methods in performance ethnography; emphasis on political dimensions of field encounter. May be taken two times for credit.  
Prerequisites: PERF 600; PERF 602.

PERF 621 Topics in Popular Music Studies  
Credits 3.3 Lecture Hours.  
Examination of context, politics, and political economy of specific popular music forms. May be repeated for a total of 9 credits.  
Prerequisites: PERF 600, PERF 601, PERF 602, or approval of instructor.

PERF 622 Performance and the Construction of American Identity  
Credits 3.3 Lecture Hours.  
Role of performance in construction of national identity; special emphasis on post-Civil War US.  
Prerequisites: PERF 600, PERF 601, PERF 602, or approval of instructor.

PERF 623 Phenomenology and Music  
Credits 3.3 Lecture Hours.  
Theoretical and methodological potentials of phenomenology in analyses of music; special emphasis on use of phenomenology to examine multiple aspects of music production, including embodiment.  
Prerequisites: PERF 600, PERF 601, PERF 602, or approval of instructor.

PERF 625 Latino/a Expressive Culture  
Credits 3.3 Lecture Hours.  
Explores how issues concerning Latinos, including race and ethnicity, religion, border politics, immigration, the drug war, family, gender and sexuality, and class, are reflected and debated through expressive forms of performance such as theater, comedy music, folklore and performance art.  
Prerequisite: Acceptance into the MA in Performance Studies program or approval of instructor.

PERF 682 American Theatre: Gender on the U.S. Stage  
Credits 3.3 Lecture Hours.  
Focuses on 18th-21st century texts and performers in order to account for transformations in representations as well as lived experiences of gender.  
Prerequisite: Enrollment in the MA in Performance Studies or approval of instructor.

PERF 685 Directed Studies  
Credits 1 to 3. 1 to 3 Other Hours.  
Directed studies in specific areas of performance studies. Student may take up to two sections of directed studies in the same semester, with a maximum of 6 credits.  
Prerequisites: PERF 600, PERF 601, PERF 602, or approval of instructor.

PERF 689 Special Topics in Performance Studies  
Credits 3.3 Lecture Hours.  
Selected topics in an identified area of performance studies. May be repeated for a total of 9 credits.  
Prerequisites: PERF 600, PERF 601, PERF 602, or approval of instructor.
PERI 5035 Ortho/Perio Seminar
Credits 0.0 Other Hours.
Diagnosis and treatment of basic orthodontic problems; force vectors; mechanical applications with various orthodontics systems; clinical management of combined periodontic/orthodontic cases and esthetic correction of mucogingival cases. Joint treatment of actual cases.

PERI 5045 Related Disciplines Seminar
Credits 0.0 Other Hours.
Seminar for first-, second- and third-year residents that includes comprehensive interdisciplinary case planning, management and presentations, and affords opportunity for interactions with graduate faculty/residents in periodontics, prosthodontics and endodontics.

PERI 5065 VA Hospital Rotation
Credits 0.0 Other Hours.
A three-month rotation at the Dallas VA Hospital Dental Clinic treating medically compromised dental patients. Diagnosis, treatment planning and consultation with physicians are emphasized. Supervised by HSC-BCD faculty. One resident each semester.

PERI 5066 Mock Board Examination I
Credits 0.5-0.5 Lecture Hours.
Prepares students for certification by the American Board of Periodontology. Includes case write-up, presentation and comprehensive oral examination.

PERI 5067 Mock Board Examination II
Credits 0.5-0.5 Lecture Hours.
Prepares students for certification by the American Board of Periodontology. Includes case write-up, presentation and defense, and comprehensive oral examination.

PERI 5114 Advanced Dental Implants
Credit 1.5. 0.8 Lecture Hours. 0.8 Other Hours.
A lecture and clinical course covering advanced implant techniques. The radiographic examination, diagnosis, treatment planning and management of patients with jaw deformities, inadequate remaining bone; ridge augmentation requirements, including sinus lift procedures and complications, are reviewed.

PERI 5115 Periodontal Plastic Surgery
Credits 0.5. 0.3 Lecture Hours. 0.3 Other Hours.
Lectures and seminars covering the diagnosis and treatment of esthetic and functional gingival deformities. Recognizing normal and abnormal appearance and gingival discrepancies is stressed. Current techniques of grafting, shaping and sculpting tissues are taught. The techniques discussed are performed during clinical periodontics.

PERI 5140 Case Presentation/Treatment Planning
Credits 0.5-1.0 Other Hours.
Emphasizes diagnosis, analysis and treatment planning/approaches for cases presenting with moderate to advanced periodontitis, soft/hard tissue deficiencies and/or dental implant needs. First-year residents receive instruction and experience in preparing case presentations, and first-, second- and third-year residents present cases, participate in discussions and interact with faculty.

PERI 5164 Occlusion: Principals/Therapy
Credits 0 to 1.5. 0 to 1.5 Other Hours.
Review of literature concerning occlusion and its relationship to periodontal disease. Clinical evaluation, diagnosis of occlusal trauma and treatment of patients with occlusal disharmonies via occlusal adjustment are discussed. Includes a review of occlusal concepts related to periodontics, anatomy and function of the masticatory system, temporomandibular joint dysfunction, and adjustment of the natural dentition.

PERI 5201 Periodontal Lecture Series I
Credits 0 to 2.0 to 2 Other Hours.
Principles of basic science of periodontology, including anatomy of the periodontium, and the classification, etiology and pathogenesis of periodontal diseases, including plaque associated and nonplaque-related disorders. Provides an introduction to the clinical practice of periodontics and stomatology, including diagnosis, prognosis, treatment planning, basic flap design, instrumentation, therapeutic approaches, suturing techniques and wound healing. Oral hygiene methods and principles of oral hygiene instruction are also presented.

PERI 5207 Periodontal Lectures Series II
Credits 2.2 Lecture Hours.
Periodontal Lectures Series II. Advanced management of complex periodontal and stomatological problems is presented. An in-depth review of systemic diseases, and plaque associated and nonplaque-related periodontal disorders (mucocutaneous, etc.) related to the practice of periodontics is emphasized, including the roles of pharmacotherapeutics and complex regenerative therapeutic approaches.

PERI 5211 Practice Teaching
Credits 2.1 Lecture Hour. 1 Other Hour.
Second year residents give clinical instruction involving contact with second-, third- and fourth-year dental students. Four hours per week per semester of clinical instruction, including diagnosis, treatment and maintenance of periodontal patients. One half-day/session/week for 2nd year residents (afternoon). Students register for two semesters for a total of 8 semester hours.

PERI 5213 Dental Implants
Credits 1.50 to 2.1.50 to 2 Other Hours.
Historical review of dental implants, including biological principles, techniques and systems; diagnosis, interdisciplinary considerations, treatment planning, and indications and contraindications for implants; wound healing for implants, including osseointegration, surgical techniques and implant maintenance.

PERI 5221 Practice Teaching
Credits 2.1 Lecture Hour. 1 Other Hour.
Third year residents give lectures and clinical instruction involving contact with second, third, and fourth year dental students. Six hours per week per semester of clinical instruction, including diagnosis, treatment and maintenance of periodontal patients. Two half-day sessions/week for 3rd year residents (one morning and one afternoon). Students register for two semesters for a total of 8 semester hours.

PERI 5224 Periodontal Literature Review I
Credits 1 to 2.1 to 2 Lecture Hours.
Review of periodontics literature from early classic articles to current publications; development of basis for various periodontal concepts; anatomy, epidemiology, etiology, diagnosis, pathogenesis and therapy of periodontal diseases. Students register for two semesters for a total of 4 semester hours.
PERI 5227 Periodontal Literature Review II
Credits 1 to 2. 2 Lecture Hours. 1 to 2 Other Hours.
Continuation of PERI 5224. Students register for two semesters for a total of 4 semester hours.

PERI 5228 Periodontal Literature Review III
Credits 1 to 2. 1 to 2 Other Hours.
A seminar series during the third year of residency. Students learn to select and then research various contemporary topics and lead group discussions. Use of computer search technology and interlibrary facilities is taught and utilized. Self-reliance and individual effort is emphasized instead of school-provided reading lists as in PER 5224 and PER 5227. Students register for two semesters for a total of 4 semester hours.

PERI 5432 Clinical Anesthesiology for the Periodontist
Credits 3. 3 Other Hours.
A one-month anesthesiology rotation supervised by personnel in the Department of Anesthesiology at Baylor University Medical Center; operating room procedures; use of anesthetics; instruction in resuscitative procedures.

PERI 5434 Moderate Parenteral Conscious Sedation
Credits 0.5. 0.5 Lecture Hours.
The course focuses on clinical management of patients needing conscious sedation. Lectures include information on deep sedation and general anesthesia so residents will be familiar with these levels should a patient get to one of these planes of anesthesia. The course is ongoing each fall and spring semester of a resident’s three year academic degree plan.

PERI 5435 Periodontal Histopathology
Credits 2. 1 Lab Hour. 1 Other Hour.
Histopathologic study of the etiology and pathogenesis of periodontal diseases; seminars and laboratory exercises with block sections of human periodontium.

PERI 5V98 Research for Master’s Thesis
Credits 0 to 3. 0 to 3 Other Hours.
Activity to establish a research problem, search the literature, define and limit the problem and explore technical difficulties involved in the pursuit of research for the master’s degree. Restricted to master’s degree candidates.

PERI 5V99 Thesis Preparation
Credits 0 to 2. 0 to 2 Other Hours.
Restricted to master’s degree candidates.

PETE - Petroleum Engineering

PETE 602 Well Stimulation
Credits 3. 3 Lecture Hours.
Design and analysis of well stimulation methods, including acidizing and hydraulic fracturing; causes and solutions to low well productivity.

PETE 603 Advanced Reservoir Engineering I
Credits 3. 3 Lecture Hours.
Petroleum reservoir simulation basics including solution techniques for explicit problems.

PETE 604 Advanced Reservoir Engineering II
Credits 3. 3 Lecture Hours.
Advanced petroleum reservoir simulation with generalized methods of solution for implicit problems.

PETE 605 Phase Behavior of Petroleum Reservoir Fluids
Credits 3. 3 Lecture Hours.
Pressure, volume, temperature, composition relationships of petroleum reservoir fluids.

PETE 606 EOR Methods—Thermal
Credits 3. 3 Lecture Hours.
Fundamentals of enhanced oil recovery (EOR) methods and applications of thermal recovery methods.
Prerequisite: PETE 323.

PETE 608 Well Logging Methods
Credits 3. 3 Lecture Hours.
Well logging methods for determining nature and fluid content of formations penetrated by drilling. Development of computer models for log analysis.

PETE 609 Enhanced Oil Recovery Processes
Credits 3. 3 Lecture Hours.
Fundamentals and theory of enhanced oil recovery; polymer flooding, surfactant flooding, miscible gas flooding and steam flooding; application of fractional flow theory; strategies and displacement performance calculations.
Prerequisite: PETE 323.

PETE 611 Application of Petroleum Reservoir Simulation
Credits 3. 3 Lecture Hours.
Use of simulators to solve reservoir engineering problems too complex for classical analytical techniques.
Prerequisites: PETE 400 and PETE 401.

PETE 612 Unconventional Oil and Gas Reservoirs
Credits 3. 3 Lecture Hours.
As conventional oil and gas resources are depleted, unconventional resources, including heavy oil and gas from low-permeability sandstones, fractured shales, coal bed, and hydrates, will assume greater roles in meeting USA and world energy demands; this course emphasizes resources, geologic and geographic occurrences, recovery technology and economics of unconventional hydrocarbon resources.
Prerequisite: Graduate classification in petroleum engineering, geology or geophysics.

PETE 613 Natural Gas Engineering
Credits 3. 3 Lecture Hours.
Flow of natural gas in reservoirs and in wellbores and gathering systems; deliverability testing; production forecasting and decline curves; flow measurement and compressor sizing.
Prerequisites: PETE 323 and PETE 324.

PETE 616 Engineering Near-Critical Reservoirs
Credits 3. 3 Lecture Hours.
Identification of reservoir fluid type; calculation of original gas in place, original oil in place, reserves and future performance of retrograde gas and volatile oil reservoirs.
Prerequisites: PETE 323, PETE 400, PETE 401.

PETE 617 Petroleum Reservoir Management
Credits 3. 3 Lecture Hours.
The principles of reservoir management and application to specific reservoirs based on case studies presented in the petroleum literature.
PETE 618 Modern Petroleum Production
Credits 3.3 Lecture Hours.
An advanced treatment of modern petroleum production engineering encompassing well deliverability from vertical, horizontal and multilateral/multibranched wells; diagnosis of well performance includes elements of well testing and production logging; in this course the function of the production engineer is envisioned in the context of well design, stimulation and artificial lift.

PETE 619 Naturally Fractured Reservoirs
Credits 3.3 Lecture Hours.
Explore all relevant subject matter in naturally fractured reservoirs; naturally fractured reservoirs are commonplace throughout the world, however there is a general lack of understanding of such reservoirs; provides the background for all relevant topics such as characterization, fluid flow, simulation and enhanced oil recovery.
Prerequisite: Approval of instructor.

PETE 620 Fluid Flow in Petroleum Reservoirs
Credits 3.3 Lecture Hours.
Analysis of fluid flow in bounded and unbounded reservoirs, wellbore storage, phase redistribution, finite and infinite conductivity fractures; dual-porosity systems.
Prerequisite: PETE 323.

PETE 621 Petroleum Development Strategy
Credits 3.2 Lecture Hours. 3 Lab Hours.
Applications of the variables, models and decision criteria used in modern petroleum development; case approach used to study major projects such as offshore development and assisted recovery. Both commercial and student-prepared computer software used during the lab sessions to practice methods.

PETE 622 Exploration and Production Evaluation
Credits 3.2 Lecture Hours. 3 Lab Hours.
Selected topics in oil industry economic evaluation including offshore bidding, project ranking and selection, capital budgeting, long-term oil and gas field development projects and incremental analysis for assisted recovery and acceleration.

PETE 623 Waterflooding
Credits 3.3 Lecture Hours.
Design, surveillance and project management of waterfloods in reservoirs.
Prerequisite: PETE 323.

PETE 624 Rock Mechanic Aspects of Petroleum Reservoir Response
Credits 3.3 Lecture Hours.
Reservoir rocks and their physical behavior; porous media and fracture flow models; influence of rock deformability, stress, fluid pressure and temperature.
Prerequisite: PETE 604.

PETE 625 Well Control
Credits 3.3 Lecture Hours.
Theory of pressure control in drilling operations and during well kicks; abnormal pressure detection and fracture gradient determination; casing setting depth selection and advanced casing design; theory supplemented on well control simulators.
Prerequisites: PETE 411.

PETE 626 Offshore Drilling
Credits 3.3 Lecture Hours.
Offshore drilling from fixed and floating drilling structures; directional drilling including horizontal drilling; theory of deviation monitoring and control.
Prerequisite: PETE 411.

PETE 627 Well Completion and Workover
Credits 3.3 Lecture Hours.
Development of design options, systems and procedures to meet deliverability, safety and integrity requirements for completions and workover equipment; overview of methods in the oil and gas industry; function and design criteria of well components.
Prerequisite: Graduate classification.

PETE 628 Horizontal Drilling
Credits 3.3 Lecture Hours.
Changing a wellbore from vertical to horizontal; long- and short-radius horizontal wells; bottomhole assemblies for achieving and maintaining control of inclination and direction; drilling fluids; torque and drag calculations; transport of drilled solids.
Prerequisite: PETE 411.

PETE 629 Advanced Hydraulic Fracturing
Credits 3.3 Lecture Hours.
Physical principles and engineering methods involved in hydraulic fracturing; an advanced treatise integrating the necessary fundamentals from elasticity theory, fracture mechanics and fluid mechanics to understand designs, optimization and evaluate hydraulic fracturing treatments including special topics such as high permeability fracturing and deviated well fracturing.

PETE 630 Geostatistics
Credits 3.3 Lecture Hours.
Introductory and advanced concepts in geostatistics for petroleum reservoir characterization by integrating static (cores/logs/seismic traces) and dynamic (flow/transport) data; variograms and spatial correlations; regionalized variables; intrinsic random functions; kriging/cokriging; conditional simulation; non-Gaussian approaches.
Prerequisite: Introductory course in statistics or PETE 322.

PETE 631 Petroleum Reservoir Description
Credits 3.3 Lecture Hours.
Engineering and geological evaluation techniques to define the extent and internal character of a petroleum reservoir; estimate depositional environment(s) during the formation of the sedimentary section and resulting effects on reservoir character.
Prerequisites: PETE 324 and PETE 620.

PETE 632 Physical and Engineering Properties of Rock
Credits 4.3 Lecture Hours. 3 Lab Hours.
Physical and engineering properties of rock and rock masses including strength, deformation, fluid flow, thermal and electrical properties as a function of the subsurface temperature, in-situ stress, pore fluid pressure and chemical environment; relationship of rock properties to logging, siting and design of wells and structures in rock.

PETE 633 Data Integration for Petroleum Reservoirs
Credits 3.3 Lecture Hours.
Introduction and application of techniques that can be used to incorporate dynamic reservoir behavior into stochastic reservoir characterizations; dynamic data in the form of pressure transient tests, tracer tests, multiphase production histories or interpreted 4-D seismic information.
Prerequisites: PETE 620; STAT 601.

PETE 635 Underbalanced and Managed Pressure Drilling
Credits 3.3 Lecture Hours.
This course provides an introduction and application of techniques utilized in underbalanced and managed pressure drilling; includes equipment, types of drilling fluids used (air, mist foam, etc.), flow drilling, mud cap drilling and hydraulics calculations.
Prerequisite: Graduate classification.
PETE 636 Horizontal, Multilateral and Intelligent Wells  
Credits 3.3 Lecture Hours.  
Advanced well architectures, primarily horizontal, multilateral and intelligent wells, all aspects of these types of wells, including well completions, reservoir flow, and wellbore flow conditions, and well deliverability; optimization of well design and field applications will be demonstrated with field cases.  
Prerequisites: PETE 662; graduate classification.

PETE 637 Streamline Simulation  
Credits 3.3 Lecture Hours.  
Introductory and advanced concepts in streamline simulation and its applications; theory of streamlines/streamtubes in multidimensions; topics include: streamline, streamtubes, streamfunctions, transport along streamlines, spatial discretization and material balance, time stepping and transverse fluxes, impact of cell geometry, history matching and production data integration, comparison with finite difference.  
Prerequisite: Graduate classification.

PETE 638 Production Logging  
Credits 3.3 Lecture Hours.  
Well logging methods concerned with problem well diagnosis and reservoir surveillance; includes fluid flow in pipes, understanding fluid dynamics in a wellbore, theoretical basis of production logging techniques, production log interpretation techniques, and operational considerations.  
Prerequisite: Graduate classification.

PETE 639 High Performance Drilling Design and Operational Practices  
Credits 3.3 Lecture Hours.  
Achieving differentiating drilling performance in most complex wells; includes physics of each type of performance limiter, real time operational practices, engineering redesign practices, and effective workflows to achieve the required change in engineering and operational practices.  
Prerequisites: Graduate classification, PETE 355 or PETE 661 or approval of instructor.

PETE 640 Models for Simulation of Flow and Transport of Fluids and Heat in Porous Media  
Credits 4.3 Lecture Hours. 3 Lab Hours.  
Design and develop numerical simulators that describe flow of reservoir fluids and transport of heat through porous media; develop multi-dimensional models capable of handling single mass components (gas, oil or water) in single phases (liquid or vapor).  
Prerequisites: PETE 603 or approval of instructor; experience in FORTRAN or another programming language; solid understanding of physical processes of flow and transport through porous media, numerical analysis and linear algebra; graduate classification.

PETE 641 Models for Simulation of Advanced Coupled Processes in Geologic Media  
Credits 4.3 Lecture Hours. 3 Lab Hours.  
Design and develop advanced multi-phase flow processes and complex geologic media (porous and fractured, with matrix-fracture interactions); structured and unstructured grids, multiple mass components (gas, oil and water) in multi-phase states (liquid, vapor and/or liquid-vapor), and phase changes.  
Prerequisites: PETE 640 and graduate classification; experience in FORTRAN95, C, C++ or another programming language; solid understanding of physical processes of flow and transport through porous media, numerical analysis and linear algebra.

PETE 642 Formation Damage: Mechanisms and Remediation  
Credits 3.3 Lecture Hours.  
Identification and development of solutions for mechanisms of formation damage that can occur during drilling, completion, and following chemical treatments; includes interaction of cleaning fluids with the formation brines, rock and oil.  
Prerequisites: Graduate classification.

PETE 643 Oil Field Chemistry  
Credits 3.3 Lecture Hours.  
The role of chemistry in well stimulation, water shut-off treatments, scale removal, mitigation, downhole corrosion issues, organic deposition, dementing, drilling fluids and various aspects of formation damage; includes problem identification as the first step in designing chemical treatment to remove formation damage.  
Prerequisites: Graduate classification.

PETE 644 CO2 Capture and Uses: Sequestration, Enhanced Oil Recovery (EOR)  
Credits 3.3 Lecture Hours.  
Understanding the need and potential of CO2 captures and uses, including sequestration and Enhanced Oil Recovery (CCS-EOR), the scientific, technological and economic aspects of identifying and implementing a CCS-EOR; overview of safety, environmental and legal aspects.  
Prerequisites: Graduate classification.

PETE 645 Upscaling of Geologic Models for Flow Simulation  
Credits 3.3 Lecture Hours.  
In-depth understanding of current approaches to upscaling of 3D geologic models for reservoir flow simulation; includes development of upscaling solvers.  
Prerequisites: Graduate classification.

PETE 646 Reservoir Characterization and Forecasting  
Credits 3.3 Lecture Hours.  
Emphasis on geostatistical estimation/simulation and advanced mathematical inversion methods; integration of three important aspects of reservoir development and management: i) stochastic reservoir description, ii) reservoir model updating; and iii) model-predictive reservoir control and management.  
Prerequisites: Graduate classification; basic familiarity with linear algebra, probability, statistics, differential and integral calculus and general reservoir engineering.

PETE 648 Pressure Transient Testing  
Credits 3.3 Lecture Hours.  
Diffusivity equation and solutions for slightly compressible liquids; dimensionless variables; type curves; applications of solutions to buildup, drawdown, multi-rate, interference, pulse and deliverability tests; extensions to multiphase flow; analysis of hydraulically fractured wells.  
Prerequisites: PETE 324 and PETE 620.

PETE 650 Advanced Drilling Engineering  
Credits 3.3 Lecture Hours.  
Underbalanced drilling techniques, offshore drilling; horizontal, extended reach and multilateral drilling and fishing operations; geothermal drilling and high pressure, high temperature drilling.  
Prerequisite: Graduate classification; PETE 405 or equivalent basic drilling engineering.
PETE 656 Advanced Numerical Methods for Reservoir Simulation
Credits 3.3 Lecture Hours.
Numerical simulation of flow in porous media based on numerical methods for partial differential equations; supplemented by published papers and research topics; development of a reservoir simulator.
Prerequisites: Graduate classification; basic reservoir simulation or equivalent course; linear algebra and matrix computations or equivalent course; advanced calculus or equivalent course; programming experience.

PETE 657 Petroleum Engineering Reserves and Evaluation
Credits 3.3 Lecture Hours.
Estimation and valuation of hydrocarbon reserves and resources, with emphasis on probabilistic methods, technically challenging reservoirs, and unconventional resources.
Prerequisite: PETE 664, approval of instructor.

PETE 658 Petroleum Project Evaluation and Management
Credits 1 to 4.1 to 4 Other Hours.
Training under the supervision of practicing professional engineers in settings appropriate to the student's professional objectives. May be taken four times for credit.
Prerequisite: Graduate classification and one semester of graduate work completed.

PETE 659 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Special topics in an identified area of petroleum engineering. May be repeated for credit.

PETE 660 Dean's Hour
Credits 0.0 Lecture Hours.
The theme of the Dean's Hour is to involve students in the college's leadership and strategic initiatives and engage them in academic excellence. It allows them to provide input into programmatic issues. This course also provides an opportunity for students to participate in reflective thought and writing. Offered: Fall and spring semesters.
Prerequisite: Admission to Doctor of Pharmacy Program.

PETE 661 Drilling Engineering
Credits 3.3 Lecture Hours.
Introduction to drilling systems: wellbore hydraulics; identification and solution of drilling problems; well cementing; drilling of directional and horizontal wells; wellbore surveying abnormal pore pressure, fracture gradients, well control; offshore drilling, underbalanced drilling.

PETE 662 Production Engineering
Credits 3.3 Lecture Hours.
Development of fundamental skills for the design and evaluation of well completions, monitoring and management of the producing well, selection and design of article lift methods, modeling and design of surface facilities.

PETE 663 Formation Evaluation and the Analysis of Reservoir Performance
Credits 3.3 Lecture Hours.
Current methodologies used in geological description/analysis, formation evaluation (the analysis/interpretation of well log data), and the analysis of well performance data (the design/analysis/interpretation of well test and production data); specifically, the assessment of field performance data and the optimization of hydrocarbon recovery by analysis/interpretation/integration of geologic, well log, and well performance data.
Prerequisite: Approval of instructor or graduate classification.

PETE 664 Petroleum Project Evaluation and Management
Credits 3.3 Lecture Hours.
Introduction to oil industry economics, including reserves estimation and classification—building and using reservoir models, developing and using reservoir management processes, managing new and mature fields, and investment ranking and selections.

PETE 665 Petroleum Reservoir Engineering
Credits 3.3 Lecture Hours.
Reservoir description techniques using petrophysical and fluid properties; engineering methods to determine fluids in place, identify production-drive mechanisms, and forecast reservoir performance; implementation of pressure-maintenance schemes and secondary recovery.
Prerequisite: Approval of instructor or graduate classification.

PETE 667 Petroleum Engineering Reserves and Evaluation
Credits 3.3 Lecture Hours.
Estimation and valuation of hydrocarbon reserves and resources, with emphasis on probabilistic methods, technically challenging reservoirs, and unconventional resources.
Prerequisite: PETE 664, approval of instructor.

PETE 668 Professional Internship
Credits 1 to 4.1 to 4 Other Hours.
Students undertake and complete limited investigations not within their thesis research and not covered in established curricula.
Prerequisites: Graduate classification; approval of instructor.

PETE 669 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Special topics in an identified area of petroleum engineering. May be repeated for credit.

PETE 670 Research
Credits 1 to 12. 1 to 12 Other Hours.
Advanced work on some special problem within field of petroleum engineering. Thesis course.

PETE 671 Professional Study
Credits 1 to 12. 1 to 12 Other Hours.
Approved professional study or project. May be taken more than once but not to exceed 6 hours of credit towards a degree.

PETE 672 Production Engineering
Credits 3.3 Lecture Hours.
Development of fundamental skills for the design and evaluation of well completions, monitoring and management of the producing well, selection and design of article lift methods, modeling and design of surface facilities.

PETE 673 Formation Evaluation and the Analysis of Reservoir Performance
Credits 3.3 Lecture Hours.
Current methodologies used in geological description/analysis, formation evaluation (the analysis/interpretation of well log data), and the analysis of well performance data (the design/analysis/interpretation of well test and production data); specifically, the assessment of field performance data and the optimization of hydrocarbon recovery by analysis/interpretation/integration of geologic, well log, and well performance data.
Prerequisite: Approval of instructor or graduate classification.

PETE 674 Petroleum Project Evaluation and Management
Credits 3.3 Lecture Hours.
Introduction to oil industry economics, including reserves estimation and classification—building and using reservoir models, developing and using reservoir management processes, managing new and mature fields, and investment ranking and selections.

PETE 675 Petroleum Reservoir Engineering
Credits 3.3 Lecture Hours.
Reservoir description techniques using petrophysical and fluid properties; engineering methods to determine fluids in place, identify production-drive mechanisms, and forecast reservoir performance; implementation of pressure-maintenance schemes and secondary recovery.
Prerequisite: Approval of instructor or graduate classification.

PETE 676 Advanced Numerical Methods for Reservoir Simulation
Credits 3.3 Lecture Hours.
Numerical simulation of flow in porous media based on numerical methods for partial differential equations; supplemented by published papers and research topics; development of a reservoir simulator.
Prerequisites: Graduate classification; basic reservoir simulation or equivalent course; linear algebra and matrix computations or equivalent course; advanced calculus or equivalent course; programming experience.

PETE 677 Petroleum Engineering Reserves and Evaluation
Credits 3.3 Lecture Hours.
Estimation and valuation of hydrocarbon reserves and resources, with emphasis on probabilistic methods, technically challenging reservoirs, and unconventional resources.
Prerequisite: PETE 664, approval of instructor.

PETE 678 Professional Internship
Credits 1 to 4.1 to 4 Other Hours.
Students undertake and complete limited investigations not within their thesis research and not covered in established curricula.
Prerequisites: Graduate classification; approval of instructor.

PETE 679 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Special topics in an identified area of petroleum engineering. May be repeated for credit.

PETE 680 Research
Credits 1 to 12. 1 to 12 Other Hours.
Advanced work on some special problem within field of petroleum engineering. Thesis course.

PETE 681 Professional Study
Credits 1 to 12. 1 to 12 Other Hours.
Approved professional study or project. May be taken more than once but not to exceed 6 hours of credit towards a degree.

PETE 682 Production Engineering
Credits 3.3 Lecture Hours.
Development of fundamental skills for the design and evaluation of well completions, monitoring and management of the producing well, selection and design of article lift methods, modeling and design of surface facilities.

PETE 683 Formation Evaluation and the Analysis of Reservoir Performance
Credits 3.3 Lecture Hours.
Current methodologies used in geological description/analysis, formation evaluation (the analysis/interpretation of well log data), and the analysis of well performance data (the design/analysis/interpretation of well test and production data); specifically, the assessment of field performance data and the optimization of hydrocarbon recovery by analysis/interpretation/integration of geologic, well log, and well performance data.
Prerequisite: Approval of instructor or graduate classification.

PETE 684 Petroleum Project Evaluation and Management
Credits 3.3 Lecture Hours.
Introduction to oil industry economics, including reserves estimation and classification—building and using reservoir models, developing and using reservoir management processes, managing new and mature fields, and investment ranking and selections.

PETE 685 Petroleum Reservoir Engineering
Credits 3.3 Lecture Hours.
Reservoir description techniques using petrophysical and fluid properties; engineering methods to determine fluids in place, identify production-drive mechanisms, and forecast reservoir performance; implementation of pressure-maintenance schemes and secondary recovery.
Prerequisite: Approval of instructor or graduate classification.

PETE 686 Advanced Numerical Methods for Reservoir Simulation
Credits 3.3 Lecture Hours.
Numerical simulation of flow in porous media based on numerical methods for partial differential equations; supplemented by published papers and research topics; development of a reservoir simulator.
Prerequisites: Graduate classification; basic reservoir simulation or equivalent course; linear algebra and matrix computations or equivalent course; advanced calculus or equivalent course; programming experience.

PETE 687 Petroleum Engineering Reserves and Evaluation
Credits 3.3 Lecture Hours.
Estimation and valuation of hydrocarbon reserves and resources, with emphasis on probabilistic methods, technically challenging reservoirs, and unconventional resources.
Prerequisite: PETE 664, approval of instructor.

PETE 688 Professional Internship
Credits 1 to 4.1 to 4 Other Hours.
Students undertake and complete limited investigations not within their thesis research and not covered in established curricula.
Prerequisites: Graduate classification; approval of instructor.

PETE 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Special topics in an identified area of petroleum engineering. May be repeated for credit.

PETE 690 Research
Credits 1 to 12. 1 to 12 Other Hours.
Advanced work on some special problem within field of petroleum engineering. Thesis course.

PETE 692 Professional Study
Credits 1 to 12. 1 to 12 Other Hours.
Approved professional study or project. May be taken more than once but not to exceed 6 hours of credit towards a degree.

PHAR - Pharmacy

PHAR 600 Dean's Hour
Credits 0.0 Lecture Hours.
The theme of the Dean's Hour is to involve students in the college's leadership and strategic initiatives and engage them in academic excellence. It allows them to provide input into programmatic issues. This course also provides an opportunity for students to participate in reflective thought and writing. Offered: Fall and spring semesters.
Prerequisite: Admission to Doctor of Pharmacy Program.

PHAR 601 Forum / Student Portfolios / Professional Development I
Credits 0-1.0 Lecture Hours.

PHAR - Pharmacy
PHAR 602 Core Recitation (P1)  
Credits 0. 0 Lecture Hours.  
Core Recitation provides additional interaction for students with their teachers/facilitators in order to further their knowledge, skills and abilities. These sessions are dedicated to reviewing, in a different format, and clarifying material previously presented in a professional course. Most formative exams are scheduled during this course. Must be taken on a satisfactory/unsatisfactory basis. Offered: Fall and spring semesters.  
Prerequisite: Admission to Doctor of Pharmacy Program.

PHAR 605 IPPE I: Introductory Pharmacy Practice Experiences  
Credit 1. 1 Lecture Hour.  
This course introduces the student to foundational concepts necessary to practice pharmaceutical care and to develop the attitudes, values, skills, and knowledge of a professional pharmacist. The student participates in simulated training, didactic lectures, service learning, and reflection throughout the semester to implement didactic knowledge learned from the general academic curriculum. The student gains exposure to real patients and serves the needs of the community through organized activities under the supervision of health-care-practitioners. Training includes basic patient assessment skills and communication skills to interact with patients at service learning events. Offered: Fall semester.  
Prerequisite: Admission to Doctor of Pharmacy Program.  
Corequisite: PHAR 672.

PHAR 606 IPPE II: Introductory Pharmacy Practice Experiences  
Credit 1. 1 Lecture Hour.  
This course continues the IPPE course sequence dedicated to developing the attitudes, values, skills, and knowledge required to participate actively in the pharmacy profession. The student continues simulated training, didactic lectures, service learning, and reflection throughout the semester. Basic Medical Spanish and telephone prescription transcribing skills are taught and assessed. The student is expected to apply cumulative knowledge and skills from the didactic curriculum and is provided supervised opportunities to work with health-care practitioners. Offered: Spring semester.  
Prerequisites: PHAR 605 IPPE I, PHAR 672 Intro to Patient Care.  
Corequisites: PHAR 657 and PHAR 673.

PHAR 610 Principles Drug Action I  
Credits 2. 2 Lecture Hours.  
The course provides an introduction to pathology, pathophysiology, pharmacology and medicinal chemistry. This course introduces the basic principles of drug action and covers chemical properties, stability, solubility, mechanisms of action and structure-activity relationships of the major drug classes. Offered: Fall semester.  
Prerequisite: Admission to Doctor of Pharmacy Program.  
Corequisite: PHAR 627.

PHAR 611 Principles Drug Action II  
Credits 2. 2 Lecture Hours.  
The second of a two-class sequence. This course covers the pharmacology and medicinal chemistry of adrenergic and cholinergic agonists and antagonists, serotonergics and amino acid neurotransmitters. Offered: Spring semester.  
Prerequisite: PHAR 610.

PHAR 626 Human Physiology  
Credits 4. 4 Lecture Hours.  
This course provides core knowledge of human physiology and pathophysiology with elements of anatomy needed to understand: (1) normal function of the body systems, (2) common disease states, and (3) the role of pharmacologic agents in various physiologic disorders and pathological conditions. Offered: Fall semester.  
Prerequisite: Admission to Doctor of Pharmacy Program.

PHAR 627 Biochemistry  
Credits 3. 3 Lecture Hours.  
This course introduces the basic concepts in biochemistry with a focus on structure and function of carbohydrates, proteins, hormones, and lipids. It establishes the biochemical basis for cell structure, cellular metabolism, disease, drug function, and genetic information flow in prokaryotic and eukaryotic cells. Common metabolic pathways of drugs, enzyme induction, and metabolic regulation are presented. Offered: Fall semester.  
Prerequisite: Admission to Doctor of Pharmacy Program.  
Corequisite: PHAR 658.

PHAR 641 Pharmaceutical Calculations  
Credits 2. 2 Lecture Hours.  
This course requires the application of basic mathematics and quantitative reasoning to pharmaceutical calculations encountered by pharmacists in professional practice. Emphasis is given to dosage calculations, compounding and dispensing of formulations. Interpretation and filling of prescriptions are also discussed. Offered: Fall semester.  
Prerequisite: Admission to Doctor of Pharmacy Program.

PHAR 642 Pharmaceutics I  
Credits 4. 3 Lecture Hours. 1 Lab Hour.  
The first of a two-course series introduces the principles of pharmaceutical dosage forms and discusses the effects of the physicochemical and biological properties of pharmaceutical products on the stability of drugs in dosage forms. The basic properties of radiopharmaceuticals and the role of nuclear pharmacy are also discussed. The laboratory portion of the course involves students in the preparation and evaluation of dosage forms. Offered: Spring semester.  
Prerequisite: PHAR 641.

PHAR 656 Health Care Systems  
Credits 2. 2 Lecture Hours.  
This course provides an introduction to the structure, organization, delivery, regulation and financing of health care. The history of pharmacy and the pharmacist’s current role and responsibilities as a patient-centered health professional are covered. Interactions with other health occupations are also discussed. Offered: Fall semester.  
Prerequisite: Admission to Doctor of Pharmacy Program.

PHAR 657 Pharmacy Law and Ethics  
Credits 3. 3 Lecture Hours.  
This course presents the application of ethical principles to pharmacy practice. Principles of ethical thinking and role of formal codes of professional conduct are discussed in the context of resolving conflicting ethical principles. Pharmacy law is covered as it relates to practice under federal, state and local regulations. Offered: Spring semester.  
Prerequisite: Admission to Doctor of Pharmacy Program.  
Corequisite: PHAR 606.
PHAR 658 Public Health and Pharmacoepidemiology  
Credits 2. 2 Lecture Hours.  
Public Health and Pharmacoepidemiology. This course introduces principles of public health and application of epidemiologic methods to the study of drug use and outcomes in populations. Measures of effect size and confidence intervals in observational research designs are emphasized. Assignments are designed to develop skills in applying analytical concepts to literature evaluation and clinical decision making. Offered: Spring semester.  
Prerequisite: Admission to Doctor of Pharmacy Program.

PHAR 671 Clinical Communications  
Credits 2. 2 Lecture Hours.  
This course introduces basic skills for effective healthcare communications. It provides verbal, non-verbal, and writing training, with patient counseling emphasis. Topics include negotiation, persuasion and presentation strategies to improve therapy adherence and clinical outcomes. Offered: Fall semester.  
Prerequisite: Admission to Doctor of Pharmacy Program.

PHAR 672 Introduction to Patient Care  
Credits 2. 2 Lecture Hours.  
This course introduces the concepts of caring for patients and pharmaceutical care. Emphasis is placed on ways of collecting, organizing and evaluating information for the purpose of rendering decisions that improve patient quality of life through the SOAP format of therapy review and basic clinical skills including pharmaceutical care plans. Offered: Fall semester.  
Prerequisite: Admission to Doctor of Pharmacy Program.

PHAR 673 Self Care and Non-Prescription Medications  
Credits 3. 3 Lecture Hours.  
This course introduces the principles of self-care and nonprescription medications, herbal products, and homeopathic. Emphasis is placed on the problem-solving processes involved in the therapeutic evaluation, rational use and recommendation for treatment. An emphasis is placed on patient care and patient counseling. Offered: Spring semester.  
Prerequisites: PHAR 605, PHAR 610, PHAR 626 and PHAR 672.  
Corequisite: PHAR 606 IPPE-II.

PHAR 681 Seminar  
Credit 1. 1 Lecture Hour.  
This course involves presentations in areas of current interest in pharmacy practice or in pharmaceutical sciences. The focus will be on promoting critical thinking skills. Emphasis will be placed on oral communications, scientific writing, and possibly grant preparation. Not graded, offered as an S/U option only. Offered: Fall, spring and summer semesters.  
Prerequisite: Permission of instructor and department chair.

PHAR 685 Independent Study  
Credits 1 to 3. 1 to 3 Lecture Hours.  
This course provides an opportunity for students to work with individual faculty mentors on research projects of variable scope. Activities could include library, laboratory and/or survey-type research, assistance with syllabus development for future elective courses, or other activities agreed on between the student and mentor. Not graded, offered as “S/U” option only. Can be repeated twice. Offered: Fall and spring semesters.  
Prerequisite: Permission of instructor and department chair.

PHAR 689 Special Topics  
Credits 1 to 3. 1 to 3 Lecture Hours.  
This course involves in-depth exploration of specialized topics within the college. Not graded, offered as S/U option only. Can be repeated twice, up to maximum number of hours permitted (an TAMHSC-assigned course and number). Offered: Fall, spring and summer semesters.  
Prerequisite: Permission of instructor and department chair.

PHAR 691 Independent Research  
Credits 1 to 9. 1 to 9 Other Hours.  
This course involves research for thesis or dissertation. Not graded, offered as S/U option only. Can be repeated (an TAMHSC-assigned course and number). Offered: Fall, spring and summer semesters.  
Prerequisite: Permission of supervisory professor in chosen field and department chair.

PHAR 700 Dean’s Hour  
Credits 0. 0 Lecture Hours.  
The theme of the Dean’s Hour is to involve students in the college’s leadership and strategic initiatives and engage them in academic excellence. It allows them to provide input into programmatic issues. This course also provides an opportunity for students to participate in reflective thought and writing. Offered: Fall and spring semesters.  
Prerequisite: P2 standing.

PHAR 701 Forum/Student Portfolios/Professional Development II  
Credits 0-1. 0-1 Lecture Hours.  
In this two-semester course, students are exposed to leaders within the profession, practitioners from various settings, leading researchers and scientists, and other renowned individuals who discuss career opportunities, latest research results and the practice of pharmacy. Student portfolio assignments are due each semester. Offered: Fall and spring semesters.  
Prerequisite: P2 standing.

PHAR 702 Core Recitation (P2)  
Credits 0. 0 Lecture Hours.  
Core Recitation provides additional interaction for students with their teachers/facilitators in order to further their knowledge, skills and abilities. These sessions are dedicated to reviewing, in a different format, and clarifying material previously presented in a core course. Most formative exams are scheduled during this course. Offered: Fall and spring semesters.  
Prerequisite: P2 standing.

PHAR 705 IPPE: Community Pharmacy Practice  
Credit 1. 1 Other Hour.  
This course continues the IPPE sequence and is a structured introductory pharmacy practice experience in the community pharmacy under the supervision of a licensed pharmacist preceptor. Through 12 weekly longitudinal site visits, the student provides direct patient care and reflects upon the professional activities. The student gains introductory competence in the values, attitudes, knowledge and skills of a pharmacist in the community setting. Offered: Fall and spring semesters.  
Prerequisites: PHAR 606, HIPAA training; blood-borne pathogens training; Basic Life Support certification; and a valid Pharmacists Intern License from the Texas State Board of Pharmacy throughout the course.
PHAR 706 IPPE: Institutional Pharmacy Practice  
Credit 1. 1 Lecture Hour.  
This course continues the IPPE sequence and is a structured introductory pharmacy practice experience in the institutional (or hospital) pharmacy under the supervision of a licensed pharmacist preceptor. Through 12-weekly longitudinal site visits, the student provides direct patient care and reflects upon the professional activities. The student gains introductory competence in the values, attitudes, knowledge and skills of a pharmacist in the institutional setting. Offered: Fall and spring semesters.  
Prerequisites: PHAR 606, HIPAA training, blood-borne pathogens training; Basic Life Support certification; and a valid Pharmacist Intern License from the Texas State Board of Pharmacy throughout the course.  
PHAR 710 IPT I: Electrolytes, Acid-Base, and Kidney Diseases  
Credits 2. 2 Lecture Hours.  
This course presents common renal disorders with an emphasis on the management of electrolyte, fluid, acid-base, acute and chronic renal disease, and common anemic conditions. Offered: Fall semester.  
Prerequisite: P2 standing.  
Corequisites: PHAR 710, PHAR 714.  
PHAR 711 IPT II: Cardiovascular Diseases  
Credits 4. 4 Lecture Hours.  
This course presents common cardiovascular disorders with a major emphasis on hypertension, ischemic heart disease, arrhythmias, heart failure, venous thromboembolism, dyslipidemia, stroke and peripheral arterial disease. Offered: Fall semester.  
Prerequisite: P2 standing.  
Corequisites: PHAR 710, PHAR 714.  
PHAR 712 IPT III: Endocrinology and Metabolic Diseases  
Credits 3. 3 Lecture Hours.  
IPT III: Endocrinology and Metabolic Diseases. This course presents common endocrine and metabolic disorders with an emphasis on diabetes, contraception, infertility, corticosteroids, thyroid, osteoporosis and menopause. Offered: Spring semester.  
Prerequisites: PHAR 710, PHAR 711, PHAR 714.  
Corequisites: PHAR 713 and PHAR 715.  
PHAR 713 IPT IV: Neurology and Pain Management  
Credits 3. 3 Lecture Hours.  
This course presents neurological disorders and pain with emphasis on seizure disorders, pain management, Parkinson’s and Alzheimer’s diseases, migraine headaches, muscle relaxants, neuromuscular blocking agents and anesthetics. Offered: Spring semester.  
Prerequisites: PHAR 710 and PHAR 711.  
Corequisites: PHAR 712, PHAR 715.  
PHAR 714 IPT Recitation/Rounds I  
Credit 1. 1 Lab Hour.  
This course introduces problem-based learning to develop skill sets for use in critical analysis and assessment of therapeutics cases using the SOAP process. Individual and team activities will focus on obtaining pertinent information, locating and utilizing appropriate resources, and integrating evidence-based practice into therapeutic decisions. Offered: Fall semester.  
Prerequisite: P2 Standing.  
Corequisites: PHAR 710 and PHAR 711.  
PHAR 715 IPT Recitation/Rounds II  
Credit 1. 1 Lab Hour.  
This course builds on prior skills while introducing the patient care plan process. Individual and team activities will build on previous courses with additional focus on written and verbal communication ability-based outcomes and critical evaluation and use of clinical resources. Offered: Spring semester.  
Prerequisites: PHAR 710, PHAR 711, PHAR 714.  
Corequisites: PHAR 712 and PHAR 713.  
PHAR 720 Introduction to Academic Pharmacy  
Credits 2. 2 Lecture Hours.  
This elective course is an overview of academic pharmacy, its role in higher education, and the triumvirate faculty roles in teaching, research, and service. During this course, the focus is on teaching in academic pharmacy and the value of teacher’s self-knowledge. Various career paths in academic pharmacy are presented. Elective course. Offered: Fall semester.  
Prerequisite: P2 Standing.  
PHAR 721 Nutrition, Vitamins, Complementary and Alternative Medicine  
Credits 2. 2 Lecture Hours.  
This course provides an overview of the basic nutrients required by the body for optimal health. The student is introduced to methods of determining a patient’s nutritional status and oral, enteral and parenteral nutritional requirements. Topics include the major nutrients of carbohydrates, lipids, protein, vitamins and minerals. The course will also provide an evidence-based approach to complementary and alternative medicine. Offered: Fall semester.  
Prerequisite: P2 standing.  
PHAR 725 Applied Pain Pharmacotherapy  
Credits 2. 2 Lecture Hours.  
This elective course focuses on pharmacotherapy of chronic pain states. The emphasis is on practical aspects of pain management such as effective and safe analgesic dose rotation and conversion, tailoring and individualizing therapy with analgesics, management of adverse events, documentation, and patient counseling. Problem-solving is based on various pain case studies. Elective course. Offered: Spring semester.  
Prerequisite: IPT IV.  
PHAR 726 Microbiology/Immunology  
Credits 3. 3 Lecture Hours.  
This course provides an overview of medical microbiology with the immunological responses and the host-parasite interaction in infectious diseases. It integrates the basic concepts of the immune response to infectious agents and other triggers and their roles in disease. An introduction to the rational management, prevention, and control of infectious diseases is provided. Offered: Spring semester.  
Prerequisite: IPT IV.  
PHAR 727 Obesity Epidemic  
Credits 2. 2 Lecture Hours.  
This elective course covers the various aspects of the obesity epidemic in the United States. The main focus is on the physiological and pathophysiological aspects of obesity. The complications of, prevalence, and incidence data from national health statistics regarding, and interventions for obesity are emphasized. Offered: Spring semester.  
Prerequisite: PHAR 712 (or concurrent enrollment).
PHAR 730 Vitamins, Phytomedicinals and Other Natural Products
Credits 2. 2 Lecture Hours.
This course intends to explore vitamins, phytomedicinals, and other natural products, especially those used as nutritive supplements and homeopathic remedies, from a medicinal and chemical perspective. Particular emphasis will be placed on the chemical nature of these agents with regards to structure, physiochemical properties, structure-activity relationships, mechanism of action, drug-drug interactions, metabolism, and excretion. The course will look at these commonly used agents from a "medicinal chemistry" perspective. Offered: Fall semester.
Prerequisite: P3 standing.

PHAR 734 Applied Drug Metabolism in Pharmacotherapy
Credits 2. 2 Lecture Hours.
Ongoing discoveries in pharmacogenetics field are expanding drug metabolism in directions that lead to the future prospect of truly individualized drug regimens. The principles presented in this elective course will help to keep abreast of these new developments and applications in pharmacotherapy. This course will focus on fundamentals of drug metabolism, metabolic pathways, different CYP isoforms involved and their role in drug metabolism. General drug metabolic pathways (e.g. oxidation, reduction, conjugation), the induction and inhibition of CYP450 enzymes and their role in drug toxicity, drug-drug interactions, drug-food interactions, idiosyncratic reactions, and chemical carcinogenesis will also be discussed.
Prerequisite: PHAR 611.

PHAR 741 Pharmaceutics II
Credits 3. 3 Lecture Hours.
The second of a two-course series introduces students to the principles of biopharmaceutics and provides information on the theory, technology, formulation, evaluation, and dispensing of solid dosage forms and sterile products. The course additionally covers principles of controlled, targeted and self-regulated drug delivery systems. Fundamentals of cellular absorption of macromolecules and novel approaches for protein and gene delivery are also discussed. Offered: Fall semester.
Prerequisite: P2 standing.
Corequisite: PHAR 742.

PHAR 742 Basic Pharmacokinetics
Credits 3. 3 Lecture Hours.
This course covers the measurement and interpretation of drug concentrations in biological fluids with a focus on the relationship between drug dose and effect. Students calculate and interpret pharmacokinetic parameters, discuss pharmacokinetic principles, and assess factors that affect drug disposition. Offered: Fall semester.
Prerequisite: P2 standing.
Corequisite: PHAR 741.

PHAR 745 Licit and Illicit Drug Use, Abuse and Addiction
Credits 3. 3 Lecture Hours.
In this elective course, students will examine the use and abuse of licit and illicit drugs in our society from historical, biological, psychological and sociological perspectives. Drugs that will be covered in the class include cocaine, amphetamines, opiates, hallucinogens, marijuana, performance-enhancing drugs, prescription drugs, over-the-counter drugs, dietary supplements, alcohol, nicotine and inhalants. Students will become familiar with the topic of drug use and abuse through listening to didactic lectures, participating in small group discussions, writing opinion papers and organizing a community project. Offered: Spring semester.
Prerequisite: PHAR 626.

PHAR 750 Drugs in Practice I
Credit 1. 1 Lecture Hour.
This two-part elective builds upon pharmacotherapy information presented in the IPT Sequence and on the counseling skills developed in Clinical Communications. It specifically focuses on the most commonly used and recently approved drug products. Students will create their own study materials by therapeutic class, and on an alternating basis present material to their classmates. There will be a heavy emphasis on active, participatory and self-learning. Student will be responsible for mastering information on the warnings, contraindications, monitoring parameters, interactions, adverse reactions and patient information for the therapeutics categories covered. Students will also counsel a patient at the proper literacy level receiving a mock prescription for the products presented. Offered: Spring semester.
Prerequisite: P3 standing.

PHAR 753 Clinically Significant Drug Interactions
Credits 2. 2 Lecture Hours.
This elective course will cover clinically significant drug interactions of commonly prescribed medications. Most drug interaction software programs tend to "flag" all interactions, which makes it difficult for the pharmacist to understand the clinically significant interactions and make a recommendation. This course will provide methods for recognizing and acting upon significant drug interactions. Appropriate consultation techniques for making recommendations to providers and patients on clinically significant drug interactions will be taught. Offered: Spring semester.
Prerequisites: PHAR 610 and PHAR 611.

PHAR 756 Pharmacy Management
Credits 2. 2 Lecture Hours.
This course introduces the role of management activities within the health care system. It presents skills for analyzing problems involving time, equipment, dollar and human resources in a health care environment. Emphasis is placed on developing problem-solving abilities within a framework of pharmacy management. Offered: Spring semester.
Prerequisite: P2 standing.

PHAR 758 Forensic Pharmacy
Credits 2. 2 Lecture Hours.
This elective course introduces students to the field of forensic pharmacy which studies the interaction between law and medicinal science. It applies principles of both areas to legislation, litigation, agency regulation, and many aspects of the criminal justice system. Students may focus on such topics as: prescription forgery, pharmacologic euthanasia, testing for drugs of abuse, professional malpractice, drug impaired driving, drug induced violence, product tampering, health care fraud, patient confidentiality, patient consent, chemical restrains, drug effects as a mitigating factor in criminal sentencing, expert witnessing, or another forensic pharmacy subject agreed to by the instructor. Offered: Fall and spring semesters.
Prerequisite: PHAR 657.

PHAR 759 Health Informatics And Patient-Centered Care
Credits 2. 2 Lecture Hours.
This elective course introduces students to information technology in health care, with emphasis on the Electronic Health Record and Electronic Prescribing. The course focuses on students who will eventually become the end-user of the Electronic Health Record; practicing pharmacists in a clinical health care setting. The method of instruction includes practical applications and hands-on exercises to provide a complete learning system. The topics integrate the history, theory and benefits of information technology with the opportunity for students to enhance clinical skills in the electronic health record environment. Offered: Fall and spring semesters.
PHAR 761 Humanism in Pharmacy Practice  
Credits 2. 2 Lecture Hours.  
Exploration of the fundamental principles of humanistic practice such as open communication, mutual respect, and absence of judgment between patients and health care providers; embracing and addressing patients' experience of health and illness and providing specialized technical functions of each profession; current literature, patience cases, speakers, personal reflection and group exercises to empower pharmacy students to provide and advocate for humanistic healthcare.  
Prerequisite: P2 or P3 standing.

PHAR 763 Geriatric Care  
Credits 2. 2 Lecture Hours.  
Fundamentals of geriatric pharmacy with focus on anticoagulation, primary care diseases, neurologic disorders, cardiovascular disorders, neurologic disorders, infectious diseases, polypharmacy and inappropriate prescribing, drug interaction, community pharmacy, consultant pharmacy and Texas State Board of Pharmacy Rules and Regulations in geriatric care.  
Prerequisite: P2 or P3 standing.

PHAR 764 Utah School on Alcoholism  
Credits 2. 2 Lecture Hours.  
Development of product knowledge, critical thinking skills, and patient care abilities with the principles and theories of addiction; offered by the University of Utah School on Alcoholism and other Drug Dependencies; additional information regarding the school and program of events may be found at medicine.utah.edu/uas/index.html.  
Prerequisite: P2 or P3 standing.

PHAR 765 Pediatric Pharmacotherapy  
Credits 2. 2 Lecture Hours.  
Instruction in pediatric pharmacotherapy through a combination of lectures, brief student presentations and online cases; work groups make a 20-minute presentation on a pediatric topic; work groups to complete online case assignment and journal article reviews.  
Prerequisite: P2 or P3 standing.

PHAR 766 Landmark Studies  
Credits 2. 2 Lecture Hours.  
Focus on important clinical trials that shape the use of pharmacotherapy; assist students in their ability to provide clinical evidence to support drug therapy recommendations in the treatment of common diseases encountered during their clinical rotations and future practice. May be repeated for credit.  
Prerequisite: P2 or P3 standing.

PHAR 767 Patient Monitoring  
Credits 2. 2 Lecture Hours.  
Overview of laboratory testing and other diagnostic procedures such as imaging, body fluid analysis, centesis and fiberoptic visualization; topics include cardiology, hematology, blood chemistry, liver tests/biopsy, body fluid tests, radiography, Computed Tomography (CT) scans, Magnetic Resonance Imaging (MRI), gastrointestinal tests, arterial blood gases, pulmonary function tests, ultrasonography, cardiac catheterization, cardiac stress testing and echocardiography.  
Prerequisite: P2 or P3 standing.

PHAR 768 Basic Science  
Credits 3. 2 Lecture Hours. 1 Lab Hour.  
The course will follow the physiological and neurological aging processes in woman. Conception and psychosocial issues are two of the topics that will be covered in depth.  
Prerequisite: P2 standing.

PHAR 769 Advanced Diabetes Care and Management  
Credits 2. 2 Lecture Hours.  
The purpose of this elective course is to provide the student with a multidisciplinary foundation in the principles of diabetes management. The student will develop their knowledge and ability to assess, manage, educate and monitor patients with diabetes.  
Prerequisites: PHAR 712 and PHAR 776.

PHAR 771 Spanish for Pharmacists  
Credits 2. 2 Lecture Hours.  
The focus of this elective course will be to provide students with a basic Spanish foundation for communicating with pharmacy clients. Emphasis will be on medical/pharmacy terminology and the ability to give instructions regarding the purpose and use of medications. Offered: Fall and spring semesters.  
Prerequisite: P3 standing.

PHAR 773 Women's Health  
Credits 2. 2 Lecture Hours.  
This elective course will highlight the special medical needs and health issues that females face. The course will include a review of female anatomy and physiology. Common diseases and disorders, along with preventative and management strategies, will be covered. Psychological, social, and economic aspects of women's health will also be addressed. The course will follow the physiological and neurological aging processes in woman. Conception and psychosocial issues are two of the topics that will be covered in depth.  
Prerequisite: P2 standing.

PHAR 777 Sterile Products/IV Admixtures (Lab)  
Credit 1. 1 Lab Hour.  
This laboratory course introduces the standards for preparation of parenteral products and provides an opportunity for students to gain proficiency with calculating and compounding sterile formulations. It focuses on proper aseptic technique, preparation of intravenous admixtures, safe handling of cytotoxic and hazardous drugs, quality assurance, and labeling. Offered: Fall semester.  
Prerequisite: P2 standing.

PHAR 778 Drug Literature Evaluation and Patient Drug Education  
Credits 3. 2 Lecture Hours. 1 Lab Hour.  
This course introduces students to drug information resources and the retrieval of and critical evaluation of drug literature related to providing pharmaceutical care. Principles and methods of drug education are presented and discussed with emphasis on development of informational materials and educational programs. Offered: Spring semester.  
Prerequisite: P2 standing.

PHAR 781 Seminar  
Credits 0-1. 0-1 Lecture Hours.  
This course involves presentations in areas of current interest in pharmacy practice or in pharmaceutical sciences. The focus will be on promoting critical thinking skills. Emphasis will be placed on oral communications, scientific writing and possibly grant preparation. Grades, offered as a graded option only. Can be repeated twice up to maximum number of hours permitted. Offered: Fall and spring semesters.  
Prerequisite: Permission of instructor and department chair.
PHAR 785 Independent Study
Credits 1 to 3. 1 to 3 Other Hours.
This course provides an opportunity for students to work with individual faculty mentors on research projects of variable scope. Activities could include library, laboratory and/or survey-type research, assistance with syllabus development for future elective courses, or other activities agreed on between the student and mentor. Grades, offered as a grade option only. Can be repeated twice up to a maximum number of hours permitted. Offered: Fall, spring and summer semesters.
Prerequisite: Permission of instructor and department chair.

PHAR 789 Special Topics
Credits 1 to 3. 1 to 3 Other Hours.
This course involves in-depth exploration of specialized topics within the college. Graded, offered as a graded option only. Can be repeated twice, up to maximum number of hours permitted. Offered: Fall, spring and summer semesters.
Prerequisites: Permission of instructor and department chair; instructors who wish to offer this course will submit an outline of the content to be covered and how the students will be assessed to the Office of Academic Affairs before registration begins.

PHAR 800 Dean's Hour
Credits 0. 0 Lecture Hours.
Dean's Hour. The theme of the Dean's Hour is to involve students in the college's leadership and strategic initiatives and engage them in academic excellence. It allows them to provide input into programmatic issues. This course also provides an opportunity for students to participate in reflective thought and writing. Offered: Fall and spring semesters.
Prerequisite: Admission to Doctor of Pharmacy Program.

PHAR 801 Forum/Student Portfolios/Professional Development III
Credits 0-1. 0-1 Lecture Hours.
In this two-semester course students are exposed to leaders within the profession, practitioners from various settings, leading researchers and scientists, and other renowned individuals who discuss career opportunities, latest research results and the practice of pharmacy. Student portfolio assignments are due each semester. Offered: Fall and spring semesters.
Prerequisites: P3 standing, HIPAA training, blood-borne pathogens training.

PHAR 802 Core Recitation (P3)
Credits 0. 0 Lecture Hours.
Core Recitation provides additional interaction for students with their teachers/facilitators in order to further their knowledge, skills and abilities. These sessions are dedicated to reviewing, in a different format, and clarifying material previously presented in a core course. Most formative exams are scheduled during this course. Offered: Fall and spring semesters.
Prerequisite: P3 standing.

PHAR 804 Grand Rounds I Capstone
Credit 1. 1 Lecture Hour.
Grand Rounds I Capstone. This course is held during the P4 year while the PharmD Candidates are participating in the Advanced Pharmacy Practice Experiences (APPEs). It is designed to provide opportunities for didactic course content review that will assist students in their transition into the profession of Pharmacy. The course will primarily be on-line, case based review of topics. Cases are designed to provide assessment of the student's knowledge base on a variety of disease states and patient populations. Grading will be on satisfactory/unsatisfactory basis. Offered: Fall semester.
Prerequisite: P4 standing.
Corequisite: Currently enrolled in APPEs.

PHAR 805 Capstone
Credit 1. 1 Lecture Hour.
This course is designed to provide students with the opportunity to reflect on the progress of their skills and knowledge, prepare and plan for post-graduate opportunities such as residencies and graduate school, and to provide time to review material the student feels strengthens his/her weaknesses. There will be a pharmacy law refresher offered as part of the course. Students will complete mock licensure exams, continuing education programs and other review activities. Grading will be on a satisfactory/unsatisfactory basis. Offered: P4 year.
Prerequisite: P4 standing.

PHAR 810 IPT V: Psychiatry and Addiction
Credits 3. 3 Lecture Hours.
This course presents common psychiatric disorders with major emphasis on the treatment of addiction, depression, anxiety, insomnia, psychosis, schizophrenia, bipolar disorder, eating disorders, attention deficit hyperactive disorder. Offered: Fall semester.
Prerequisite: P3 standing.
Corequisites: PHAR 811 and PHAR 814.

PHAR 811 IPT VI: Critical Care, GI, Pulmonary, Rheumatic, Ophthalmology and Dermatology
Credits 5. 5 Lecture Hours.
IPT VI: Critical Care, GI, Pulmonary, Rheumatic, Ophthalmology, and Dermatology. This course presents common GI conditions, rheumatologic disorders and pulmonary disease with major emphasis on peptic ulcer disease, GERD, irritable bowel disease, nausea, vomiting, diarrhea, benign prostatic hypertrophy, erectile dysfunction, incontinence, arthritis, gout, SLE, asthma, COPD and allergic rhinitis. Offered: Fall semester.
Prerequisite: P3 standing.
Corequisites: PHAR 810 and PHAR 814.

PHAR 812 IPT VII: Infectious Diseases
Credits 5. 5 Lecture Hours.
This course presents antimicrobial agents used to treat common infectious diseases with major emphasis on organ-specific bacterial, fungal, and viral infections as well as surgical prophylaxis, sexually-transmitted diseases, HIV disease and opportunistic infections. A local point is correlating medical microbiology with the medications used to treat specific organisms as well as current trends in emerging antimicrobial resistance. Offered: Spring semester.
Prerequisites: PHAR 810, PHAR 811 and PHAR 814.
Corequisites: PHAR 813, PHAR 815 and PHAR 875.

PHAR 813 IPT VIII: Oncology, Transplant and Genomics
Credits 3. 3 Lecture Hours.
IPT VIII: Oncology, Transplant, and Genomics. This course presents common neoplastic diseases, organ transplantation, and pharmacogenomics with an emphasis on most common carcinomas, sarcomas and lymphomas, supportive and palliative care, solid organ transplants. Offered: Spring semester.
Prerequisites: PHAR 810, PHAR 811 and PHAR 814.
Corequisites: PHAR 812, PHAR 815 and PHAR 875.

PHAR 814 IPT Recitation/Rounds III
Credit 1. 1 Lab Hour.
This course is designed for continued application of SOAP and patient care plan processes to critically analyze and solve increasingly complex patient problems. Individual and team activities will build on previous sequence courses with additional focus on effective written and verbal communication of literature critique and presentation. Offered: Fall semester.
Prerequisite: P3 standing.
Corequisites: PHAR 810 and PHAR 811.
PHAR 815 IPT RECITATION/ROUNDS IV
Credit 1. 1 Lab Hour.
The fourth of a four-class sequence builds on the course description of the IPT Recitation/Pharmacy Rounds Sequence (see under P2 course listings). Specifically, it covers the principle therapies associated with infectious diseases, oncology, supportive care and organ transplantation. Patient education regarding the issues surrounding their conditions and drug therapy are also identified and addressed. Students are responsible for participation in drug use decisions and devising rational pharmacy care plans (therapeutic strategies) and optimal drug dosage regimens, as well as determining appropriate parameters for outcome monitoring and assessment techniques for safety and efficacy. 

PHAR 826 APPE: Research
Credits 6. 6 Other Hours.
This rotation allows the student to observe and participate in the research pharmacist's role. Emphasis is placed on how to conduct experiments, analyze data and discuss results. The student continues to build their knowledge base in the discipline of the preceptor and gains practical experience in research. Students on this rotation also review journal articles and write a synopsis to further develop their medical writing skills and will orally present journal articles. Offered: Fall and spring semesters. 
Prerequisite: P4 standing.

PHAR 828 APPE: Spinal Cord Injuries
Credits 6. 6 Other Hours.
May not be enrolled in one of the following campuses: Dallas. The elective in spinal cord injuries (SCI) centers around an interdisciplinary team that collects patient specific information to prevent, detect and resolve medication related problems and to make appropriate evidence-based patient centered medication therapy recommendation. The team will develop SCI pharmacotherapeutic regimens and monitoring plans.

PHAR 829 APPE: Pharmacoeconomics
Credits 6. 6 Other Hours.
Must be enrolled in one of the following degrees: Doctor of Pharmacy. May not be enrolled in one of the following campuses: Dallas. The elective rotation will focus on pharmacoeconomic factors in formulary management and decision making including drug characteristics, drug administration and monitoring costs, quality of life, total costs, cost effectiveness, supply related issues and practice demand.

PHAR 830 APPE: Medication Therapy Management
Credits 6. 6 Other Hours.
May not be enrolled in one of the following campuses: Dallas. The Medication Therapy Management elective optimizes therapeutic outcomes for patients through medication reconciliation on discharge medications and the provision of discharge counseling to medicine patients.

PHAR 841 Toxicology and Poison Management
Credits 2. 2 Lecture Hours.
This course provides an overview of basic concepts in clinical toxicology including diagnosis and treatment of common poisonings with emphasis on patient-oriented toxicology. Current poison information systems and their clinical uses are provided. Focal points will include critical problem-solving skills, patient interview techniques, differential diagnosis of poisoning, rational therapeutic plans for toxicological problems, and patient monitoring parameters. Offered: Fall semester. 
Prerequisite: P3 standing.

PHAR 842 Patient Assessment
Credits 3. 2 Lecture Hours. 1 Lab Hour.
This course is designed to develop skills in data collection, interpretation and evaluation of a patient’s physical state. Physical examination principles are presented on select organ systems and are followed by practicums whereby students practice learned techniques. Additional skills in patient interviewing, SOAP note documentation, medication profiling and advisement are also covered. Offered: Fall semester. 
Prerequisite: P3 standing.

PHAR 855 APPE: Pain Management
Credits 6. 6 Other Hours.
This elective rotation introduces students to treating patients for pain management in the hospital setting. Focus is place on medication management of patients on pain medications. Students use problem solving skills, and gain experience with therapeutic monitoring, drug-related problems, and medication side effects. Offered: Fall and spring semesters. 
Prerequisite: P4 standing.

PHAR 856 Introduction to Pharmaceoeconomics
Credits 2. 2 Lecture Hours.
This course introduces the concepts of health outcomes research and pharmacoeconomic analysis and provides a basic framework to optimize health care resource allocation. Principles of measuring and analyzing costs and outcomes plus techniques used to evaluate them across drug treatments are discussed. The course reviews practice guidelines for pharmacoeconomic evaluation and describes conducting pharmacoeconomic research. Offered: Spring semester. 
Prerequisite: PHAR 756 and PHAR 778.

PHAR 857 APPE: Nutrition
Credits 6. 6 Other Hours.
The purpose of this experiential is for students to gain professional skills in the area of nutrition/nutrition support. Students will participate in a variety of clinical activities, functioning as an integral member of the health care team. Emphasis will be placed on building the student's knowledge and experience with enteral and parenteral nutrition and the student's ability to demonstrate their understanding of common disease states and treatment modalities as well as their ability to provide pharmaceutical care. The most commonly encountered medical conditions may include malnutrition syndromes, malabsorptive syndromes (short gut, inflammatory bowel disease, etc.), high metabolic need states (burns, critical care, etc.), and conditions requiring specialized feeding devices. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 858 APPE: Poison Control
Credits 6. 6 Other Hours.
In this practice experience, students work closely with the pharmacist and professional staff of a poison control center and possibly other pharmacy students, emergency medicine residents, and toxicology fellows. Students will spend time with the professional staff on the phones handling patient and professional inquiries. One of the primary emphases of this rotation is for the student to become familiar with the role of a pharmacist in a poison control center, to identify various information resources used by poison center staff and to be able to relay poison information to the lay public, emergency room staff and other health care professionals. Offered: Fall and spring semesters. 
Prerequisite: P4 standing.
PHAR 859 APPE: Surgery
Credits 6. 6 Other Hours.
This elective experiential introduces students to clinical pharmacy practice in the outpatient surgery setting. This rotation is designed to develop further the student’s knowledge and understanding of the processes, procedures, and skills necessary to provide pharmaceutical care to surgery patients. The student will learn fundamental concepts that will allow the student to provide pharmaceutical care to animals and assist the veterinarian and owner in the care of pets and domestic animals. Emphasis will be placed on the selection of the proper therapeutic agents for use in various species of animals. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 860 APPE: Veterinary Medicine
Credits 6. 6 Other Hours.
The Veterinary Medicine rotation is designed to introduce pharmacy student to veterinary pharmacology and therapeutics and the role of the pharmacist in the care of animals. The students will evaluate the most commonly used drugs in veterinary care and relate that evaluation to the use of these drugs in humans. The student will learn fundamental concepts that will allow the student to provide pharmaceutical care to animals and assist the veterinarian and owner in the care of pets and domestic animals. Emphasis will be placed on the selection of the proper therapeutic agents for use in various species of animals. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 862 APPE: Compounding
Credits 6. 6 Other Hours.
This elective experiential introduces students to extemporaneous pharmaceutical compounding within the community setting. This rotation is designed to develop further the student’s knowledge and understanding of the techniques, processes, procedures, and skills necessary to provide pharmaceutical care for patients needing compounded products. Students will compound prescriptions that are not commercially available or economically feasible to manufacture in order to meet individual patient needs. The most commonly compounded preparations may include oral liquids (solutions, suspension, etc.) capsules, suppositories, lozenges, nasal sprays, and topical preparations (gels, creams and ointments). Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 863 APPE: Home Infusion
Credits 6. 6 Other Hours.
This elective rotation introduces students to clinical pharmacy practice in the home infusion setting. This experiential is designed to develop further the student’s knowledge and understanding of the processes, procedures, and skills necessary to provide pharmaceutical care for home infusion patients. The student will be involved in the general and clinical operations, identification and training of appropriate candidates to received infusion therapy, and the initial assessment and ongoing care planning for patients receiving infusions. The student will develop the skills necessary to prepare products for home infusion therapy. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 864 APPE: Investigational Drugs
Credits 6. 6 Other Hours.
This experiential will introduce the student to key concepts of Investigational Review Boards (IRB) and the role of the pharmacist in the use of investigational drugs. Students will learn the unique procedures of dispensing investigational medications, drug accountability, study monitoring, and reviewing drug orders. Students may have the opportunity to attend an IRB meeting and work with clinical investigators who have ongoing research. This elective rotation will prepare students for work in an investigational drug service and offer an inside view of pharmaceutical research requirements. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 865 APPE: Nuclear Pharmacy
Credits 6. 6 Other Hours.
This advanced practice experience provides the student with a supervised, clinical experience in nuclear pharmacy and participating in patient management as a member of the nuclear medicine team. Emphasis is placed on regulatory matters, technology, distribution procedures and the specialized skills utilized in a nuclear pharmacy. The student will have active involvement in the distributive functions of compounding and dispensing radiopharmaceuticals, as well as the associated patient-oriented functions and consultative interactions with nuclear medicine personnel. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 866 APPE: Managed Care
Credits 6. 6 Other Hours.
This rotation introduces students to clinical pharmacy practice in the managed care setting. It is designed to develop further the student’s knowledge and understanding of the pharmacist’s role in formulary development and management, as a means of cost control and literature evaluation as it pertains to clinical decision making in specific patient cases. The student may be responsible for therapeutic class reviews, communication with patients, providers, and employer groups, evaluation, counselling and participation in the prior authorization process. The student will develop the skills necessary to be involved in Medication Therapy Management, using primary literature and cost-benefit analysis. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 867 APPE: Professional Association Management
Credits 6. 6 Other Hours.
This rotation introduces students to pharmacy association management at the national, regional, or state level. It is designed to develop further the student’s knowledge and understanding of the purpose, roles and responsibilities of pharmacy associations in the profession. The student will be responsible for recruitment and retention initiatives of members and developing and designing programs which appeal to both the newly graduated and the highly experienced. The student will develop the skills necessary to interact effectively in a business setting and evaluate legislation to determine possible implications to the profession. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 868 APPE: Regulatory Affairs
Credits 6. 6 Other Hours.
This experiential introduces the student to the legal and regulatory processes that impact the profession. Opportunities will vary according to the preceptor and site availability. The student will delve into the enactment and enforcement of federal and state laws related to drug manufacture, drug distribution, drug use and pharmacy practice. Possibilities may include, but are not limited to, working with federal or state agencies, regulatory or accrediting bodies, legal scholars, or others. Offered: Fall and spring semesters.
Prerequisite: P4 standing.
PHAR 869 APPE: Health Informatics
Credits 6. 6 Other Hours.
This experience focuses on the areas of health informatics and its impact on practice. The student will gain basic understanding of the history, language and concepts of information technology thereby exposing the student to the interdisciplinary environment of informatics project teams. Students will be exposed to database management, automation and robotics, electronic prescribing, and health records. Location of the rotation will vary according to preceptor and site availability. Emphasis will be placed on information searches, analysis, and the development and dissemination of reports. Students will also become more familiar with HIPPA requirements and information security measures. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 870 APPE: Administration
Credits 6. 6 Other Hours.
This experience will introduce the student to the administrative role pharmacists perform in different practice settings. Opportunities will vary according to preceptor and site availability. Rotation assignments may be made in community pharmacy or health-system pharmacy management, academic leadership, or other sites that feature a prominent administrative presence. Students continue to build their knowledge base in the administrative, behavioral, economic and legal sciences. It will also explore the role a manager plays in directing the organizational, financial and human relations aspect of the site. Student activities include reviewing pertinent literature, participation in management discussions, writing reports and working on assigned projects. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 871 Pharmaceutical Care Lab and Medication Therapy Management
Credits 2. 2 Lecture Hours.
This course is preparation for the practice of pharmacy in ambulatory and/or institutional settings. Emphasis is placed on skills in using patient assistance devices as well as patient counseling, education and assessment. Didactic instruction is incorporated with experiential rotation inter-professional settings with credit earned toward medication therapy management certification. The application of appropriate communication and documentation is stressed. Offered: Spring semester.
Prerequisite: P3 Standing.

PHAR 872 Social-Behavioral Aspects of Patient Care
Credits 2. 2 Lecture Hours.
This course focuses on behavioral change relative to public health, health education, preventive health, health promotion and pharmacological practice. The course utilizes historical and cross-cultural examples to examine medication-taking experiences and their influence on drug-taking behaviors. Integration of information from both pharmaceutical and social sciences allows for the exploration of how and why drugs are discovered and used. Offered: Spring semester.
Prerequisite: P3 standing.

PHAR 875 Clinical Pharmacokinetics
Credits 3. 2 Lecture Hours. 1 Lab Hour.
This course is designed to reinforce the application of pharmacokinetic and pharmacodynamic principles along with enhanced of critical thinking and confident clinical decision-making regarding therapeutic drug monitoring. Patient-centered therapeutic plans that address pharmacokinetic problems are applied in the management of clinical cases. Offered: Spring semester.
Prerequisites: PHAR 810 and PHAR 811.
Corequisites: PHAR 812, PHAR 813 and PHAR 815.

PHAR 876 APPE: Acute Care General Medicine
Credits 6. 6 Other Hours.
This rotation is designed to provide the student substantial exposure and experience in the comprehensive treatment and inpatient management of the disease states of adult patients that are admitted to the hospital or other institutionalized setting with common acute or chronic conditions (e.g., hypertension, asthma, congestive heart failure, diabetes, or infectious diseases). In addition, student utilized problem-solving skills, develop therapeutic plans, monitor lab values, and assess for drug interactions and adverse drug reactions while tracking patients through completion of their therapy. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 877 APPE: Ambulatory Care
Credits 6. 6 Other Hours.
This experience is designed to give students preparation in treating patients in a general or specialized outpatient setting that are typically not seriously ill. Focus is placed on the medication management of specific diseases (such as hypertension, diabetes, asthma, etc.) or the general care of patients with chronic conditions. Students utilize problem-solving skills, patient medication counseling, therapeutic monitoring, as well as address interaction, side effects and compliance issues in the care of these patients. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 878 APPE: Community Practice
Credits 6. 6 Other Hours.
This pharmacy practice experience exposes students to the daily clinical activities of the community pharmacy setting, with the focus placed upon a patient care approach. Students learn the goals of clinical intervention and the steps necessary to execute effectively those interventions. Students engage in evaluating and solving drug-related problems, in interacting with the patient, and acting as a primary health care source are stressed. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 879 APPE: Hospital/Health System Pharmacy
Credits 6. 6 Other Hours.
APPE: Hospital / Health System Pharmacy. The purpose of this pharmacy practice experience is to gain an understanding of the various aspects of health-system pharmacy services. This includes, but is not limited to, provision of products, clinical pharmacy services, and pharmacy management issues. Students should approach the rotation with the understanding that the ultimate goal in all health-system pharmacies is improving patient care. Offered: Fall and spring semesters.
Prerequisite: P4 Standing.

PHAR 880 APPE: Critical Care
Credits 6. 6 Other Hours.
This pharmacy practice experience is designed to give students preparation in treating patients in a critical care setting. Focus is placed on the medication management of patients in critical condition. Students utilize problem-solving skills, patient medication counseling, therapeutic monitoring, as well as address interaction, side effects, and compliance issues in the care of these patients. Offered: Fall and spring semesters.
Prerequisite: P4 standing.
PHAR 882 APPE: Academic Internship
Credits 6. 6 Other Hours.
This experiential introduces students to the academic practice of pharmacy. This rotation is designed to develop and enhance the student's knowledge and understanding of an academic career, to develop personal teaching skills, and to provide exposure to the various responsibilities associated with a full-time faculty position in pharmacy education. The student will be responsible for didactic and small group teaching, including active learning techniques, assessment, instructional technology and learning theories. The student will be exposed to class coordination techniques and the administrative components of academia. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 883 APPE: Extended Care
Credits 6. 6 Other Hours.
This experience provides student with the opportunity to learn how to provide patient care for those who are housed in an extended-care facility or who are undergoing rehabilitation. Emphasis will be placed on the student's ability to demonstrate their empathy and to work in interprofessional teams. Students will learn the different treatment options and therapeutic modalities utilized in these patient populations and take into consideration the different pharmacokinetic properties, dosing principles and therapeutic drug monitoring required of this population. Offered: Fall and spring semesters.
Prerequisites: P4 standing and permission from preceptor.

PHAR 884 APPE: Geriatrics
Credits 6. 6 Other Hours.
The geriatric rotation provides students with the opportunity to learn how to treat illnesses that commonly afflict older patients. Students will learn the different treatment options and regimens utilized in this patient population and take into consideration the different pharmacokinetic properties, dosing principles and therapeutic drug monitoring required of this populations. Offered: Fall, spring and summer semesters.
Prerequisite: P4 standing.

PHAR 886 APPE: Infectious Diseases
Credits 6. 6 Other Hours.
The purpose of this rotation is for students to gain professional skills in an infectious disease practice environment. The Infectious Diseases rotation affords students the opportunity to participate effectively in the patient care decision-making process. Students will be engaged in a variety of clinical activities, functioning as an integral member of the health care team. Emphasis will be placed on the student's ability to demonstrate their understanding of common infectious processes, to evaluate critically, patients for appropriate antimicrobial pharmacotherapy, and to communicate his or her recommendation to other health care professionals. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 887 APPE: End-of-Life Care
Credits 6. 6 Other Hours.
The purpose of this rotation is for students to gain professional skills with end of life care. It will afford the student an opportunity to participate effectively in the process of providing patient care and comfort in the hospice or other setting. Students will participate in a variety of activities, functioning as an integral member of the health care team. Emphasis will be placed on the student’s ability to demonstrate their empathy and understanding of common indications for and treatment modalities in end-of-life. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 888 APPE: Public Health
Credits 6. 6 Other Hours.
This rotation exposes students to the daily clinical activities of the pharmacist practicing in a rural health setting. The types of patients and disease states encountered by the learner will vary, based on the individual site. Disaster preparedness and bioterrorism preparation and countermeasures may be part of this experience. The students and preceptor will partner with communities and/or health departments to assess health priorities and develop plans to address identified needs. Evaluation and solving drug-related problems, patient interaction, and acting as a primary health care source to the medically underserved are stressed. Students will develop an understanding of inter-professional working relationships. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 892 APPE: Drug Information
Credits 6. 6 Other Hours.
This rotation allows the student to serve as a primary provider of drug information in a structured environment that possesses both the resources and the faculty expertise in clinical information requests, design and execute a systematic search strategy, assimilate the information retrieved and formulate and communicate an appropriate response. The student continues to build their knowledge base of available drug information resources and gains practical experience in critically evaluating those resources. Students on this rotation also prepare drug monographs and journal articles to further develop their medical writing skills and will orally present journal articles and drug reviews. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 893 APPE: Pediatrics
Credits 6. 6 Other Hours.
The pediatric rotation provides students with the opportunity to learn how to treat acute and chronic illnesses that commonly afflict infant and child patients. Students learn the different treatment options and regimens utilized in this patient population and take into consideration the different pharmacokinetic properties, dosing principles and therapeutic drug monitoring of children. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 894 APPE: Oncology
Credits 6. 6 Other Hours.
This experiential introduces students to clinical oncology pharmacy practice. This rotation is designed to develop further the student’s knowledge and understanding of the pharmaceutical support to the inpatient oncology service patient including staging, treatment, dosing, monitoring, and supportive care issues, including comfort, empathy and pain management. The student will be responsible for designing a treatment plan for cancer patients, identifying and following monitoring parameters and supplying specific supportive regimens based on current literature and guidelines. Offered: Fall and spring semesters.
Prerequisite: P4 standing.
PHAR 896 APPE: Cardiology
Credits 6. 6 Other Hours.
This experiential is designed to introduce fourth year pharmacy students to clinical pharmacy practice in the cardiology setting. This rotation will further develop the student’s knowledge and understanding of the pharmacotherapy of patients with a variety of cardiac conditions. The student will be responsible for monitoring patients, utilizing appropriate resources to provide patient-centered care, and providing drug information to other health care professionals. The student will develop the skills necessary to evaluate critically, patients for appropriate pharmacotherapy and to communicate their recommendations to other health care providers. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 897 APPE: Mental Health
Credits 6. 6 Other Hours.
The purpose of this experiential is for students to gain professional skills in the area of behavioral modification. This rotation is designed to further develop the student’s knowledge and understanding of the methods, monitoring and skills necessary to provide patient care for adult patients with psychological or behavioral disorders. The student will be responsible for assessing, designing and monitoring patients with various psychological or behavioral disorders and presenting therapeutic recommendations as a member of an interdisciplinary team. The student will develop the skills necessary to provide care to these patients. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 898 APPE: Emergency Medicine
Credits 6. 6 Other Hours.
Students will rotate through different areas of an emergency department (ED). This rotation may necessitate a flexible schedule. Most of the student’s time will be spent in direct interaction with the ED pharmacist assisting with conscious sedation, critical responses, reviewing lab values, patient charts, medication histories, indications and safety of medications administered in the emergency department. Time will be spent interacting with other disciplines, attending meetings, answering drug information questions or completing projects. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHAR 899 APPE: Specialty Pharmacy Practice
Credits 6. 6 Other Hours.
APPE: Specialty Pharmacy Practice. This rotation allows the student to explore a specific area of interest that may or may not be a traditional career path in pharmacy under the supervision of a preceptor. Specialty areas will vary according to preceptor and site availability. Potential opportunities may include, but are not limited to, compounding, specialty independent pharmacy, nuclear pharmacy, veterinary practice, medical missions, pharmaceutical industry, nutritional practice or others. Course is repeatable when topic varies. Offered: Fall and spring semesters.
Prerequisite: P4 standing.

PHEB - Public Hlth Epide Biost

PHEB 600 Fundamentals of Epidemiology
Credits 3. 3 Lecture Hours.
This is the core epidemiology course for non-major students. It is an overview course intended to familiarize students with the basic principles and applications of epidemiological concepts and methods in the study of public health problems in populations. The focus of the course is on the interpretation and assessment of epidemiologic research, both descriptive and analytic, and its application to public health practice and relevance to the key disciplines of public health.

PHEB 602 Biostatistics I
Credits 3. 3 Lecture Hours.
An introduction to statistical issues in public health, including basic probability, significance levels and confidence intervals, interpretation of public health data, and specific statistical techniques such as regression, analysis of variance, nonparametric techniques and categorical data.

PHEB 603 Biostatistics II
Credits 3. 3 Lecture Hours.
A second course in biostatistical methods that emphasizes linear models and designed experiments. Designed for student wishing a deeper understanding of topics introduced in PHEB 602.
Prerequisite: PHEB 602.

PHEB 605 Epidemiologic Methods I
Credits 3. 3 Lecture Hours.
This is the core epidemiology course for major students in the Department of Epidemiology and Biostatistics. It is an overview course intended to familiarize students with the basic principles and applications of epidemiological concepts in the study of disease occurrence in populations. The focus of the course is on the interpretation and assessment of epidemiological research, as well as the design and conduct of descriptive and analytic epidemiologic studies.

PHEB 606 Survival Analysis
Credits 3. 3 Lecture Hours.
Introduce statistical methods for survival (time-to-event) data analysis. Discuss the basic concepts of survival analysis, including hazard functions, survival functions, types of censoring, Kaplan-Meir estimates, logrank tests.
Prerequisites: PHEB 602 and PHEB 603.

PHEB 607 Sample Survey Methodology
Credits 3. 3 Lecture Hours.
The purpose of this course is to prepare students to examine the unified set of concepts, principles and methodologies that govern sample survey methodology. It is designed to build on a foundation of coherent survey concepts and foster the understanding of the principles and methods of sampling theory, survey design, analysis and interpretation. This course is designed for epidemiology track and other public health students requiring a more thorough knowledge of the concepts and methods used in survey research. This course stresses survey designs, methodological issues and analytic methods as they relate to conduct of surveys.
Prerequisites: PHEB 602 and PHEB 603.

PHEB 609 Categorical Data Analysis
Credits 3. 3 Lecture Hours.
This course will introduce the basic theory and applications of methods used to analyze categorical data. The theory will be covered but the emphasis will be on selecting appropriate analysis strategies, analyzing data and interpreting results of those analyses. No background in calculus or matrix algebra is required.
Prerequisites: PHEB 602 and PHEB 603 (or STAT 651 and STAT 652).

PHEB 610 Epidemiologic Methods II
Credits 3. 3 Lecture Hours.
An intensive introduction to epidemiological concepts and methods for students in the epidemiology concentration and others who will collaborate in – or be required to – interpret the results of epidemiological studies. Emphasis is placed on calculation and interpretation of crude and adjusted data, measures of association, and study design. Course restricted to PHEB students only or approval of instructor required.
Prerequisites: PHEB 602 and PHEB 605 or concurrent enrollment in PHEB 603.
PHEB 611 Epidemiologic Methods III  
Credits 3. 3 Lecture Hours.  
In-depth treatment of key methodological and analytic topics in epidemiology. Emphasis on study design and implications for data analysis, such as confounding, model selection and effect modification. Analytic techniques using logistic regression and stratified analysis will be emphasized. Restricted to PHEB students only or approval of instructor required.  
Prerequisites: PHEB 610 and PHEB 603.

PHEB 612 Data Management / Computing  
Credits 3. 3 Lecture Hours.  
An introduction to the principles of data management, techniques in designing and implementing databases for large data systems, techniques for communicating between computing environments, and introduction to statistical software.

PHEB 614 Analysis of Longitudinal and Multilevel Data  
Credits 3. 3 Lecture Hours.  
This course presents modern approaches to the analysis of longitudinal and multilevel data. The random effects model and the generalized estimating equations are studied. Both continuous and discrete outcome are considered. Missing data issue is discussed.  
Prerequisites: PHEB 602, PHEB 603 and PHEB 609.

PHEB 615 Disaster Epidemiology  
Credits 3. 3 Lecture Hours.  
Students will be taught the basic principles, terms, and epidemiological tools for use in disasters. Topics to be covered include: 1) public health consequences associated with various types of disasters; 2) rapid health assessment of disaster-affected populations; 3) establishment of emergency surveillance systems in disaster settings; 4) the federal and state disaster response framework; 5) selected case studies of disasters and their effects on populations; and 6) topics related to disasters in international health settings. Each class session will have a lecture component, team exercise/case study and discussion.

PHEB 616 Statistical Methods of Genetics  
Credits 3. 3 Lecture Hours.  
This is an elective course that will introduce students to the statistical methods used in the search for genetic factors that may be associated with diseases. While the mathematics underlying the methods will be presented, emphasis will be placed on understanding concepts, using software to analyze example data and interpreting the results of those analyses.  
Prerequisites: PHEB 602 and PHEB 603 or STAT 651 and STAT 652.

PHEB 618 Spatial Epidemiology  
Credits 3. 3 Lecture Hours.  
This course provides a broad introduction to the principles and methods of spatial epidemiology, with particular emphasis on the use and applications of Geographical Information Systems (GIS), and spatial analysis methods in health research and public health practice.

PHEB 619 Infectious Disease Epidemiology  
Credits 3. 3 Lecture Hours.  
Principles and practices of epidemiology appropriate for the study of communicable diseases. Course focuses on methodology, public health concerns, patterns of transmission and newly discovered infectious diseases.  
Prerequisite: PHEB 600 or PHEB 605.

PHEB 620 Cancer Epidemiology  
Credits 3. 3 Lecture Hours.  
A review of the principles and methods used in cancer epidemiology. The course focuses on cancer etiology and control with emphasis on race/ethnicity and urban/rural differences in cancer incidence and mortality.  
Prerequisite: Either PHEB 600 or PHEB 605.

PHEB 622 Reproductive And Perinatal Epidemiology  
Credits 3. 3 Lecture Hours.  
Epidemiology of major reproductive health outcomes, including infertility, fetal loss, birth weight, congenital malformations and infant mortality. Review of current knowledge of determinants of these outcomes.  
Prerequisite: PHEB 600 or PHEB 605.

PHEB 624 Social Epidemiology  
Credits 3. 3 Lecture Hours.  
This course exposes students to the breadth of chronic diseases affecting public health and methods of prevention, including: 1) Screening for Early and Asymptomatic Conditions, 2) Development of Guidelines, 3) Cancer, 4) Cardiovascular Disease, 5) Diabetes, 6) Other conditions: Respiratory Diseases, Musculoskeletal Disorders, Disabilities, Traumatic Injuries, Neurological Disorders, Psychiatric Illness and Stress, Childhood Cognitive Disorders, Kidney and Liver Diseases, Skin Disorders, Visual and Hearing Disorders, Blood Disorders, 7) Tobacco Use, 8) Obesity and Nutrition. Restricted to MD or DO in Preventive Medicine Residency.

PHEB 630 Public Health Epidemiology For Military Personnel  
Credits 3. 3 Lecture Hours.  
This course provides an introduction to Epidemiology and all students will emerge with the tools needed to identify, analyze and apply interventions useful in understanding how disease occurs, propagates and is controlled.
PHEB 684 Practicum
Credits 3. 3 Other Hours.
Field placement experience in which students work closely with a departmental faculty member and (an) appropriate field professional(s) applying skills and techniques acquired through coursework. Satisfactory/Unsatisfactory grade option only.
Prerequisite: Approval of student’s academic advisor.

PHEB 685 Directed Study
Credits 1 to 6. 1 to 6 Other Hours.
Student investigation of a topic not covered by other formal courses. May be repeated for a maximum of six credits. Satisfactory/Unsatisfactory grading option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day and outlined in the course syllabus and not be altered once the course has begun.
Prerequisite: Approval of student’s academic advisor.

PHEB 686 Directed Research
Credits 1 to 3. 1 to 3 Other Hours.
Student research initiative not within the scope of a thesis or dissertation. May be repeated for a maximum of six credits. Satisfactory/Unsatisfactory grading option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day, outlined in the course syllabus and not be altered once the course has begun.
Prerequisite: Approval of student’s academic advisor.

PHEB 689 Special Topics
Credits 1 to 3. 1 to 3 Lecture Hours.
Revolving topics seminar in an area of specialization within the department. May be repeated for credit. Satisfactory/Unsatisfactory grading option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day, outlined in the course syllabus and not be altered once the course has begun.
Prerequisite: Approval of student’s academic advisor.

PHEB 690 Epidemiologic Proposal Development
Credits 3. 3 Lecture Hours.
This course describes the components of a National Institutes of Health grant application, including the scientific, budgetary and human subjects aspects of the proposal. Students develop an epidemiologic research proposal utilizing these guidelines. In a mock study section, the students also serve as reviewers for colleagues’ proposals.
Prerequisites: PHEB 600, and either PHEB 602 or STAT 651.

PHEB 691 Thesis
Credits 1 to 6. 1 to 6 Other Hours.
Research for master’s thesis. May be repeated for credit. Satisfactory/Unsatisfactory grade option only.
Prerequisite: Approval of the student’s academic advisor and department head.

PHEB 695 Doctoral Capstone
Credits 3 to 9. 3 to 9 Other Hours.
Doctoral Dissertation or equivalent project(s). Satisfactory/Unsatisfactory grade option only.

PHEO - Public Hlth Enviro Occu

PHEO 600 Principles of Environmental and Occupational Health
Credits 3. 3 Lecture Hours.
Overview of nature and magnitude of environmental and occupational disease; sources of exposure, methods of monitoring and modeling exposure; review of target organs and potential effects of specific chemicals; discussion of workplace hazards and monitoring programs.

PHEO 601/MSCI 601 Principles of Basic Medical Sciences
Credits 5. 5 Lecture Hours.
Review of cellular and biochemical functions in human body; technologies for probing cellular functions and structures; plasma membrane, internal membranes and intracellular organelles; gene function; cell metabolism; cell motility and cytoskeleton.
Prerequisites: Undergraduate biology and biochemistry or equivalent.
Cross Listing: MSCI 601.

PHEO 603 Introduction to Environmental and Occupational Health for Military Personnel II
Credits 3. 3 Lecture Hours.
The goal of the course is for the student to be able, given a scenario and pertinent information, make sound management decisions and effectively employ public health policy among military public health specialties.

PHEO 605/VAPH 605 Chemical Hazard Risk Assessment
Credits 3. 3 Lecture Hours.
Chemical and biological methods for testing hazardous chemicals and complex mixtures; chemical analysis; microbial bioassays; developmental toxicity; enzyme induction; mammalian cell culture.
Cross Listing: VAPH 605.

PHEO 606 Applied Health Risk Assessment: Humanitarian Settings for Military Personnel
Credits 3. 3 Lecture Hours.
The overall goal of the course is for the student to be able, given a scenario and pertinent information, make sound management decisions and effectively employ public health policy.

PHEO 607 Applied Health Risk Assessment: Operational Risk Assessment and Management for Military Personnel
Credits 3. 3 Lecture Hours.
The overall goal of the course is for the student to be able, given a scenario and pertinent information, make sound management decisions and effectively employ public health policy.

PHEO 610 Basic Environmental Toxicology
Credits 3. 3 Lecture Hours.
Examines basic concepts of toxicology in environmental and occupational surroundings. Distribution, absorption, metabolism and elimination of toxicants are discussed. Mechanisms of injury for various classes of toxicants following exposure to toxic chemicals are explored at the systemic, organ and cellular level.
Prerequisite: PHEO 630 or approval of instructor.

PHEO 611 Environmental Health Assessment
Credits 3. 3 Lecture Hours.
This course will review methods to evaluate the public health implications of exposures to environmental contamination. These methods are used to determine whether people have been, are being, or may be exposed to hazardous substances and if so, whether that exposure is harmful, or potentially harmful, and should therefore be stopped or reduced. Students will gain insight into the variety of tasks associated with the environmental health assessment process.
Prerequisite: PHEO 600 and PHEO 600.
PHEO 612 International Environmental Health
Credits 3. 3 Lecture Hours.
As globalization continues and the earth's natural processes transform local problems into international issues, few societies are being left untouched by major environmental problems. This course addresses some of these environmental problems that developing and underdeveloped countries face due to overpopulation, lack of natural resources, and lack of proper ways or technologies to dispose of hazardous wastes.

PHEO 613 Introduction to Environmental Health Disparities
Credits 3. 3 Lecture Hours.
In this online course, the students will learn about the disproportionate burdens of environmental contamination, whether urban or rural, and about the environmental health inequalities affecting communities of color. The course will review the history and politics of environmental justice movements in the U.S., and other parts of the world with a focus on the methods and materials used in the study of environmental racism, environmental risk, and sustainable development. This course presents empirical evidence on distributions of environmental quality and health, enforcement of regulations, access to resources to respond to urban, rural, and industrial problems, and the broader political economy of decision-making around environmental and health issues.

PHEO 614/SCSC 614 Biodegradation and Bioremediation
Credits 3. 3 Lecture Hours.
Processes affecting the biodegradation of organic chemicals in the environment; assessment of the utility of various remedial procedures, including biodegradation and bioremediation in site specific situations; methods of site assessment and quantitative risk characterization.
Prerequisite: Organic chemistry or approval of instructor.
Cross Listing: SCSC 614.

PHEO 615 Environmental Measurement
Credits 3. 3 Lecture Hours.
Theory and practice of analytical methods used in the study of environmental sciences; data quality of objectives, instrumental and wet chemical techniques used in measurement of environmental quality parameters and contaminants.
Prerequisite: College-level chemistry or approval of instructor.

PHEO 617 Occupational Assessment
Credits 3. 3 Lecture Hours.
This course is designed to provide students with an understanding of occupational exposure assessment. Students will gain experience in, sample collection for occupational settings and occupational exposure analysis.

PHEO 618 Occupational Safety
Credits 3. 3 Lecture Hours.
This course is designed to provide students with an understanding of occupational safety and health topics they will encounter as safety professionals. Students will gain experience and knowledge in the areas of construction safety, fall protection systems, aerial lift safety, emergency response communication, hazard identification, accident investigation techniques, OSHA regulations, their role as a safety professional during an OSHA inspection, workers compensation, safety in rural and developing areas and ethics in safety.

PHEO 630 Environmental/Occupational Diseases
Credits 3. 3 Lecture Hours.
Identification, evaluation and quantification of risk factors for environmental and occupational diseases, using classic and current examples of exposures involving chemical, physical and biologic agents. Selection of appropriate design and groups. Exposure assessment, including biomarkers and molecular dosimetry. Genetics, gender, age, socioeconomic and other factors affecting susceptibility.
Prerequisite: College-level mathematics.

PHEO 640 Industrial Hygiene
Credits 3. 3 Lecture Hours.
Considers methods to measure and reduce workplace hazards; evaluation of engineering controls and personal protective equipment; includes potential chemical, physical, ergonomic and biological exposures. Review of major legislation affecting workplace environment.

PHEO 645 Health and Safety at Hazardous Waste Sites
Credits 3. 3 Lecture Hours.
Course covers OSHA compliance issues related to the protection of personnel engaged in on-site remediation activities. Students who satisfactorily complete the course meet the requirements for initial training under 20 CFR 1910.120 (HAZWOPER) and receive a certificate. Hands-on activities/workshops in the areas of personal protective equipment selection and use, sources of chemical information, decontamination procedures, air monitoring equipment, materials handling, and health and safety planning. Lab fee required.

PHEO 650 Risk Assessment I
Credits 3. 3 Lecture Hours.
Introduction to the general methodology of Quantitative Risk Assessment; introduction to methods of modeling exposure and selection of toxicity values, as well as risk characterization. Students utilize case studies to learn the general methods of risk assessment; also reviews the importance of and methods for risk communication and management.

PHEO 655 Human Factors And Behavior-Based Safety
Credits 3. 3 Lecture Hours.
Basic understanding of the theory and practice of human factors as well as discussion on behavior-based safety. Topics are presented within the framework of humans as functioning systems.
Prerequisite: Approval of instructor.

PHEO 670 Professional Perspectives in Environmental Health
Credits 1 to 3. 1 to 3 Lecture Hours.
The purpose of this course is to study the ethics and values of environmental public health. From a practice standpoint, we will study the 10 essential services of environmental health. We will also discuss three critical varieties of environmental ethics: conservation ethics, environmental justice, and sustainability ethics. In regards to policy, we will explore, Brownfields redevelopment, cleanup, and development and restoration policies.

PHEO 675 Water and Environmental Public Health
Credits 0 to 3. 0 to 3 Lecture Hours.
To provide a broad understanding of the elements of water and environmental public health and how these major environmental issues affect our society. It will examine water-related health issues, scientific understanding and causes and associations, and possible future approaches to understanding the major environmental health problems in developed and developing countries.
PHEO 678 Occupational Biomechanics
Credits 3. 3 Lecture Hours.
This course will focus on research methods in occupational biomechanics to understand and identify/analyze underlying risks associated with the development of work-related musculoskeletal disorders. Topics will include assessing injury risk, balance and posture control, human motion analysis, muscle activity, fatigue, and ergonomics for special populations such as the aging and obese. Students will become familiar with the use of laboratory experimental methods and existing field-friendly ergonomic evaluation techniques.

PHEO 679 Ergonomics of the Upper Extremities
Credits 3. 3 Lecture Hours.
Fundamental topics upon which models for the prevention and control of distal upper extremity disorders are constructed. Focus is on topics including human anatomy, neurophysiology, electrophysiology and worker capacity evaluation.

PHEO 681 Seminar in Environmental and Occupational Health
Credit 1. 1 Lecture Hour.
This course reviews the foundational literature on environmental and occupational health (EOH). The course will begin with an introductory look at the literature from broad topics followed by specific reviews of current departmental research topics and those found in industry. The course will also examine the application of EOH in public health research and its application to public health practice and commercialization of ideas for supporting efforts to improve environmental and occupational health.

PHEO 682 Industrial and System Safety
Credits 3. 3 Lecture Hours.
Course covers general concepts and techniques of safety upon which more detailed and advanced applications may be based. In addition, concepts will include current system safety analysis techniques, failure mode and effect and fault tree analysis, as well as economic analysis for presentation of alternative solutions for problem solving.

Prerequisite: Approval of instructor.

PHEO 684 Practicum
Credits 3 to 6. 3 to 6 Other Hours.
Field placement experience in which students work closely with a departmental faculty member and appropriate field professional(s), applying skills and techniques acquired through course work. Must be taken on a satisfactory/unsatisfactory basis.

Prerequisite: Approval of academic advisor.

PHEO 685 Directed Study
Credits 1 to 3. 1 to 3 Other Hours.
Student investigation of a topic not covered by other formal courses. May be repeated for a maximum of six credits. Satisfactory/Unsatisfactory grading option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day, outlined in the course syllabus and not be altered once the course has begun.

Prerequisite: Approval of student’s academic advisor.

PHEO 686 Directed Research
Credits 1 to 3. 1 to 3 Other Hours.
Student research initiative not within the scope of a thesis or dissertation. May be repeated for a maximum of six credits. Satisfactory/Unsatisfactory grade option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day, outlined in the course syllabus and not be altered once the course has begun.

Prerequisite: Approval of student’s academic advisor.

PHEO 689 Special Topics In Environmental And Occupational Health
Credits 1 to 4. 1 to 4 Other Hours.
Revolving topics seminar in an area of specialization within the department. May be repeated for credit. Satisfactory/Unsatisfactory grading option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day, outlined in the course syllabus and not be altered once the course has begun.

PHEO 691 Thesis
Credits 1 to 6. 1 to 6 Other Hours.
Research for master’s thesis. May be repeated for credit. Satisfactory/Unsatisfactory grade option only.

Prerequisites: Approval of the student’s academic advisor and department head.

PHEO 695 Doctoral Capstone
Credits 1 to 9. 1 to 9 Lecture Hours.
Research for doctoral dissertation. Course may be repeated for credit. Satisfactory/Unsatisfactory grade option only.

Prerequisites: Approval of student’s academic advisor and department head.

PHIL - Philosophy

PHIL 611 Ancient Philosophy
Credits 3. 3 Lecture Hours.
Greek and Roman philosophy from 600 B.C. to 300 A.D.; emphasis on Plato and Aristotle.

Prerequisite: Approval of instructor.

PHIL 616 Modern Philosophy
Credits 3. 3 Lecture Hours.
Developments in philosophy from the Renaissance through the Enlightenment: Renaissance humanism and natural science, 17th- and 18th-century empiricism and rationalism, idealism; major thinkers including Descartes, Hume, Kant, Hegel.

Prerequisite: Approval of instructor.

PHIL 620 Contemporary Philosophy
Credits 3. 3 Lecture Hours.
19th- and 20th-century philosophical movements: phenomenology, existentialism, positivism, pragmatism, analysis, process thought. May be repeated for credit as content varies.

Prerequisite: Approval of instructor.

PHIL 623 American Philosophy
Credits 3. 3 Lecture Hours.
The genesis of American philosophical thought from the seventeenth century until the work of Emerson; subsequent concentration on the philosophies of Pierce, James, Royce, Dewey, Mead, Santayana and Whitehead.

Prerequisite: Approval of instructor.

PHIL 624 Latin American Philosophy
Credits 3. 3 Lecture Hours.
Reading and examination of the philosophical writings of some of the most important Latino/as (or Hispanic) contributors to the history of philosophy.

PHIL 630 Aesthetics
Credits 3. 3 Lecture Hours.
Metaphor, the ontology of artworks, art and artfactuality, aesthetic attitudes, concepts of aesthetic appraisal such as beauty and sublimity and theory of tropes.

Prerequisite: Approval of instructor.
PHIL 631 Philosophy of Religion  
Credits 3.3 Lecture Hours.  
Investigation of metaphysical and epistemological issues concerning religious claims, beliefs and experiences.  
Prerequisite: Approval of instructor.

PHIL 632 Social and Political Philosophy  
Credits 3.3 Lecture Hours.  
Theories of justice, equality, liberty and authority in social and political institutions; individualism and the social contract; political philosophy of writers such as Plato, Aristotle, Machiavelli, Locke, Rousseau, Marx, Dewey and Rawls.  
Prerequisite: Approval of instructor.

PHIL 635 Ethical Theory  
Credits 3.3 Lecture Hours.  
Theories of moral value and conduct, moral language and argumentation; consequentialist and deontological approaches to ethics; ethical naturalism; theories of virtue.  
Prerequisite: Approval of instructor.

PHIL 640 Epistemology  
Credits 3.3 Lecture Hours.  
Nature and origin of knowledge, skepticism, belief, truth, rationality, justification and reliability and knowledge of necessary truths.  
Prerequisite: Approval of instructor.

PHIL 641 Mathematical Logic I  
Credits 3.3 Lecture Hours.  
The metatheory of propositional and first-order logic.  
Prerequisite: Graduate classification or approval of instructor.

PHIL 642 Mathematical Logic II  
Credits 3.3 Lecture Hours.  
Continuation of PHIL 641: Compactness, The Lowenheim-Skolem Theorems, computability theory and Church's thesis, formal arithmetic, Godel's Incompleteness Theorems, Tarski's Theorem, and Church's Theorem. Other topics covered in the course might include systems of modal logic, intuitionistic logic, and more advanced issues in set theory.  
Prerequisite: 641 or approval of instructor.

PHIL 643 History and Philosophy of Logic  
Credits 3.3 Lecture Hours.  
Selected topics on the historical development of logic; philosophical views of the nature of logical theory; the role of logical metatheory in the development of logic. May be repeated for credit as content varies.  
Prerequisite: PHIL 341 or 641 or approval of instructor.

PHIL 645 Philosophy of Science  
Credits 3.3 Lecture Hours.  
Philosophy of the natural and social sciences, including the nature of theories and laws, the notion of causation, probability and determinism and the nature of theoretical change.  
Prerequisite: Approval of instructor.

PHIL 646 Philosophy of a Particular Science  
Credits 3.3 Lecture Hours.  
Focus on methodological, epistemological and ontological issues in physics, or one of the special sciences, such as biology, psychology, cognitive science, economics. Application of philosophical methods to theoretical issues in the particular science. Relationships between theories and explanations of the particular science and basic sciences or other special sciences. May be repeated for credit for courses focusing on different sciences.  
Prerequisite: Approval of instructor.

PHIL 650 Metaphysics  
Credits 3.3 Lecture Hours.  
Classical and contemporary treatments of the nature of reality, God, the existence of universals, space, time, causality; realism and antirealism, the existence and nature of abstract entities, the nature of events, the nature and logic of time and modality, freedom and determinism, and personal identity.  
Prerequisite: Approval of instructor.

PHIL 655 Philosophy of Mind  
Credits 3.3 Lecture Hours.  
The mind-body problem, personal identity, thought and intentionality, action and responsibility; materialism, behaviorism, functionalism. May be repeated for credit as content varies.  
Prerequisite: Approval of instructor.

PHIL 658 Philosophy of Language  
Credits 3.3 Lecture Hours.  
The nature of language, the various uses of language and their philosophical import, the nature of meaning, truth, reference and issues surrounding formal representations of natural languages. May be repeated for credit as content varies.  
Prerequisite: Approval of instructor.

PHIL 661 Seminar in the History of Philosophy  
Credits 3.3 Lecture Hours.  
Intensive study of a current issue in the history of philosophy. May be repeated for credit with variation in topic.  
Prerequisite: Approval of instructor.

PHIL 662 Seminar in Ethics and Value Theory  
Credits 3.3 Lecture Hours.  
Intensive study of current issue in ethics, ethical theory, applied ethics, aesthetics, or the work of particular philosophers in one of these areas. May be repeated for credit with variation in topic.  
Prerequisite: Approval of instructor.

PHIL 663 Seminar in Metaphysics and Epistemology  
Credits 3.3 Lecture Hours.  
Seminar in Metaphysics or Epistemology. Intensive study of a current issue in metaphysics, epistemology, or other core areas of philosophy. May be repeated for credit with variation in topic.  
Prerequisite: Approval of instructor.

PHIL 664 Seminar in Applied Philosophy  
Credits 3.3 Lecture Hours.  
Intensive study of a topic involving the application of philosophical concepts and theories to an issue arising in another scientific or academic field. May be repeated for credit with variation to topic.  
Prerequisite: Approval of instructor.

PHIL 682 Philosophical Authors  
Credits 3.3 Lecture Hours.  
Intensive study of works of an individual important philosopher, their historical context, and criticisms and interpretations of them. May be repeated for credit with different authors.  
Prerequisite: Approval of instructor.

PHIL 683 Philosophical Pedagogy  
Credit 1.1 Lecture Hour.  
Teaching practicum for PhD students in philosophy; detailed examination of all aspects of teaching philosophy to university- and college-level students.  
Prerequisite: Enrollment in PhD program in Philosophy or approval of instructor.
PHIL 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
Prerequisite: Approval of committee chair and department head.

PHIL 685 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
Directed studies in specific problem areas in philosophy.

PHIL 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of philosophy. May be repeated for credit.

PHIL 691 Research
Credits 1 to 15. 1 to 15 Other Hours.
Directed studies in specific problem areas in philosophy.

PHPM 601 Foundations of Public Health
Credits 3. 3 Lecture Hours.
Introduction to the field of public health and to rural health conditions, issues, professions, organizations, and policies relevant to the health of rural communities.

PHPM 602 Managerial Statistics
Credits 3. 3 Lecture Hours.
This course will cover analytical techniques to support managerial decision making in health care. The course will cover descriptive statistical techniques for the presentation of health care data and applicability of descriptive statistical techniques, a survey commonly used inferential statistical techniques for data analysis is presented. Throughout the course material, emphasis is on the sources and uses of health care data and information for decision-making, and on the interpretation and evaluation of health care research.

PHPM 603 Managing Healthcare Data and Information
Credits 4. 4 Lecture Hours.
Descriptive statistical techniques for the presentation of health care data and applicability of the descriptive statistical techniques; survey commonly used inferential statistical techniques for data analysis. Restriction: Enrollment in Executive MHA.

PHPM 604 Population and Public Health for Health Professionals
Credits 4. 4 Lecture Hours.
Public health and its concentration areas; examination of the federal, state and local health care and public health system/infrastructure and how it has evolved; public health problems, diseases and risk factors and the role of public health in preventing/alleviating same; reviews the core functions of public health. Restriction: Enrollment in Executive MHA.

PHPM 605 Introduction to Health Policy and Management
Credits 3. 3 Lecture Hours.
Prepares students for administrative or policy positions in governmental programs, voluntary health organizations, or in other health service organizations. Supports effectiveness of public health and health services professionals by providing knowledge of health organizations and services and associated management policy issues. Introduces the U.S. health system and health management areas and emphasizes policy topics.

PHPM 606 Health Systems Management
Credits 3 to 4. 3 to 4 Lecture Hours.
Introduction to conceptual frameworks and practices associated with key functions in the management of complex health organizations.

PHPM 607 Health Workforce: Issues and Challenges
Credits 3. 3 Lecture Hours.
This course will focus on the development, impact and needs of the U.S. workforce. Options for the future direction and strategies to improve the effectiveness and efficiency of the health workforce will be analyzed.

PHPM 608 Overview of Maternal and Child Health Systems and Policy
Credits 3. 3 Lecture Hours.
This proposed course is designed to address a growing demand for courses focused on maternal child health. It is designed to be offered to public health students and doctoral students at Health Science Center.

PHPM 609 Overview of Maternal and Child Health Systems and Policy
Credits 3. 3 Lecture Hours.
This course offers an introduction to strategic planning and management in health services organizations. Processes and formats employed in strategic planning and marketing are presented and applied in case studies and a final project. Elements of market assessment, environmental analysis and strategy are presented and applied in case studies.

PHPM 610 Introduction to Military Preventative Medicine Policy & Management I
Credits 3. 3 Lecture Hours.
Introduction to Military Preventative Medicine Policy & Management I.

PHPM 611 Introduction to Military Preventative Medicine Policy & Management II
Credits 3. 3 Lecture Hours.
This course builds upon strategic planning and marketing concepts introduced in PHPM 614. It provides an overview of marketing and how it can be applied to health care organizations. The course covers the history of health care marketing, basic marketing concepts and tools, the process of developing and managing a marketing plan, and the nature of health care marketing.

PHPM 612 Application in Military Preventative Medicine Policy & Management
Credits 3. 3 Lecture Hours.
Application in Military Preventative Medicine Policy & Management. Given a scenario and pertinent information, ability to make sound management decisions and effectively employ public health policy.

PHPM 613 Advanced Strategic Planning and Marketing I
Credits 3. 3 Lecture Hours.
This course offers an introduction to strategic planning and management in health services organizations. Processes and formats employed in strategic planning and marketing are presented and applied in case studies and a final project. Elements of market assessment, environmental analysis and strategy development are presented and applied to course practices.

PHPM 614 Strategic Planning And Marketing I
Credits 3. 3 Lecture Hours.
This course offers an introduction to strategic planning and management in health services organizations. Processes and formats employed in strategic planning and marketing are presented and applied in case studies and a final project. Elements of market assessment, environmental analysis and strategy development are presented and applied to course practices.

PHPM 615 Strategic Planning And Marketing II
Credits 3. 3 Lecture Hours.
This course builds upon strategic planning and marketing concepts introduced in PHPM 614. It provides an overview of marketing and how it can be applied to health care organizations. The course covers the history of health care marketing, basic marketing concepts and tools, the process of developing and managing a marketing plan, and the nature of health care marketing.

PHPM 616 Introduction to Management of Human Resources
Credits 3. 3 Lecture Hours.
An introduction to the range of human resources issues facing the health delivery system administrator from benefits to grievances and human resources management in health organizations. Course also covers personnel practices such as job analysis and description, recruitment, selection and compensation in various health delivery system settings.

Course Descriptions
PHPM 617 Health Care Quality Evaluation and Utilization Management
Credits 3.3 Lecture Hours.
Overview of evolving health delivery system quality mechanisms and approaches for maximizing quality control in health care organizations. Includes concepts and practices of quality assessment, control and improvement, and accreditation and outcome analysis in service delivery systems.
Prerequisite: PHPM 602 or PHEB 602 or STAT 651 or STAT 652.

PHPM 619 Organizational Theory
Credits 3.3 Lecture Hours.
The primary purpose of this course is to develop competency in application of several major organizational theories to health care systems. During the semester, students will become familiar with central assumptions, predictions, and implications of the following theories: sociology of professions, culture and climate, social networks, agency and stewardship, resource dependence, institutional theory, and change implementation. Restricted to PHPM-PhD students.

PHPM 620 Operations Management
Credits 3.3 Lecture Hours.
This course is organized around the types of tactical and operational decisions made by health care operations managers. Tactical decisions are medium- and long-term decisions that together determine the processes by which health care services are produced and delivered, while operational decisions are short-term decisions concerned with utilizing resources to meet the objectives of the organization in an efficient manner. Building on a “system-based” approach to the health care environment, analytical tools are examined to aid problem solving and decision-making in health care organizations. Where appropriate, spreadsheets will be used to ease computational work, facilitate analysis, and aid in the presentation of results. This course examines operational decisions through a combination of lectures, problem sets, organizational analysis, and readings.
Prerequisites: PHPM 617 and PHPM 631.

PHPM 621 Seminar in Interorganizational Research
Credits 3.3 Lecture Hours.
Health services research in interorganizational relations includes applications of theories such as social exchange, transaction costs, resource dependence, organization ecology, political, economic and institutional theory; and their applications to community health networks, integrated delivery systems, and complex market and/or public policy approaches to health services.
Prerequisite: PHPM 619.

PHPM 622 Management of Innovation In Health Services
Credits 3.3 Lecture Hours.
This course examines the processes through which innovation is identified, studied, implemented, evaluated, and disseminated with particular attention to organization theory applied to innovation in the development, structure, and performance of health care organizations and/or health systems.
Prerequisite: PHPM 619 or PHPM 621.

PHPM 623 Health Care Financial Management I
Credits 3.3 Lecture Hours.
Course is designed as an overview of health financing and techniques for financial management in health service settings, blending theory and practice through lecture discussion and case analysis. This course also examines major sources of public and private health services funding.

PHPM 624 Health Care Financial Management II
Credits 3.3 Lecture Hours.
This is an intermediate course on health care financial management which covers several topics from PHPM 623 in depth and introduces new topics and tools relating to capital financing, financial evaluation, and developing forecast financial statements. Several special topics are included that deal with current trends and issues (e.g., mergers and acquisitions, physician integration, and new payment mechanisms). The course consists of lectures and case studies. As a team project, students develop a long-range financial plan for a hypothetical hospital.
Prerequisites: PHPM 605, PHPM 623.

PHPM 629 Organizational Assessment and Development
Credits 3.3 Lecture Hours.
This course provides skills needed to support collaborative processes in diagnosing organizational needs and problems and introducing innovative structures, processes, and other changes to enhance organizational responsiveness and accountability.

PHPM 631 Health Information Management Systems
Credits 3.3 Lecture Hours.
Course introduces computer-based information systems, architectures and applications in the management of health services organizations. It addresses systems designs, data management systems, data access and communications, and the implications of expanding technological capacities for information management systems.
Prerequisite: PHPM 605 or PHPM 606.

PHPM 632 Inter-professional Health Care Ethics
Credits 2.2 Lecture Hours.
This proposed course is an inter-professional Health Care Ethics and Professionalism Course. It is designed to be offered to combined medicine, nursing, pharmacy and public health students at the Health Science Center. It now includes the Chaplaincy program at Scott & White Health System. Students in public health will be in combined large lecture classes and small groups with students enrolled in medicine, nursing, pharmacy and chaplaincy. Students will be exposed to a wide range of ethical, professional, and policy issues. Grading and evaluation is based on short quizzes and participation in small group discussion.

PHPM 633 Health Law and Ethics
Credits 3.3 Lecture Hours.
Course covers torts, contract law, corporate liability, malpractice, key federal and state regulations, and records management relative to health care. Important health care law is discussed. Ethical considerations are discussed as they relate to the law and management of health delivery systems.
Prerequisite: PHPM 605 or PHPM 606.

PHPM 639 Global Health
Credits 3.3 Lecture Hours.
Globalization of health is evolving dramatically spurred on by the globalization of trade and commerce, migration of peoples, and advances in communication. These changes are having a significant impact on health and health care. Multiple diseases, as influenza, emerging in a local site but then are transmitted at a global or pandemic proportion with a few short weeks or months. International travel and the migration of populations across countries can lead to the introduction of diseases or conditions previously unheard of or noted in only small numbers.
PHPM 640 Health Policy and Politics
Credits 3.3 Lecture Hours.
This course examines health policy-making at the national and state levels, including the role of Congress, the Presidency, administrative agencies, and interest groups. The course explores policy formation in multiple areas with a particular focus on Medicare, Medicaid, and various approaches to controlling costs, improving access, and assuring quality.

PHPM 641 Health Policy Analysis and Policy Formation
Credits 3.3 Lecture Hours.
This course examines the process by which national health policy is made, including the role of government, interest groups, and the public, and how policy analysis and program evaluation can inform health policy but also be constrained by the politics of health.

PHPM 642 Public Health Emergency Preparedness Policy Issues
Credits 3.3 Lecture Hours.
This course examines design and implementation of public health at federal, state, and local levels. It addresses development, organization, financing, regulation, delivery and evaluation in many health policy areas. The course examines public health policy issues across the emergency preparedness continuum.

PHPM 644 Texas Training Initiative For Emergency Response (T-Tier)
Credits 3.3 Lecture Hours.
This course develops the knowledge, skills, and abilities needed to effectively respond to bioterrorism, infectious and other disease outbreaks, and other public health threats and emergencies in a multi-disciplinary approach. The course will focus on competencies paralleling the critical benchmark of emergency preparedness as identified by the Centers for Disease Control and Prevention, as well as to gain the knowledge, skills and abilities along with practice to protect the public's health. Roles of the many public health workers will be explored.

PHPM 645 Critical Issues in Health Policy
Credits 3.3 Lecture Hours.
Overview of how U.S. national and state health policy is formulated and considers competing interests in the political process. Considerable emphasis placed on the unique needs of special interest groups from the financially disadvantaged to special needs populations, ethnic and other minorities and rural populations.
Prerequisite: PHPM 640.

PHPM 646 Health Systems and the Aging
Credits 3.3 Lecture Hours.
Overview of the current U.S. infrastructure designed to provide health services to the aging. Includes federal and illustrative state policies that affect the health of the older citizens and the systems designed to meet their health care needs.

PHPM 647 Long-Term Care Policy and Management
Credits 3.3 Lecture Hours.
Examination of health policy and management in provision of care for the aged and other chronic care populations. Includes instruction on access, use, market issues, quality of services and cost containment.
Prerequisite: PHPM 605.

PHPM 652 Health Care Reimbursement
Credits 3.3 Lecture Hours.
Study of reimbursement policies and practices of public and private third party payers, and self-insured employers. In addition the course presents an overview of the impact these different payers have on health providers, including incentives, quality and access to care.
Prerequisite: PHPM 605.

PHPM 654 Health Insurance and Managed Care
Credits 3.3 Lecture Hours.
Provides an overview of health insurance in the U.S., with an emphasis on the private health insurance markets and managed care. Topics covered include the demand for insurance, insurance underwriting and rate making, the role of employer-sponsored health insurance, the impact of managed care on hospitals and physician markets, and health savings accounts and consumer-directed plans.
Prerequisites: PHPM 601, PHPM 605.

PHPM 661 Introduction To Health Economics
Credits 3.3 Lecture Hours.
Provides basic concepts in economic theory and analysis applied to health care delivery in the United States. Course addresses supply and demand issues for health services, reimbursement systems and health insurance. Course addresses issues in health delivery in a competitive market and public sector involvement.

PHPM 662 Health Economics II: Advanced Health Economics
Credits 3.3 Lecture Hours.
This course is intended to provide a more in depth examination of the economic aspects of the supply of and demand for health and health care services.
Prerequisite: PHPM 661.

PHPM 663 Cost Effectiveness Analysis and Health Policy
Credits 3.3 Lecture Hours.
This course provides an overview of the methods of cost-effectiveness analysis and decision analysis and their applications to resource allocation decisions in public health and medicine, particularly as it relates to health policy.
Prerequisite: PHPM 661.

PHPM 664 Foundations of Translational Research
Credits 3.3 Lecture Hours.
This is a course in Foundations of Translational Research. The discipline of translational science provides a structure that expedites the translation of important discoveries that improve healthcare into practical applications. The course is an intense introduction to translational science and includes educational preparatory lectures and presentations by senior researchers. Topics include an introduction to types and tools of research, ethics in translational science, communication of science, research with underserved/under-represented populations, introduction to bioinformatics and health informatics, data/database management and analysis, clinical study/trial design and methodology, clinical research methods, basic statistics, an update on molecular biology and genetics, an update on basic science in translational research, protections of human subjects, animal welfare and use, and grantsmanship. Restricted to PhD program students.

PHPM 668 Applied Health Services Research I
Credit 1.1 Other Hour.
Takes students through each step in the development and execution of a research project. Faculty in the doctoral program will discuss hypothesis development, measurement strategies, data collection option, analysis plans, research ethics and other issues that arise during a health services research project.
Prerequisite: Must be taken concurrently with PHPM 671.
PHPM 669 Applied Health Services Research II  
Credit 1. 1 Lecture Hour.  
Requires that students be prepared each week to discuss a research paper or research papers assigned by the instructor. Faculty in the doctoral program may also present their work or lead the discussion of specific papers during the course of the semester.  
Corequisite: PHPM 672.  

PHPM 670 Health Policy Evaluation  
Credits 3. 3 Lecture Hours.  
Comprehensive examination of approaches to evaluate health policies and programs. Includes both discussion of analytical methods and design issues.  
Prerequisites: PHPM 640, STAT 651.  

PHPM 671 Introduction to Health Services Research  
Credits 3. 3 Lecture Hours.  
Examines issues pertaining to health care access, cost and quality across multiple health care settings.  
Prerequisite: PhD or MSPH students only.  

PHPM 672 Data Science for Health Services Research  
Credits 3. 3 Lecture Hours.  
Introduces multidisciplinary approaches to conducting health services research. Course focuses on both primary and secondary data analysis for the purpose of understanding the quality and effectiveness of various health delivery systems and the policy implications for the health of citizenry. PhD students only.  
Corequisite: PHPM 669.  

PHPM 673 Foundations of Health Services Research  
Credits 3. 3 Lecture Hours.  
The class introduces doctoral students in health services research to the conceptual frameworks and research results related to three core issues in healthcare services research - the costs of care, access to care, and quality of care. The course is coordinated by a senior faculty member and faculty members provide readings and lectures on specific topics so that students are exposed to, and can explore, different aspects of costs, access, and quality.  
Prerequisite: PHPM 671.  

PHPM 674 Secondary Analysis of Health Data  
Credits 3. 3 Lecture Hours.  
Support secondary data analysis opportunities in health services research. Includes introduction to available databases, mechanisms of access, health policy issues that can be addressed through secondary data analysis, and data cleaning and analytical techniques necessary to examine key health policy issues.  
Prerequisites: PHPM 601, PHPM 671, PHPM 672, STAT 651.  

PHPM 675 Survey Research Methods  
Credits 3. 3 Lecture Hours.  
Key elements in the design and execution of population and organizational surveys.  
Prerequisites: PHPM 671 and PHPM 672.  

PHPM 676 Analytical Issues in Health Services Research  
Credits 0 to 3. 0 to 3 Lecture Hours.  
Provides an overview of analytic tools used in health services research. Primary focus is on application to non-experimental research settings. Topics include simple and multivariate regression models, dichotomous dependent variable models, polychotomous choice models, quantile regression, propensity score methods, and instrumental variables estimators.  
Prerequisite: PHPM 671 and PHPM 672.  

PHPM 677 Data Science in Public Health  
Credits 3. 3 Lecture Hours.  
(3-0) The primary purpose of this course is to apply data science to health data for public health applications in order to improve the three core dimensions in health care: (1) improve quality, (2) reduce costs, and (3) improve access. The course focuses on computer programming skills to turn raw data into valid information and the fundamentals of data science. For assignments, we will select a statistical package to practice the programming concepts learned.  
Prerequisite: PHEB 602 or approval of instructor.  

PHPM 680 Health Systems Leadership  
Credits 3. 3 Lecture Hours.  
Provides opportunity to integrate essential content presented in health policy and management curriculum by assessing issues confronted by health service organizations leaders and employing tools acquired in prior courses to address the issues. For MHA students only.  
Prerequisites: PHPM 606, PHPM 614, PHPM 617, PHPM 623, PHPM 661, PHPM 631, PHPM 660, PHPM 624.  

PHPM 684 Practicum  
Credits 3. 3 Other Hours.  
Field placement experience where students work closely with a departmental faculty member and (an) appropriate field professional(s) applying skills and techniques acquired through coursework. Satisfactory/Unsatisfactory grade option only.  
Prerequisite: Approval of student’s academic advisor.  

PHPM 685 Directed Study  
Credits 1 to 3. 1 to 3 Other Hours.  
Student investigation of a topic not covered by other formal courses. May be repeated for a maximum of six credits. Satisfactory/Unsatisfactory grading option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day and outlined in the course syllabus and not be altered once the course has begun.  
Prerequisite: Approval of student’s academic advisor.  

PHPM 686 Directed Research  
Credits 1 to 3. 1 to 3 Other Hours.  
Student research initiative not within the scope of a thesis or dissertation. May be repeated for a maximum of six credits. Satisfactory/Unsatisfactory grading option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day, outlined in the course syllabus and not be altered once the course has begun.  
Prerequisite: Approval of student’s academic advisor.  

PHPM 689 Special Topics - Health Policy and Management  
Credits 1 to 4. 1 to 4 Lecture Hours.  
Revolving topics seminar in an area of specialization within the department. May be repeated for credit. Satisfactory/Unsatisfactory grading option or standard grading option to be determined by the instructor and applied to all students registered for the course. Grading option will be determined prior to the first class day, outlined in the course syllabus and not be altered once the course has begun.  
Prerequisite: Approval of student’s academic advisor.  

PHPM 691 Thesis  
Credits 1 to 6. 1 to 6 Other Hours.  
Research for master’s thesis. May be repeated for credit. Satisfactory/Unsatisfactory grade option only.  
Prerequisites: SOPH 690 and approval of the student’s academic advisor and department head.
PHYS 601 Analytical Mechanics
Credits 3. 3 Lecture Hours.
Hamilton approaches to dynamics; canonical transformation and variational techniques; central force and rigid body motions; the mechanics of small oscillations and continuous systems.
Prerequisites: PHYS 302 or equivalent; MATH 311 and MATH 412 or equivalents; concurrent registration in PHYS 615.

PHYS 603 Electromagnetic Theory
Credits 3. 3 Lecture Hours.
Boundary-value problems in electrostatics; basic magnetostatics; multipoles; elementary treatment of ponderable media; Maxwell's equations for time-varying fields; energy and momentum of electromagnetic field; Poynting's theorem; gauge transformations.
Prerequisites: PHYS 304 or equivalents; PHYS 615.

PHYS 606 Quantum Mechanics
Credits 3. 3 Lecture Hours.
Schroedinger wave equation, bound states of simple systems, collision theory, representation and expansion theory, matrix formulation, perturbation theory.
Prerequisites: PHYS 412 or equivalent; MATH 311 and MATH 412 or equivalents; concurrent registration in PHYS 615.

PHYS 607 Statistical Mechanics
Credits 3. 3 Lecture Hours.
Classical statistical mechanics, Maxwell-Boltzmann distribution, and equipartition theorem; quantum statistical mechanics, Bose-Einstein distribution and Fermi-Dirac distribution; applications such as polyatomic gases, blackbody radiation, free electron model for metals, Debye model of vibrations in solids, ideal quantum mechanical gases and Bose-Einstein condensation; if time permits, phase transitions and nonequilibrium statistical mechanics.
Prerequisites: PHYS 408 and PHYS 412 or equivalents; PHYS 615.

PHYS 611 Electromagnetic Theory
Credits 3. 3 Lecture Hours.
Continuation of PHYS 603. Propagation, reflection and refraction of electromagnetic waves; wave guides and cavities; interference and diffraction; simple radiating systems; dynamics of relativistic particles and fields; radiation by moving charges.
Prerequisite: PHYS 603.

PHYS 615 Methods of Theoretical Physics I
Credits 3. 3 Lecture Hours.
Orthogonal eigenfunctions with operator and matrix methods applied to solutions of the differential and integral equations of mathematical physics; contour integration, asymptotic expansions of Fourier transforms, the method of stationary phase and generalized functions applied to problems in quantum mechanics.
Prerequisites: MATH 311, MATH 407 and MATH 412 or equivalents.

PHYS 616 Methods of Theoretical Physics II
Credits 3. 3 Lecture Hours.
Green's functions and Sturm-Liouville theory applied to the differential equations of wave theory; special functions of mathematical physics; numerical techniques are introduced; conformal mapping and the Schwarz-Christoffel transformation applied to two-dimensional electrostatics and hydrodynamics.
Prerequisite: Approval of instructor.

PHYS 617 Physics of the Solid State
Credits 3. 3 Lecture Hours.
Crystalline structure and symmetry operations; electronic properties in the free electron model with band effects included; lattice vibrations and phonons; thermal properties; additional topics selected by the instructor from: scattering of X-rays, electrons, and neutrons, electrical and thermal transport, magnetism, superconductivity, defects, semiconductor devices, dielectrics, optical properties.
Prerequisites: PHYS 606 and PHYS 607.

PHYS 619 Modern Computational Physics
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Modern computational methods with emphasis on simulation such as molecular dynamics and Monte Carlo; applications to condensed matter and nuclear many-body physics and to lattice gauge theories.
Prerequisites: PHYS 408 and PHYS 412 or equivalents; knowledge of any programming language.

PHYS 624 Quantum Mechanics
Credits 3. 3 Lecture Hours.
Continuation of PHYS 606. Scattering theory, second quantization, angular momentum theory, approximation methods, application to atomic and nuclear systems, semi-classical radiation theory.
Prerequisite: PHYS 606.

PHYS 625 Nuclear Physics
Credits 3. 3 Lecture Hours.
Nuclear models, nuclear spectroscopy, nuclear reactions, electromagnetic properties of nuclei; topics of current interest.
Prerequisite: PHYS 606.

PHYS 627 Elementary Particle Physics
Credits 3. 3 Lecture Hours.
Fundamentals of elementary particle physics; particle classification, symmetry principles, relativistic kinematics and quark models; basics of strong, electromagnetic and weak interactions.
Prerequisite: PHYS 606.

PHYS 631 Quantum Theory of Solids
Credits 3. 3 Lecture Hours.
Second quantization, and topics such as plasmons; many-body effects for electrons; electron-phonon interaction; magnetism and magnons; other elementary excitations in solids; BCS theory of superconductivity; interactions of radiation with matter; transport theory in solids.
Prerequisites: PHYS 617 and PHYS 624.

PHYS 632 Condensed Matter Theory
Credits 3. 3 Lecture Hours.
Prerequisites: PHYS 601, PHYS 617 and PHYS 624.
PHYS 634 Relativistic Quantum Field Theory
Credits 3.3 Lecture Hours.
Classical scalar, vector and Dirac fields; second quantization; scattering matrix and perturbation theory; dispersion relations; renormalization.
Prerequisite: PHYS 624.

PHYS 638 Quantum Field Theory II
Credits 3.3 Lecture Hours.
Functional integrals; divergences, regularization and renormalization; non-abelian gauge theories; other topics of current interest.
Prerequisite: PHYS 634.

PHYS 641/ASTR 601 Extragalactic Astronomy
Credits 3.3 Lecture Hours.
Overview of observations of galaxies and large-scale structures in the Universe to understand their formation and evolution from theoretical and observational perspectives; galaxy luminosity functions; evolution of stellar populations and chemical enrichment; clusters and AGN.
Prerequisites: PHYS 644; or PHYS 601; or ASTR 314 and PHYS 302; or approval of instructor.
Cross Listing: ASTR 601/PHYS 641.

PHYS 642/ASTR 602 Astronomical Observing Techniques and Instrumentation
Credits 3.3 Lecture Hours.
Theory and practice of obtaining and analyzing astrometric, photometric, spectroscopic, and interferometric measurements of astronomical sources across the electromagnetic spectrum; principles of design, fabrication, assembly, test, deployment, and use of astronomical instruments.
Prerequisites: PHYS 615 or equivalent; or approval of instructor.
Cross Listing: ASTR 602/PHYS 642.

PHYS 643/ASTR 603 Stellar Astrophysics
Credits 3.3 Lecture Hours.
Theoretical and observational aspects of stellar astrophysics; thermodynamic properties of stellar interiors; energy sources; nuclear processes and burning stages; convective and radiative energy transport; evolutionary models; atmospheres; stability and pulsations; chemical enrichment processes; population synthesis.
Prerequisites: PHYS 606 and PHYS 607 or equivalents; or approval of instructor.
Cross Listing: ASTR 603/PHYS 643.

PHYS 644/ASTR 604 Cosmology
Credits 3.3 Lecture Hours.
Basic principles of modern cosmology and particle physics; general relativity; cosmic inflation; Big Bang nucleosynthesis; expansion of the universe; cosmic microwave background; large-scale structure of the Universe; properties of particles; dark matter; dark energy.
Prerequisites: PHYS 615 or equivalent; or approval of instructor.
Cross Listing: ASTR 604/PHYS 644.

PHYS 645/ASTR 605 Galactic Astronomy
Credits 3.3 Lecture Hours.
Basic nature and structure of constituents of Milky Way galaxy; distribution and motions of stars and gas; origin evolution and distribution of large-scale chemical abundances and kinematic patterns across populations; models of galaxy formation and implications of modern observations.
Prerequisites: PHYS 601 and PHYS 607 or equivalents; or approval of instructor.
Cross Listing: ASTR 605/PHYS 645.

PHYS 646/ASTR 606 Radiative Transfer
Credits 3.3 Lecture Hours.
Fundamental radiative processes in stellar and planetary atmospheres; radiative fields; Stokes parameters; Mueller matrix formalism; radiation from moving charges; Compton scattering; plasma effects; atomic structure and radiative transitions; molecular structure and spectra; multiple scattering.
Prerequisites: PHYS 602, PHYS 604, PHYS 408, and PHYS 412 or equivalents; or approval of instructor.
Cross Listing: ASTR 606/PHYS 646.

PHYS 647 Gravitational Physics
Credits 3.3 Lecture Hours.
Special relativity; equivalence principle; theory of gravitation; Einstein’s theory of general relativity; classic tests of general relativity; simple black hole and cosmological solutions; global aspects; penrose diagrams; stationary black holes; Hawking radiation.
Prerequisites: PHYS 611 and PHYS 615.

PHYS 648 Quantum Optics and Laser Physics
Credits 3.3 Lecture Hours.
Line widths of spectral lines; laser spectroscopy; optical cooling; trapping of atoms and ions; coherence; pico- and femto-second spectroscopy; spectroscopic instrumentation.
Prerequisite: Approval of instructor.

PHYS 649 Physics of Optoelectronic Devices
Credits 3.3 Lecture Hours.
Overview of basic concepts: laser physics, optics of semiconductors, heterostructures with quantum confinement and their interaction with light; physical principles of state of the art optoelectronic devices; emerging concepts and technologies: integrated photonics, nanophotonics, plasmonics, metamaterials, terahertz optoelectronics, quantum information processing, etc.
Prerequisites: Quantum mechanics (PHYS 412 and PHYS 414 or PHYS 606 or equivalent).

PHYS 651 Superstring Theory I
Credits 3.3 Lecture Hours.
Basics of string theory, including bosonic string, conformal field theory, strings with worldsheet and space-time supersymmetry, as well as the higher dimensional extended objects called D-branes.
Prerequisites: PHYS 634 and PHYS 653; PHYS 647 recommended.

PHYS 652 Superstring Theory II
Credits 3.3 Lecture Hours.
M-theory unification of superstring theories into a single eleven-dimensional theory; duality symmetries relating string theories; string geometry; Calabi-Yau manifolds and exceptional holonomy manifolds; flux compactifications; black holes in string theory; AdS/CFT correspondence; string and M-theory cosmology.
Prerequisites: PHYS 651; PHYS 647 recommended.

PHYS 653 Introduction to Supersymmetry and Supergravity
Credits 3.3 Lecture Hours.
Core material on supersymmetric field theories and their coupling to supergravity theories.
Prerequisite: PHYS 634.
PHYS 654 The Standard Model and Beyond
Credits 3. 3 Lecture Hours.
The standard model of particle physics in detail; general principles of gauge theories, including spontaneous breaking and applications to Electro-Weak Interactions and Quantum Chromodynamics; extension of the standard model involving Grand Unified Theories (GUT), Supersymmetry (SUSY) and Supergravity (SUGRA).
Prerequisites: PHYS 624 and PHYS 634.

PHYS 655 String Phenomenology
Credits 3. 3 Lecture Hours.
Physical applications of string theory; rudiments of string theory; compactification of extreme dimensions in string theory; free-fermionic formulation; dualities, M-theory, intersection D-Branes, and D-Brane phenomenology; model building.
Prerequisites: PHYS 634 and PHYS 651.

PHYS 666 Scientific Instrument Making
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Theory and techniques for designing and constructing advanced scientific instruments such as spectrometers, cryostats, vacuum systems, etc.; mechanical and electronic shop procedures utilizing the lathe and mill; welding and soldering; drafting and print reading; circuit design.
Prerequisite: Approval of instructor.

PHYS 674/ECEN 674 Introduction to Quantum Computing
Credits 3. 3 Lecture Hours.
Introduces the quantum mechanics, quantum gates, quantum circuits and quantum hardware of potential quantum computers; algorithms, potential uses, complexity classes, and evaluation of coherence of these devices.
Prerequisites: MATH 304; PHYS 208.
Cross Listing: ECEN 674/PHYS 674.

PHYS 681 Seminar
Credit 1. 1 Lecture Hour.
Subjects of current importance; normally required of all graduate students in physics.

PHYS 685 Directed Studies
Credits 1 to 9. 1 to 9 Other Hours.
Individual problems not related to thesis.
Prerequisite: Approval of instructor.

PHYS 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in an identified area of physics. May be repeated for credit.
Prerequisite: Approval of instructor.

PHYS 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research toward thesis or dissertation.
Prerequisite: Baccalaureate degree in physics or equivalent.

PLAN 604 Planning Methods I
Credits 3. 3 Lecture Hours.
Fundamental concepts and methods used in urban and regional research; qualitative and quantitative research designs; measurement and scaling; sampling; data collection; data file construction; introduction to data analysis and statistical inference.
Prerequisite: Graduate classification.

PLAN 610 Structure and Function of Urban Settlements
Credits 3. 3 Lecture Hours.
The study of urbanization and how geographic, economic, sociological and political factors give rise to changes in the structure and functions of cities; how the movement of people, products, services and capital create unique urban patterns of land use and infrastructure with implications for long-term livability and sustainability.
Prerequisites: Graduate classification.

PLAN 612 Transportation in City Planning
Credits 3. 3 Lecture Hours.
Influence of transportation in shaping urban form; relationships between land use and transportation; conceptual layout of street systems; trends in urban development, site development, circulation and relationships to the street system; guidelines for the redevelopment of existing streets and the adjacent land.

PLAN 613 Planning Methods and Techniques
Credits 3. 3 Lecture Hours.
Methods and techniques of research, data collection and analysis; coordination of planning process with public policy and plan implementation.

PLAN 616 Analyzing Risk/Hazard and Public Policy
Credits 3. 3 Lecture Hours.
Evaluation and development of risk analysis, including risk assessment, perception of risk, risk communication and risk management; the mitigation of risk, involving technology, emergency management, disaster preparedness; emphasizes the relationship with risk analysis in public policy, participation, emergency preparedness, hazard mitigation and the management of risk.
Prerequisite: Graduate classification.

PLAN 623 Development Planning in Third World Countries
Credits 3. 3 Lecture Hours.
Examines historical, political, economic, social and cultural dimensions of "Third World" development problems; application of planning methods and techniques toward long-term solutions in the context of unfolding contemporary world events; considers the role of international lending institutions, technical assistance and funding requirements in developing countries.

PLAN 624 Digital Communication in Landscape Architecture and Urban Planning
Credits 3. 2 Lecture Hours. 4 Lab Hours.
Learn, develop, and apply fundamental knowledge and skills throughout the process of environmental design and planning; base map preparing, site plan designing, cross-section drawing, 2-dimensional plan rendering, 3-dimensional model rendering and poster presentation.
PLAN 625 Geographical Information Systems in Landscape and Urban Planning
Credits 3. 3 Lecture Hours. 2 Lab Hours.
Provides an understanding of GIS fundamentals; basic concepts, principles and functions; essential skills for applying GIS in various fields such as urban planning, landscape architecture, land development, environment studies, transportation and hazard management; based on learning through class projects.
Prerequisite: Graduate classification.

PLAN 626 Advanced GIS in Landscape Architecture and Urban Planning
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Continuation of GIS in Landscape Architecture and Urban Planning PLAN 625; topics include advanced spatial analysis technology; emphasis on urban planning, landscape architecture, land development, hazard management and related applications to issues.
Prerequisite: PLAN 625.

PLAN 627 Economic Development
Credits 3. 3 Lecture Hours.
Examines the strategies employed in the pursuit of local economic development. Discusses basic principals for critically assessing alternative development policies and programs; reflects on the goals and objectives of economic development efforts; and identifies tools for structure and financing local projects.

PLAN 629 Neighborhood Revitalization
Credits 3. 3 Lecture Hours.
Addresses the social, political and economic theory of neighborhoods-their growth, function and design; an understanding of how neighborhoods experience change, as well as the consequences of this change for residents.

PLAN 630 Survey of Health Planning Processes
Credits 3. 3 Lecture Hours.
Considers evolution and development of the health care system in the U.S. and how hospitals and other health service institutions go about developing strategic planning systems.

PLAN 631 Health Systems Planning and Policy
Credits 3. 3 Lecture Hours.
Specific health planning issues; distribution of manpower and facilities, financial resources, local-federal partnership, system's organization and governance.

PLAN 632/LAND 632 Design for Active Living
Credits 3. 3 Lecture Hours. 0 Lab Hours.
Understanding the forms and characteristics of the built environment and the influence on human behaviors, lifestyles and health; theoretical and empirical insights into the issues of physical activity, obesity, and automobile dependency; focus on how changes in the built environment help address these issues.
Prerequisite: Graduate classification or approval of instructor.
Cross Listing: LAND 632/PLAN 632.

PLAN 633 Planning for Healthy Communities
Credits 3. 3 Lecture Hours.
An introduction to issues involved in planning healthy cities/communities; by exploring experiences initiated by the World Health Organization and subsequent international experiences, attention is given to the healthy cities/communities movement in the United States and the case studies of programs at local, state and national levels.

PLAN 634 Environmental Health Policy and Planning
Credits 3. 3 Lecture Hours.
Interdisciplinary perspective of environmental risk analysis methods and policy implications; federal and state agencies and programs involved in developing and implementing environmental health policies and monitoring environmental health hazards; historical and economic context of environmental health legislation; framework for policy making process and criteria to determine effectiveness and outcomes.
Prerequisite: Graduate classification.

PLAN 635/LAND 635 Concepts in Ecological Planning and Design
Credits 3. 3 Lecture Hours.
Reviews selected ecological concepts and explores integration into ecological/landscape planning, design using a historical perspective; historical and contemporary approach to provide and in-depth understanding of how they can better mediate between human actions and natural process.
Prerequisite(s): Graduate classification.
Cross Listing: LAND 635/PLAN 635.

PLAN 640 Law and Legislation Related to Planning
Credits 3. 3 Lecture Hours.
Legislative process and planning legislation; enabling legislation and legal tools of planner: zoning, subdivision ordinances, eminent domain, extraterritorial jurisdiction and other related planning instruments.

PLAN 641 Problems of Environmental Planning Administration
Credits 3. 3 Lecture Hours.
State and federal legislation pertaining to environmental consumer protective aspects of urban planning; review of administrative procedures; major judicial decisions.

PLAN 642 Planning for Coastal Sustainability and Resiliency
Credits 3. 3 Lecture Hours.
Principles of resiliency and sustainability in coastal areas; examination of issues from ecological, social, economic, organizational, planning and built-environment perspectives; application of principles to realistic problems, settings and solutions.
Prerequisite: Graduate classification.

PLAN 647 Disaster Recovery and Hazard Mitigation
Credits 3. 3 Lecture Hours.
Interdisciplinary study of the impacts of environmental disasters; describes process of disaster recovery and examines methods of reducing future vulnerability; analyzes regulation, market mechanisms, and public education as methods for implementing mitigation measures.
Prerequisite: Graduate classification.

PLAN 649 Organizational and Community Response to Crises and Disasters
Credits 3. 3 Lecture Hours.
Introduction to the study of organized and community planning and response to natural and technological disasters and social crisis; focus upon emergency preparedness and response; practical issues, planning for emergency management and existing research literature of basic disaster at the organization and community levels.
Prerequisite: Graduate classification.

PLAN 650 Disaster Response Planning
Credits 3. 3 Lecture Hours.
Mitigation, preparedness, response and recovery strategies; roles of the Federal Emergency Management Agency, the Governor's Division of Emergency Management, the National Weather Service and the American Red Cross.
Course Descriptions

PLAN 654 Planning Administration and Management
Credit 1. 1 Lecture Hour.
Issues of professional practice in public and private sectors.

PLAN 656 Housing and Community
Credits 3. 3 Lecture Hours.
Housing, its development, planning, marketing, designing, financing, and production; social and design history and contemporary issues of American housing development, urban renewal, neighborhood structure and community facilities.

PLAN 658 Plan Implementation
Credits 3. 3 Lecture Hours.
Techniques of implementing major urban development programs and plans; capital improvements programming and budgeting; overview of regulatory measures including zoning and subdivision regulations; public involvement process; and fiscal planning.

PLAN 661 Information and Communication in Planning
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Types and sources of planning related information; use of verbal, printed and electronic media in communicating planning information and formulating alternative solutions to community development problems.

PLAN 662 Applied Planning I
Credits 3. 1 Lecture Hour. 6 Lab Hours.
Acquisition, analysis, and management of information pertaining to urban and regional planning in a case specific scenario; issue analysis; formulation of goals and objectives, and policies; consensus building; includes all tasks leading up to the preparation of an urban, regional or strategic plan.

PLAN 663 Applied Planning II
Credits 3. 3 Lecture Hours. 6 Lab Hours.
Preparation of a major plan or planning document for a specific subject associated with the field of urban and regional planning including the environment; land use; urban design; transportation systems; housing and community facilities; infrastructure systems; growth management systems; urban image; and other topics.
Prerequisite: PLAN 662 or approval of instructor.

PLAN 664 Planning Theory and History
Credits 3. 3 Lecture Hours.
A critical examination of the justifications for and major alternative approaches to planning in the public domain, beginning with the fundamental historical intentions of and projects in city planning within industrial societies and tracing the subsequent development of planning as political reform, political analysis, social mobilization and other modern variants.

PLAN 665 Plan Making
Credits 3. 3 Lecture Hours.
Introduction to a wide variety of styles and methodologies employed by the urban and regional planner; planning styles reviewed include: comprehensive land use planning; policies planning; strategic planning; regional planning; and private sector corporate planning. Emphasis is given to the actual review and content analysis of plans.

PLAN 667 Site Planning
Credits 3. 2 Lecture Hours. 4 Lab Hours.
Introduction to physical planning and design aspects of city planning; the relationship between urban design and city/regional planning; the history of design paradigm; essential tools and applications for physical planning; and site planning and design of physical attributes.

PLAN 669 Urban Infrastructure Planning
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Identification of urban infrastructure requirements; criteria for utility location and design; projection of the conversion of land to urban uses; estimating demand for urban services; anticipating the effect of urbanization on storm runoff; and municipal practice in financing infrastructure extensions.

PLAN 670 Urban Public Transportation Planning
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Planning, operations, fiscal, management and legal aspects of urban, rural and regional public transportation modes; preparation of transportation systems program elements.

PLAN 673 Design for Sustainable Transportation
Credits 3. 3 Lecture Hours.
Introduce planning and design principles, techniques, and examples for achieving sustainable transportation; transit-oriented development, neo-traditional design, traffic calming, non-motorized travel, and smart growth; car sharing, parking pricing, location efficient mortgage, and alternative vehicles and fuel technologies.
Prerequisite: Graduate classification.

PLAN 674 Transportation System Analysis
Credits 3. 3 Lecture Hours.
Introduces basic concepts and techniques of modeling, analyzing and solving problems in transportation systems planning, operations, management and design within a unified framework for transportation systems analysis; includes: disaggregate demand theory and application, activity analysis and land use forecasting, network optimization stochastic processes, queuing models and simulation.
Prerequisite: CVEN 672 or approval of instructor.

PLAN 675 Theory of Planning and Urbanism
Credits 3. 3 Lecture Hours.
Theories of planning and urbanization in world literature; physical community design as expression of ideology and cultural value systems.

PLAN 676 Transportation Investment Decisions
Credits 3. 3 Lecture Hours.
The course provides the graduate-level student with an overview of the elements of transportation investment decisions including transportation supply, demand, finance, and economic impact.

PLAN 678 Applied Transportation Studio: Site Planning and Traffic Impact
Credits 3. 3 Lecture Hours.
Practical overview of urban planning and transportation topics including transportation-land use, functional classification, thoroughfare and land use planning, site planning, traffic impact analysis, access management and site design.
Prerequisite: Approval of instructor.

PLAN 681 Seminar
Credit 1. 1 Lecture Hour.
Reports and discussions of current research and selected topics in urban and regional planning.
Prerequisite: Approval of instructor.

PLAN 684 Professional Internship
Credits 1 to 8. 1 to 8 Other Hours.
Professional practice under approved arrangement with public or private agencies.
PLPA - Plant Pathology

PLPA 601 Fundamentals of Plant Pathology
Credits 3.3 Lecture Hours.
Increase the understanding of the underlying mechanisms in the disease process; apply that understanding to reduce losses caused by disease; nature of disease causing agents; the outcomes of the interaction between plants and pathogens.
Prerequisite: Graduate classification.

PLPA 603 Plant Disease Management
Credits 3.3 Lecture Hours.
Online course designed to provide a strong foundation in the principles and practices of management of plant diseases; analysis of disease cycles and epidemiological parameters to develop and evaluate efficient control strategies and forecasting models.
Prerequisites: PLPA 301 or equivalent, approval of instructor.

PLPA 604 Plant Bacterial Diseases
Credit 1.1 Lecture Hour.
Bacterial diseases of fruit and vegetable crops, field crops and ornamental plants; structure and function of plant pathogenic bacteria; dissemination of bacterial pathogens and methods of control.
Prerequisite: PLPA 301 or PLPA 601.

PLPA 605 Molecular Plant Virology
Credit 1.1 Lecture Hour.
Focus on biology and molecular genetics of plant viruses; historical information and recent developments discussed to illustrate how viruses establish an infection; control measures presented; uses as tools in biotechnology.
Prerequisite: PLPA 301 or PLPA 601.

PLPA 606 Fungal Biology
Credit 1.1 Lecture Hour.
Morphological and molecular systematic survey of kingdom of Fungi; emphasis on modern concepts and disease control.
Prerequisite: PLPA 301 or PLPA 601.

PLPA 607 Pathogen Strategies
Credit 1.1 Lecture Hour.
Molecular mechanisms that pathogens use to overcome innate immunity of the host plant; molecular events associated with the disease cycles of pathogens; pathogen-host-coevolution; pathogen virulence factors; pathogen countermeasures to plant defense mechanisms.
Prerequisites: PLPA 301 or PLPA 601.

PLPA 608 Pathogen Perception and Signaling
Credit 1.1 Lecture Hour.
Molecular and biochemical basis of pathogen recognition; pathogen signaling initiation and transduction in hosts.
Prerequisite: PLPA 301 or PLPA 601.

PLPA 609 Defense Hormone Signals
Credit 1.1 Lecture Hour.
Molecular and biochemical mechanisms of plant hormone-mediated defense responses to pathogen invasion; major classes of defense-related proteins, phytoalexins and antibacterial secondary metabolites and signal transduction pathways.
Prerequisite: PLPA 301 or PLPA 601.

PLPA 610 Host Plant Resistance
Credits 3.3 Lecture Hours.
Host plant resistance programs from the standpoint of the plant breeder, plant pathologist and entomologist; team taught with each discipline represented; roundtable discussions of assigned readings and lectures.
Prerequisite: Approval of instructor.
Cross Listing: SCSC 610 and ENTO 610.

PLPA 611 Advanced Plant Pathology
Credits 3.3 Lecture Hours.
Principles and concepts of plant pathogenesis, plant disease epidemiology, and plant disease management at the level of the whole plant and in plant populations; impact and control of significant plant diseases.
Prerequisites: PLPA 301 or equivalent; approval of instructor.

PLPA 613 Advanced Plant Pathology Laboratory
Credit 1.3 Lab Hours.
A laboratory course designed to demonstrate key components of the host-pathogen interaction and modern diagnostic and research techniques. Concurrent enrollment in PLPA 611 recommended.
Prerequisite: PLPA 301 or approval of instructor.

PLPA 614 Pathogens, the Environment, and Society
Credits 3.3 Lecture Hours.
Survey the impact of microorganisms on development of modern culture and society; emphasize role pathogens have played in history of mankind; influence of changing environment on emerging diseases.
Prerequisite: Graduate classification.

PLPA 616 Methods in Molecular Biology of Plant-Microbe Interactions
Credits 2.2 Lecture Hours.
Concepts and techniques used in molecular plant pathology to study the interactions between hosts and pathogens; focus on understanding the rationale for implementing certain procedures and the theoretical concepts underlying the methodology.
Prerequisite: Graduate classification.
PLPA 617 Molecular Plant Pathogen Interactions
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Critical review of the current literature on molecular and biochemical mechanisms of plant responses to pathogen invasion; overview of disease resistance genes, major classes of defense-related proteins, antimicrobial compounds and signal-transduction pathways.
Prerequisite: Graduate classification in any life sciences departments.

PLPA 618 Bacterial Plant Diseases
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Bacterial diseases of fruit and vegetable crops, field crops and ornamental plants; nature of the disease, dissemination of the pathogen and methods of control.
Prerequisite: Approval of instructor.

PLPA 619 Plant-Associated Microorganisms
Credits 3. 3 Lecture Hours.
Basic concepts and current topics in plant-microbe interactions including the diversity of plant-associated microorganisms; the plant as a microbial environment; endophytes; microbial roles in plant nutrition and fitness; uses of microorganisms for improved plant health and sustainable agriculture; microbial roles in food safety and future challenges; discussion of current literature.
Prerequisites: Basic plant biology or plant ecology is recommended; microbiology is helpful, but not required. Cross listed with HORT 619 and MEPS 619.

PLPA 620 Plant Virology
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Overview of plant virology with emphasis on molecular biology of host-virus interactions; topics will include virus replication, gene expression, movement, symptoms, transmission and control; current literature and techniques important to virology presented.
Prerequisite: Approval of instructor.

PLPA 623 Diseases of Field Crops
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Fundamental and practical aspects of more important and representative diseases of field crops; plant disease problems peculiar to extensive cultivation methods.
Prerequisites: PLPA 301 and PLPA 303.*

PLPA 626 Diagnosis of Plant Diseases
Credits 2. 1 Lecture Hour. 3 Lab Hours.
Techniques employed in field diagnosis of plant diseases; histological and microbiological studies to verify initial diagnosis.
Prerequisite: PLPA 625 or approval of instructor.*

PLPA 630 Fungi: Physiology and Genetics
Credits 2. 2 Lecture Hours.
Exploration of genetic networks, and genome evolution; physiology of fungal development and plant pathogenesis.
Prerequisites: Graduate classification or approval of instructor and concurrent enrollment in PLPA 631.

PLPA 631 Fungi Laboratory
Credit 1. 3 Lab Hours.
Demonstration of key modern concepts in the Kingdom Fungi; experiments with current research methodologies using fungi.
Prerequisites: Graduate classification or approval of instructor and concurrent enrollment in PLPA 630 and/or PLPA 632.

PLPA 632 Fungi Cell Biology and Taxonomy
Credits 2. 2 Lecture Hours.
Fungi: Cell Biology and Taxonomy. Morphological and molecular phylogenetic survey of the Kingdom Fungi; cell biology of fungal form and function.
Prerequisites: Graduate classification or approval of instructor and concurrent enrollment in PLPA 631.

PLPA 634 Turfgrass Pathology
Credits 3. 3 Lecture Hours.
Recognizing turfgrass problems and understanding biological mechanisms in the disease process; principles of disease management strategies.

PLPA 657 Biotechnology for Biofuels and Bioproducts
Credits 3. 3 Lecture Hours.
Biotechnology issues in developing bioenergy as a renewable energy source; emphasis on the three generations of bioenergy and enabling technologies; special topics include recent advances in bioenergy research, government policy, and industrial development.
Prerequisite: Graduate classification.

PLPA 665 Viral Vectors and Gene Therapy
Credits 3. 3 Lecture Hours.
Describes various viral vector systems, their development, their use as research tools, and their use in biotechnology and gene therapy; consists of a mixture of short lectures and discussion of papers from the literature.
Prerequisites: VTMI 663/MPIM 663, VTMI 647, PLPA 616, or PLPA 620 or approval of instructor.
Cross Listing: MPIM 665 and VTMI 665.

PLPA 681 Seminar
Credit 1. 1 Lecture Hour.
Reports and discussions of topics of current interest in plant pathology; review of literature on selected subjects.

PLPA 684 Professional Internship
Credits 1 to 4. 1 to 4 Other Hours.
Work-study program for on-the-job training. The student's major professor and job training supervisor will grade the individual.
Prerequisite: Graduate classification in Department of Plant Pathology and Microbiology.

PLPA 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Individual problems or research not pertaining to thesis or dissertation.
Prerequisites: PLPA 301 and PLPA 303; approval of instructor.

PLPA 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Special topics in an identified area of plant pathology. May be repeated for credit.
Prerequisite: Approval of instructor.

PLPA 690 Theory of Research
Credit 1. 1 Lecture Hour.
Design and development of research theory, inquiry and methodology in various subfields of plant pathology and microbiology; includes examination of modern trends and advances, the analysis of research approaches, and the evaluation and interpretation of data using examples from current research literature. May be repeated for credit.
Prerequisite: Approval of instructor.

PLPA 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Original investigations in support of thesis or dissertation.
POLS 601 Components of Political Inquiry
Credits 3.3 Lecture Hours.
Elements of empirical research design, techniques of data collection and data analysis. The evolution of political science as a scientific discipline. Required for political science majors.
Prerequisite: Completion of or concurrent enrollment in STAT 303 or equivalent.

POLS 602 Quantitative Political Analysis
Credits 3.3 Lecture Hours.
Theory, techniques and applications of quantitative analysis in political science. Required for political science majors.
Prerequisite: POLS 601 or equivalent.

POLS 603 Quantitative Political Analysis II
Credits 3.3 Lecture Hours.
Introduction to advanced applications of quantitative analysis in political science; critical evaluation of the use of several advanced statistical techniques in political analysis.
Prerequisite: POLS 602 or equivalent.

POLS 604 Conceptualization and Theory in Political Analysis
Credits 3.3 Lecture Hours.
Exploration of the function of general theoretical assumptions in social scientific research and a critical analysis of some of the most influential general conceptualizations of political phenomena.
Prerequisite: POLS 601 or equivalent.

POLS 606 Advanced Research Methods for Political Scientists
Credits 3.3 Lecture Hours.
Advanced techniques for specialized problems in empirical political analysis, including voter choice models, longitudinal data, elite interviewing, problems of formal theory and others. May be taken three times.
Prerequisites: POLS 601 and POLS 602 or equivalents.

POLS 607 Advanced Research Methods for Political Scientists II
Credits 3.3 Lecture Hours.
Advanced techniques for specialized problems in empirical political analysis, including voter choice models, longitudinal data, elite interviewing, problems of formal theory and others. May be taken up to three times as content varies.
Prerequisites: POLS 601 and POLS 602.

POLS 620 Comparative Political Systems
Credits 3.3 Lecture Hours.
Comparative study of national political systems; cross-national relationships and comparative analysis.

POLS 621 Theory and Method in Comparative Politics
Credits 3.3 Lecture Hours.
Introduction to methods for conducting research in comparative politics, including approaches to theory development and overcoming obstacles to comparative politics research.
Prerequisites: Graduate classification or approval of instructor.

POLS 623 Seminar in Cross-National Topics
Credits 3.3 Lecture Hours.
Cross-cultural investigation of the manner in which selected political processes manifest themselves in various political systems. May be taken for credit up to three times as content varies.

POLS 624 Seminar in Regional Studies
Credits 3.3 Lecture Hours.
Political behavior or institutions within a specified country, region or cultural area. May be taken for credit up to three times as content varies.

POLS 625 Seminar in Comparative Race and Ethnic Politics
Credits 3.3 Other Hours.
Significant themes in comparative study of race and ethnic politics; includes racial and ethnic identities, government and diversity, racial and ethnic violence, managing conflict. May be taken three times for credit.
Prerequisite: Graduate classification.

POLS 630 International Politics
Credits 3.3 Lecture Hours.
Survey of international politics; security politics, the development of nations, international law, organization and integration.

POLS 631 Conflict Studies
Credits 3.3 Lecture Hours.
The study of international conflict, especially factors pertaining to the causes of war.
Prerequisite: Graduate classification or approval of instructor.

POLS 632 Theory and Method in International Relations
Credits 3.3 Lecture Hours.
Theory, techniques and applications of quantitative analysis in international relations.
Prerequisites: POLS 602 and POLS 630 or approval of instructor.

POLS 633 Seminar in Foreign and Security Policy
Credits 3.3 Lecture Hours.
Selected aspects of the formation and conduct of foreign and defense policy. May be taken for credit up to three times as content varies.

POLS 634 International Institutions
Credits 3.3 Lecture Hours.
Current theoretical and empirical debates in the field of international institutions; includes the value and limitations for understanding the creation, design, behavior, change and impact of international institutions in world politics.
Prerequisite: POLS 630.

POLS 635 International Political Economy
Credits 3.3 Lecture Hours.
The study of international political economy, focusing on the economic and political causes and consequences of international trade, foreign direct investment, capital mobility, exchange rate, monetary policy, migration, and development.
Prerequisite: Graduate classification or approval of instructor.

POLS 641 Seminar in Public Administration
Credits 3.3 Other Hours.
Literature and research problems of a selected aspect of public administration. May be taken three times.

POLS 642 Seminar in Public Policy
Credits 3.3 Other Hours.
Literature and research problems of a selected aspect of public policy. May be taken three times.

POLS 643 Theory and Practice of Public Administration
Credits 3.3 Lecture Hours.
Theory, process and structure of management in the public sector. Internal management and behavior in federal, state or local agencies in a political setting.
POLS 644 Seminar in Politics of Race, Ethnicity and Public Policy
Credits 3. 3 Other Hours.
Examines race, ethnicity, and public policy; emphasizes how policy process considers race and ethnicity, and differential impact of policy on racial groups. May be taken three times for credit.
Prerequisite: Graduate classification.

POLS 645 Politics, Policy and Administration
Credits 3. 3 Lecture Hours.
Relationship of politics and administration with reference to the influence of administration and bureaucracy, legislative bodies, parties, interest groups and other forces in the formation and execution of public policy in various levels of, primarily, American government.

POLS 646 Public Policy Theory
Credits 3. 3 Lecture Hours.
Major theories and classifications of public policies, and general explanations of policy formation and impact; recent research testing major theories.

POLS 650 Normative Political Theory
Credits 3. 3 Lecture Hours.
Examination of the most influential approaches, concepts and political arguments of classical and contemporary political theory. May be taken for credit up to three times as content varies.

POLS 654 Seminar in Theories of Political Legitimacy, Order and Obligation
Credits 3. 3 Lecture Hours.
Intensive examination of contending theories of political authority, obligation and justice. May be taken up to three times for credit as content varies.
Prerequisites: Graduate classification and approval of instructor.

POLS 660 Gateway Seminar in the Politics of Race and Ethnicity
Credits 3. 3 Lecture Hours.
Overview of the race and ethnicity literature in four different subfields: comparative politics, international relations, American politics, and public administration/policy; emphasis on four themes across the subfields: identity participation (including non traditional participation such as violence), representation, and institutions/structure.

POLS 667 Seminar in Race, Ethnicity and American Politics
Credits 3. 3 Other Hours.
This seminar examines social science theories of race, ethnicity and politics in the United States; highlights the political behavior of Latinos, African-Americans, and Asian Americans. May be taken three times for credit.
Prerequisite: Graduate classification.

POLS 674 Seminar in Race, Ethnicity and American Politics
Credits 3. 3 Other Hours.
This seminar examines social science theories of race, ethnicity and politics in the United States; highlights the political behavior of Latinos, African-Americans, and Asian Americans. May be taken three times for credit.
Prerequisite: Graduate classification.

POLS 675 Seminar in American Political Processes and Behavior
Credits 3. 3 Lecture Hours.
Relevant literature and research problems of selected aspects of mass political behavior in the United States; emphasis on original student research. May be taken for credit up to three times as content varies.
Prerequisites: Approval of instructor.

POLS 681 Seminar
Credit 1. 1 Lecture Hour.
Topics of interest to political scientists with emphasis on professional norms, opportunities and teaching strategies.
Prerequisite: Approval of graduate advisor.

POLS 685 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
Individual instruction in selected fields of political science.
Prerequisite: Approval of instructor.

POLS 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of political science or public policy. May be repeated for credit.
Prerequisite: Approval of instructor.

POLS 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Thesis research.
Prerequisite: Approval of graduate advisor.

POSC - Poultry Science

POSC 609 Avian Physiology
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Basic physiological principles pertaining specifically to avian species; cardiovascular, neural, respiratory, digestive, endocrine and reproductive systems; physiological experiments use various avian species as laboratory animals.
Prerequisite: Approval of instructor.

POSC 611/FSTC 611 Poultry Further Processing
Credits 3. 3 Lecture Hours.
Egg and poultry meat processing; egg markets, egg processing, grading, packaging, safety, quality and consumer acceptance of shell eggs; poultry meat processing (specifically turkey and broilers), meat quality, markets, consumer acceptance of poultry meat and safety.
Cross Listing: FSTC 611/POSC 611.

POSC 614 Fermentation and Gastrointestinal Microbiology
Credits 3. 3 Lecture Hours.
Fermentation and gastrointestinal ecosystems in terms of microorganisms present, their activities and requirements and their interactions in a dynamic system.
Prerequisite: Beginning microbiology and/or biochemistry or approval of instructor.
Cross Listing: NUTR 614 and VTMI 614.
POSC 615 Avian Nutrition  
Credits 3. 3 Lecture Hours.  
Metabolism and nutritional requirements of domestic fowl including proteins, carbohydrates, fats, minerals, vitamins and related feed additives.  
Prerequisites: POSC 411 and CHEM 228 or approval of instructor.

POSC 619 Molecular Methods for Microbial Characterization  
Credits 3. 2 Lecture Hours. 2 Lab Hours.  
Underlying principles of molecular methods for microbial detection and characterization in natural and man-made ecosystems; emphasis on method application and data interpretation; emphasis on microbial pathogens and indicator organisms in foods and environment; laboratory covers select protocols.  
Prerequisites: POSC 429; SCSC 405; FSTC 326/DASC 326; approval of instructor.  
Cross Listing: SCSC 619, FSTC 619 and VTMI 619.

POSC 625/ANSC 623 Precision Diet Formula  
Credits 3. 2 Lecture Hours. 2 Lab Hours.  
Theoretical and applied principles associated with precision feeding and diet formulation to optimize nutrient requirements; optimization using least-cost formulation, ingredient inventory, farm and feed mill management, and nutrient management of non-ruminants (poultry, swine, horse, and fish) and ruminant animals (beef and dairy).  
Prerequisite: POSC 411 or ANSC 318.

POSC 628 Advanced Poultry Meat Further Processing  
Credits 3. 3 Lecture Hours.  
The science and practice of value added products; physical, chemical, microbiological and functional characteristics of value-added poultry products as they affect consumer acceptance, efficiency of production and regulatory approval.  
Prerequisite: Graduate classification.

POSC 629/FSTC 629 Microbiology of Food Irradiation  
Credits 3. 2 Lecture Hours. 2 Lab Hours.  
Lecture plus laboratory overview of electron beam and x-ray based food irradiation principles; provides a working knowledge of using electronic pasteurization as a means of destroying microbial pathogens or retarding microbial spoilage in foods.  
Cross Listing: FSTC 629/POSC 629.

POSC 630 Applied Animal Genomics  
Credits 3. 3 Lecture Hours.  
Theory and application of genomics by livestock industries; consideration of genetic markers, gene mapping methods, genome analysis and emerging technologies such as microarrays, transgenesis, cloning and marker assisted selection; exposure to bioinformatic tools for genomics.  
Prerequisite: GENE 603 or approval of instructor.

Cross Listing: ANSC 629 and GENE 629.

POSC 634 Diseases of Poultry  
Credits 3. 3 Lecture Hours.  
Introduction to Poultry Biosecurity and Diseases. Basic understanding of infectious diseases of poultry; control and prevention of infectious diseases.  
Prerequisites: BIOL 113/ BIOL 123.

POSC 645/NUTR 645 Nutrition and Metabolism of Vitamins  
Credits 3. 3 Lecture Hours.  
Chemistry and metabolism of the fat soluble and water soluble vitamins and their roles in animals; integrates cellular biochemistry and metabolism of the vitamins in the vertebrate animals.  
Prerequisites: POSC 411 or ANSC 303/NUTR 303; BICH 410 or BICH 603.

Cross Listing: NUTR 645/POSC 645.

POSC 649/VTMI 649 Immunology  
Credits 3. 3 Lecture Hours.  
Cellular basis of the immune response; relationships between inflammation and acquired immunity, MHC and cell activation; the role of cytokines in immunoregulation and hypersensitivity, vaccines, and the mechanism of immunity to viruses, bacteria and parasites.  
Prerequisite: VTPB 409 or equivalent.  
Cross Listing: VTMI 649/POSC 649.

POSC 650/NUTR 650 Nutrition and Metabolism of Minerals  
Credits 3. 3 Lecture Hours.  
Nutritional significance of minerals in animal metabolism; chemical, biochemical and physiological role of minerals and homeostatic control in animal metabolism.  
Prerequisites: POSC 411 or ANSC 303/NUTR 303; BICH 410 or BICH 603.

Cross Listing: NUTR 650/POSC 650.

POSC 660/VTMI 650 Experimental Immunology  
Credits 4. 3 Lecture Hours. 3 Lab Hours.  
Familiarization, development and integration of techniques into experimental design of immunologic investigation; antibody production, protein purification, immunofluorescence, agar-gel diffusion, immunoelectrophoresis and specialized serologic tests.  
Prerequisites: BICH 410 or equivalent; 8 hours of microbiology.  
Cross Listing: VTMI 650/POSC 660.

POSC 681 Seminar  
Credit 1. 1 Lecture Hour.  
Intensive review of literature on feeding, breeding, incubation, marketing, and management; development of familiarity with journals, organizations, agencies and personnel working on poultry problems. May be repeated as many semesters as desired.  
Prerequisite: Graduate classification.

POSC 685 Directed Studies  
Credits 1 to 6. 1 to 6 Other Hours.  
Individual problems involving application of theory and practice in the various disciplines of poultry science.  
Prerequisite: Approval of department head.

POSC 689 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours.  
Selected topics in an identified area of poultry science. May be repeated for credit.  
Prerequisite: Approval of instructor.

POSC 691 Research  
Credits 1 to 23. 1 to 23 Other Hours.  
Research methods and techniques in breeding, nutrition, physiology, marketing, management and products technology. Students must conduct experiments in one of these fields. Design of experiments, collection, analysis and presentation of experimental data. Designed for thesis or dissertation credit.
PROS - Prosthodontics

PROS 5001 Mock Board Examination I
Credits 0. 0 Other Hours.
Prepares the students for certification by the American Board of Prosthodontics (ABP). It includes a comprehensive written examination, presentation and defense of a Part 4 patient presentation with oral examination.

PROS 5002 Mock Board Examination II
Credits 0. 0 Other Hours.
A continuation of (I), preparing students for certification by the American Board of Prosthodontics (ABP) with a comprehensive written examination, presentation and defense of a Part 2 or 3 patient presentation with oral examination.

PROS 5003 Mock Board Examination III
Credits 0. 0 Other Hours.
A continuation of (I) and (II), preparing students for certification by American Board of Prosthodontics (ABP) with a comprehensive written examination and presentation of a Part 2 or 3 patient presentation not yet presented with oral examination. Selection is also made of which Part 2, 3 or 4 should possibly be considered for actual presentation to the ABP. Students are required to take Part 1 (written) of the ABP examination in February of their third year.

PROS 5019 Journal Club
Credits 0. 0 Other Hours.
Reviews current prosthodontic literature and encompasses analytical review and evidence-based approach. Students register for a total of three summers and six semesters.

PROS 5020 Treatment Planning and Clinical Review
Credits 0. 0 Other Hours.
A series of formalized treatment plans are presented by the students and are discussed and finalized by attending faculty and students. Students also present treatments in progress and completed treatments for review and discussion at this seminar. Students register for a total of three summers and six semesters.

PROS 5022 Interdisciplinary Conferences
Credits 0. 0 Other Hours.
Specialized conferences in orthognathic surgery, craniofacial anomalies and dental implants are held weekly and monthly. The specialties of prosthodontics, periodontics, oral and maxillofacial surgery, and orthodontics attend with interdisciplinary treatment planning, presentation of treatment results, and future direction based on outcomes and new developments. Students register for six semesters.

PROS 5118 Prosthodontic Topic Literature Review
Credits 0.5-1. 0.5-1 Other Hours.
Detailed review of classical and current prosthodontic literature organized into specific topics, encompassing all sub-disciplines in prosthodontics. Students are assigned a specific topic, upgrade past literature packets, prepare and disseminate new material and summaries prior to the seminar, and lead discussion at the seminar. Students register for a total of three summers and six semesters.

PROS 5122 Advanced Prosthodontic Concepts and Techniques
Credit 1. 1 Other Hour.
Theories, concepts and treatment modalities in complete denture, removable partial denture and fixed partial denture prosthodontics, with related contemporary literature and techniques. Students register for a total of two semesters.

PROS 5126 Related Discipline Seminars
Credit 1. 1 Other Hour.
Interactive seminar presentations in the specialty areas of periodontics, oral and maxillofacial surgery, orthodontics, endodontics, dental materials, physiology and other disciplines not covered in the core curriculum specifically related to prosthodontics. Students register for a total of four semesters.

PROS 5127 Advanced TMD and Occlusal Concepts and Treatments
Credit 1.5. 1.5 Other Hour.
Seminars and clinical application of contemporary literature and techniques in occlusion and temporomandibular disorders.

PROS 5130 Clinical Teaching
Credit 1. 1 Other Hour.
Lectures and clinical instruction involving contact with second-year, third-year and fourth-year dental students. Students register for one semester.

PROS 5136 Maxillofacial Prosthodontic Concepts and Treatments
Credit 1. 1 Other Hour.
Theories, concepts and treatment modalities related to the maxillofacial patient with a seminar, laboratory and clinical application format and a VA hospital rotation. Implant literature reviews of contemporary material with an evidence-based seminar approach.

PROS 5160 Advanced Implant Concepts and Treatment
Credit 1.5. 1.5 Other Hour.
Seminars and clinical application on implant concepts, designs, placement techniques and clinical utilization. Specific prosthodontic diagnosis and treatment concepts are stressed with evidence-based rationale.

PROS 5210 Introduction to Prosthodontic Concepts and Techniques
Credits 2.5. 1.3 Lecture Hour. 1.3 Lab Hour.
Assessment, development and enhancement of diagnostic and clinical skills in prosthodontics; lecture/laboratory format, concepts in fixed, removable and implant prosthodontics, porcelain laboratory techniques and applications.

PROS 5226 Occlusal Concepts and Techniques
Credit 1.5. 1.5 Other Hour.
Theories and clinical application of various occlusal concepts with utilization of various categories of recording mechanisms of condylar movements. Students register for a total of two semesters.

PROS 5250 Geriatric Prosthodontics
Credit 1. 1 Other Hour.
Seminars and clinical applications on the demographics epidemiology and special considerations of the aging patient in a prosthodontic practice. Clinic rotations in geriatric evaluation and management unit team meetings and nursing home rounds.

PROS 5259 Implant Concepts and Techniques, Surgical Placement
Credits 0. 0 Other Hours.
Seminars and clinical application of basic implant concepts, diagnosis and treatment planning and the SAC classification, review of various systems, surgical placement considerations and evidence-based rationale; for advanced specialty education students desiring to place implants in the Post-Doctoral Implant Surgical Placement Program. Must be taken on a satisfactory/unsatisfactory basis.

PROS 5301 Clinical Prosthodontics
Credits 3. 3 Other Hours.
Diagnosis, treatment and management of patients requiring various categories of prosthodontic core. Patient selection and load determined by student aptitude and clinical competence.
PSAA 601 Foundations of Public Service  
Credits 3.3 Lecture Hours.  
Different perspectives on management and leadership in public service; provides overview of how public and nonprofit organizations work; discusses ethical dilemmas that occur in public service careers.  
Prerequisite: PSAA majors only.

PSAA 602 Tools for Advancement and Leadership in Public Service  
Credits 3.3 Lecture Hours.  
Focuses on techniques and practices that executives employ to accomplish their work through politicians, bureaucrats, the media, lobbyists, governing boards, and their supervisors and staff; explores issues that arise from conflict with policy makers, moral and ethical concerns, and professionalism in public service.  
Prerequisite: Graduate classification.

PSAA 603 Nongovernmental Organization Management in International Settings  
Credits 3.3 Lecture Hours.  
Exploration of the management of nongovernmental organizations (NGO) in international setting with special attention to their niche alongside private and public sectors, revenue sources, impact on society and converse effects of society and its institutions.  
Prerequisite: Graduate classification.

PSAA 604 Emergency Management and Homeland Security  
Credits 3.3 Lecture Hours.  
Provides an overview of emergency management and its connection with homeland security; topics include emergency management cycles, activities that fall into mitigation, preparedness, response, recovery phases of emergency management; other topics may include emergency management of terrorism, disaster communication, media relations, and performance assessment for emergency management organizations.  
Prerequisite: Graduate classification.

PSAA 605 Homeland Security Policies, Strategies, and Operations  
Credits 3.3 Lecture Hours.  
In-depth examination of past, current, and emerging national and international homeland security policies, strategies, and selected strategic operations. Emphasis on national and global risks, the national security management system, risk and crisis management, longer-term community recovery, and the strategies of other countries applicable to the United States.  
Prerequisite: Graduate classification.

PSAA 606 Environmental Policy and Management  
Credits 3.3 Lecture Hours.  
Covers environmental policy areas, including air and water pollution, toxic waste disposal, public land use, sustainable development, and resource conservation. Explores actions of governmental institutions and actors at all levels in their efforts to implement and manage environmental policy.  
Prerequisite(s): Graduate classification.

PSAA 607 Research Methods for Homeland Security Studies  
Credits 3.3 Lecture Hours.  
Introduces fundamental social science research principles, concepts, and methods applied in designing and conducting research and communicating research findings and recommendations; conduct research and write a paper on a homeland security topic and develop expertise in assessing the validity of research done by others.  
Prerequisite: Graduate classification.

PSAA 608 Cyber Security for Managers  
Credits 3.3 Lecture Hours.  
Introduces operations and security issues involving attacking, exploiting, and defending digitized data, knowledge, and communications and the security challenges arising from the globalization of the Internet, the sharing of networks, and the flow of strategic communications. Does not require significant skills or experience in information technology.  
Prerequisite: Graduate classification.

PSAA 609 Introduction to Homeland Security  
Credits 3.3 Lecture Hours.  
Broad, multidisciplinary overview of homeland security as a contemporary subject and an evolving discipline; fundamental issues, strategies, challenges, and interdependencies related to preventing, mitigating, preparing for, responding to, recovering from, and building in resiliency to counter intentional and non-intentional threats to homeland security.  
Prerequisite: Graduate classification.

PSAA 610 Comparing Domestic and International Organizations in Public Administration  
Credits 3.3 Lecture Hours.  
Overview of federal, state and international public organizations; public agencies under the cabinets of the executive branch; universal patterns in organizations that promote the most ‘desirable’ policy outcomes used national and internationally.  
Prerequisite: Graduate classification.

PSAA 611 Public Policy Formation  
Credits 3.3 Lecture Hours.  
Examination of public policy formation processes in the United States, with an emphasis on national government.  
Prerequisites: Graduate classification and approval of MPSA or MPIA director.
PSAA 613 Immigration and Education Policy
Credits 3. 3 Lecture Hours.
Explores contemporary issues and debates in US education policy as it relates to immigrant children and children of immigrants; examines long-run and current issues that immigrant students face, such as educational assimilation, equity, and access to higher education; includes readings from the education, economics, and sociology disciplines.
Prerequisite: Graduate classification.

PSAA 615 Policy Analysis
Credits 3. 3 Lecture Hours.
Provides solid working knowledge of the techniques involved in public policy analysis; gives both the theoretical framework and practical experience necessary for a public manager to analyze public policy effectively.
Prerequisite: ECON 322 or equivalent or approval of instructor.

PSAA 616 Managing Workplace Diversity in Public and Nonprofit Organizations
Credits 3. 3 Lecture Hours.
Examines the role of government in education and education policy issues, including equity, adequacy and accountability; final section of class will focus on current policy topics, emphasizing two strategies favored by the Obama administration—charter schools and pay for performance.
Prerequisite: Graduate classification.

PSAA 617 U.S. State and Local Government: Institutions and Policy Credits 3. 3 Lecture Hours.
A practical, working knowledge of the institutions and processes through which state and local policy is made and implemented; application of theoretical and empirical tools used to evaluate policy at the state and local levels.
Prerequisite: Graduate classification.

PSAA 618 Education Policy
Credits 3. 3 Lecture Hours.
Examines the role of government in education and education policy issues, including equity, adequacy and accountability; final section of class will focus on current policy topics, emphasizing two strategies favored by the Obama administration—charter schools and pay for performance.
Prerequisite: Graduate classification.

PSAA 619 Urban Policy and Management
Credits 3. 3 Lecture Hours.
Overview of U.S. urban policy, management and institutions; theory and research on governmental functions and policies; exposure to actual policymakers and jurisdictions; for careers in regional or local levels of U.S. government.
Prerequisites: Graduate classification; PSAA 601, PSAA 611 or approval of instructor or department head.

PSAA 620 Safeguarding the Nation’s Maritime Gateways
Credits 3. 3 Lecture Hours.
Thorough examination of the national policy, strategies and plans that direct maritime security and harbor safety and how they integrate into homeland security; historical overview, current national strategies, departments and agencies responsible for security, international cooperation efforts and U.S. efforts against piracy and vessel hijacking, future considerations.
Prerequisite: Graduate classification.

PSAA 621 Economic Analysis
Credits 3. 3 Lecture Hours.
Microeconomic analysis of consumers, firms and markets; macroeconomic analysis of growth and stabilization policies; the government's role in the economy.
Prerequisites: Graduate classification and approval of MPSA or MPIA director.

PSAA 622 Public Finance
Credits 3. 3 Lecture Hours.
Framework for positive and normative economic analysis of public sector spending and taxation; application of fundamental analytical principles of public finance to current issues in public policy.
Prerequisites: Graduate classification and approval of MPSA or MPIA director.

PSAA 623 Budgeting in Public Service
Credits 3. 3 Lecture Hours.
Designed to introduce selected topics in public administration and political science literature on the politics of public finance and budgeting; introduce the practice of budgeting by learning language and issues common to budgeting in government.
Prerequisite: Graduate classification.

PSAA 630 Program Evaluation in Public and Nonprofit Organizations
Credits 3. 3 Lecture Hours.
Organizations today are responding to increasing demands for accountability; demands come from an increasingly sophisticated public, clientele, and from funding sources including government, foundations, and corporations; designed to introduce theories, research, and practice for program evaluation and systems that support the organization's information needs.
Prerequisite: Graduate classification.

PSAA 631 Marketing for Nonprofit Organizations
Credits 3. 3 Lecture Hours.
Provides overviews and examines the underlying fundamental principles, concepts, and methods of strategic marketing as it is associated with the nonprofit sector.
Prerequisite: Graduate classification.

PSAA 632 Fiscal Management for Nonprofits
Credits 3. 3 Lecture Hours.
Introduction to the underlying fundamental principles, concepts and methods of managerial finance in nonprofit organizations; interpretation and evaluation of the financial reports to inform strategic decision-making in planning and budgeting.
Prerequisite: Graduate classification.

PSAA 633 Philanthropy: Fundraising in Nonprofit Organizations
Credits 3. 3 Lecture Hours.
Examines the theory and practice of fundraising in nonprofit organizations; overview of fundraising strategies and techniques and how they relate to the achievement of organizational goals; focuses on ways of integrating various fundraising activities into an effective fundraising program.
Prerequisite: Graduate classification.

PSAA 634 Public Management
Credits 3. 3 Lecture Hours.
Addresses three critical aspects of public management; the role of management in the public sector, validity of the argument that government should be run like a business and the tools public managers need to be effective. Application of organizational theory concepts applied to case studies.
Prerequisite: Graduate classification.
PSAA 635 Social Welfare and Health Policy
Credits 3. 3 Lecture Hours.
Explores the historical development and impact of US public welfare, child welfare, employment, and health social service programs; analyzes values and assumptions that formed the foundations of social welfare policy and explores the social, economic, political, and cultural context in which these policies developed and their potential future.
Prerequisite: Graduate classification.

PSAA 636 Grant and Project Management in the Public and Nonprofit Sectors
Credits 3. 3 Lecture Hours.
Examination of the use and provision of grants in the public and nonprofit sectors; exploration of the conceptual background of government and private grants; the management of grants and projects; application of skills and methods related to proposal writing needs statements, program budgets and evaluations.
Prerequisite: Graduate classification.

PSAA 637 Decision Making in Government and Public Service
Credits 3. 3 Lecture Hours.
Introduction to the study and practice of judgment and decision making processes in government and administrative settings; content is firmly grounded in empirically-based theory and research with a practical slant designed to help develop and improve decision making skills.
Prerequisite: Graduate classification.

PSAA 638 Health Economics and Policy
Credits 3. 3 Lecture Hours.
Examines health care and health care markets in U.S. and abroad; topics include production of and demand for health, moral hazard and adverse selection in insurance markets, information asymmetries in physician-patient relationships, regulation and payment systems for providers, Medicare, Medicaid and other programs, and comparisons to other countries.
Prerequisite: Graduate classification.

PSAA 640 Energy Policy and Security
Credits 3. 3 Lecture Hours.
Policy and economic issues related to increasing global reliance on fossil fuels, including the resulting impact on security concerns and global warming; utilizes competitive and non-competitive market theories, non-renewable resource analysis, and cost-benefit analysis.
Prerequisites: Graduate classification; BUSH 621; course experience in microeconomics and quantitative modeling.

PSAA 641 Organization Theory for the Public Sector
Credits 3. 3 Lecture Hours.
Theories of bureaucracy and control, management, human relations, decision making and organizations and their environments; effects of organizations on individuals, the government and the policy formation process.
Prerequisites: Graduate classification and approval of MPSA or MPIA director.

PSAA 642 Ethics and Public Policy
Credits 3. 3 Lecture Hours.
Theory and practice for analyzing and responding to the ethical responsibilities and dilemmas for professional conduct; ethical dimensions of analysis and decision making for policy makers and public administrators.
Prerequisites: Graduate classification and approval of MPSA or MPIA director.

PSAA 643 Foundations of the Nonprofit Sector
Credits 3. 3 Lecture Hours.
Overview of the origins, size, scope and composition of the nonprofit and voluntary sector in American society today; introduction to the historical, political and religious foundations of the nonprofit sector; examines theoretical and conceptual framework.
Prerequisite: Graduate classification.

PSAA 644 Management and Leadership of Nonprofit Organizations
Credits 3. 3 Lecture Hours.
Introduction and overview of nonprofit organizations and the environment they operate in; examination of the distinctiveness of these organizations and the special skills required for effective management of them; empirical and normative issues surrounding nonprofit management and leadership.
Prerequisite: Graduate classification.

PSAA 645 Networks and Inter-organizational Collaboration
Credits 3. 3 Lecture Hours.
Introduction to the knowledge base pertaining to inter-organizational relationship and the management environment of network based organizations.
Prerequisite: Graduate classification.

PSAA 646 Accountability in Public Service
Credits 3. 3 Lecture Hours.
Role of bureaucracy in American government; emphasis on mechanisms of institution accountability and control; readings and concepts from the fields of political science, public administration and administrative law; emphasis on broad theory-based knowledge for careers in public service.
Prerequisite: Graduate classification.

PSAA 648 Performance Management in the Public and Nonprofit Sectors
Credits 3. 3 Lecture Hours.
Drawing on readings, practical exercises and guest lectures; examine public sector performance management and measurement as tools for improving strategic planning, resource allocation, organizational learning, internal operational processes, and internal and external accountability; apply learning to the development of a particular organization's performance measurement system.
Prerequisite: PSAA 634 or PSAA 644.

PSAA 649 Volunteer and Human Resources in Nonprofit Organizations
Credits 3. 3 Lecture Hours.
Introduces theories, research and practice for managing personnel and human resources for paid and volunteer staff in nonprofit settings; explores the behaviors and cognitions of participants in nonprofit organizations, the motivational and personnel programs required by the organization, and the managerial strategies for effective human resources management.
Prerequisite: Graduate classification.

PSAA 650 Social Innovation and Entrepreneurship in Nonprofit Management
Credits 3. 3 Lecture Hours.
Nonprofit management practices and principles related to social entrepreneurship and innovation; research, theories, and practice examples utilized to teach principles of designing and implementing a social innovation which can be applied to domestic and international social problems.
Prerequisites: Graduate classification, PSAA 634 or PSAA 644 or approval of instructor.
PSAA 651 Homeland Security and Homeland Defense
Credits 3.3 Lecture Hours.
Thoroughly examine the strategy for homeland defense and civil support, Department of Defense policy and doctrine, along with numerous scholarly articles focusing on homeland security; master's level course intended for individuals preparing for professional careers in the conduct of international affairs.

PSAA 652 Protection of the Nation's Critical Infrastructure
Credits 3.3 Lecture Hours.
Protection of the Nation's Critical Infrastructure. Survey an overview of the Nation's strategies for Critical Infrastructure Protection and securing cyberspace and the definition of critical infrastructures as it exists today; master's level course intended for individuals preparing for professional careers in the conduct of international affairs.

PSAA 653 Weapons of Mass Destruction
Credits 3.3 Lecture Hours.
Comprehensive study of weapons of mass destruction and their potential use by a terrorist group; considers both political and technological issues associated with WMD terrorism; focus will be on prevention, protection, response and recovery to WMD terrorism events; intended for individuals preparing for professional careers in the conduct of international affairs.

Credits 3.3 Lecture Hours.
U.S. border security policies, strategies and issues; policies and strategies for homeland defense and security; Mexican and Canadian governments' border policies; southern U.S. border situation and issues; considerations when border land is privately versus federally owned; impact of criminal elements on border security; efforts to secure the U.S. coasts.
Prerequisite: Graduate classification.

PSAA 655 Domestic Intelligence Operations: Legalities, Policies, and Procedures
Credits 3.3 Lecture Hours.
Examination of laws and national policies and operations surrounding domestic intelligence within the United States; departments and agencies with domestic intelligence responsibilities, their missions, operations and resources; selected readings, government documents and case studies.
Prerequisite: Graduate classification.

PSAA 656 Fundamentals of Homeland Security
Credits 3.3 Lecture Hours.
An introduction to the theory, practice, challenge and prospects for securing the "American Homeland" against terrorist attack, with special emphasis on how American policy makers are resolving this dilemma, and their prospects for the future; draws heavily on current events and emerging policy solutions as examples.
Prerequisite: Graduate classification.

PSAA 657/INTA 657 Terrorism in Today's World
Credits 3.3 Lecture Hours.
Comprehensive survey of international terrorism from its origins to the present; emphasis on how the U.S. government has responded and how it has organized to counter the threat; all major terrorist groups studied; understanding the nature of the terrorist threat and the implications for the U.S. government.
Prerequisite: Graduate classification.
Cross Listing: INTA 657/PSAA 657.

PSAA 660 Domestic Terrorism: The Internal Threat to America
Credits 3.3 Lecture Hours.
Survey of domestic terrorism from the first manifestation of terror tactics in the United States to the anarchist movement of the 1880s to the present; study of domestic terrorist threats, the growing threats from weapons of mass destruction, and the implications WMDs have for all levels of government.
Prerequisite: Graduate classification.

PSAA 661 Human Resources Management in Government and Public Service
Credits 3.3 Lecture Hours.
Organization and operation of civil service personnel systems in American governments.
Prerequisites: Graduate classification.

PSAA 663/AGEC 604 Natural Resource Economics
Credits 3.3 Lecture Hours.
Critical evaluation of policies and procedures in natural resource development and use; identification of problems in resource development, the political-economic decision-making process and analytical tools which can contribute to economic decisions.
Prerequisite: ECON 323.
Cross Listing: AGEC 604/PSAA 663.

PSAA 667/INTA 609 Principles of International Law
Credits 3.3 Lecture Hours.
Introduction to the nature and sources of international law, including jurisdiction of states; law governing the making, interpretation, application and termination of treaties and agreements; recognition of states and government; nationality of persons and corporations; state immunities from jurisdiction and control; and human rights.
Prerequisite: Graduate classification.
Cross Listing: INTA 609/PSAA 667.

PSAA 668/INTA 612 U.S. Law and Homeland Security
Credits 3.3 Lecture Hours.
Analyze the threat to the homeland as reflected in a number of pre and post 9/11 commission reports; master's level course intended for individuals preparing for professional careers in the conduct of international affairs.
Prerequisite: Graduate classification.
Cross Listing: INTA 612/PSAA 668.

PSAA 669 Legal Environment of Nonprofit Management
Credits 3.3 Lecture Hours.
Laws, policies, and ideals affecting the creation and governance of nonprofit organizations; includes medical, education, cultural, social, religious, and advocacy organizations; considers these organizations' contributions to society, how they cooperate with or rival for-profit entities, and how they should be governed.
Prerequisite: Graduate classification.

PSAA 670 Public Information Systems Management
Credits 3.3 Lecture Hours.
Introduction to information systems for future public managers, management and public policy issues regarding information systems, and current policy issues related to information and communications technology.
Prerequisite: Graduate classification.
PSAA 671 Science and Technology Policy  
Credits 3. 3 Lecture Hours.  
An overview of the role of science and technology in the public policy process; explores the impact of public policy on science and technology. These two perspectives are radically distinct, yet intertwined in the broader process of public policy making in the United States.  
Prerequisite: Graduate classification.

PSAA 674 Political Economy of International Development  
Credits 3. 3 Lecture Hours.  
Examines aspects of international development and underdevelopment, including lack of sustained economic growth and the prevalence of income inequality; designed to provide leaders in public service areas with basic knowledge of development and development assistance in cross-national and regional perspectives and the tools to analyze information in the future.  
Prerequisite: Graduate classification.

PSAA 675 Public Service and Administration Capstone Seminar  
Credits 3. 3 Lecture Hours.  
Provides a capstone experience for students as they operate in teams to address an important policy and administrative issue; draws on the coursework and experiences of their Bush School education to develop specific recommendations for design, implementation and evaluation of this project task. For MPSA majors only.  
Prerequisites: For MPSA majors only; graduate classification; approval of MPSA director.

PSAA 676 Public Service and Administration Capstone Seminar II  
Credits 3. 3 Lecture Hours.  
Provides a capstone experience as they operate in teams to address an important policy and administrative issue; draws on the coursework and experiences of their Bush School education to develop specific recommendations for design, implementation and evaluation of this project task. Continuation of BUSH 675.  
Prerequisites: BUSH 675; approval of MPSA director.

PSAA 684 Professional Internship  
Credits 1 to 6. 1 to 6 Other Hours.  
Directed internship in a public or private organization to provide on-the-job training with professionals in organizational settings appropriate to the student's professional objectives.  
Prerequisites: Graduate classification and approval of MPSA or MPIA director.

PSAA 685 Directed Studies  
Credits 1 to 4. 1 to 4 Other Hours.  
Directed individual instruction in selected problems in government and public service.  
Prerequisites: Graduate classification and approval of MPSA or MPIA director.

PSAA 689 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours.  
Selected topics in an identified area of government and public service. May be repeated for credit.  
Prerequisites: Graduate classification and approval of MPSA or MPIA director.

PSAA 691 Research  
Credits 1 to 23. 1 to 23 Other Hours.  
Research for thesis or dissertation.
PSYC 613 Practicum in Psychological Assessment
Credits 1 to 4. 1 to 4 Other Hours.
Application of psychological assessment across the life-span; assessment of cognitive, intellectual, academic, and memory abilities and adaptive behavior; assessment of personality, behavioral style, and systems/environment; integration of assessment measures in comprehensive psychological evaluations; attendance required at Practicum Seminar designed to integrate research, coursework, and applied training and supervisory instruction from a faculty supervisor; at least 3 credits and no more than 18 credits applied to degree plan.
Prerequisites: PSYC 623 and PSYC 624, or approval of instructor.

PSYC 614 Practicum in Psychology
Credits 1 to 6. 1 to 6 Other Hours.
Practical on-the-job experience for graduate students. Activities will be guided by psychologists in the following areas: behavior modification, social, clinical, experimental and industrial. Supervision will be provided by members of University staff. May be taken more than once but not to exceed 18 hours of credit toward a graduate degree.
Prerequisite: Approval of instructor.

PSYC 615 Perceptual Processes
Credits 3. 3 Lecture Hours.
Complex sensory and perceptual phenomena with emphasis on the relationship between perception and motivation, cognition, creativity and instinctive/ethological; learning/experiential factors in higher level perceptual processes.
Cross Listing: NRSC 615/PSYC 615.

PSYC 616 Treatment of Problem Behavior in Children and Families
Credits 3. 3 Lecture Hours.
Current methods of treating families with children displaying aggressive, hyperactive, underachieving and other problem behaviors in natural settings; behavior of children and adolescents at home, school and at play.
Prerequisite: Approval of instructor.

PSYC 617 Analytical Psychology
Credits 3. 3 Lecture Hours.
Survey emphasizing Jungian psychology but including coverage of Freudian psychology; application of analytical principles and concepts to a variety of clinical issues and situations.
Prerequisite: Approval of instructor.

PSYC 618 Psychology of Persuasion
Credits 3. 3 Lecture Hours.
Theory and scientific evidence regarding strategies and tactics of persuasion; explores theoretical controversies and presents potential integrations.

PSYC 619 History and Systems of Psychology
Credits 3. 3 Lecture Hours.
Historical examination of scientific psychology’s antecedents in philosophy and physiology; early systems of psychology including structuralism, functionalism, behaviorism, Gestalt psychology and psychoanalysis.
Prerequisite: Graduate classification.

PSYC 620 Theories of Social Psychology
Credits 3. 3 Lecture Hours.
Current theories of social psychology and a review of related studies to these theories; theories of attitude change, prosocial behavior, aggression, equity, coalition formation, social learning and S-R theory applied to social behavior.
Prerequisite: PSYC 315 or SOCI 411.

PSYC 621 Seminar in Social Psychology
Credits 3. 3 Other Hours.
Attitudes and persuasion; small group interaction and performance; prosocial behavior; aggression; self concept; applied social problems; gender differences in social interaction; and social cognition. May be repeated up to three times for credit.
Prerequisite: Approval of instructor.

PSYC 622 Emotions: Neuroscience, Cognitive, & Social Approaches
Credits 3. 3 Lecture Hours.
Emotions: Neuroscience, Cognitive, & Social Approaches. Overview of the issues in the scientific study of emotions; focus on neuroscience, cognitive, and social approaches; introduction to theory and research in major areas of emotions research.
Prerequisite: Graduate classification.

PSYC 623 Psychological Assessment I
Credits 3. 3 Lecture Hours.
Principles of psychological testing; uses and critical evaluation of tests of achievement, intelligence, aptitude and personality.

PSYC 624 Psychological Assessment II
Credits 3. 3 Lecture Hours.
Theory and application of psychological assessment of children, adolescents, and adults; assessment of cognitive, intellectual, academic, and memory abilities and adaptive behavior; integration of assessment measures in comprehensive psychological evaluations.
Prerequisite: PSYC 623 or approval of instructor.

PSYC 625 Psychopathology
Credits 3. 3 Lecture Hours.
Various symptom categories in psychopathology including differing theoretical conceptualizations of these symptom categories, and theories and research concerning etiology and treatment.

PSYC 626 Psychological Assessment of Children and Adolescents
Credits 3. 3 Lecture Hours.
Theory and application of psychological assessment of toddlers, children, adolescents, and adults; assessment of cognitive, intellectual, academic, and memory abilities and adaptive behavior; assessment of personality, behavioral style, family functioning, and child-focused systems; integration of assessment measures in comprehensive psychological evaluations.
Prerequisite: PSYC 624 or approval of instructor.

PSYC 627 Behavior Disorders in Children
Credits 3. 3 Lecture Hours.
Different systems of classification including research and theory about the origins and anticipated outcomes of various emotional disorders; families of disturbed children; major treatment approaches and community resources for intervention.
Prerequisites: PSYC 407 or equivalent and graduate classification or approval of instructor.

PSYC 628 Psychological Assessment of Children, Adolescents, and Adults
Credits 3. 3 Lecture Hours.
Theory and application of psychological assessment of toddlers, children, adolescents, and adults; assessment of cognitive, intellectual, academic, and memory abilities and adaptive behavior; assessment of personality, behavioral style, family functioning, and child-focused systems; integration of assessment measures in comprehensive psychological evaluations.
Prerequisite: PSYC 624 or approval of instructor.

PSYC 629 Seminar in Clinical/Community Psychology
Credits 3. 3 Other Hours.
Assessment and treatment of specific clinical disorders such as depression, sexual dysfunctions and deviations, anxiety-based disorders, autism, marital distress and psychophysiological disorders. May be repeated up to three times for credit.
Prerequisites: PSYC 608 and PSYC 626; PSYC 623 or equivalent.
PSYC 630 Health Psychology and Behavioral Medicine  
Credit 3. 3 Lecture Hours.  
Theory, research and practice of health psychology emphasizing the prevention and modification of health compromising behaviors; psychological management of stress, pain and chronic/terminal illness; effective interventions for specific health behaviors/disorders.  
Prerequisite: Graduate classification.

PSYC 633 Gender and Minority Issues in Clinical Psychology  
Credit 3. 3 Lecture Hours.  
Human behavior and mental health as a function of culture, gender and sexual orientation; discussion of absolutist, relativist and universalist perspectives in cross-cultural psychology; psychology of stereotype and prejudice; adjustment through acculturation and biculturalism; learning about our own and other cultures.

PSYC 634 Principles of Human Development  
Credit 3. 3 Lecture Hours.  
Biological, psychological and cultural interrelationships in human development; principles and methods as illustrated in research and theoretical contributions; experiences in procedures of child study.  
Prerequisite: Graduate classification.

PSYC 635 Behavioral and Cellular Research Seminar  
Credit 2. 2 Other Hours.  
Expose graduate students to neuroscience research, theory, and proposal development; research presentations by guest speakers, faculty, and graduate students; Discussions, readings and presentations on issues related to research design, statistics, methodology, ethics, IACUC, grant writing, presentation skills, job talks, and other relevant topics. May be taken four times for credit.  
Prerequisite: Graduate classification.

PSYC 636 Seminar in Developmental Psychology  
Credit 3. 3 Other Hours.  
Cognitive development; social and emotional development; developmental abnormalities in connection with social/emotional and cognitive development; language acquisition; family processes; and development during infancy; recent developments in these fields. Topics will vary from semester to semester; may be repeated for credit up to three times as topics change.  
Prerequisite: Graduate classification.

PSYC 637 Clinical Interventions I  
Credit 3. 3 Lecture Hours.  
Theory, research and techniques related to evidence-based behavioral and cognitive-behavioral approaches to clinical interventions; ethical, professional, multicultural and history/systems issues in therapeutic psychological interventions.  
Prerequisite: Enrollment in Clinical Psychology Graduate Program or approval of instructor.

PSYC 638 Clinical Interventions II  
Credit 3. 3 Lecture Hours.  
Theory, research, and techniques related to evidence-based interpersonal, psychodynamic, group therapy, and family therapy approaches to clinical interventions; ethical, professional, multicultural, and history/systems issues in therapeutic psychological interventions.  
Prerequisite: Enrollment in Clinical Psychology Graduate Program or approval of instructor.

PSYC 639 Pediatric Psychology  
Credit 3. 3 Lecture Hours.  
Application of clinical/counseling/school psychology to children and adolescents with chronic illnesses or disabilities and their families; theoretical foundations and models for consultation, assessment and intervention strategies; unique ethical and professional issues associated with research and service delivery in child health psychology/pediatric behavioral medicine.  
Prerequisite: Approval of instructor.

PSYC 649/NRSC 649 Seminar in Behavioral Neuroscience  
Credit 3. 3 Lecture Hours.  
Behavioral neuroscience; including behavioral pharmacology, neuropharmacology, methods and techniques, drug reinforcement, behavioral toxicology, pain perception and ingestive behavior. May be repeated up to three times for credit.  
Prerequisites: PSYC 606/NRSC 606 or equivalent; PSYC 609/NRSC 609; graduate classification.  
Cross Listing: NRSC 649/PSYC 649.

PSYC 650/NRSC 650 Clinical Psychopharmacology  
Credit 3. 3 Lecture Hours.  
Survey of topics in clinical psychopharmacology, including pharmacodynamics, major neurotransmitter systems, and therapeutic applications and limitations.  
Prerequisite: Graduate classification or approval of instructor.  
Cross Listing: NRSC 650/PSYC 650.

PSYC 660 Seminar in Organizational Psychology  
Credit 3. 3 Other Hours.  
Areas of organizational psychology: job stress, socialization processes, motivation, leadership, person perception in organizations, conflict management. May be repeated up to five times for credit; content will vary by semester.  
Prerequisite: PSYC 610 or approval of instructor.

PSYC 661 Industrial/Organizational Psychology  
Credit 1 to 3. 1 to 3 Lecture Hours.  
Both research and applied colloquia provided by I/O psychologists and individuals in related disciplines.  
Prerequisite: Graduate classification.
PSYC 682 Seminar in Personnel Selection and Placement
Credits 3.3 Other Hours.
Personnel selection and placement including job analysis and evaluation, psychological testing, test development, psychometric theory, theories of test fairness, validity generalization, utility theory, performance appraisal and selection/placement decision models. May be repeated up to five times for credit; content will vary by semester.
Prerequisite: PSYC 611 or approval of instructor.

PSYC 684 Professional Internship
Credits 1 to 12.1 to 12 Other Hours.
Full-time clinical experience in a departmentally-approved internship training facility. Limited to advanced doctoral students specializing in clinical psychology. May be taken up to 12 hours total.

PSYC 685 Directed Studies
Credits 1 to 4.1 to 4 Other Hours.
Directed individual study of selected problem in psychology or special topics to fit small group requirements.
Prerequisite: Approval of instructor.

PSYC 689 Special Topics in...
Credits 1 to 4.1 to 4 Lecture Hours.
Selected topics in an identified area of psychology. May be repeated for credit.
Prerequisite: Graduate classification.

PSYC 690 Cognoscenti: Professional Issues in Cognitive Psychology
Credits 2.2 Lecture Hours.
Introduce students to current themes in research, theory and practice in cognitive psychology; presentations by guest speakers from within and outside the University.
Prerequisite: Graduate enrollment in psychology.

PSYC 691 Research
Credits 1 to 23.1 to 23 Other Hours.
Research for thesis.

PSYC 697 Seminar in the Teaching of Introductory Psychology
Credits 3.3 Lecture Hours.
Introductory methods relevant to teaching psychology; for graduate students assisting in the teaching of PSYC 107.
Prerequisite: Graduate classification.

RDNG - Reading

RDNG 604 Reading Diagnosis
Credits 3.2 Lecture Hours.3 Lab Hours.
Appraisal and diagnosis of reading problems; practicum in administration and interpretation of individual reading inventories.
Prerequisite: RDNG 649 or RDNG 674 recommended.

RDNG 610 Elementary Literacy Instruction for Facilitating STEM Learning
Credits 3.3 Lecture Hours.
Evidenced based instruction of literacy skills and strategies facilitating student learning of STEM content and processes; traditional literacy and new literacies.
Prerequisite: Graduate classification.

RDNG 612 Children's Literature and Literacy
Credits 3.3 Lecture Hours.
Children's Literature and Literacy. Critical selection and evaluation of various children's literature genres; comparative studies of children's literature; development, implementation and evaluation of research in children's literature and literacy; integration of reading and response theory into the study of literature.
Prerequisite: Graduate classification.

RDNG 613 Multicultural Children's Literature and Literacy
Credits 3.3 Lecture Hours.
Multicultural Children's Literature and Literacy. Analysis and evaluation of Native American, Black and Hispanic children's literature; development, implementation and evaluation of research in multicultural literature and literacy; analysis of issues influencing multicultural literature and literacy.
Prerequisites: RDNG 612; graduate classification.

RDNG 614 Reading Research and Trends
Credits 3.3 Lecture Hours.
Exploration of recent research in reading; identification of trends and patterns in issues attached, research designs employed and consistent findings; generation of new research hypotheses and guidelines for improving current practice.
Prerequisites: Doctoral classification or approval of instructor.

RDNG 615 Theories of the Reading Process
Credits 3.3 Lecture Hours.
Seminar for doctoral students and advanced master's students to study and critique major theories of the reading process that have been influential in the fields of reading, language arts, educational psychology, and related fields.
Prerequisite: Doctoral status or approval of instructor.

RDNG 616 Organization and Supervision of Reading Programs
Credits 3.3 Lecture Hours.
Organization of school reading programs; role of reading supervisor in program implementation, staff development, program evaluation. Coordination of reading services with total curriculum.
Prerequisites: Doctoral classification; approval of instructor.

RDNG 620 Literacy and Language
Credits 3.3 Lecture Hours.
Orthography of different languages and its relation to literacy acquisition and failure to acquire basic literacy skills. This is a seminar course in reading, language arts, bilingual education, psychology, linguistics, and related fields.
Prerequisite: Graduate classification.

RDNG 630 Writing: Development, Assessment and Instruction
Credits 3.3 Lecture Hours.
Examines the nature of writing development and how to assess both formally and informally; includes successful instructional techniques based on empirical evidence.
Prerequisite: Graduate classification.

RDNG 642 Clinic Teaching in Reading
Credits 3.1 Lecture Hour.6 Lab Hours.
Practicum in recognition, diagnosis, remediation and corrective procedures of reading-study problems; demonstration and laboratory analysis of physiological and psychological factors related to reading disabilities.
Prerequisite: RDNG 649 or RDNG 674.
RDNG 649 Reading Instruction in High School and College
Credits 3. 3 Lecture Hours.
Basic principles of reading instruction; nature and scope of total reading program; methods, materials and organization of developmental, corrective and speed-reading programs in high school and college.

RDNG 650 Foundations of Reading Instruction
Credits 3. 3 Lecture Hours.
Psychological, linguistic and physical factors related to reading performance; implications for content and teaching methods; appraisal of current research and related reading for teachers, supervisors and reading specialists.
Prerequisites: RDNG 649 and RDNG 674 or approval of instructor.

RDNG 674 Developmental Reading in the Elementary School
Credits 3. 3 Lecture Hours.
Methods and materials of reading instruction in the elementary grades; past, present and emerging programs; organization and administration of programs and classroom management; teaching reading to special groups; issues in reading.

RDNG 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of reading. May be repeated for credit.

RENR Renewable Natural Resources

RENR 650/ESSM 676 Leadership Development and Management of Environmental NGOs
Credits 3. 3 Lecture Hours.
Trends and increasing power of NGOs in environment and sustainable development; understanding of the organizational structures, functions, planning and management processes of environmental NGOs; technical skills and leadership qualities for careers with environmental NGOs.
Prerequisite: Graduate classification.
Cross Listing: ESSM 676/RENR 650.

RENR 659 Ecological Economics
Credits 3. 3 Lecture Hours.
Study of the relationships between ecosystems and economic systems; understanding the effects of human economic endeavors on ecological systems and how the ecological benefits and costs of such activities can be quantified and internalized.
Prerequisite: Graduate classification.
Cross Listing: AGEC 659 and ESSM 671.

RENR 660/ESSM 672 Environmental Impact Analysis for Renewable Natural Resources
Credits 3. 3 Lecture Hours.
Analysis and critique of contemporary environmental analysis methods in current use; environmental impact statements; national policies; political, social and legal ramifications as related to development and use of renewable natural resources.
Cross Listing: ESSM 672/RENR 660.

RENR 662 Environmental Law and Policy
Credits 3. 3 Lecture Hours.
Analysis of the legal theories used to allocate and protect environmental resources; common law, federal and state statutes, and international treaties dealing with the environment; policies and laws for controlling air, water, solid waste, toxic waste and water pollution; species protection and natural resource use.

RPTS - Rec, Park & Tourism Sci

RPTS 601 Interrelationships of Recreation and Leisure Concepts
Credits 3. 3 Lecture Hours.
History and philosophy of the field of recreation and parks; fundamentals of planning, development and management of resources allocated for recreation, parks and tourism purposes; development of the recreation movement with broad treatment of the role of recreation and parks in contemporary society.

RPTS 602 Social Science Foundations of Recreation, Parks and Tourism
Credits 3. 3 Lecture Hours.
Sociological and social psychological dimensions of leisure, recreation and related behavior; nature and function of leisure for individuals and for society; implications for development and management of recreation resources.
Prerequisite: RPTS 601 or previous academic background in recreation and parks.

RPTS 603 Financing and Marketing Park and Recreation Resources
Credits 3. 3 Lecture Hours.
Positioning park and recreation services; traditional and non-traditional sources of financing for developing services and facilities; philosophy and techniques of marketing services and facilities.

RPTS 604 Principles of Community and Community Development
Credits 3. 3 Lecture Hours.
Examines different theories about community development as well as the concept of community; explores measurement and other methodological issues in the conduct of basic and applied community research.
Prerequisite: Graduate classification.

RPTS 605 Community Organization
Credits 3. 3 Lecture Hours.
Examines how community organization and institutions differ and result from diverse social, cultural and demographic factors; explores how these factors restructure communities over time and community responses to restructuring.
Prerequisite: Graduate classification.

RPTS 606 Overview of Tourism
Credits 3. 3 Lecture Hours.
Theoretical introduction to the field of tourism sciences; the cooperative and dynamic nature of decision-making in tourism; the contributions made by various disciplines towards understanding the consequences of tourism trade and activity; and identification of critical issues in the study of travel and tourism.

RPTS 609 Social, Economic and Cultural Issues in Outdoor Recreation and Natural Resources
Credits 3. 3 Lecture Hours.
Survey of socio-economic and cultural characteristics impinging on provision of outdoor recreation opportunities in urban and non-urban settings; implications of social and cultural factors on recreation resource use patterns, resource development and policy issues.

RPTS 615 Analytic Techniques in Recreation, Parks and Tourism
Credits 3. 3 Lecture Hours.
Analysis of current research; instruments and analytic techniques used in the selection and formulation of research problems.
RPTS 616 Tourism Economics
Credits 3.2 Lecture Hours. 3 Lab Hours.
Introduction to tourism economics including: tourism consumption and demand analysis; operating and capital budgeting; measurement of economic impacts through input/output analysis; forecasting; project management through PERT/CPM; decision making under uncertainty; benefit/cost analysis.
Prerequisites: RPTS 606 and STAT 651 or approval of instructor.

RPTS 620 Interdisciplinary Seminar in Prevention Science
Credit 1.1 Lecture Hour.
Contemporary research programs that represent the interdisciplinary field of prevention science; strengths and limitations of diverse theoretical and conceptual bases of research in prevention science; application of research findings to issues related to the prevention of mental, emotional, and physical health problems and the promotion of well-being. May be taken 3 times for credit.
Prerequisite: Graduate standing and either admission to the interdisciplinary graduate certificate in prevention science program or approval of instructor.
Cross Listing: COMM 671, HLTH 671 and SPSY 620.

RPTS 626 Social Impacts of Tourism
Credits 3.3 Lecture Hours.
Analysis of social, cultural and political impacts associated with travel behavior and tourism development, emphasizing a case study approach; theories and methods for assessing individual, community and organization impacts at local and regional levels; host/guest interactions; evaluation of processes of tourism planning and decision-making; and qualitative and quantitative measures for assessing social impacts.
Prerequisite: RPTS 606 or approval of instructor.

RPTS 636 Philosophy of Social Research
Credits 3.3 Lecture Hours.
Overview of the history and development of the philosophy of social science; Relationships science; issues in social research; Sociology of Knowledge; related debates in various disciplines and fields of study. May be taken 3 times for credit.
Prerequisite: Doctoral classification.

RPTS 641 Tourism Experience
Credits 3.3 Lecture Hours.
Discusses the theoretical foundations of tourism experiences from an interdisciplinary perspective, including the role of humans, nature/landscapes, built environments and technologies in staging tourism-experiences; draws implications for the design/planning, management and marketing of tourism venues such as events, festivals, museums, hotels/resorts, cruise ships, cities, theme parks as well as websites.

RPTS 646 Heritage Tourism
Credits 3.3 Lecture Hours.
Comprises a transdisciplinary examination of contemporary research and practice in heritage tourism and public culture; encourages to deploy a variety of disciplinary outlooks to explore the representation of peoples, places and pasts in a range of settings from the indigenous/sacred to the post industrial/post colonial.

RPTS 654 AMAZON FIELD SCHOOL
Credits 4.4 Lecture Hours.
Investigation of social and ecological complexities of biodiversity conservation in tropical ecosystems; biological and social science approaches to evaluate causes, consequences and solutions to biodiversity loss through ecology, culture and governance.
Cross Listing: VTMI 604 and WFSC 654.

RPTS 655/WFSC 655 Applied Biodiversity Science I
Credits 3.3 Lecture Hours.
Students will study in the areas of Conservation genetics, metapopulations, landscape ecology, and ecosystem management.
Prerequisite(s): Graduate classification.
Cross Listing: WFSC 655/RPTS 655.

RPTS 666 Parks, Tourism and the Natural Environment
Credits 3.3 Lecture Hours.
Parks, Tourism and the Natural and Cultural Environment. Analysis of natural and cultural resource management in the United States; emphasis on federal policy and the influence by political processes at the national, regional, and local levels; case studies to illustrate conceptual and legal frameworks in real world contexts, including the policy and politics of tourism and recreation, endangered species, contested history, and Native American traditions and sovereignty.
Prerequisite: RPTS 602 or approval of instructor.

RPTS 670 Youth Development Programs and Services
Credits 3.3 Lecture Hours.
Principles and practices of youth development supports, opportunities, programs and services; emphasis on the role of out-of-school time settings in youth development; programming considerations related to gender, disability and culture; introduction to evaluation and financing of youth development programs.

RPTS 678Latent Variable Model Applications in the Leisure Sciences
Credits 3.3 Lecture Hours.
Introduction to structural equation modeling (SEM); background on conceptual issues, application of the method, and insight on SEM software; measurement theory, missing data analysis, non-normal data, confirmatory factor analysis, path analysis, multi-group models.
Prerequisites: STAT 636 or approval of instructor.

RPTS 684 Professional Internship
Credits 1 to 4.1 to 4 Other Hours.
Survey and application of principles of recreation and resources development; selected aspects of park and recreation management in professional setting within an approved recreation/park agency under the supervision of a member of the graduate faculty.

RPTS 685 Directed Studies
Credits 1 to 4.1 to 4 Other Hours.
Investigations not included in student's research for thesis or dissertation; problems selected in administration or management, recreation or planning.

RPTS 689 Special Topics in...
Credits 1 to 4.1 to 4 Lecture Hours. 0 to 9 Lab Hours.
Selected topics in an identified area of recreation and resources development. May be repeated for credit.
Prerequisite: Approval of department head.

RPTS 691 Research
Credits 1 to 23.1 to 23 Other Hours.
Research in recreation and resources development for thesis or dissertation.

RPTS 693 Professional Study
Credits 1 to 9.1 to 9 Other Hours.
Approved research or professional paper undertaken as the terminal requirement for the Master of Science Non-Thesis or Natural Resources Development. May be taken more than once, but not to exceed 3 hours credit towards a degree.
Prerequisite: Approval of instructor.
RUSS - Russian

RUSS 692 Readings
Credits 3. 3 Lecture Hours.
Readings in Russian literary texts in the original language.
Prerequisite: Graduate classification.

SCEN - College of Science

SCEN 600 Science Graduate Study Abroad
Credits 1 to 18. 1 to 18 Other Hours.
Approved study abroad student participation; reciprocal educational exchange programs. May be taken two times for credit.
Prerequisite: Admission to approved program.

SCEN 677 Science, Technology, Engineering and Mathematics (STEM) Teaching Professional Development
Credit 1. 1 Lecture Hour.
Center for Teaching Excellence (CTE) consultation and faculty mentoring in STEM teaching; course topic and syllabus design; learning outcomes and assessment; teaching methodology; reflection on teaching philosophy; reflection on teaching as research. Must be taken on satisfactory/unsatisfactory basis.
Prerequisites: Graduate classification and approval of instructor.
Cross Listing: GEOS 677 and ENGR 677.

SCEN 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of science. May be repeated for credit.
Prerequisites: Graduate classification and approval of instructor.

SCEN 698 Writing for Publication
Credits 3. 3 Lecture Hours.
Writing in academic disciplines and settings. Writing for different audiences and purposes. Style; planning and development of journal articles; grant proposals; correspondence; oral presentations; technical reports. Permission of departmental/college graduate advisor.
Prerequisite: Advanced standing in master's/doctoral programs.

SCMT - Supply Chain Mgmt

SCMT 610 Quantitative Analysis for Business Decisions
Credits 1 to 3. 1 to 3 Lecture Hours.
Formulation and structuring of business problems using selected quantitative techniques; modeling and statistical analysis stress computer applications. May be repeated for up to 3 hours credit. Classification 6 students may not enroll in this course.
Prerequisite: Enrollment is limited to MBA students.

SCMT 614 Operations Management
Credits 1 to 3. 1 to 3 Lecture Hours.
Theory and applications of designing, analyzing and controlling productive systems in the allocation and use of resources to produce goods and services. May be repeated for up to 3 hours credit. Classification 6 students may not enroll in this course.
Prerequisites: SCMT 610 or equivalent; enrollment is limited to MBA students.

SCMT 616 Supply Chain Management
Credits 3. 3 Lecture Hours.
Focus on the integrated management of the total product delivery system; purchasing, inventory management and distribution functions with emphasis on physical and information flows.
Prerequisites: SCMT 614 and MBA student classification.

SCMT 636 Decision Support Systems
Credits 3. 3 Lecture Hours.
Use of decision support systems in business-related decision making, business environment, use of models, user interface with decision support systems and decision support systems examples. Classification 6 students may not enroll in this course.
Prerequisite: SCMT 303 or equivalent.

SCMT 638 Information Technology in Supply Chain Management
Credits 3. 3 Lecture Hours.
Review, evaluate, and contribute to the existing knowledge base regarding the management of information flows from automatic identification systems such as RFID.
Prerequisites: ISEN 615 and PhD students or Masters students with a thesis degree plan or approval of instructor.

SCMT 645 Business Process Design
Credits 3. 3 Lecture Hours.
Introduction to business process design and analysis; tools and techniques to document, analyze and improve business processes; Six Sigma process design and improvement; process metrics; computer simulation of processes; aligning business process with organizational goals and objectives; and case study of real world business problems.
Prerequisites: Graduate classification or approval of instructor; SCMT 614, SCMT 660 or approval of instructor.

SCMT 667 Logistics and Distribution Management
Credits 3. 3 Lecture Hours.
Contemporary logistics activities including inbound and outbound materials and service flows, with special emphasis on their relationships to the firm's manufacturing function. Classification 6 students may not enroll in this course.
Prerequisite: SCMT 614 or SCMT 660 or equivalent.

SCMT 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed study on selected problems using recent developments in business research methods.
Prerequisites: Approval of instructor and graduate advisor.

SCMT 688 Doctoral Seminar in...
Credits 3. 3 Lecture Hours.

SCMT 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation. Classification 6 students may not enroll in this course.
SCSC - Soil and Crop Sciences

SCSC 603 Cytological and Histological Principles in Plant Breeding
Credits 3. 3 Lecture Hours. 2 Lab Hours.
Modern concepts and recent developments for advanced students in plant and soil sciences and related fields employing microscopic evaluation; specimen preparation, stain technology, theory and use of microscopes, micromanipulators, microtomes, the microtome cryostat, use of equipment in modern cytological research.
Prerequisite: Graduate classification.

SCSC 605 Pedology
Credits 3. 3 Lecture Hours.
Soil genesis, morphology and classification; development of a working knowledge of soil taxonomy and diagnostic horizons used in placement of soils.
Prerequisites: SCSC 301 or equivalent; or approval of instructor. Two 2-day field trips for which departmental fees may be assessed to cover costs.

SCSC 607 Crop Physiology
Credits 3. 3 Lecture Hours.
Growth and productivity of major agronomic crops as related to plant physiological processes and environmental parameters, including manipulation of crop growth for enhanced production.
Prerequisites: SCSC 303; MEPS 313.

SCSC 609 Integrated Farming Systems
Credits 3. 3 Lecture Hours.
System-oriented course that stimulates critical thinking and debate regarding the strength and weakness of modern crop and livestock production systems within the context of ecological and economic sustainability; evaluates conservation tillage, integrated nutrient and pest management and multiple cropping systems.
Prerequisite: Approval of instructor.

SCSC 610 Host Plant Resistance
Credits 3. 3 Lecture Hours.
Host plant resistance programs from the standpoint of the plant breeder, plant pathologist and entomologist; team taught with each discipline represented; roundtable discussion of assigned readings and lectures.
Prerequisite: Approval of instructor.
Cross Listing: ENTO 610 and PLPA 610.

SCSC 611 Introduction to Environmental Biophysics
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Theoretical and experimental analysis of interactions between living organisms and their environments; measurement and modeling of the physical environment; measurement and modeling of energy and mass transfer between organisms and their environments, and of organism response to fluxes of mass and energy.
Prerequisites: Graduate classification and approval of instructor.

SCSC 613 Ethical Aspects of International Agricultural Systems
Credits 3. 3 Lecture Hours. 0 Lab Hours.
Diverse theories of morality; ethical dimensions of population growth, high yielding crop production systems, genetic engineering, and use of land, soil, and water.
Prerequisites: Approval of instructor.

SCSC 615 Reclamation of Drastically Disturbed Lands
Credits 3. 3 Lecture Hours.
Theoretical and practical aspects of reclamation of lands disturbed during mining of lignite, uranium, phosphorous, oil shale and other minerals and disturbances due to industrial activities; emphasis on physical and chemical characteristics of disturbed materials and their impact on establishment of permanent vegetation.
Prerequisite: SCSC 301 or approval of instructor.

SCSC 618 Analysis of Environmental Systems
Credits 2. 1 Lecture Hour. 2 Lab Hours.
Classical and contemporary methods for analyzing chemical components of environmental systems, soil, water, plants and gases; environmental chemistry coupled with experiential.
Prerequisite: Graduate classification.

SCSC 619 Molecular Methods for Microbial Characterization
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Underlying principles of molecular methods for microbial detection and characterization in natural and man-made ecosystems; emphasis on method application and data interpretation; emphasis on microbial pathogens and indicator organisms in foods and environment; laboratory covers select protocols.
Prerequisites: SCSC 405; FSTC 326/DASC 326; POSC 429; approval of instructor.
Cross Listing: FSTC 619, POSC 619, VTM 619.

SCSC 620 Brazilian Agriculture and Food Production Systems
Credits 3. 3 Lecture Hours.
Compare Brazilian and U.S. agriculture and culture related to soil, water, and forest conservation and management in Brazil; tour and learn about Amazon River, rain forest, Brasilia, farm, ranch, and florist production systems, agricultural cooperatives and research, sugar and alcohol production, phosphate mining and production; visit points of interest.
Prerequisite: Approval of instructor.

SCSC 621 International Agricultural Research Centers - MX
Credits 3. 3 Lecture Hours.
Introduction to international agricultural research, Consultative Group on International Agriculture activity; modern and underdeveloped tropical agricultural systems; introduction to Mexican culture; critical evaluation of complex and international agricultural issues and research programs.
Prerequisites: Approval of instructor; graduate classification.

SCSC 622 Natural Resources and Agricultural Sustainability in UK
Credits 3. 3 Lecture Hours.
Environmental impacts and sustainability of United Kingdom and U.S. agriculture compared; soil, water, crop, and environmental management; conservation of watersheds; production of hydropower; sustainable use of water resources; cultural immersion.
Prerequisite: Approval of instructor.

SCSC 624 Soil Chemistry
Credits 3. 3 Lecture Hours.
Chemistry of clay minerals, inorganic solid phases, and organic colloids in soil; mass transfer reactions in soils: absorption/desorption, precipitation/dissolution, gas/liquid phase exchange; principles of soil acidity and salinity; introduction to application of equilibrium concepts in soils.
Prerequisites: SCSC 301 or approval of instructor.

SCSC 625 Biofuels and the Environment
Credits 2. 2 Lecture Hours.
Biofuel crop use and disposal; production systems; conversion technologies; impacts of bioenergy production on sustainability, environment, and soil and water quality; carbon and energy budgets.
Prerequisite: SCSC 301 or approval of instructor.
SCSC 626 Soil Mineralogy
Credits 5. 3 Lecture Hours. 4 Lab Hours.
Crystal structures and properties of important minerals in soils and sediments especially clay minerals and oxides combined with identification techniques involving theory and practice with x-ray diffraction, electron microscopy, infrared and chemical methods.

SCSC 627 Soil Chemistry and Fertility
Credits 3. 3 Lecture Hours.
Chemical and biological behavior of nitrogen, phosphorus and potassium in soils; secondary nutrients, micronutrients and soil acidity and liming; interpretation of soil chemical/biochemical research from historical and current literature and relationships with nutrient availability, plant uptake, and environmental quality.
Prerequisites: SCSC 422; MEPS 313.

SCSC 629/VTMI 629 Laboratory Quality Systems
Credits 3. 3 Lecture Hours.
Quality systems and method development used within a laboratory; ensuring the integrity of procedures used in lab processes, chain of custody, information management, and international laboratory standards; regulatory requirements for laboratory operation; bio-security precautions; laboratory management.
Cross Listing: VTMI 629/SCSC 629.

SCSC 630/FSTC 630 Cereal Grains for Human Food
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Fundamental concepts of dry milling, wet milling, oil extraction, baking, malting, brewing, storage, sanitation, and quality evaluation and control interrelated with physical and biochemical properties of cereals and their products; use of instruments and techniques to evaluate cereal quality.
Prerequisite: Approval of instructor.
Cross Listing: FSTC 630/SCSC 630.

SCSC 631 Prerequisite Programs for Feed Industry HACCP
Credit 1. 1 Lecture Hour.
Development of preliminary science-based risk management decision factors in feed industry; understanding and complying with FDA regulatory requirements for animal feed; application of international standards; prerequisite programs for Feed Industry Hazard Analysis and Critical Control Point (HACCP); module one of three. Prerequisite: Graduate classification.

SCSC 632 Feed Industry HACCP - Principles and Plan Development
Credit 1. 1 Lecture Hour.
Principles of Feed Industry Hazard Analysis and Critical Control Point (HACCP) plan development; science-based risk analysis of decision factors; regulatory requirements of HACCP; module two of three. Prerequisite: SCSC 631.

SCSC 633 Feed Industry HACCP - Advanced Plan Development
Credit 1. 1 Lecture Hour.
Principles of Feed Industry Hazard Analysis and Critical Control Point (HACCP) advanced plan development; case studies of HACCP principles; HACCP plan development for feed industry companies; module three of three. Prerequisites: SCSC 631 and SCSC 632.

SCSC 634 Regulatory Science: Principles & Practices in Food Systems
Credits 3. 3 Lecture Hours.
Regulatory Science: Principles & Practices in Food Systems. Regulatory tools, standards and approaches in production, processing and distribution of agricultural goods; development and implementation of regulations; interdependence of federal and state agencies, use of risk analysis.

SCSC 635/AGEC 639 Comparative Global Standards in Food Systems
Credits 3. 3 Lecture Hours.
Laws, regulations and standards governing the production, distribution, processing and marketing of food across regions of the world; international standard setting bodies and risk assessment committees; regulatory equivalency and harmonization; product approval procedures; cost/benefits of global standards and trade agreements.
Cross Listing: AGEC 639/SCSC 635.

SCSC 636 Regulatory Science: Methodology in Food Systems
Credits 3. 3 Lecture Hours.
Risk management methodology including investigation of food and feed firms, conducting internal compliance audits; sample collection, chain-of-custody, trace-back and trace-forward, recalls, label review, data interpretation, risk ranking, resource prioritization, incident command and rapid response.
Prerequisite: SCSC 634.

SCSC 637 Environmental Microbiology
Credits 3. 3 Lecture Hours.
Microbial diversity and interactions in various environments with emphasis on soil and freshwater systems. Molecular methods for detection and characterization of indigenous and introduced microorganisms. Environmental sources and fate of pathogens. Biotechnological applications of environmental microorganisms.

SCSC 640 Intellectual Property in the Plant Sciences
Credits 3. 3 Lecture Hours.
Introduction to major foci of intellectual property (IP) impacting plant sciences, including: 1) traditional vs. emerging knowledge economies, 2) governing statutes and treaties, 3) forms of IP, and 4) IP asset identification, valuation, capture and deployment towards understanding the best practices for IP strategy development and IP portfolio management.

SCSC 641 Plant Breeding I
Credits 3. 3 Lecture Hours.
Theoretical and practical aspects of plant breeding including genetic basis; application of breeding methods and interdisciplinary considerations in breeding problems.
Prerequisites: SCSC 304 or HORT 404/GENE 404; GENE 301; STAT 651.

SCSC 642 Plant Breeding II
Credits 3. 3 Lecture Hours.
Expectations of genetic improvement for different plant breeding methods; relative efficiency for crops of different reproductive mechanisms; genetic variances, covariances and genotype-environment interaction components of variance used in planning selection procedures.
Prerequisites: SCSC 641; GENE 613; STAT 619.

SCSC 643/GENE 643 Molecular Quantitative Genetics and Plant Breeding
Credits 3. 3 Lecture Hours.
Classical, applied and molecular aspects of quantitative genetics in plant breeding; genetic relationships; genetic diversity; genetic phenomena (linkage, heterosis and epistasis); genotype by environment interaction; mapping quantitative trait loci (QTL); genomic and marker-assisted selection; application of statistical software.
Prerequisites: STAT 651, SCSC 642 or GENE 613; or approval of instructor.
Cross Listing: GENE 643/SCSC 643.
SCSC 644 Forage Ecology and Management
Credits 3. 3 Lecture Hours.
Investigation of multidisciplinary approaches toward the development of integrated forage, livestock, and wildlife production systems that are economically feasible and environmentally sustainable.
Prerequisites: Approval of instructor and graduate classification.

SCSC 645/HORT 645 World Agriculture and International Plant Breeding
Credit 1. 1 Lecture Hour.
Evolution of world agriculture; plant breeding and improved varieties; international agricultural research centers and green revolution; population growth; environmental challenges; IPR; role of plant breeding and biotechnology in meeting world food needs.
Prerequisite: SCSC 304, HORT 404/GENE 404 or approval of instructor.
Cross Listing: HORT 645/SCSC 645.

SCSC 646 Advanced Studies in Cotton Fiber Quality and Its Measurements
Credits 3. 3 Lecture Hours.
Advanced studies in cotton fiber quality and its measurement will explore the morphology of cotton fiber growth, the instruments used to determine fiber quality, and the interpretation of quality measurements.

SCSC 650 Mode of Action and Environmental Fate of Herbicides
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Relationships between physical-chemical characteristics of herbicides and their biological activity, selectivity, environmental fate in soil, water, and plants. Laboratory includes practical applications of gas and liquid chromatography, liquid scintillation counting and plant bioassays.
Prerequisite: SCSC 450 or approval of instructor.

SCSC 651 Weed Biology and Ecology
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Fundamentals of weed invasion, development, persistence and competition with agronomic crops; consideration of ecological concepts important to weed-crop relationships as influenced by weed control and other cultural practices. Practical consideration of integrated weed management systems and weed identification.
Prerequisites: SCSC 303; MEPS 313.

SCSC 654 Analysis of Complex Genomes
Credits 3. 3 Lecture Hours.
History and current status of genetic and molecular analysis of higher eukaryotic genomes; coverage of techniques for dissection of genomes into manageable parts; investigations in genetics, breeding and evolution; emphasis on quantitative inheritance, genetic mapping, physical mapping, map-based cloning, with examples drawn from a wide range of organisms.
Prerequisite: GENE 603 or GENE 431/BICH 431.
Cross Listing: GENE 654 and MEPS 654.

SCSC 655 Analysis of Complex Genomes--Lab
Credits 3. 0 Lecture Hours. 7 Lab Hours.
Laboratory methods in molecular genetic techniques for genetic mapping, physical mapping, and map-based cloning of both qualitative and quantitative phenotypes.
Prerequisite: GENE 603 or equivalent or approval of instructor.
Cross Listing: GENE 655 and MEPS 655.

SCSC 657 Environmental Soil and Water Science
Credits 3. 3 Lecture Hours.
Discussion of physical, chemical, and biological properties of soil and water and the impact on productivity and sustainability of various ecosystems; application of the knowledge of properties and soil processes to develop and evaluate strategies for protecting and/or improving soil and water quality.
Prerequisite: SCSC 301. Stacked with SCSC 455.

SCSC 658 Watershed and Water Quality Management
Credits 3. 3 Lecture Hours.
Land use impact on surface and ground water chemistry; legislation impacting water quality; surface and groundwater impairment and restoration; case studies in best management practices.
Prerequisite: Graduate classification.

SCSC 660 Experimental Designs in Agriculture
Credits 3. 3 Lecture Hours.
Fundamental principles and procedures of experimental designs in agricultural sciences; emphasis includes factorial designs, predicting outputs, use of covariance, balanced and unbalanced experimental designs as related to common agricultural research projects under field, greenhouse or growth chamber culture; familiarization with computer programming of common statistical software.
Prerequisite: STAT 651.

SCSC 663/ESSM 663 Applied Spatial Statistics
Credits 4. 3 Lecture Hours. 2 Lab Hours.
An introduction to the theory and practice of spatial statistics as applied to the natural resources. Spatial analyses focusing primarily on ordinary kriging, point processes, and lattice data.
Prerequisites: MATH 141, MATH 142, STAT 651, or equivalents; ESSM 651/BAEN 651 preferred.
Cross Listing: ESSM 663/SCSC 663.

SCSC 671/MEPS 671 Plant Growth and Development
Credits 3. 3 Lecture Hours.
Comprehensive analysis of plant development primarily focused on the molecular and cellular processes underlying morphogenesis, vegetative growth and reproduction; role of the major phytohormones as coordinators of development will be analyzed; plastic developmental responses to conditioning environmental signals.
Prerequisites: MEPS 601 or approval of instructor.
Cross Listing: MEPS 671/SCSC 671.

SCSC 681 Seminar
Credit 1. 1 Lecture Hour.
For graduate students and staff members in soils and crops; presentation and discussion of special topics and research data; participation required of all graduate students in agronomy.

SCSC 684 Professional Internship
Credits 1 to 16. 1 to 16 Lecture Hours.
Program planned to provide professional training in student's particular field of interest. Faculty and employer will supervise the activity.
Prerequisite: Approval of instructor.

SCSC 685 Directed Studies
Credits 1 to 4. 1 to 4 Lecture Hours.
Advanced problems in some phase of agronomy not directly related to thesis or dissertation.
SCSC 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in an identified area of agronomy. May be repeated for credit.
Prerequisite: Approval of department head.

SCSC 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Investigations leading to thesis or dissertation.

SEFB - Special Ed. Field Based

SEFB 618 Applied Behavior Management in the Classroom
Credits 3. 3 Lecture Hours.
Field-based course related to effective management of challenging behavior problems in the classroom using proactive classroom strategies, effective instruction and planned behavior interventions; discussion and applications of methods for observing, assessing and analyzing challenging behaviors.
Prerequisites: Graduate classification and approval of department head.

SEFB 630 Practicum in Applied Behavior Analysis
Credits 3. 9 Other Hours.
University-supervised experience related to specializations in special education and behavior analysis. May be taken eight times for credit.
Prerequisites: Graduate classification; SEFB 618; approval of department head.

SEFB 631 Intensive Practicum in Applied Behavior Analysis
Credits 3. 9 Other Hours.
University-supervised intensive experience related to specializations in special education and behavior analysis. May be taken eight times for credit.
Prerequisites: Graduate classification; SEFB 618; approval of department head.

SEFB 684 Internship in Special Education
Credits 1 to 4. 1 to 16 Other Hours.
University-directed experience in a professional employment setting; full-time teaching and responsibility in a classroom with students with disabilities. May be taken 4 times.
Prerequisites: Graduate classification and approval of department head.

SENG - Safety Engineering

SENG 655/CHEN 655 Process Safety Engineering
Credits 3. 3 Lecture Hours.
Applications of engineering principles to process hazards analysis including source and dispersion modeling, emergency relief systems, fire and explosion prevention and mitigation, hazard identification, risk assessment, process safety management, etc.
Prerequisite: Approval of instructor.
Cross Listing: CHEN 655/SENG 655.

SENG 660 Quantitative Risk Analysis
Credits 3. 3 Lecture Hours.
Fundamental concepts, techniques, and applications of quantitative risk analysis and risk-informed decision making for students in all engineering fields. Practical uses of probabilistic methods are demonstrated in exercises and case studies from diverse engineering areas.
Prerequisite: Graduate or Senior status.
Cross Listing: CHEN 660 and ISEN 660.

SENG 670 Industrial Safety Engineering
Credits 3. 3 Lecture Hours.
General concepts and techniques of safety engineering upon which more detailed and advanced applications may be based; applications of safety engineering principles to industrial and commercial systems; the concept of designing optimally safe systems.

SENG 674 System Safety Engineering
Credits 3. 3 Lecture Hours.
Current system safety engineering analysis techniques; failure mode and effect and fault tree analysis. Engineering economic analysis is reviewed to develop skills for the safety engineer in presenting alternate solutions to management.

SENG 677 Fire Protection Engineering
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Theory of combustion, characteristics of flammables, fire resistance, fire spread, fire protection principles, public and private fire service organization and equipment; automatic extinguishing systems. Fire protection analysis and design projects.

SENG 680 Industrial Hygiene
Credits 3. 3 Lecture Hours.
Recognition of environmental stresses present in man-machine-environment systems and the effect of these stresses on human performance, safety and health; chemical, physical, ergonomic and biological exposures, manufacturing systems, materials and operations.

SENG 681 Seminar
Credit 1. 1 Other Hour.
Formal presentations in industrial hygiene and safety engineering by students and professional industrial representatives.

SENG 684 Professional Internship
Credits 1 to 6. 1 to 6 Other Hours.
Training under the supervision of practicing engineers in settings appropriate to the student's professional objectives.
Prerequisites: Approval of chair of student's advisory committee and department head.

SENG 685 Directed Studies
Credits 1 to 12. 1 to 12 Other Hours.
Investigation of topics not within the scope of thesis or dissertation research and not covered by other formal courses.

SENG 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of safety engineering and industrial hygiene. May be repeated for credit.
Prerequisite: Approval of instructor.

SENG 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research in industrial hygiene, safety engineering or related topics for thesis or dissertation.

SOCI - Sociology

SOCI 603/WGST 603 The Contemporary Family
Credits 3. 3 Lecture Hours.
Review and criticism of theories developed for study of the family; family formation, dynamics, conflicts, power, dissolution; subcultural family forms and responses to social change.
Cross Listing: WGST 603.
SOCI 604 Comparative Historical Methods
Credits 3.3 Lecture Hours.
Surveys key methodological issues, including the logic of comparative design and analysis of primary and secondary sources. Exemplars of important comparative historical research—both classics and more recent publications—will be reviewed.
Prerequisite: Graduate classification.

SOCI 605 Social Movements
Credits 3.3 Lecture Hours.
Surveys the literature on social movements including the topics of movement emergence, movement outcomes, state repression, and revolutions; reviews contemporary debates in the theories of social movement and new developments in research.
Prerequisite: Graduate classification.

SOCI 606 War and Democracy
Credits 3.3 Lecture Hours.
Sociological approaches to the study of war’s effects on democracy and democratic control of the military and the use of force, in comparative-historical context.

SOCI 607 Seminar in Social Organizations
Credits 3.3 Lecture Hours.
Relevant conceptual and empirical approaches to the study of selected aspects of social organization. May be taken up to two times for credit as content varies.
Prerequisite: Graduate classification.

SOCI 608 Social Organization
Credits 3.3 Lecture Hours.
Theoretical and conceptual bases of patterned human behavior; structural, processual and functional aspects of human groups from simplest informal to the most complex formal types: small groups, associations, institutions, complex organizations, bureaucracies, societies.

SOCI 611 Classical Sociological Theory
Credits 3.3 Lecture Hours.
Critical analysis of the writings of the principal founders of modern sociology; Marx, Durkheim and Weber and their influence on current theoretical issues.
Prerequisite: SOCI 430 or equivalent or approval of instructor.

SOCI 615 Contemporary Sociological Theory
Credits 3.3 Lecture Hours.
Critical analysis of current sociological perspectives, their logic of inquiry, substantive claims and application to empirical research.
Prerequisite: SOCI 611.

SOCI 616 Political Sociology
Credits 3.3 Lecture Hours.
Survey of the principal social and organizational bases of politics; the institutionalization of political power; explanation of political change and movements of social protest.
Prerequisite: Graduate classification or approval of instructor.

SOCI 617 Comparative Racial-Ethnic Relations
Credits 3.3 Lecture Hours.
Cross-cultural variations in racial-ethnic relations and structures of inequality; assessment of systems and power-conflict frameworks in diverse settings such as South America, Mexico, South Africa, Caribbean Regions and United States.
Prerequisite: Approval of instructor.

SOCI 618 Sociology of Education
Credits 3.3 Lecture Hours.
The school system and the democratic way of life; relationship of education to social organization, social change and social control. Role of education in society.
Prerequisite: SOCI 205.

SOCI 621 Social Psychology
Credits 3.3 Lecture Hours.
Personality, social and cultural systems; development and interrelationships; cognitive activities, motivational determinants and selectivity; goals, structures, coordination and related factors influencing complex social groupings.
Prerequisites: SOCI 205; 12 additional hours of social science.

SOCI 622 Social Demography
Credits 3.3 Lecture Hours.
Survey of methods, theories and problems of contemporary demographic phenomena.
Prerequisite: Approval of department head.

SOCI 623 Measurement of Sociological Parameters
Credits 3.3 Lecture Hours.
Sociological research including scaling, scale analysis and experimental design.
Prerequisites: Graduate classification; three hours of statistics.

SOCI 624 Qualitative Methodology
Credits 3.3 Lecture Hours.
Exposure to and critical assessment of qualitative approaches to data gathering in social science; topics include naturalistic observation, field research skills, unobtrusive measures and grounded theory construction.

SOCI 625 Seminar in Law, Deviance and Social Control
Credits 3.3 Lecture Hours.
Relevant literature and research in selected aspects of law, deviance and social control. May be taken up to three times for credit as content varies.
Prerequisite: Graduate classification.

SOCI 628 Deviant Behavior
Credits 3.3 Lecture Hours.
Contemporary sociological approaches to deviance; theoretical and empirical studies of major types of deviant behavior.

SOCI 629 Sociology of Law
Credits 3.3 Lecture Hours.
Critical survey of the social sources of law, the role of law in social organizations and problems of law enforcement.
Prerequisite: Graduate classification.

SOCI 631 Seminar in Sociological Research
Credits 3.3 Other Hours.
Critical analysis of research procedures used by sociologists.
Prerequisite: SOCI 623.

SOCI 633 Demographic Methods
Credits 3.3 Lecture Hours.
Procedures and techniques for the collection, evaluation and analysis of demographic data; measures of population growth, composition, fertility, mortality and migration.
Prerequisite: SOCI 622.

SOCI 635 Sociology of Complex Organizations
Credits 3.3 Lecture Hours.
Comparative structures; contingency models; micro- and macro-theoretical perspectives.
SOCI 640 Sociology of Development
Credits 3.3 Lecture Hours.
Survey of sociology of development; review of major classical and
contemporary approaches to development including but not limited to
modernization theory, world systems theory, comparative nationalism,
demographic theories, feminist approaches; contradictions of development
including K-Cycles, social movements and ecological constraints.
Prerequisite: Graduate classification or approval of instructor.

SOCI 647 Seminar in Demography and Human Ecology
Credits 3.3 Lecture Hours.
Relevant literature and research problems of a selected aspect of
demography and human ecology, such as fertility and mortality, migration,
international demography. May be taken up to three times for credit as
content varies.
Prerequisite: Graduate classification.

SOCI 651 Sociology of Culture
Credits 3.3 Lecture Hours.
Theoretical developments and methodological issues relevant to
studying culture through classical, modern and postmodern sociological
perspectives; includes background concerning the conditions under which
theories develop and discussion of controversies in the definition of and
research agendas within the sociology of culture.
Prerequisite: Graduate classification.

SOCI 657 Seminar in Culture
Credits 3.3 Lecture Hours.
Relevant literature and research in selected aspects of culture and cultural
processes. May be taken up to three times for credit as content varies.
Prerequisite: Approval of instructor.

SOCI 660 Theories of Race and Ethnic Group Relations
Credits 3.3 Lecture Hours.
Sociological theories of intergroup assimilation, conflict and adaptation;
includes examination and analysis of three major contemporary
perspectives; assimilation and social fusion theory, conflict models and
models of ethnic pluralism; theories of melioration of social discrimination
also examined.
Prerequisite: Graduate classification.

SOCI 661/WGST 661 Sociology of Gender
Credits 3.3 Lecture Hours.
Overview of the Sociology of Gender; historical development, primary
concepts, contemporary issues, theory, methods, and applications.
Prerequisite: Graduate classification.
Cross Listing: WGST 661/SOCI 661.

SOCI 662 Racism and Anti-Racism
Credits 3.3 Lecture Hours.
This seminar focuses on racism and anti-racism issues, including
social science research on slavery, anti-Black discrimination and Black
resistance, anti-Asian discrimination and Asian American resistance, anti-
Latino discrimination and Latino resistance, and white anti-racist groups.
We assess empirical research on these topics and explore important
theoretical frameworks.
Prerequisite: Graduate classification.

SOCI 663 Black and Latino Americans
Credits 3.3 Lecture Hours.
This seminar focuses social science theory and research about African
Americans and Latinos. We will emphasize historical backgrounds,
social science theories applied to these groups, patterns of immigration,
cognitive framing, patterns of racial-ethnic discrimination, and racial/class/
gender intersections. We will review critically important research books
dealing with these and related U.S. racial-ethnic issues.
Prerequisite: Graduate classification.

SOCI 667 Seminar in Race and Ethnic Relations
Credits 3.3 Lecture Hours.
Origins, extent, consequences of racial and ethnic differences on key
demographic variables such as fertility, mortality, migration and population
size, growth, distribution and composition; how demographic variables
affect and are affected by racial and ethnic differences in family structure,
social mobility and socioeconomic stratification. May be taken up to three
times for credit as content varies.
Prerequisite: Graduate classification.

SOCI 668 Seminar in Social Psychology
Credits 3.3 Lecture Hours.
Relevant literature and research problems of a selected aspect of social
psychology. May be taken for credit up to three times as content varies.
Prerequisite: Graduate classification.

SOCI 669 Special Topics in...  
Credits 1 to 4.1 to 4 Lecture Hours.
Selected topics in an identified area of sociology. May be repeated for
credit.

SOCI 691 Research
Credits 1 to 23.1 to 23 Other Hours.
Initiation and completion of research project of approved scope for an
advanced degree.
Prerequisite: Approval of instructor.
SOPH - School of Public Health

SOPH 680 Public Health Capstone
Credits 3. 3 Lecture Hours.
In this course, students will integrate the knowledge and skills gained through other courses and experiences at SPH, allowing them to understand both the overall public health problem-solving approach and the contributions of each discipline to that approach. Students work in groups to analyze public health problems and develop interventions. Must be taken on a satisfactory/unsatisfactory basis only.
Prerequisites: Four of the five SPH core courses (PHEB 600, PHEB 602, PHEO 600, PHPM 605, HPCH 603 are prerequisites for this class, and the fifth core course may be taken concurrently. Instructor approval is also required.

SOPH 690 Thesis Development
Credits 3. 3 Lecture Hours.
Course helps students prepare a thesis proposal including writing a literature review, developing hypotheses and/or research questions and appropriate research design, and obtaining IRB approval. Students are expected to draft their thesis proposal by the conclusion of the course.
Prerequisite: Approval of student’s academic advisor.

SPED - Special Education

SPED 601 Assessment in School Settings
Credits 3. 3 Lecture Hours.
Formal and informal assessment; state assessment and alternatives; techniques used with students with disabilities; using data to make educational decisions.
Prerequisite: Graduate classification; approval of department head; approval of instructor.

SPED 602 Ethics and Professional Conduct in Special Education and Applied Behavior Analysis
Credits 3. 3 Lecture Hours.
Focus on ethical and professional conduct required for special educators and behavior analysts; information required for certified behavior analysts; ethics required by the Behavior Analyst Certification Board; highly relevant for those working with children or adults with disabilities in any capacity.
Prerequisite(s): approval of department head; graduate classification.

SPED 603 Foundations of Special Education
Credits 3. 3 Lecture Hours.
Build a knowledge base to understand the historical and conceptual foundations of special education; familiarization with special education literature; overview of current issues and trends impacting special education.
Prerequisites: Graduate classification or approval of instructor; approval of department head.

SPED 607 Educating Individuals with Autism Spectrum Disorders
Credits 3. 3 Lecture Hours.
Study of the incidence, prevalence, and characteristics of individuals with autism spectrum disorders, particularly for teachers, counselors, and related fields; research and best practices in assessment, treatment, and education; includes treatment of social, communication, academic, and behavior deficits with emphasis on behavior analysis.
Prerequisite: Graduate classification.

SPED 610 Special Education and the Family
Credits 3. 3 Lecture Hours.
Overview of issues in special education interpreted within the context of the family; relationships among the school, the families, and the community; impact of relationships on service provisions; field experiences working with families with special needs.
Prerequisite: Approval of department head.

SPED 611 Multicultural Special Education
Credits 3. 3 Lecture Hours.
Multicultural perspectives in special education; foundations of multicultural special education; cultural responsive teaching; methods for teaching culturally and linguistically diverse learners in special education.
Prerequisite: Graduate classification.

SPED 612 Special Education Law and Policy
Credits 3. 7 Lab Hours.
Legal development of the discipline of special education; current requirements for providing free and appropriate education to students with disabilities; assessment and performance of research with legal information.
Prerequisites: Graduate classification and approval of department head.

SPED 614 Issues in Moderate and Severe Disabilities
Credits 3. 3 Lecture Hours.
Psychological, social, physical and cognitive aspects of moderate to severe disabilities; service delivery systems; biomedical issues community programming; transition programming; adult service program; programs for the elderly; all in relation to individuals with moderate to severe disabilities.
Prerequisites: Graduate classification and approval of department head.

SPED 615 Special Education Assessment: Technical and Legal Aspects
Credits 3. 3 Lecture Hours.
Teaches skills to critically examine assessment tools and procedures in special education; technical and legal issues in pre-referral evaluation, eligibility assessment, IEP writing and program evaluation; emphasizes test validity and test sensitivity to growth; mastery of knowledge base and realistic scenarios.
Prerequisites: Graduate classification or approval of instructor; approval of department head.

SPED 617 Adolescent Literacy for Students with Diverse Instructional Needs
Credits 3. 3 Lecture Hours.
Research-based strategies to teach reading and writing to 4th through 12th grade students with disabilities and other diverse instructional needs; emphasis on current issues, assessment, motivation, intervention, and content area issues and strategies.
Prerequisite: Graduate classification.

SPED 618 Induction and Preparation for the Special Education Professoriate
Credits 3. 3 Lecture Hours.
Orientation to full-time doctoral studies; understanding historical and contemporary issues in the field of special education; familiarization with special education literature and systematic reviews of research literature.
Prerequisite: Admission into special education doctoral program.

SPED 619 Critical Research and Practice Issues in Special Education
Credits 3. 3 Lecture Hours.
Examination of the historical, conceptual/theoretical and empirical basis of special education research and practice; understanding special education as a field and specific areas for in-depth knowledge.
Prerequisite: Admission into special education doctoral program.
SPED 620 Bilingual Special Education
Credits 3.3 Lecture Hours.
Topics concerning bilingual special education will be covered including history of the field; language acquisition and assessment; general assessment, individual education plans (IEPs); curriculum development; mainstreaming; consultation services; and parental involvement.
Prerequisite: Approval of department head.

SPED 621 Overview of Exceptional Students
Credits 3.3 Lecture Hours.
Overview of historical foundations for special education practice; definitions of disabilities, relevant educational characteristics of students with disabilities; assessment procedures associated with the identification of students' disabilities; intervention procedures related to education of students with disabilities.
Prerequisites: Graduate classification and approval of department head.

SPED 622 Overview of Exceptional Students
Credits 3.3 Lecture Hours.
Overview of historical foundations for special education practice; definitions of disabilities, relevant educational characteristics of students with disabilities; assessment procedures associated with the identification of students' disabilities; intervention procedures related to education of students with disabilities.
Prerequisites: Graduate classification and approval of department head.

SPED 623 Self-Determination and Advocacy
Credits 3.3 Lecture Hours.
Conceptualization and theoretical framework of self-determination for students with disabilities; the role of self-determination in improving student outcomes; and best practices in promoting self-determination among students with disabilities.
Prerequisites: Graduate classification.

SPED 624 Professional Development in Research
Credits 3.3 Lecture Hours.
Development and refinement of skills needed to be productive scholars with particular focus on disseminating research through manuscript preparation and conference presentations.
Prerequisites: SPED 618; SPED 619; Graduate classification; approval of department head.

SPED 625 Consultation in Special Education
Credits 3.3 Lecture Hours.
Rationale, strategies, procedures and resources for providing consultation as systematic problem-solving to school procedures, and resources for improving services for children with disabilities, and those who are at-risk of school failure.
Prerequisites: Graduate classification and approval of department head.

SPED 626 Early Literacy for Students with Diverse Instructional Needs
Credits 3.3 Lecture Hours.
Research-based strategies to teach beginning reading and writing to pre-K through 4th grade students with disabilities and other diverse instructional needs; emphasis on current issues, assessment, prevention, and intervention.
Prerequisite: Graduate classification.

SPED 627 Transition from School to Work
Credits 3.3 Lecture Hours.
Current issues and practices related to the transition of students from school to work; partnerships with business and industry; secondary and postsecondary education linkages; work-based training.
Prerequisite: Approval of department head.

SPED 641 Low-Incidence Instruction for Individuals with Significant Support Needs
Credits 3.3 Lecture Hours.
Examination of how particular types of low-incidence disabilities; including mental retardation, autism, physical disabilities, traumatic brain injury, deafness, blindness, multiple disabilities, and other health impairments, affect academic and job performance. Current methods for teaching individuals with low-incidence disabilities, including an overview of Adaptive/Assistive Technology (AT) solutions.
Prerequisites: Graduate classification and approval of department head.

SPED 642 Program Development for Students with Behavior Problems
Credits 3.3 Lecture Hours.
Field-based course relating to effective management of challenging and severe behavior problems in the classroom using proactive strategies; effective instruction and planned behavioral interventions; methods for observing, assessing and analyzing challenging and severe behaviors; includes a 20-hour field based component.
Prerequisites: Graduate classification and approval of department head.

SPED 683 Field Practicum
Credits 1 to 15.1 to 15 Other Hours.
Faculty supervised experience in professional practice settings in Special Education. May be repeated for credit.
Prerequisite: Approval of instructor and department head.

SPED 684 Professional Internship
Credits 1 to 6.1 to 6 Other Hours.
Supervised experience in professional functions appropriate to career goals in special education.
Prerequisite: Approval of instructor and department head.

SPED 685 Directed Studies
Credits 1 to 6.1 to 6 Other Hours.
Directed individual study of selected problems in special education.
Prerequisite: Approval of instructor and department head.

SPED 686 Special Topics in...
Credits 1 to 4.1 to 4 Lecture Hours.
Selected topics in an identified area of special education. May be repeated for credit.
Prerequisite: Approval of department head.

SPED 699 Advanced Applied Behavior Analysis
Credits 3.3 Lecture Hours.
Rigorous repertoire of knowledge and skill in behavior analysis; comprehensive and contemporary description of applied behavior analysis; application of principles and paradigms of theoretical and experimental aspects of behavior.
Prerequisites: SEFB 618 and graduate classification.

SPMT - Sport Management

SPMT 601 Research Methods for Sport Organizations
Credits 3.3 Lecture Hours.
Methodology and application of social science research in sport organizations; including the research process, research designs, sampling procedures, measurement, survey research, hypothesis testing, application and interpretation of appropriate statistics, and the research presentation.

SPMT 610 Administration of Sport Organizations
Credits 3.3 Lecture Hours.
Issues related to the administration of sport and fitness organizations; includes interschool athletics and corporate organizations.
SPMT 611 Revenue Generation in Sport  
Credits 3. 3 Lecture Hours.  
Examine the basic financial, accounting, and revenue generation principles central to the management of sport organizations.  
**Prerequisites:** Graduate classification.

SPMT 612 Personnel Management in Sport  
Credits 3. 3 Lecture Hours.  
Examine the service orientation of sport organizations, individual differences in employees and clients, personnel management practices, and expected outcomes of effective personnel management.  
**Prerequisite:** Graduate classification.

SPMT 613 Diversity in Sport Organizations  
Credits 3. 3 Lecture Hours.  
Examines an encompassing perspective of diversity within North American and international sport organizations; analysis and understanding of the various ways that people within sport organizations can differ; treats issues of the non-dominant, historically under-represented elements of U.S. society with an emphasis placed on racial and gender issues.  
**Prerequisite:** Graduate classification.

SPMT 615 Sport Marketing  
Credits 3. 3 Lecture Hours.  
Explores and examines the elements of planning, organizing and prompting sporting events.  
**Prerequisite:** Graduate classification.

SPMT 623 Athletics Administration  
Credits 3. 3 Lecture Hours.  
Principles and processes of managing intercollegiate athletic organizations and properties.  
**Prerequisite:** Graduate classification.

SPMT 655 Sport Law  
Credits 3. 3 Lecture Hours.  
Legal principles affecting sponsors and users of sports programs; liability concepts in tort, contract, civil rights and property law in program planning, development, marketing and management.  
**Prerequisite:** Graduate classification or approval of instructor.

SPMT 681 Seminar  
Credit 1. 1 Lecture Hour.  
Reports and discussions of research and the research process in sport management. May be taken 4 times for credit.  
**Prerequisite:** Graduate classification.

SPMT 682 Seminar in...  
Credit 1. 1 Lecture Hour.  
Discussions of current topics and issues impacting sport management and administration. May be taken 8 times for credit.  
**Prerequisite:** Graduate classification.

SPMT 683 Practicum in Sport Management  
Credits 3. 3 Lecture Hours.  
Participation and study in sport management and administration; acquisition and practice of professional and/or clinical skills in sport management.  
**Prerequisites:** Graduate classification and approval of instructor.

SPMT 684 Internship in Sport Management  
Credits 1 to 6. 1 to 6 Lecture Hours.  
Supervised internship with sport management organization; application of formal training to performing professional functions consistent with career goals.  
**Prerequisites:** Graduate classification; approval of instructor.

SPMT 685 Directed Studies  
Credits 1 to 12. 1 to 12 Lecture Hours.  
Directed study of special problems in sport management not related to thesis. May be repeated for credit.  
**Prerequisites:** Graduate classification; approval of instructor; approval of department head.

SPMT 689 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours.  
Special Topics in ... Selected topics in an identified area of sport management. May be repeated for credit.  
**Prerequisite:** Graduate classification.

SPMT 690 Theory of Research in Sport Management  
Credits 3. 3 Lecture Hours.  
Theory and design of research problems and experiments in various fields of sport management. May be taken 2 times for credit.  
**Prerequisite:** Graduate classification.

SPMT 691 Research  
Credits 1 to 18. 1 to 18 Other Hours.  
Research for thesis or dissertation.  
**Prerequisites:** Graduate classification and approval of committee chair.

SPSY - School Psychology

SPSY 610 Child Psychopathology  
Credits 3. 3 Lecture Hours.  
Major forms of psychopathology and behavioral disorders in children and adolescents; concepts of child psychological disorders; application of multiple theoretical models; understanding of the development context in which these orders exist.  
**Prerequisites:** Graduate classification; approval of department head.

SPSY 611 Introduction to School Psychology: Legal, Ethical and Credentialing Issues in School Psychology  
Credit 1. 1 Lecture Hour.  
History of professional psychology with emphasis on school psychology; legal, ethical and credentialing issues in psychology; scholarly writing; models of providing clinical child and special educational services. May be taken up to three times for credit.  
**Prerequisite:** Graduate classification; approval of department head.

SPSY 612 Individual Assessment of Children’s Intelligence  
Credits 4. 3 Lecture Hours. 2 Lab Hours.  
Individual Assessment of Children's Intelligence. Educational and clinical applications of individual assessment; diagnostic measures of intelligence, achievement, language and perception; videotaping of student test administration is required for purposes of supervision and self-evaluation. Limited to 12 students per semester.  
**Prerequisites:** Approval of instructor; approval of department head.

SPSY 613 Crisis Intervention in the Schools  
Credits 3. 3 Lecture Hours.  
Fundamentals of school-based crisis intervention; emphasis on personal and situational crises, and the development and implementation of crisis intervention and prevention plans within the school setting; differing models of crisis intervention, models of coping with crisis and critical incidents, and the efficacy of crisis intervention.  
**Prerequisite:** Graduate classification.
SPSY 614 Integrated Assessment Practicum
Credits 3. 1 Lecture Hour. 6 Lab Hours.
Student test administration competencies and a minimum of 150 hours of supervised experience in administration, analysis and reporting of individual diagnostic instruments. May be taken twice for credit.
Prerequisites: SPSY 612; SPSY 617; approval of department head.

SPSY 615 Preschool Assessment
Credits 3. 3 Lecture Hours.
Assessment of infants and young children (birth to 5 years of age); requires extension of the diagnostic skills gained in other coursework to applications for early intervention and child find with younger children; measures/methods will include norm-referenced, criterion referenced, and play-based/observational methods used in the assessment of infants and young children.
Prerequisites: SPSY 612 and approval of instructor.

SPSY 617 Emotional Disturbance in Children
Credits 3. 3 Lecture Hours.
Diagnostic procedures and techniques in personality assessment and identification of emotionally disturbed children and youth.
Prerequisite: SPSY 610; SPSY 612; SPSY 642.

SPSY 620 Interdisciplinary Seminar in Prevention Science
Credit 1. 1 Lecture Hour.
Contemporary research programs that represent the interdisciplinary field of prevention science; strengths and limitations of diverse theoretical and conceptual bases of research in prevention science; application of research findings to issues related to the prevention of mental, emotional, and physical health problems and the promotion of well-being. May be taken 3 times for credit.
Prerequisite: Graduate classification and enrollment in the interdisciplinary graduate certificate in prevention science or approval of instructor.
Cross Listing: COMM 671, HLTH 671 and RPTS 620.

SPSY 628 Consultation: Theory and Techniques
Credits 3. 3 Lecture Hours.
History and theory of various models of consultation including mental health, behavioral and organizational development; skills and techniques necessary for effective consultation; relevant research issues.
Prerequisites: Approval of instructor; approval of department head.

SPSY 638 Systems Consultation and Prevention Science
Credits 3. 3 Lecture Hours.
Theory, research and practice in prevention science with an emphasis on individuals from birth to age 21; understanding and application of theories and methods of prevention science.
Prerequisite: Approval of department head.

SPSY 641 Child Therapy for School Behavior Problems
Credits 3. 3 Lecture Hours.
Selected therapy approaches for treating childhood behavior disorders that interfere with children's interpersonal and intrapersonal adjustment and school learning; play therapy, behavior therapy, cognitive therapies; case studies; observation of therapy cases in public and/or mental health settings.
Prerequisites: SPSY 610; approval of department head.

SPSY 642 Behavioral Assessment and Intervention
Credits 3. 3 Lecture Hours.
Overview of contemporary behavior theory and applied behavior analysis; overview of behavioral assessment strategies with an emphasis on the systematic observations of behavior and interviews; and contemporary behavior therapy approaches for use with educators, children, and their families.
Prerequisite: Graduate classification and approval of department head.

SPSY 643 Academic Assessment and Intervention
Credits 3. 3 Lecture Hours.
Developing effective and appropriate interventions for school-based academic concerns; collecting and interpreting data from informal academic assessments and observations for intervention development and evaluation; using curriculum-based assessments for monitoring student's academic programs and teacher decision making; understanding effective instructional strategies and their application to academic interventions.
Prerequisite: Graduate classification and approval of department head.

SPSY 644 Child Therapy: Advanced Theory and Techniques
Credits 3. 3 Lecture Hours.
Supervised experiences in public and mental health settings in the application of psychotherapy techniques with children, adolescents and families; interviewing techniques; process of therapy; advanced theoretical foundations; case management.
Prerequisites: SPSY 641 and approval of department head.

SPSY 645 Social and Emotional Development and Intervention
Credits 3. 3 Lecture Hours.
Theories of how children develop in the areas of social and emotional learning, recent empirical findings in the area of social and emotional development; preventive and remedial interventions for social and emotional difficulties.
Prerequisites: Graduate classification; approval of department head.

SPSY 657 Bilingual Psychoeducational Assessment
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Theory of second language acquisition; discrete point and descriptive approach to language assessment; achievement assessment; cognitive assessment and practical and cultural factors when assessing bilingual children.
Prerequisites: SPSY 612; approval of department head.

SPSY 663 Field Experience/Externship in School Psychology
Credits 1 to 15. 1 to 15 Other Hours.
Faculty supervised experience in professional employment public and mental settings in school psychology. Repeatable to 15 hours.
Prerequisite: Approval of instructor and department head.

SPSY 683 Professional Internship
Credits 1 to 4. 1 to 4 Other Hours.
Limited to advanced doctoral students; faculty supervised experience in approved professional employment settings. Applications for September assignments must be approved the previous October. May be repeated up to 9 hours.
Prerequisites: Completion of required substantive coursework; approval of instructor and department head.

SPSY 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed individual study of selected problems.
Prerequisite: Approval of department head.
Course Descriptions

SPSY 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of school psychology. May be repeated for credit.
Prerequisite: Approval of department head.

SPSY 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation.
Prerequisite: Approval of department head.

STAT - Statistics

STAT 601 Statistical Analysis
Credits 4. 3 Lecture Hours. 2 Lab Hours.
For students in engineering, physical and mathematical sciences. Introduction to probability, probability distributions and statistical inference; hypothesis testing; introduction to methods of analysis such as tests of independence, regression, analysis of variance with some consideration of planned experimentation.
Prerequisite: MATH 152 or MATH 172.

STAT 604 Topics in Statistical Computations
Credits 3. 3 Lecture Hours.
Efficient uses of existing statistical computer programs (SAS, R, etc.); generation of random numbers; using and creating functions and subroutines; statistical graphics; programming of simulation studies; and data management issues.
Prerequisite: MATH 221, MATH 251, or MATH 253.

STAT 605 Advanced Statistical Computations
Credits 3. 3 Lecture Hours.
Programming languages, statistical software and computing environments; development of programming skills using modern methodologies; data extraction and code management; interfacing lower-level languages with data analysis software; simulation; MC integration; MC-MC procedures; permutation tests; bootstrapping.
Prerequisite: STAT 612 and STAT 648.

STAT 607 Sampling
Credits 3. 3 Lecture Hours.
Planning, execution and analysis of sampling from finite populations; simple, stratified, multistage and systematic sampling; ratio estimates.
Prerequisite: STAT 601 or STAT 652 or concurrent enrollment in STAT 641.

STAT 608 Regression Analysis
Credits 3. 3 Lecture Hours.
Multiple, curvilinear, nonlinear, robust, logistic and principal components regression analysis; regression diagnostics, transformations, analysis of covariance.
Prerequisite: STAT 601 or STAT 641.

STAT 610 Theory of Statistics - Distribution Theory
Credits 3. 3 Lecture Hours.
Brief introduction to probability theory; distributions and expectations of random variables, transformations of random variables and order statistics; generating functions and basic limit concepts.
Prerequisite: MATH 409 or concurrent enrollment in MATH 409.

STAT 611 Theory of Statistics - Inference
Credits 3. 3 Lecture Hours.
Theory of estimation and hypothesis testing; point estimation, interval estimation, sufficient statistics, decision theory, most powerful tests, likelihood ratio tests, chi-square tests.
Prerequisite: STAT 610 or equivalent.

STAT 612 Theory of Linear Models
Credits 3. 3 Lecture Hours.
Matrix algebra for statisticians; Gauss-Markov theorem; estimability; estimation subject to linear restrictions; multivariate normal distribution; distribution of quadratic forms; inferences for linear models; theory of multiple regression and AOV; random-and mixed-effects models.
Prerequisite: STAT 612.

STAT 613 Statistical Methodology I
Credits 3. 3 Lecture Hours.
Elements of likelihood inference; exponential family models; group transformation models; survival data; missing data; estimation and hypotheses testing; nonlinear regression models; conditional and marginal inferences; complex models-Markov chains, Markov random fields, time series, and point processes.
Prerequisite: STAT 612.

STAT 614 Probability for Statistics
Credits 3. 3 Lecture Hours.
Probability and measures; expectation and integrals, Kolmogorov's extension theorem; Fubini's theorem; inequalities; uniform integrability; conditional expectation; laws of large numbers; central limit theorems
Prerequisite: STAT 610 or its equivalent.

STAT 615 Stochastic Processes
Credits 3. 3 Lecture Hours.
Survey of the theory of stochastic processes; includes countable-state Markov processes, birth-death processes, Poisson point processes, renewal processes, Brownian motion and diffusion processes and covariance-stationary processes; theoretical development and applications to real world problems.
Prerequisites: STAT 610; MATH 409.

STAT 616 Statistical Aspects of Machine Learning I: Classical Multivariate Methods
Credits 3. 3 Lecture Hours.
Core methods from traditional multivariate analysis and various extensions; probability distributions of random vectors and matrices, multivariate normal distributions, model assessment and selection in multiple regression, multivariate regression, dimension reduction, linear discriminant analysis, logistic discriminant analysis, cluster analysis, multidimensional scaling and distance geometry, and correspondence analysis.
Prerequisites: STAT 612, STAT 613.

STAT 618 Statistical Aspects of Machine Learning II: Modern Techniques
Credits 3. 3 Lecture Hours.
Second course in statistical machine learning; recursive partition and tree-based methods, artificial neural networks, support vector machines, reproducing kernels, committee machines, latent variable methods, component analysis, nonlinear dimensionality reduction and manifold learning, matrix factorization and matrix completion, statistical analysis of tensors and multi-indexed data.
Prerequisites: STAT 612, STAT 613, and STAT 616.

STAT 620 Asymptotic Statistics
Credits 3. 3 Lecture Hours.
Review of basic concepts and important convergence theorems; elements of decision theory; delta method; Bahadur representation theorem; asymptotic distribution of MLE and the LRT statistics; asymptotic efficiency; limit theory for U-statistics and differential statistical functionalins with illustrations from M-,L-,R-estimation; multiple testing.
Prerequisite: STAT 614.
STAT 621 Advanced Stochastic Processes  
Credits 3. 3 Lecture Hours.
Conditional expectation; stopping times; discrete Markov processes; birth-death processes; queuing models; discrete semi-Markov processes; Brownian motion; diffusion processes, Ito integrals, theorem and limit distributions; differential statistical functions and their limit distributions; M-, L-, R-estimation.  
Prerequisite: STAT 614 or STAT 615.

STAT 623 Statistical Methods for Chemistry  
Credits 3. 3 Lecture Hours.
Chromemetrics topics of process optimization, precision and accuracy; curve fitting; chi-squared tests; multivariate calibration; errors in calibration standards; statistics of instrumentation.  
Prerequisite: STAT 601, STAT 641 or STAT 652 or approval of instructor.

STAT 626 Methods in Time Series Analysis  
Credits 3. 3 Lecture Hours.
Introduction to statistical time series analysis; autocorrelation and spectral characteristics of univariate, autoregressive, moving average models; identification, estimation and forecasting.  
Prerequisite: STAT 601 or STAT 642 or approval of instructor.

STAT 627 Nonparametric Function Estimation  
Credits 3. 3 Lecture Hours.
Nonparametric function estimation; kernel, local polynomials, Fourier series and spline methods; automated smoothing methods including cross-validation; large sample distributional properties of estimators; recent advances in function estimation.  
Prerequisite: STAT 611.

STAT 630 Overview of Mathematical Statistics  
Credits 3. 3 Lecture Hours.
Basic probability theory including distributions of random variables and expectations. Introduction to the theory of statistical inference from the likelihood point of view including maximum likelihood estimation, confidence intervals, and likelihood ratio tests. Introduction to Bayesian methods.  
Prerequisites: MATH 221, MATH 251, and MATH 253.

STAT 631 Statistical Methods in Finance  
Credits 3. 3 Lecture Hours.
Regression and the capital asset pricing model, statistics for portfolio analysis, resampling, time series models, volatility models, option pricing and Monte Carlo methods, copulas, extreme value theory, value at risk, spline smoothing of term structure.  
Prerequisites: STAT 610, STAT 611, STAT 608.

STAT 632 Statistical Methodology II-Bayesian Modeling and Inference  
Credits 3. 3 Lecture Hours.
Decision theory; fundamentals of Bayesian inference; single and multi-parameter models; Gaussian model; linear and generalized linear models; Bayesian computations; asymptotic methods; non-iterative MC; MCMC; hierarchical models; nonlinear models; random effect models; survival analysis; spatial models.  
Prerequisite: STAT 613.

STAT 633 Advanced Bayesian Modeling and Computation  
Credits 3. 3 Lecture Hours.
Bayesian methods in their research; methodology, and applications of Bayesian methods in bioinformatics, biostatistics, signal processing, machine learning, and related fields.  
Prerequisite: STAT 608, STAT 613, STAT 632.

STAT 636 Applied Multivariate Analysis  
Credits 3. 3 Lecture Hours.
Multivariate extension of the chi-square and t-tests, discrimination and classification procedures; applications to diagnostic problems in biological, medical, anthropological and social research; multivariate analysis of variance, principal component and factor analysis, canonical correlations.  
Prerequisites: MATH 304, STAT 608.

STAT 638 Introduction to Applied Bayesian Methods  
Credits 3. 3 Lecture Hours.
Uncertainty regarding parameters and how they can be explicitly described as a posterior distribution which blends information from a sampling model and prior distribution; emphasis on modeling and computations under the Bayesian paradigm; includes prior distributions, Bayes Theorem, conjugate and non-conjugate models, posterior simulation via the Gibbs sampler and MCMC, hierarchical modeling.  
Prerequisites: STAT 604, STAT 608, STAT 630.

STAT 641 The Methods of Statistics I  
Credits 3. 3 Lecture Hours.
An application of the various disciplines in statistics to data analysis, introduction to statistical software; demonstration of interplay between probability models and statistical inference.  
Prerequisite: Concurrent enrollment in STAT 610 or approval of instructor.

STAT 642 The Methods of Statistics II  
Credits 3. 3 Lecture Hours.
Design and analysis of experiments; scientific method; graphical displays; analysis of nonconventional designs and experiments involving categorical data.  
Prerequisite: STAT 641.

STAT 643 Biostatistics I  
Credits 3. 3 Lecture Hours.
Bio-assay for quantitative and quantal responses: statistical analysis of contingency, including effect estimates, matched samples and misclassification.  
Prerequisites: STAT 608, STAT 630, and STAT 642 or STAT 610.

STAT 644 Biostatistics II  
Credits 3. 3 Lecture Hours.
Generalized linear models; survival analysis with emphasis on nonparametric models and methods.  
Prerequisite: STAT 643 or approval of instructor.

STAT 645 Applied Biostatistics and Data Analysis  
Credits 3. 3 Lecture Hours.
Survey of crucial topics in biostatistics; application of regression in biostatistics; analysis of correlated data; logistic and Poisson regression for binary or count data; survival analysis for censored outcomes; design and analysis of clinical trials; sample size calculation by simulation; bootstrap techniques for assessing statistical significance; data analysis using R.  
Prerequisites: STAT 651, STAT 652, and STAT 659, or equivalent or prior approval of instructor.
STAT 646 Statistical Bioinformatics
Credits 3. 3 Lecture Hours.
An overview of relevant biological concepts and technologies of genomic/proteomic applications; methods to handle, visualize, analyze, and interpret genomic/proteomic data; exploratory data analysis for genomic/proteomic data; data preprocessing and normalization; hypotheses testing; classification and prediction techniques for using genomic/proteomic data to predict disease status.
Prerequisites: STAT 604, STAT 651, STAT 652 or equivalent or prior approval of instructor.

STAT 647 Spatial Statistics
Credits 3. 3 Lecture Hours.
Spatial correlation and its effects; spatial prediction (kriging); spatial regression; analysis of point patterns (tests for randomness and modelling patterns); subsampling methods for spatial data.
Prerequisite: STAT 601 or STAT 611 or equivalent.

STAT 648 Applied Statistics and Data Analysis
Credits 3. 3 Lecture Hours.
Background to conduct research in the development of new methodology in applied statistics. Topics covered will include: exploratory data analysis; sampling; testing; smoothing; classification; time series; and spatial data analysis.
Prerequisite: Approval of instructor.

STAT 651 Statistics in Research I
Credits 3. 3 Lecture Hours.
For graduate students in other disciplines; non-calculus exposition of the concepts, methods and usage of statistical data analysis; T-tests, analysis of variance and linear regression.
Prerequisite: MATH 102 or equivalent.

STAT 652 Statistics in Research II
Credits 3. 3 Lecture Hours.
Continuation of STAT 651. Concepts of experimental design, individual treatment comparisons, randomized blocks and factorial experiments, multiple regression, Chi-squared tests and a brief introduction to covariance, non-parametric methods and sample surveys.
Prerequisite: STAT 651.

STAT 653 Statistics in Research III
Credits 3. 3 Lecture Hours.
Advanced topics in ANOVA; analysis of covariance; and regression analysis including analysis of messy data; non-linear regression; logistic and weighted regression; diagnostics and model building; emphasis on concepts; computing and interpretation.
Prerequisite: STAT 652.

STAT 654 Applied Analytics Using SAS Enterprise Miner
Credits 3. 3 Lecture Hours.
Introduction to data mining and will demonstrate the procedures: Optimal prediction decisions; comparing and deploying predictive models; neural networks; constructing and adjusting tree models; the construction and evaluation of multi-stage models.
Prerequisite: STAT 657, STAT 659.

STAT 655 Advanced Programming Using SAS
Credits 3. 3 Lecture Hours.
Programming with SAS/IML, scripting in SAS Data step, advanced use of various SAS procedures.
Prerequisites: STAT 604 and STAT 642.

STAT 656 Applied Categorical Data Analysis
Credits 3. 3 Lecture Hours.
Design of experiments, estimation, hypothesis testing, modeling, and data mining for transportation specialists.
Prerequisite: STAT 211 or STAT 651.

STAT 657 Applied Categorical Data Analysis
Credits 3. 3 Lecture Hours.
Introduction to analysis and interpretation of categorical data using ANOVA/regression analogs; includes contingency tables, loglinear models, logistic regression; use of computer software such as SAS, GLIM, SPSSX.
Prerequisite: STAT 601, STAT 641 or STAT 652 or equivalent.

STAT 661 Statistical Genetics I
Credits 3. 3 Lecture Hours.
Basic concepts in human genetics, sampling designs, gene frequency estimation, Hardy-Weinberg equilibrium, linkage disequilibrium, association and transmission disequilibrium test studies, linkage and pedigree analysis, segregation analysis, polygenic models, DNA sequence analysis.
Prerequisites: STAT 610 and STAT 611.

STAT 663 Statistical Genetics II
Credits 3. 3 Lecture Hours.
Continuation of STAT 661. Multiple time series; ARMA models, test of hypotheses, estimation of spectral density matrix, transfer function and forecasting.
Prerequisites: STAT 673.

STAT 664 Professional Internship
Credits 1 to 3. 1 to 3 Other Hours.
Practicum in statistical consulting for students in PhD program. Students will be assigned consulting problems brought to the Department of Statistics by researchers in other disciplines.
Prerequisite: STAT 642 or its equivalent.

STAT 665 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
Individual instruction in selected fields in statistics; investigation of special topics not within scope of thesis research and not covered by other formal courses.
Prerequisites: Graduate classification and approval of department head.
Satisfactory completion of year three of the medical school curriculum.

SURG 805 Neurosurgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- to 4-week elective will allow the student to correlate neuroanatomy and neurophysiology in the major areas of neurosurgical care: brain, spine, and peripheral nerves. Additionally, the student will correlate imaging studies with surgical anatomy. The student will be provided with a broad exposure to neurological diseases requiring surgical intervention. The student will be provided with the opportunity to assist with pre-operative and post-operative evaluation as well as operative experience, including serving as a surgical assistant in selected cases.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 806 Orthopedic Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 4-week elective will familiarize the student with orthopedic surgery which will involve treatment of musculoskeletal disorders. This elective will increase the student’s familiarity and knowledge with both ambulatory and surgical treatment of common orthopedic problems; allow students to assist in surgery and management of fractures; help students be able to recognize and describe common fracture patterns seen in a community setting; introduce students to adult reconstructive orthopedic surgery, including joint replacement procedures and arthroscopic surgery. Students can also diagnose many common ambulatory orthopedic problems; diagnose inpatient orthopedic problems to facilitate communication with orthopedic specialists; read plain films and selected MRI scans; and demonstrate an understanding of the impact of orthopedic problems in the general health and well-being of patients.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 807 Plastic Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- to 4-week elective will provide an exposure to a broadly based plastic and reconstructive surgery practice including pediatric and adult craniofacial, hand, microsurgery, soft tissue tumor, trauma, aesthetic and burn surgery. The student will be provided a one-on-one experience with senior staff in both the clinic and operating room. The student will be involved with all aspects of the management of the Plastic Surgery patient: initial diagnosis, assisting with surgery, and post-operative care, fully integrating the student into the Plastic Surgery team.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 808 Orthopedic Surgery; 835. Orthopedic Surgery/Sports Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- to 4-week elective provides an experience for medical students in orthopedic surgery and the treatment of musculoskeletal disorders. Students will participate in the ambulatory and surgical treatment of common orthopedic problems. Students will assist in surgery and the management of closed fractures and recognize and describe common fracture patterns seen in the community setting. Surgeries include but are not limited to joint replacement, arthroscopy, fractures, foot and hand reconstruction, sports medicine and spine. Students will become familiar with the techniques of orthopedic history taking and musculoskeletal examination. Students will participate in orthopedic trauma call at a level dependent upon their individual interest.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.
SURG 810 Oral and Maxillofacial Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- to 4-week elective is an introduction to the spectrum of trauma and pathology seen in the practice of Oral and Maxillofacial Surgery. Increase the student’s familiarity and knowledge of practical head and neck anatomy and its application to diagnostic and surgical procedures; instruction on common regional blocks of the head and neck for pain management; strengthening of student's knowledge of antibiotic therapy of maxillofacial infections. Students will participate in diagnosing and management of maxillofacial trauma and infections.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 811 Neurosurgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will allow the student to correlate neuroanatomy and neurophysiology in the major areas of neurosurgical care: brain, spine, and peripheral nerves. Additionally, the student will correlate imaging studies with surgical anatomy. The student will be provided with a broad exposure to neurological diseases requiring surgical intervention. The student will be provided with the opportunity to assist with pre-operative and post-operative evaluation as well as operative experience, including serving as a surgical assistant in selected cases.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 812 Bariatric Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10.

SURG 814 Cardiothoracic Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will familiarize the student with surgically-reparable cardiac conditions, including atherosclerotic heart disease, congenital and acquired valvulopathies, congenital and acquired cardiac malformations, including atrial and ventricular septal defects, and other cardiac pathologies amendable to surgical correction. The student will also become familiar with critical care physiology, monitoring, and treatment. Additionally, the student will participate pre-op evaluations, decision-making, surgical operations, and postoperative care.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 815 Urology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective is designed to give the student experience in the evaluation and management of common clinical problems seen in a Urology practice. The elective will familiarize the student with the techniques utilized in urologic historical and physical examination; the basic urologic evaluation and indications for specialized urologic examination: urologic diagnostic and therapeutic events to enable understanding of the indications and contraindications for diagnostic testing and surgical therapy.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 816 General Surgery Acting Internship
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. The General Surgery Acting Internship will provide an advanced level of surgical training by approaching the functioning responsibility of an intern while building on the clinical skills obtained by the student in his third year Surgery Clerkship. The student will receive more training in both pre and post-op care of general surgical patients and will expand their OR and procedural experiences. Students will obtain some experience in emergency surgical care by taking in house surgical call with the junior general surgical resident. Senior Medical Students will get more in depth involvement in the care of critically ill patients within the intensive care unit setting.

SURG 817 Vascular Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will further the educational experience in the clinical care of patients with vascular surgical disorders and improve the clinical acumen of students in recognizing the problems of these patients as individuals. The student will broaden his/her educational base and enable him/her to make decisions about the care of patients with vascular surgical problems. The elective will provide students with an experience which will enable those considering vascular surgery as a career choice to further evaluate this decision as to its appropriateness. Additionally, the course will provide students with broad exposure to the various surgery educational activities.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 818 Surgical Intensive Care Unit
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week SICU rotation will provide the student with additional experience in the management of critically ill trauma and general surgical patients, as well as exposure to the multi-disciplinary management of those patients. This will include education directed towards ventilatory management, hemodynamic monitoring and management, as well as nutritional, pharmacologic, and rehabilitative efforts.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 819 Abdominal Transplant Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 4-week elective will be exposed to all realms of transplantation surgery, including the procurement procedure (“donor”) and transplants (liver, kidney and pancreas). Also, an essential part of our field is the postoperative care of the recipient, including ICU management. Finally, the student will attend our pre and posttransplant clinics to gain a full understanding of transplantation medicine. Multiple didactic sessions are offered.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.
SURG 820 ENT Surgery Elective  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This 2- or 4-week elective will familiarize the student with general surgical procedures. Increase the student’s training in both pre and post-op care of general surgical patients and to expand on their OR and procedural experience; provide experience in emergency surgical care; perform an initial history and physical examination and plan initial workup of general surgical patients seen as an elective or emergency consultation; scrub in surgery, recognize anatomic structures, and know what procedure is indicated; become familiar with general surgical emergency situations, both inpatient and outpatient.  
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 821 Acute Care Surgery  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This elective will provide a broad exposure to the evaluation and management of patients with urgent/emergent surgical problems. Provide a broad exposure to operative techniques and an opportunity to develop technical skills. Provide practical clinical experience in preparation for a surgical internship.

SURG 822 General Surgery – GI II  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This elective will strive to: Provide an exposure to a broadly based plastic and reconstructive surgery practice including adult craniofacial, hand, microsurgery, soft tissue tumor, trauma, aesthetic and burn surgery; Involve the student in the management of the plastic surgery patient: initial diagnosis, assisting with surgery, and post-operative care; Integrate the student into the Plastic Surgery team.

SURG 823 Liver/Kidney Transplantation  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. The faculty will strive to: provide a broad exposure to fundamental concepts of peroperative care, and specific exposure to the comprehensive management of transplant patients and the process of transplantation; educate the student on various aspects of transplantation to include organ preservation, procurement, immunosuppressive medications and surgical complications; provide the medical student with the opportunity to take on increasing responsibilities while building on the clinical skills obtained by the student in his third year Surgery Clerkship.

SURG 824 Neurosurgery  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This elective will strive to: Provide the student with a broad exposure to neurological diseases requiring surgery. Provide the student with opportunity to scrub into neurosurgical cases and assist during operations in selected cases. Provide an environment in which students can learn about the field of neurosurgery and what it entails. Provide input and advice for those interested in pursuing a career in the neurological sciences.

SURG 825 Surgical Intensive Care Unit  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This 2- or 4-week SICU rotation will provide the student with additional experience in the management of critically ill trauma and general surgical patients, as well as exposure to the multi-disciplinary management of those patients. This will include education directed towards ventilatory management, hemodynamic monitoring and management, as well as nutritional, pharmacologic, and rehabilitative efforts.  
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 826 Orthopedic Surgery; 835. Orthopedic Surgery/Sports Medicine  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This 2- to 4-week elective provides an experience for medical students in orthopedic surgery and the treatment of musculoskeletal disorders. Students will participate in the ambulatory and surgical treatment of common orthopedic problems. Students will assist in surgery and the management of closed fractures and recognize and describe common fracture patterns seen in the community setting. Surgeries include but are not limited to joint replacement, arthroscopy, fractures, foot and hand reconstruction, sports medicine and spine. Students will become familiar with the techniques of orthopedic history taking and musculoskeletal examination. Students will participate in orthopedic trauma call at a level dependent upon their individual interest.  
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 827 Urology  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This 2- or 4-week elective is designed to give the student experience in the evaluation and management of common clinical problems seen in a Urology practice. The elective will familiarize the student with the techniques utilized in urologic historical and physical examination; the basic urologic evaluation and indications for specialized urologic examination; urologic diagnostic and therapeutic events to enable understanding of the indications and contraindications for diagnostic testing and surgical therapy.  
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 828 Cardiovascular and Thoracic Surgery  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This 2- or 4-week elective will allow students to become a part of the surgical team caring for patients undergoing cardiac procedures. Students participate with cardiologists, attending surgeons and a house staff in the evaluation and follow-up of cardiac surgical patients. The experience emphasizes applied cardiopulmonary physiology and diagnostic studies in patient management.  
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 829 Surgical Intensive Care Unit  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. This 2- to 4-week SICU rotation will provide the student with additional experience in the management of critically ill trauma and general surgical patients, as well as exposure to the multi-disciplinary management of those patients. This will include education directed towards ventilatory management, hemodynamic monitoring and management, as well as nutritional, pharmacologic, and rehabilitative efforts.  
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 830 Otolaryngology  
Credits 1.25 to 10. 1.25 to 10 Other Hours.  
25 to 10. The 2- or 4-week elective is designed to provide the student with an experience with in patient and ambulatory Otolaryngology. Students will become competent with the basic equipment used in an Otolaryngology office. The student will develop competence in the performance of the Otolaryngology exam in both adults and children, and in the diagnosis and treatment of common Otolaryngologic problems and emergencies.  
Prerequisite: Satisfactory completion of year three of the medical school curriculum.
SURG 831 General Surgery; 820. Ent Surgery Elective
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will familiarize the student with general surgical procedures. Increase the student’s training in both pre and post-op care of general surgical patients and to expand on their OR and procedural experience; provide experience in emergency surgical care; perform an initial history and physical examination and plan initial workup of general surgical patients seen as an elective or emergency consultation; scrub in surgery, recognize anatomic structures, and know what procedure is indicated; become familiar with general surgical emergency situations, both inpatient and outpatient.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 832 Cardiovascular and Thoracic Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will allow students to become a part of the surgical team caring for patients undergoing cardiac procedures. Students participate with cardiologists, attending surgeons and a house staff in the evaluation and follow-up of cardiac surgical patients. The experience emphasizes applied cardiopulmonary physiology and diagnostic studies in patient management.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 833 Clinical Ophthalmology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2-week elective is designed to provide an experience for those considering Orthopedic Surgery and introduces the students to care and treatment of common Orthopedic problems with basic ophthalmic equipment.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 834 Plastic Surgery Acting Internship
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This elective is designed to give the student an in-depth experience in the practice of plastic and reconstructive surgery. Students will receive one-on-one experience with faculty in both the clinic and operating room and will be given the opportunity to be involved with the management of the Plastic Surgery patients from start to finish. Housing is not provided. No night call is required.

SURG 835 Orthopedic Surgery/Sports Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- to 4-week elective provides an experience for medical students in orthopedic surgery and the treatment of musculoskeletal disorders. Students will participate in the ambulatory and surgical treatment of common orthopedic problems. Students will assist in surgery and the management of closed fractures and recognize and describe common fracture patterns seen in the community setting. Surgeries include but are not limited to joint replacement, arthroscopy, fractures, foot and hand reconstruction, sports medicine and spine. Students will become familiar with the techniques of orthopedic history taking and musculoskeletal examination. Students will participate in orthopedic trauma call at a level dependent upon their individual interest.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 836 Orthopedic Surgery/Sports Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective is designed to provide an experience for those considering Orthopedic Surgery and introduce the students to care and treatment of common orthopedic problems. The elective will provide students with the experience to perform initial orthopedic evaluations associated with sports injuries as well as routine orthopedic physical exams.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 837 Urology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective is designed to give the student experience in the evaluation and management of common clinical problems seen in a Urology practice. The elective will familiarize the student with the techniques utilized in urologic historical and physical examination; the basic urologic evaluation and indications for specialized urologic examination; urologic diagnostic and therapeutic events to enable understanding of the indications and contraindications for diagnostic testing and surgical therapy.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 838 Surgical Oncology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will provide an in-depth experience in the field of surgical oncology, especially upper gastrointestinal malignancies. The student will be involved in the preoperative, intraoperative, and post-operative care of the patient. The elective will provide a better understanding of the significance of multimodality treatment regimens in the therapy of cancer.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 839 Surgical Intensive Care Unit
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week SICU rotation will provide the student with additional experience in the management of critically ill trauma and general surgical patients, as well as exposure to the multi-disciplinary management of those patients. This will include education directed towards ventilatory management, hemodynamic monitoring and management, as well as nutritional, pharmacologic, and rehabilitative efforts.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 840 Plastic Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- to 4-week elective will provide an exposure to a broadly based plastic and reconstructive surgery practice including pediatric and adult craniofacial, hand, microsurgery, soft tissue tumor, trauma, aesthetic and burn surgery. The student will be provided a one-on-one experience with senior staff in both the clinic and operating room. The student will be involved with all aspects of the management of the Plastic Surgery patient: initial diagnosis, assisting with surgery, and post-operative care, fully integrating the student into the Plastic Surgery team.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.
SURG 841 Surgical Oncology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will provide an in-depth experience in the field of surgical oncology, especially upper gastrointestinal malignancies. The student will be involved in the preoperative, intraoperative, and postoperative care of the patient. The elective will provide a better understanding of the significance of multimodality treatment regimens in the therapy of cancer.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 842 Adult and Pediatric Urology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective is designed to give the student a hands-on experience in a busy urology practice. Time will be spent in the clinic and in the operating room. It will include participation in the diagnosis, evaluation, and treatment of a wide spectrum of urologic disease. The elective will provide students the experience of performing urologic history and physical exam; developing a treatment plan for patients with common urologic problems; interpreting urologic imaging studies including CT scan, ultrasound, and intraoperative fluoroscopy.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 843 Genitourinary
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 4-week elective is designed to facilitate their educational process and to stimulate further interest in urology. This elective will increase the student's familiarity and knowledge of basic urological evaluation, and indications for specialized urologic imaging. Elective will include specialist urologic imaging in both the inpatient and outpatient setting in an attempt to give insight into the indications and contraindications for instrumentation, and to initiate understanding of the normal versus the pathologic states identified at instrumentation of the genitourinary tract.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 844 Cardiothoracic Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will familiarize the student with surgically-reparable cardiac conditions, including atherosclerotic heart disease, congenital and acquired valvulopathies, congenital and acquired cardiac malformations, including atrial and ventricular septal defects, and other cardiac pathologies amenable to surgical correction. The student will also become familiar with critical care physiology, monitoring, and treatment. Additionally, the student will participate pre-op evaluations, decision-making, surgical operations, and postoperative care.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 845 Transplant Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective is designed to educate the student on the process of transplantation from the preoperative evaluation to the postoperative care; introduce the student to various aspects of transplantation to include organ preservation, procurement, immunology, immunosuppressive medications and technical complications. This elective will increase the student's familiarity and knowledge of surgical complications of the transplant recipient and their treatment and surgical alternatives for dialysis access in the renal failure patients.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 846 General Surgery; 820. Ent Surgery Elective
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will familiarize the student with general surgical procedures. Increase the student’s training in both pre and post-op care of general surgical patients and to expand on their OR and procedural experience; provide experience in emergency surgical care; perform an initial history and physical examination and plan initial workup of general surgical patients seen as an elective or emergency consultation; scrub in surgery, recognize anatomic structures, and know what procedure is indicated; become familiar with general surgical emergency situations, both inpatient and outpatient.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 847 Oral and Maxillofacial Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- to 4-week elective is an introduction to the spectrum of trauma and pathology seen in the practice of Oral and Maxillofacial Surgery. Increase the student’s familiarity and knowledge of practical head and neck anatomy and its application to diagnostic and surgical procedures; instruction on common regional blocks of the head and neck for pain management; strengthening of student’s knowledge of antibiotic therapy of maxillofacial infections. Students will participate in diagnosing and management of maxillofacial trauma and infections.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 848 Ophthalmology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will increase the student’s familiarity and knowledge of ocular history taking; general ocular examination; concepts of medical ophthalmology and systemic disease relationships; basic elements of neuro-ophthalmology and understand the fundamentals of strabismus and its diagnosis.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 849 Pediatric Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will increase the student’s familiarity and knowledge of children/neonates as surgical patients. This elective will increase the student’s familiarity and knowledge to recognize entities peculiar to pediatric surgery; manage and treat common pediatric surgical problems.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 850 Orthopedic Surgery; 835. Orthopedic Surgery/Sports Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- to 4-week elective provides an experience for medical students in orthopedic surgery and the treatment of musculoskeletal disorders. Students will participate in the ambulatory and surgical treatment of common orthopedic problems. Students will assist in surgery and the management of closed fractures and recognize and describe common fracture patterns seen in the community setting. Surgeries include but are not limited to joint replacement, arthroscopy, fractures, foot and hand reconstruction, sports medicine and spine. Students will become familiar with the techniques of orthopedic history taking and musculoskeletal examination. Students will participate in orthopedic trauma call at a level dependent upon their individual interest.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.
SURG 851 Vascular Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will further the educational experience in the clinical care of patients with vascular surgical disorders and improve the clinical acumen of students in recognizing the problems of these patients as individuals. The student will broaden his/her educational base and enable him/her to make decisions about the care of patients with vascular surgical problems. The elective will provide students with an experience which will enable those considering vascular surgery as a career choice to further evaluate this decision as to its appropriateness. Additionally, the course will provide students with broad exposure to the various surgery educational activities.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 852 Otolaryngology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. The 2- or 4-week elective is designed to provide the student with an experience with in patient and ambulatory Otolaryngology. Students will become competent with the basic equipment used in an Otolaryngology office. The student will develop competence in the performance of the Otolaryngology exam in both adults and children, and in the diagnosis and treatment of common Otolaryngologic problems and emergencies.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 853 Podiatry
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2-week elective is designed to educate the student on the medical problems of the foot. This elective will increase the student’s familiarity and knowledge to evaluate weight bearing foot x-rays; perform a thorough examination, diagnose and provide differentiate foot problems. Students will properly render, prescribe, or evaluate diabetic foot care; understand how to perform a digital block; and perform a basic biomechanical exam.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 854 Orthopedic Surgery; 835. Orthopedic Surgery/Sports Medicine
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- to 4-week elective provides an experience for medical students in orthopedic surgery and the treatment of musculoskeletal disorders. Students will participate in the ambulatory and surgical treatment of common orthopedic problems. Students will assist in surgery and the management of closed fractures and recognize and describe common fracture patterns seen in the community setting. Surgeries include but are not limited to joint replacement, arthroscopy, fractures, foot and hand reconstruction, sports medicine and spine. Students will become familiar with the techniques of orthopedic history taking and musculoskeletal examination. Students will participate in orthopedic trauma call at a level dependent upon their individual interest.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 855 Plastic Surgery
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective will provide an exposure to a broadly based plastic and reconstructive surgery practice including pediatric and adult craniofacial, hand, microsurgery, soft tissue tumor, trauma, aesthetic and burn surgery. The student will be provided a one-on-one experience with senior staff in both the clinic and operating room. The student will be involved with all aspects of the management of the Plastic Surgery patient: initial diagnosis, assisting with surgery, and post-operative care, fully integrating the student into the Plastic Surgery team.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 856 Urology
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- or 4-week elective is designed to give the student experience in the evaluation and management of common clinical problems seen in a Urology practice. The elective will familiarize the student with the techniques utilized in urologic historical and physical examination; the basic urologic evaluation and indications for specialized urologic examination; urologic diagnostic and therapeutic events to enable understanding of the indications and contraindications for diagnostic testing and surgical therapy.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 857 Ophthalmology - Retina
Credits 1.25 to 10. 1.25 to 10 Other Hours.
25 to 10. This 2- to 4-week elective is designed for students work along faculty in the diagnosis, testing and treatment of corneal, external, and vitreoretinal diseases. This elective will increase the student’s familiarity and knowledge as they learn how to use a direct-ophthalmoscope, slit lamp and other specialized instruments as well as how to perform ophthalmology examinations. They are allowed to observe surgical procedures performed both in office and in the operating room.
Prerequisite: Satisfactory completion of year three of the medical school curriculum.

SURG 858 Off Campus Student Initiated Elective
Credits 1.25 to 15. 1.25 to 15 Other Hours.
Formally described elective courses at another medical school or off-campus opportunities that are not formally approved electives. The College of Medicine requires that each of these electives be approved prior to the rotation.

SURG 999 On Campus Student Initiated Elective
Credits 1.25 to 12. 1.25 to 12 Other Hours.
25 to 12. This is an on-campus opportunity in the department of Surgery in the College of Medicine that is not defined herein. Experiences may include clinical research, basic science research, library research, other basic science activities, and other clinical activities. Students interested in developing an elective of this type should contact the head of the appropriate department for additional details.

SYEN - Systems Engineering

SYEN 640 Systems Thinking and Analysis
Credits 3. 3 Lecture Hours.
Introduction to the systems thinking process and the fundamental considerations associated with the engineering of large-scale systems or system of systems.
Prerequisites: Graduate classification; MATH 304 or approval of instructor.
SYEN 641 Systems Engineering Methods and Frameworks  
**Credits 3. 3 Lecture Hours.**  
Concepts, methodologies, methods and tools for discovery, definition, analysis, design, creation and sustainment of systems involving information, physical and human elements; architecture modeling methods include IDEF/UPDM; systems engineering frameworks include DoDAF/ MoDAF and Zachman; analysis tools include executable architectures to assess consistency, interoperability and performance.  
**Prerequisite:** MATH 304 or approval of instructor.

SYEN 642 Systems Performance Modeling  
**Credits 3. 3 Lecture Hours.**  
Development and formulation of models to evaluate and improve system performance; Survey of Math Programming; decision trees; simulation models; and economic evaluation of systems; examples and applications of linear programming, nonlinear programming, integer programming, systems simulation, multi-objective formulations, solution interpretation and sensitivity analysis.

**Prerequisite:** Graduate classification.

SYEN 643 Theory of Socio-Technical Systems  
**Credits 3. 3 Lecture Hours.**  
Philosophy, origins, theory, principles and methodologies of complex socio-technical systems; emphasis on holistic thinking for systems engineering; systems approach; cybernetics; complexity science; physical and biological systems; social, economic and political systems; network representations of systems; real-world decision-making; system dynamics; emergent behavior; systems architecture; engineered systems today and in the future.  
**Prerequisite:** Graduate classification.

SYEN 644 Decision Making Under Uncertainty in Systems Engineering  
**Credits 3. 3 Lecture Hours.**  
Formulating models and making engineering decisions about systems and systems of systems operating under uncertainty; review of probabilistic modeling and statistical analysis; risk analysis and assessment for complex stochastic systems; mathematical decision theory, heuristic decision methods, value-driven decision making, sequential decision problems, real options theory and deferred decision making.  
**Prerequisite:** Graduate classification.

SYEN 645 Management of Engineering Systems  
**Credits 3. 3 Lecture Hours.**  
Theory and practice of leadership and management in engineering organizations; focus on both “hard” skills (systems engineering process, project management, planning, forecasting, financial analysis) and “soft” skills (leadership styles, motivation, teamwork, managing creative people, navigating informal networks); science and technology policy; economic implications of engineering and technology.  
**Prerequisite:** Graduate classification.

**TEED - Teacher Education**

TEED 602 Contemporary Perspectives on Education  
**Credits 3. 2 Lecture Hours. 3 Lab Hours.**  
Current issues in American public education concerning sociological, curricular, political and legal perspectives.  
**Prerequisite:** Admission to Post-Baccalaureate Teacher Certification Program.

TEED 649 Instructional Strategies in Academic Specialties in Middle and Senior HS: Principles & Applications  
**Credits 3. 2 Lecture Hours. 3 Lab Hours.**  
Instructional Strategies in Academic Specialties in Middle and Senior High School: Principles and Applications. Relation of information processing models to theory and practice of planning, delivering and evaluating instruction in public school settings. Subject matter and generic competencies required for teacher certification in Texas.  
**Prerequisites:** TEED 602 and TEED 649.

**URSC - Urban Science**

URSC 631 Foundations of Planning Thought  
**Credits 3. 3 Lecture Hours.**  
Examines a series of foundational issues in planning and design theory; includes the definition of planning problems, rationality, modernism and post modernism, the validation of value judgments, relations with future generations, multiculturalism and gender justice in liberal democratic societies.  
**Prerequisite:** Doctoral classification or approval of instructor.

URSC 632 Structure and Functions of Cities and Regions  
**Credits 3. 3 Lecture Hours.**  
Surveys the design, financial, natural, physical, political and social parameters that influence the development of cities and regions, including presentation of theories about cities and regions, organization of, planning to shape them, and public and private sector plans for structure and function of cities and regions.  
**Prerequisite:** Doctoral classification or approval of instructor.

URSC 641 Analytic Methods in Landscape and Urban Research I  
**Credits 3. 3 Lecture Hours.**  
Explicitly address linking theory, measurement, data set development and data analysis issues critical for conducting research in urban and regional planning and landscape architecture.  
**Prerequisites:** Doctoral classification or approval of instructor.

URSC 642 Analytic Methods in Landscape and Urban Research II  
**Credits 3. 3 Lecture Hours.**  
Provides a survey of hands on experiences with advanced techniques and procedures related to conceptual measurement and operational issues, data set development and manipulation and data analysis issues critical for conducting academic research.  
**Prerequisites:** STAT 651, CARC 601, URSC 641, or approval of instructor.

**URSC 661 Seminar**  
**Credit 1. 1 Lecture Hour.**  
Oral communication of current research and selected topics in urban and regional science to include lectures, presentations, interviews and discussions.  
**Prerequisite:** Approval of instructor.
URSC 682 Seminar
Credit 1. 1 Lecture Hour.
Written communication of current research and selected topics in urban and regional science to include posters, articles, reports and books.
Prerequisite: Approval of instructor.

URSC 685 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
Directed study of selected problems within urban and regional science.
Prerequisite: Approval of instructor.

URSC 689 Special Topic in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in and identified area of urban and regional science. May be repeated for credit.
Prerequisite: Approval of instructor.

URSC 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for dissertation.
Prerequisite: Approval of instructor.

VIBS - Vet Integrative Biosci.

VIBS 601 Anatomy
Credits 4. 2 Lecture Hours. 6 Lab Hours.
Topographical dissection of one of the following domestic animals: horse, ox, dog or cat. May be taken more than once but not to exceed 12 hours of credit toward a graduate degree.
Prerequisite: VIBS 912 or 305 or equivalent.

VIBS 602 Histology
Credits 4. 2 Lecture Hours. 6 Lab Hours.
Molecular phenomena placed in context with tissues, organs and organ systems; cell and tissue structures visualized by light microscopy and electron micrographs for functional relationships; clinical correlations reveal relevance of histology in specific disease states; conceptual thinking exercises facilitate problem-solving skills.
Prerequisite: Graduate classification.

VIBS 603/NRSC 603 Neuroanatomy
Credits 4. 2 Lecture Hours. 6 Lab Hours.
Gross, developmental and microscopic anatomy of nervous system of selected laboratory and domestic animals.
Prerequisite: Approval of instructor.
Cross Listing: NRSC 603/VIBS 603.

VIBS 604/NRSC 604 Biomedical Neuroendocrinology and Endocrine Disorders
Credits 3. 3 Lecture Hours.
Prerequisite: Approval of instructor.
Cross Listing: NRSC 604/VIBS 604.

VIBS 605 Chemical Hazard Assessment
Credits 3. 3 Lecture Hours.
Chemical and biological methods for testing hazardous chemicals and complex mixtures; chemical analysis; microbial bioassays; developmental toxicity; enzyme induction; mammalian cell culture.
Prerequisite: Graduate classification.

VIBS 606/NRSC 605 Neuroanatomical Systems
Credits 3. 3 Lecture Hours.
Emphasis on major neural systems that govern identifiable physiological functions, behavior and neurodegenerative disease; whole-brain anatomy is approached from a "systems" perspective, wherein components of defined functional systems are described in terms of their location, inputs and outputs, and physiological/behavioral significance in health and disease.
Prerequisite: Approval of instructor.
Cross Listing: NRSC 605/VIBS 606.

VIBS 607 Applied Epidemiology
Credits 4. 3 Lecture Hours. 3 Lab Hours.
An introductory course of the application of epidemiological concepts to the study of disease occurrence in populations of lower animals and man. The purpose of epidemiology is to identify the host, agent and environmental determinants and dynamics of disease spread that provide the basis for successful preventive medicine and public health programs.

VIBS 608 Epidemiology Methods I
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Epidemiology concepts and methods used in the investigation of determinants of health or disease in populations; stressing basic methods for experimental design, conduct and analysis of both observational and experimental studies.
Prerequisite: STAT 651 or equivalent.

VIBS 609 Anatomy of Reproductive Systems
Credits 4. 2 Lecture Hours. 6 Lab Hours.
Gross and microscopic anatomy of the reproductive systems of domestic animals.
Prerequisite: VIBS 601 or VIBS 602 or VIBS 910 or equivalent. (Offered in alternate years.)

VIBS 610 Epidemiologic Methods II and Data Analysis
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Principles and methods for the analysis of data from epidemiologic studies including the purpose of data analysis and role of statistics, sampling distributions, probability distributions, analysis of crude, stratified and matched data, and the use of linear and logistic regression methods.
Prerequisites: VIBS 608 and STAT 651 or approval of instructor.

VIBS 611 Tumor Cell Biology and Carcinogenesis
Credits 3. 3 Lecture Hours.
Basic principles of tumor biology; role of gene-environment interactions; molecular mechanisms regulating cancer initiation and progression; therapeutic treatment of cancer.
Prerequisites: BIMS 320/GENE 320 or equivalent; graduate classification.

VIBS 612 Mammalian Embryology
Credits 3. 3 Lecture Hours.
Embryology of domestic mammals; gametogenesis, fertilization, cell proliferation and differentiation, and organogenesis; selected commonly occurring congenital defects of domestic animals used to emphasize embryologic sequences and processes.
Prerequisite: Approval of instructor.
VIBS 613 Evolutionary Bioinformatics  
**Credits 3. 2 Lecture Hours. 2 Lab Hours.**  
Principles and concepts in molecular evolution, population genetics, and evolutionary genomics; applications of quantitative approaches (computation, statistics, and mathematics) in analyzing large and complex biological data sets; algorithm design and development of scientific software using high-level high-performance computer languages; emerging techniques for integrative data analysis, and the assumptions, advantages, and limitations of these techniques.  
**Prerequisites:** BIOL 451 or GENE 320/BIMS 320/BIMS 320/GENE 320 or equivalent; or approval of instructor.

VIBS 615 Food Hygiene  
**Credits 4. 3 Lecture Hours. 4 Lab Hours.**  
Clinical description, pathogenesis, diagnosis, source, epidemiology and prevention or control of food borne diseases caused by biological, chemical and natural hazards.  
**Prerequisite:** Graduate classification.

VIBS 616 Advanced Developmental Neurotoxicology  
**Credits 3. 3 Lecture Hours.**  
Study of mechanisms of toxicity of substances potentially devastating to the developing brain and spinal cord including lead, mercury and other heavy metals, alcohol, nicotine (smoking), pesticides, flame retardants, and others.  
**Prerequisite:** Approval of instructor.

VIBS 617 Cell Biology  
**Credits 1 to 5. 1 to 5 Lecture Hours.**  
Series of five 1-hour credit modules focusing on selected aspects of structure, function, and signal transduction in eukaryotic cells through critical analysis of recent literature in the field. Each module listed as separate course section; students may enroll in up to five 1-hour module sections per semester.  
**Prerequisite:** Approval of instructor.

VIBS 619 Food Toxicology II  
**Credits 3. 3 Lecture Hours.**  
Public health implications of toxic factors in foods, their source, nature, occurrence and distributions; emphasis on mycotoxins including their isolation, detection, identification and toxicology; study of state-of-the-art food safety research techniques.  
**Prerequisite:** Graduate classification.

VIBS 620/GENE 620 Cytogenetics  
**Credits 3. 3 Lecture Hours.**  
Examination and analysis of variation in chromosome structure, behavior and number; developmental and evolutionary effects of this variation.  
**Prerequisite:** GENE 603.  
**Cross Listing:** GENE 620.

VIBS 621/NRSC 621 Fundamental Neuroanatomy  
**Credits 4. 4 Lecture Hours.**  
A comprehensive review of the neuroanatomical determinants of function; rigorous neuroanatomical foundation relevant for research investigating changes in neural pathways and/or networks involved in sensory and motor functions, learning and memory, perception, selective attention, as well as recovery of function following brain damage.  
**Cross Listing:** NRSC 621/VIBS 621.

VIBS 622 Endocrine Toxicology  
**Credits 4. 4 Lecture Hours.**  
Impacts of endocrine toxicology on endocrine system; prevalence, environmental and occupational use and disposal of environmental endocrine disrupting chemicals (EDCs); structure, toxicokinetics and mechanism of action of EDCs; effects of EDCs on the development and function, disorders and diseases of the endocrine and reproductive organs.  
**Prerequisite:** Graduate classification; approval of instructor.

VIBS 624/VTPP 624 Endocrinology  
**Credits 4. 3 Lecture Hours. 3 Lab Hours.**  
Neuroendocrine control of puberty menstruation, ovulation, pregnancy, labor, lactation, female reproductive cycles, male reproductive functions, thyroid and parathyroid, adrenal and kidney, diabetes, obesity, sleep, memory, learning and aging, and their endocrine disorders; overview on biosynthesis, transport and signaling of peptide and neuropeptide hormones, steroids and prostaglandins.  
**Prerequisite:** Graduate classification.  
**Cross Listing:** VTPP 624/VIBS 624.

VIBS 627 Optical Microscopy and Live Cell Imaging  
**Credits 3. 2 Lecture Hours. 3 Lab Hours.**  
Principles and practice of optical microscopy for life sciences; applications with fixed samples and live cells using digital microscopy, confocal and multiphoton microscopy, TIRF and laser capture microscopy equipment; applications with fluorescence probes of cellular function.  
**Prerequisite:** Approval of instructor.

VIBS 633 Animal Diseases in Comparative Medicine  
**Credits 3. 3 Lecture Hours.**  
Study of major zoonotic diseases, including frequency of occurrence, clinical signs, diagnosis, epidemiology, bioterrorism concerns and the prevention or control in animals and humans.  
**Prerequisite:** Graduate classification.

VIBS 640/NRSC 640 Neurobiology  
**Credits 1 to 5. 1 to 5 Lecture Hours.**  
Biology of the mammalian central nervous system with emphasis on cellular and molecular interactions; contemporary research topics in areas such as neuron-glia interactions, neuroimmunology, neuroendocrinology, developmental neurobiology and neurogenetics; extensive readings from primary literature.  
**Prerequisites:** Undergraduate or graduate cell biology, genetics and biochemistry or approval of instructor.  
**Cross Listing:** NRSC 640/VIBS 640.

VIBS 650 Education in a Veterinary Medical and Biomedical Environment  
**Credits 1 to 3. 1 to 3 Lecture Hours.**  
Philosophical, stylistic and methodological consideration for designing, planning implementing and evaluating effective veterinary medical and biomedical teaching and learning. Orientation for graduate school.  
**Prerequisite:** Graduate classification.

VIBS 655 Methods of Specialized Journalism  
**Credits 3. 3 Lecture Hours.**  
Writing and placement of magazine and journal articles in specialized areas of media content such as agriculture, ecology, science, business, education, natural resources; individual projects directed to student's field of interest.
VIBS 657 Issues in Science and Technology Journalism  
Credits 3. 3 Lecture Hours.  
Current issues, fundamental concepts in science and technology journalism, communication theory, science and journalism components, philosophy and literature of the field.

VIBS 658 Research Methods in Science and Technology Journalism  
Credits 3. 3 Lecture Hours.  
Research methods including theory, hypothesis formulation, design, data collection, data analysis, measurement and report writing. Qualitative and quantitative methods. Research topics.

VIBS 660 Reporting Science and Technology  
Credits 3. 3 Lecture Hours.  
Gathering, writing and editing complex information, translation techniques, interpretation and analysis, literary and organizational devices and measurement of readability.

VIBS 663 Biomedical Reporting  
Credits 3. 3 Lecture Hours.  
Sources of biomedical information, specialized information-gathering skills, key biomedical vocabulary/concepts, audiences, outlets, translation/interpretation, research, ethical issues.

VIBS 664 Risk and Crisis Reporting  
Credits 3. 3 Lecture Hours.  
Assessment and analysis of environmental and health risk, analytical procedures, interpretation of risk factors, reporting science crisis events.

VIBS 670 Basic Environmental Toxicology  
Credits 3. 3 Lecture Hours.  
Introduction to general principles of toxicology; test methods, target organs, toxicity of major classes of toxins/toxicants, and risk assessment for engineers and other non-toxicologists; risk assessment methodology.  
Prerequisite: VIBS 602 or approval of instructor.

VIBS 681 Seminar  
Credit 1. 1 Lecture Hour.  
Review and discussion of current scientific work in one of the department's areas of specialization (anatomy, cellular and molecular biology, epidemiology, food safety, genetics, informatics, neuroscience, public health concepts, reproduction/developmental biology, toxicology, zoonoses).

VIBS 684 Professional Internship  
Credits 1 to 4. 1 to 4 Other Hours.  
A directed internship in an organization to provide students with on-the-job training with professionals in settings appropriate to the student's professional objectives.  
Prerequisite: Approval by committee chair.

VIBS 685 Directed Studies  
Credits 1 to 4. 1 to 4 Other Hours.  
Research problem in one of the department's areas of specialization (anatomy, cellular and molecular biology, epidemiology, food safety, genetics, informatics, neuroscience, public health concepts, reproduction/developmental biology, toxicology, zoonoses, science and technology journalism).

VIBS 688 Epidemiological Modeling of Infectious Diseases  
Credits 3. 2 Lecture Hours. 2 Lab Hours.  
Concepts of mathematical modeling of infectious diseases; steps and methods for the development and analysis of models.  
Prerequisite: Graduate classification.

VIBS 689 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.  
Selected topics in one of the department's areas of specialization (anatomy, cellular and molecular biology, epidemiology, food safety, genetics, informatics, neuroscience, public health concepts, reproduction/developmental biology, toxicology, zoonoses, science and technology journalism).

VIBS 690 Theory of Research  
Credits 3. 3 Lecture Hours.  
Theory and design of research related to current biomedical problems especially those involving study of animal disease; philosophical perspectives underlying historical advances in research pertaining to the study, prevention and treatment of disease.  
Prerequisite: Graduate classification.  
Cross Listing: VTPP 690 and VPAT 690.

VIBS 691 Research  
Credits 1 to 23. 1 to 23 Other Hours.  
Research reported by writing of thesis or dissertation as partial requirement for MS or PhD degree.  
Prerequisite: Approval of department head.

VIBS 910 Gross Anatomy I  
Credits 4. 2 Lecture Hours. 6 Lab Hours.  
Topographical dissection of the dog and comparative aspects of the domestic cat.  
Prerequisite: Enrollment in first year of professional curriculum.

VIBS 911 Microscopic Anatomy I  
Credits 4. 2 Lecture Hours. 6 Lab Hours.  
Microscopic study of cells, tissues and organ systems of domestic animals.  
Prerequisite: Enrollment in first year of professional curriculum.

VIBS 912 Gross Anatomy II  
Credits 4. 1 Lecture Hour. 8 Lab Hours.  
Comparative anatomy of farm animals; topographic dissection of common farm species.  
Prerequisite: Enrollment in first year of professional curriculum.

VIBS 913 Microscopic Anatomy II  
Credits 4. 2 Lecture Hours. 6 Lab Hours.  
Developmental anatomy of domestic animals with special emphasis on structural congenital defects; functional neuroanatomy and clinical neurology of domestic animals; essential clinical skills for the theory and practice of veterinary neurology.  
Prerequisite: Enrollment in first year of professional curriculum.

VIBS 926 Introduction to Public Health Concepts  
Credit 1. 1 Lecture Hour.  
Basic concepts and issues of public health as they relate to the veterinary medical profession.  
Prerequisite: Enrollment in first year of the professional curriculum.

VIBS 930 Public Health  
Credits 4. 4 Lecture Hours.  
Principles and applications of epidemiology in veterinary medicine and the literature; history, epidemiology, symptoms, prevention and control of diseases transmitted between animals and humans; emphasis on emerging zoonotic diseases presenting occupational hazards for veterinary medicine; safety of foods of animal origin including foodborne illnesses.  
Prerequisite: Enrollment in third year of professional curriculum or enrollment in graduate studies with approval of instructor.
VIBS 948 Didactic Electives in Veterinary Anatomy  
Credits 1 to 12. 1 to 12 Lecture Hours.  
E elective course in veterinary anatomy (with emphasis on neuroscience, cell biology, genetics, reproductive biology, development biological, or marine mammal anatomy) for professional students who wish to supplement required curriculum. May be repeated for credit.  
Prerequisite: Enrollment in third year of professional curriculum.  
VIBS 985 Directed Studies  
Credits 1 to 4. 1 to 4 Other Hours.  
Directed individual study of a selected problem in veterinary anatomy (with emphasis on neuroscience, cell biology, genetics, reproductive biology, development biological, or marine mammal anatomy) or directed individual study of advanced topics in veterinary public health or epidemiology (with emphasis on food safety, toxicology, informatics, or zoonoses). May be repeated for credit.  
Prerequisite: Matriculation in veterinary professional curriculum.  
VIBS 989 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours.  
Selected topics in an identified area of veterinary anatomy (with emphasis on neuroscience, cell biology, genetics, reproductive biology, development biological or marine mammal anatomy) or selected topics in veterinary public health, epidemiology, zoonoses, food hygiene and food toxicology.  
Prerequisite: Matriculation in veterinary professional curriculum.  

VIZA - Visualization  

VIZA 611 Concepts of Visual Communications I  
Credits 4. 2 Lecture Hours. 4 Lab Hours.  
Theory and practice of visual communication using a variety of media to explore perception, form-making, color, and historic and personal sources of creativity.  
Prerequisite: Graduate classification in visualization or approval of instructor.  
VIZA 612 Concepts of Visual Communications II  
Credits 4. 2 Lecture Hours. 4 Lab Hours.  
Exploration of perception, vision and self-expression for communication through visual images; image-making processes include conventional and digital media.  
Prerequisite: Approval of instructor.  
VIZA 613 3-D Modeling and Animation  
Credits 4. 3 Lecture Hours. 2 Lab Hours.  
Principles of 3-D computer animation with an emphasis in aesthetics and techniques for 3-D modeling, color, texture, lighting, motion control and rendering.  
Prerequisite: Graduate classification in visualization or approval of instructor.  
VIZA 614 Form/Installation/Environment  
Credits 3. 2 Lecture Hours. 3 Lab Hours.  
Aesthetic and functional concerns involving public spaces; interdisciplinary investigation of audible, visual and form potential of environmental space utilizing models and electronic imaging technology; ethical responsibilities regarding the environment and its use.  
Prerequisite: Graduate classification or approval of instructor.  

VIZA 615 Computer Animation  
Credits 4. 3 Lecture Hours. 2 Lab Hours.  
Intermediate level computer animation--focusing on production of three dimensional computer generated animation which may or may not integrate video and photographic elements.  
Prerequisite: VIZA 613 or approval of instructor.  
VIZA 616 Rendering and Shading  
Credits 3. 2 Lecture Hours. 2 Lab Hours.  
Exploration of advanced rendering and shading techniques for the attainment of a desired visual effect; topics may include shading languages, attainment of visual realism, integration of rendering and modeling tools, and non-photorealistic rendering.  
Prerequisite: VIZA 613 or approval of instructor.  
VIZA 617 Advanced Animation  
Credits 4. 2 Lecture Hours. 4 Lab Hours.  
Development of advanced three-dimensional computer animation with emphasis on successful storytelling and visual communication; may include story development, expressive character design, motivation, acting, speech animation, choreography, stage lighting, storyboards, soundtracks, story reels, production efficiency, and successive refinement.  
May be taken twice.  
Prerequisite: VIZA 615 or approval of instructor.  
VIZA 618 Facial Modeling and Animation  
Credits 3. 2 Lecture Hours. 2 Lab Hours.  
Design and analysis of articulated 3D models for creating facial animation; includes designing expressive 3D faces, exaggerations, facial expressions and facial animation techniques.  
Prerequisite: VIZA 613 or approval of instructor.  
VIZA 622 Design Communication I  
Credits 4. 2 Lecture Hours. 4 Lab Hours.  
Theory and practice of visual communication employing a variety of digital and conventional media; emphasis on creating effective, self-expressive images employing the combined use of a variety of media.  
Prerequisite: VIZA 612, graduate classification or approval of instructor.  
VIZA 623 Design Communication II  
Credits 3. 1 Lecture Hour. 4 Lab Hours.  
Development of concepts and forms in visual communications; organization of complex problems in production; synthesis of skills, information tools and methodology.  
Prerequisite: VIZA 622 or approval of instructor.  
VIZA 625 Multi-Media Web Design  
Credits 3. 2 Lecture Hours. 2 Lab Hours.  
Examination of aesthetic, narrative, technical strategies; multi-media content on the web; methods of integrating imagery, animation, sound; non-linear multi-media narration. Application of multi-media techniques for navigation, interaction, animation, vector drawing, video, audio.  
Prerequisite: Graduate classification in visualization or approval of instructor.  
VIZA 626 Generative Art and Design  
Credits 3. 1 Lecture Hour. 4 Lab Hours.  
Theory and creative application of generative systems in studio art practice; chance based systems include random numbers and noise; biologically inspired systems include genetic algorithms, L-systems, and artificial life; systems drawn from complexity theory include, cellular automata, fractals, finite state machines, catastrophe theory, reaction diffusion systems, and chaos. May be taken 2 times for credit.  
Prerequisite: Graduate classification in visualization or approval of instructor.
VIZA 627 Design Communication III
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Advanced methods in video, photography and/or animation production; application of image strategies used in contemporary media. May be taken twice.
Prerequisite: VIZA 622 or VIZA 643 or approval of instructor.

VIZA 629 Digital Media: Inspiration and Process
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Exploration of artwork and literature that has informed contemporary creativity provides a broad basis for discovery through reading, writing, studio projects; demonstrate a knowledge of creative strategies including, but not limited to mapping, database, allegory, sampling, and generative systems.
Prerequisite: Graduate classification in visualization or approval of instructor.

VIZA 630 Contemporary Art Studio/Seminar I
Credits 4. 2 Lecture Hours. 4 Lab Hours.
Critical, theoretical and historical readings on art and artists prompt visual and textual responses; development of personal ideas, methods, and processes; research, writing, discussion and preliminary studies contribute to a final, in-depth body of work situated within the context of contemporary art.
Prerequisites: MFA or MS in Visualization or approval of instructor; graduate classification.

VIZA 631 Contemporary Art Studio/Seminar II
Credits 4. 2 Lecture Hours. 4 Lab Hours.
Theoretical and critical tools for contemporary digital art practice and technology-based cultural production; project proposal and development; exhibition planning, site selection and installation.
Prerequisite: MFA or MS in Visualization and VIZA 630 or approval of instructor; graduate classification.

VIZA 641 Visual Storytelling
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Exploration of visual storytelling techniques for the attainment of desired storytelling effects; includes character development, using shots, camera, lights, props and background elements, master plots, one and multi-panel cartoons, comics, storyboards, animations and storyreels.
Prerequisite: Graduate classification or approval of instructor.

VIZA 643 Time Based Media I
Credits 4. 2 Lecture Hours. 4 Lab Hours.
Visual language and cinematic structure explored through time based projects; historical, critical, and practical exploration of the interaction of camera, lighting, sound, editing, special effects, and mise en scene.
Prerequisite: VIZA 612 or approval of instructor.

VIZA 644 Time Based Media II
Credits 3. 1 Lecture Hour. 4 Lab Hours.
Advanced theory and production of art forms with motion, tempo, sequencing and duration as integral components; projects may include in-depth creation using a single medium or may emphasize a combination of media such as video, audio, networked communication, animation, performance or installation. May be taken twice.
Prerequisite: VIZA 643 or approval of instructor.

VIZA 647 Color Photography
Credits 3. 1 Lecture Hour. 4 Lab Hours.
Theory and practice of still color photography; appropriate uses of color processes related to digital photography and other graphic media; exploration of vision through the photographic image as a medium of self expression. May be taken two times for credit.
Prerequisite: Graduate classification or approval of instructor.

VIZA 648/CSCE 647 The Digital Image
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Tools and techniques for generation, handling and analysis of two dimensional digital images; image representation and storage; display, media conversion, painting and drawing; warping; color space operations, enhancement, filtering and manipulation.
Prerequisite: Graduate classification or approval of instructor.

VIZA 657/CSCE 648 Computer Aided Sculpting
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Theory and experimental techniques for computer graphics, animation, video, and other forms of electronic visualization including innovative hardware and software systems, artificial life, virtual reality, volume methods and hypermedia. May be taken twice.
Prerequisite: VIZA 654/CSCE 646 or VIZA 656/CSCE 647 or approval of instructor.

VIZA 658 Experimental Visual Techniques
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Theory and experimental techniques for computer graphics, animation, video, and other forms of electronic visualization including innovative hardware and software systems, artificial life, virtual reality, volume methods and hypermedia. May be taken twice.
Prerequisite: VIZA 654/CSCE 646 or VIZA 656/CSCE 647 or approval of instructor.

VIZA 662 Physical Computing for Art and Design
Credits 3. 1 Lecture Hour. 4 Lab Hours.
Theory and creative application of digital technology in studio art and design practice to create dynamic environments, interactive objects, and tangible interfaces in the physical world; technologies involved include microcontrollers, basic electronics, sensors, actuators, motors, wireless and internet data communication, light, sound, and wearable devices. May be taken 2 times for credit.
Prerequisites: Graduate classification in Visualization or approval of instructor.

VIZA 665 Digital Compositing
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Principles of Digital Compositing--Image based lighting and modeling, camera calibration, shape reconstruction, reconstruction of transparency and specularity and digital compositing of computer generated animations with video images.
Prerequisite: VIZA 613 or approval of instructor.
VIZA 670/CSCE 620 Computational Geometry  
Credits 3. 3 Lecture Hours.  
Design and analysis of algorithms for solving geometrical problems; includes convex hull problems, Voronoi diagrams, range searching and proximity problems.  
Prerequisite: CSCE 311 or approval of instructor.  
Cross Listing: CSCE 620/VIZA 670.

VIZA 672/CSCE 641 Computer Graphics  
Credits 3. 3 Lecture Hours.  
Representation of 3-dimensional objects, including polyhedral objects, curved surfaces, volumetric representations and CSG models' techniques for hidden surface/edge removal and volume rendering; illumination and shading; antialiasing; ray tracing; radiosity; animation; practical experience with state-of-the-art graphics hardware and software.  
Prerequisite: CSCE 441 or approval of instructor.  
Cross Listing: CSCE 641/VIZA 672.

VIZA 673/CSCE 643 Robotics Programming  
Credits 3. 3 Lecture Hours.  
Manipulator dynamics, position control, hybrid position/force control, and impedance controls; advanced topics in manipulator motion planning, assembly planning and grasp planning; cell decomposition; retraction; back projection; hypothesize-and-test; and potential field methods; subassembly stability; task-level and fine motion planning; grasp stability; grasp synthesis; dexterous manipulation.  
Prerequisite: CSCE 452 or approval of instructor.  
Cross Listing: CSCE 643.

VIZA 675/CSCE 645 Geometric Modeling  
Credits 3. 3 Lecture Hours.  
Geometric and solid modeling concepts. Freeform curves and surfaces (splines and Bezier) with their relational, intersectional and global mathematic properties; parametric representation of solids, topology of closed curved surfaces, boundary concepts and Boolean/Euler operators; construction and display of curves and surfaces, and solid models.  
Prerequisites: CSCE 441 and CSCE 442 or equivalent.  
Cross Listing: CSCE 645/VIZA 675.

VIZA 679 Advanced Topics in Physically Based Modeling  
Credits 3. 2 Lecture Hours. 2 Lab Hours.  
Current research and advanced methods in choreographing motion for animation using a physics-based approach; mainstream research literature in animation; theoretical and methodological topics addressed, through both study and implementation. May be taken twice.  
Prerequisite: Graduate classification or approval of instructor.

VIZA 680 Professional Practice in Visualization  
Credits 4. 2 Lecture Hours. 4 Lab Hours.  
Preparation of a portfolio, creating an internet presence, use of social media, interviews, negotiation, business practices, and fundamentals of teaching. Professional practice in pursuit of career paths for the Master of Fine Arts in Visualization.  
Prerequisite: Graduate classification.

VIZA 684 Professional Internship  
Credits 3. 3 Lecture Hours.  
Practical experience in a studio/museum/gallery setting working with allied professionals; minimum fifteen week internship with a minimum of 600 hours continuous employment; departmental pre-approval through the departmental internship coordinator required; post approval evaluation conducted following the internship. May not be repeated for credit.

VIZA 685 Directed Studies  
Credits 1 to 6. 1 to 6 Other Hours.  
Individual problems involving application of theory and practice in Visualization. May be repeated for credit.  
Prerequisites: Approval of instructor and department head.

VIZA 689 Special Topics in...  
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.  
Selected topics in an identified field of design communication and/or electronic media. May be repeated for credit.

VIZA 691 Research  
Credits 1 to 23. 1 to 23 Other Hours.  
Research for preparation of thesis.  
Prerequisite: Approval of instructor.

VIZA 693 Professional Study  
Credits 1 to 9. 1 to 9 Other Hours.  
Research and writing combined with studio projects; prepare and present a public exhibition of a final body of work; related paper submitted to a scholarly journal as approved by the committee Chair. May be repeated for credit.  
Prerequisites: MFA in Visualization; graduate classification.

VLCS Vet Large Animal Clin. Sc

VLCS 622 Equine Epidemiology and Infectious Diseases  
Credits 3. 3 Lecture Hours.  
Principles and methods of epidemiology applied to equine health and prevention and control of selected equine infectious diseases.  
Prerequisites: Enrollment in equine certificate and graduate classification, or approval of instructor.

VLCS 681 Seminar  
Credit 1. 1 Lecture Hour.  
Oral communication of current research and selected topics in large animal veterinary medicine and clinical research methodology to include lectures, presentations, interviews, and discussions.  
Prerequisite: Approval of instructor.

VLCS 685 Directed Studies  
Credits 1 to 8. 1 to 8 Other Hours.  
Original investigations of problems in the field of large animal surgery, therapeutics, preventive veterinary medicine or radiology. May be repeated for credit.  
Prerequisites: Approval of instructor.

VLCS 691 Research  
Credits 1 to 23. 1 to 23 Other Hours.  
Research for thesis.

VLCS 930 Advanced Equine Medicine and Surgery  
Credits 3. 3 Lecture Hours.  
Advanced diagnostic techniques and management strategies for species specific disorders of horses.  
Prerequisite: Enrollment in the third year of professional curriculum.

VLCS 931 Advanced Ruminant Medicine and Surgery  
Credits 2. 2 Lecture Hours.  
Advanced diagnostic techniques and management strategies for species specific disorders of ruminant species.  
Prerequisite: Enrollment in the third year of professional curriculum.
VLCS 932 Advanced Ruminant Herd Health and Production
Credits 2. 2 Lecture Hours.
Principles needed to provide veterinary services to populations of ruminants including preventive health programs, record keeping and approaches to controlling herd/flock disease outbreak or production shortfalls.
Prerequisite: Third year veterinary student.

VLCS 940 Large Animal Clinics I
Credits 2. 35 Lab Hours.
Student participation with clinical cases in the large animal medicine services of the Veterinary Teaching Hospital. Must be taken two times.
Prerequisite: Fourth year classification in veterinary medicine or approval of department head.

VLCS 941 Large Animal Clinics II
Credits 2. 35 Lab Hours.
Student participation with clinical cases in the large animal surgery services of the Veterinary Teaching Hospital. Must be taken two times.
Prerequisite: Fourth year classification.

VLCS 945 Advanced Large Animal Clinical Elective
Credits 2. 35 Lab Hours.
Student participation with clinical cases for advanced study in selected services from the large animal medicine, surgery, theriogenology and field services of the Veterinary Teaching Hospital. May be taken 12 times.
Prerequisite: Fourth year classification.

VLCS 948 Large Animal Medicine and Surgery Elective
Credits 1 to 12. 1 to 12 Lecture Hours.
In-depth study of selected disease processes in the various disciplines of large animal medicine and surgery will be conducted emphasizing management, diagnostics and medical or surgical treatment. May be repeated for credit.
Prerequisite: Third year classification in veterinary medicine or approval of department head.

VLCS 953 Large Animal Clinical Skills
Credit 1. 4 Lab Hours.
Acquisition of basic technical skills useful in the diagnosis and treatment of large animals in general veterinary practice. Modular one month course.
Prerequisite: Third year classification in veterinary medicine in good standing.

VLCS 954 Large Animal Medicine
Credits 6. 5 Lecture Hours. 4 Lab Hours.
Medical disease of large animals; pathophysiology, diagnosis and therapy of diseases in large animals.
Prerequisite: Third year classification in veterinary medicine in good standing.

VLCS 985 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed individual study of a selected problem in large animal medicine, surgery or radiology. May be repeated for credit.
Prerequisites: Enrollment in veterinary medicine and approval of the department head.

VMID 686 Scientific Ethics
Credit 1. 1 Lecture Hour.
Ethical issues of research and methods for resolution of such issues; overview of ethical issues encountered by scientists in the conduct and dissemination of their research, in their pursuit of resources, in their interactions with the press and the broader public and resulting from the extension and technological application of their findings.
Prerequisite: Graduate classification.

VMID 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of veterinary medicine. May be repeated for credit.
Prerequisite: Approval of instructor.

VMID 912 Clinical Correlates I
Credit 1. 2 Lab Hours.
Introduction of clinical terminology and techniques needed to accomplish thorough history taking and physical exam; the problem-oriented medical record will be introduced and then used in system-based reviews; familiarization with clinical techniques appropriate for body system evaluation.
Prerequisite: Enrollment in the first year of professional curriculum.

VMID 913 Clinical Correlates II
Credit 1. 2 Lab Hours.
Continuation of Clinical Correlates I. Body system review will continue. Clinical exam techniques appropriate for each system will be emphasized and findings discussed in the context of the problem-oriented medical record.
Prerequisite: Enrollment in the first year of professional curriculum.

VMID 915 Veterinary Behavioral Medicine
Credit 1. 1 Lecture Hour.
Diverse concepts relative to the normal behaviors of domestic animals; abnormal behaviors; and how the knowledge of both can be useful to clients and the staff at veterinary hospitals.

VMID 916 Veterinary Behavioral Medicine
Credit 2. 3 Lecture Hours. 2 Lab Hours.
Continuation of Clinical Correlates III. Builds on and expands the history and physical exam skills introduced in Clinical Correlates I, II, and III. Developing logical diagnostic and therapeutic plans for the diagnosis and treatment of problems in individual and group housed small and large animal patients.

VMID 921 Clinical Correlates III
Credits 2. 1 Lecture Hour. 2 Lab Hours.
Continuation of Clinical Correlates II. Body system review will continue. Clinical exam techniques appropriate for each system will be emphasized and findings discussed in the context of the problem-oriented medical record.
Prerequisite: Enrollment in the third year of professional curriculum.

VMID 922 Clinical Correlates IV
Credits 2. 1 Lecture Hour. 2 Lab Hours.
Continuation of Clinical Correlates III. Builds on and expands the history and physical exam skills introduced in Clinical Correlates I, II, and III. Developing logical diagnostic and therapeutic plans for the diagnosis and treatment of problems in individual and group housed small and large animal patients.

VMID 923 General Surgery/Anesthesiology
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Anesthesia, general surgery and dentistry of domestic animals.

VMID 924 Introduction to Diagnostic Imaging
Credit 1. 1 Lecture Hour.
Physical properties and production of ionizing radiation as well as production of radiographic images; introduction to image interpretation.

VMID 601 Veterinary Medicine--Interdisciplinary Study Abroad
Credits 2 to 12. 2 to 12 Lecture Hours.
For students in approved programs abroad. May be repeated for credit. Maximum 6 hours free elective credit in a graduate program. Course will be graded on a satisfactory/unsatisfactory basis.
Prerequisite: Attend TAMU the semester before and after program.
VMID 925 Diagnostic Imaging Interpretation I
Credits 2. 2 Lecture Hours.
Diagnostic evaluation of radiographic and ultrasonographic images of large and small animals.
Prerequisite: Enrollment in third year of the professional curriculum.

VMID 926 Diagnostic Imaging Interpretation II
Credits 2. 2 Lecture Hours.
Continued diagnostic evaluation of radiographic and ultrasonographic images of large and small animals; emphasis on diseases of cardiac, respiratory, gastrointestinal, and urinary systems.
Prerequisite: Enrollment in third year of the professional curriculum.

VMID 927 Community Connections
Credits 2. 35 Lab Hours.
Clinical rotation emphasizing the veterinarian’s role in their local community; focus on relationships with shelter organizations and disaster preparedness training.
Prerequisite: Enrollment in the fourth year of the professional curriculum.

VMID 935 Surgery I
Credits 4. 2 Lecture Hours. 4 Lab Hours.
Diagnostic and surgical procedures of organ systems.
Prerequisite: Enrollment in the third year of professional curriculum.

VMID 936 Surgery II
Credits 2. 1 Lecture Hour. 2 Lab Hours.
Builds on principles developed in Surgery I including aseptic technique, proper use of surgical instruments and gentle tissue handling with emphasis on basic orthopedic principles.
Prerequisite: Third year classification in veterinary medicine in good standing.

VMID 940 Houston SPCA: Alliance for Animal Welfare and Shelter Medicine
Credits 2. 35 Lab Hours.
Clinical rotation at the Houston-SPCA, emphasizing the veterinarian’s role in all aspects of animal evaluation and care, and the treatment of rescue and shelter animals; emphasis on diseases, disorders, injuries, and treatment needs of diverse species, and exposure to emergency response and high volume animal rescue operations.
Prerequisite: Enrollment in the fourth year of the professional curriculum.

VMID 943 Veterinary Practice: Legal, Ethical and Managerial Credits 2. 2 Lecture Hours.
Legal considerations, business principles, management practices, economic factors and medical ethics involving veterinary practice.
Prerequisite: Enrollment in the third year of professional curriculum.

VMID 945 Advanced Specialty Elective
Credits 4. 35 Lab Hours.
Advanced elective rotation in a specialized discipline with student participation in advanced science and technology of the discipline in a practicum setting.
Prerequisite: Enrollment in the fourth year of professional curriculum.

VMID 950 Clinical Nutrition
Credits 2. 2 Lecture Hours.
Nutritional management of medical and surgical cases.
Prerequisite: Enrollment in the second year of professional curriculum.

VMID 952 Clinics I
Credit 1. 4 Lab Hours.
Student participation on a rotating schedule through clinical services in the veterinary teaching hospital; to be taken once in each semester of the third year of the professional veterinary curriculum.

VMID 953 Clinics II
Credit 1. 4 Lab Hours.
Student participation on a rotating schedule through clinical services in the veterinary teaching hospital or in a private practice.
Prerequisite: Third year classification in veterinary medicine in good standing.

VMID 960 Diagnostic Radiology I
Credits 2. 35 Lab Hours.
Practical experience in technical radiography and diagnostic radiology of domestic and zoo animals to include positioning of patients, use of x-ray machines, special diagnostic procedures, radiation safety and interpretation of radiographs.
Prerequisite: Fourth year classification in veterinary medicine or approval of department head.

VMID 962 Veterinary Anesthesia I
Credits 2. 35 Lab Hours.
Student participation with primarily small animal clinical cases in the management of patients under anesthesia and in the perianesthetic period.
Prerequisite: Fourth year classification in veterinary medicine.

VMID 963 Veterinary Anesthesia II
Credits 2. 35 Lab Hours.
Student participation with primarily large animal clinical cases in the management of patients under anesthesia and in the perianesthetic period.
Prerequisite: Fourth year classification in veterinary medicine.

VMID 975 Career Alternative Elective
Credits 2 to 16. 2 to 4 Lab Hours.
Approved student participation in a didactic and/or practicum experience in a unique practice discipline in veterinary medicine, the life sciences or other related areas.
Prerequisites: Enrollment in the fourth year of professional curriculum and approval of individual program.

VMID 980 Clinical Externship
Credits 4. 35 Lab Hours.
Off-campus clinical practicum in a private veterinary practice, research institution, industry, diagnostic center, zoo, veterinary college or other approved career experience.
Prerequisite: Enrollment in the fourth year of professional curriculum.

VMID 981 Seminar in Professional and Leadership Development Credit 1. 1 Lecture Hour.
Major issues in professional, ethical and leadership responsibilities facing a veterinarian in the 21st century; professional ethics and licensing requirements; development of specific leadership skills; leadership styles and effective interpersonal relations required in working with a team of veterinary medical professionals; public leadership role of the veterinarian.
Prerequisite: Admission in the veterinary professional curriculum.

VMID 989 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of veterinary medicine. May be repeated for credit.

VPAR - Veterinary Parasitology

VPAR 601 Parasitology
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Important helminth parasites of animals and humans; their identification, distribution and life history.
Prerequisites: VTPB 487/BIOL 487 or equivalent or approval of instructor.
VPAR 604 Parasitic Protozoa
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Taxonomy, morphology, life cycle, physiology, distribution, genetics, host
relations, methods and diagnosis concerned with protozoan parasites
affecting vertebrates including humans.
Prerequisite: VTPB 487/BIOL 487 or ENTO 208 or BIOL 438 or
equivalent or approval of instructor.

VPAR 605 Molecular and Immunological Parasitology
Credits 3. 3 Lecture Hours.
Basic concepts and recent advancement in molecular biology and
molecular immunology of parasitic diseases. Molecular-based host-
parasite interactions.

VPAR 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Special problems concerned with parasites of animals or humans.
Prerequisites: VPAR 601 or equivalent; approval of instructor.

VPAR 689 Special Topics in...
Credits 3. 3 Lecture Hours.
Selected topics in an identified area of biomedical parasitology. May be
repeated for credit.

VPAR 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis.

VPAT - Veterinary Pathology

VPAT 601 Comparative Pathology
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Pathologic processes occurring in diseased cells, tissues and organs of
animals and humans; their pathogenesis and morphologic manifestations.
Prerequisites: Courses in gross and microscopic mammalian anatomy
and physiology and approval of instructor.

VPAT 620 Humane, Public Health and Regulatory Aspects of Animal
Use
Credit 1. 1 Lecture Hour.
Emphasizes thoughtful and humane use of animals in teaching, research
and service; human and animal health benefits of biomedical research;
governmental policies regulations, public health implications, management
practices, and public relations pertaining to animal use in research and
teaching.

VPAT 640 Advanced Mechanisms of Disease
Credits 2. 2 Lecture Hours.
Concepts of pathogenesis of disease processes.
Prerequisite: DVM degree or approval of instructor.

VPAT 641 Systemic Pathology I
Credits 4. 2 Lecture Hours. 4 Lab Hours.
Disease manifestations in special organs and tissues and interrelations of
pathologic processes in individual and functionally related organs.
Prerequisite: DVM degree or equivalent.

VPAT 642 Mechanisms of Metabolic Disease
Credits 2. 2 Lecture Hours.
Characteristics and mechanisms of diseases caused either by deficiency,
imbalance, excess of specific nutrients or chemicals, or by regulatory
disturbances of metabolism.
Prerequisite: DVM degree or approval of department head.

VPAT 643 Applied Pathology
Credits 1 to 6. 1 to 6 Other Hours.
Application of information and concepts of anatomic and clinical pathology
to the diagnosis of animal disease; gross pathological changes observed
in necropsy are correlated with and corrected by histopathologic
observations; confirmatory methods of clinical pathology and laboratory
medicine used where indicated. May be taken more than once but not to
exceed 6 hours of credit toward a graduate degree.
Prerequisite: DVM degree or equivalent.

VPAT 645 Neoplastic Diseases
Credits 1 to 8. 1 to 8 Other Hours.
Theoretical, histopathological and clinical aspects of neoplasia. Diagnosis
of neoplastic and related conditions in all species. May be taken more than
once but not to exceed 8 hours of credit toward a graduate degree.
Prerequisite: DVM degree or equivalent.

VPAT 650 Neuropathology of Animals
Credits 1 to 4. 1 to 4 Other Hours.
Pathology and pathogenesis of diseases of the central and peripheral
nervous systems. Interpretation of gross and microscopic lesions of the
nervous system associated with disease processes. May be taken more
than once but not to exceed 4 hours of credit toward a graduate degree.
Prerequisite: DVM degree or equivalent.

VPAT 651 Systemic Pathology II
Credits 2. 1 Lecture Hour. 3 Lab Hours.
Continuation of VPAT 641. Disease manifestations in special organs
and tissues and interrelations of pathologic processes in individual and
functionally related organs.
Prerequisite: VPAT 641.

VPAT 653 Diseases of Laboratory Animals
Credits 3. 3 Lecture Hours.
Pathology and pathogenesis of spontaneous infectious, parasitic,
metabolic and neoplastic diseases of laboratory animals.
Prerequisite: VTPB 922 or equivalent.

VPAT 681 Seminar
Credit 1. 1 Lecture Hour.
For graduate and special students in veterinary or comparative pathology;
presentation and discussion of special topics and research data
concerning pathology and pathogenesis of disease.
Prerequisite: Approval of instructor.

VPAT 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Advanced special problems concerned with pathogenesis and pathology
of disease.
Prerequisite: Approval of instructor.

VPAT 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in an identified area of veterinary or comparative
pathology. May be repeated for credit.

VPAT 690 Theory of Research
Credits 3. 3 Lecture Hours.
Theory and design of research related to current biomedical problems
especially those involving study of animal diseases; philosophical
perspectives underlying historical advances in research pertaining to the
study, prevention and treatment of disease.
Prerequisite: Graduate classification.
Cross Listing: VIBS 690 and VTPP 690.
VPAT 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation.

VSCS Vet Small Animal Clin. Sc

VSCS 681 Seminar
Credit 1. 1 Other Hour.
Current scientific work in medical and surgical fields in and related to small animal medicine and surgery. May be repeated for credit.
Prerequisite: DVM degree or approval of department head.

VSCS 685 Directed Studies
Credits 1 to 8. 1 to 8 Other Hours.
Original investigations of problems in field of small animal surgery, therapeutics or radiology.
Prerequisite: DVM degree or approval of instructor and department head.

VSCS 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 6 Lab Hours.
Special topics in an identified area of small animal medicine or surgery. May be repeated for credit.
Prerequisite: DVM degree or approval of instructor and department head.

VSCS 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis.

VSCS 940 Small Animal Clinics I
Credits 2. 35 Lab Hours.
Student participation with clinical cases in the small animal medicine services of the Veterinary Teaching Hospital. Must be taken two times.
Prerequisite: Fourth year classification in veterinary medicine or approval of department head.

VSCS 941 Small Animal Clinics II
Credits 2. 35 Lab Hours.
Student participation with clinical cases in the small animal surgery services of the Veterinary Teaching Hospital. Must be taken two times.
Prerequisite: VSCS 940 or approval of department head.

VSCS 945 Advanced Small Animal Clinical Elective
Credits 2. 35 Lab Hours.
Student participation with clinical cases in advanced student in selected services of the small animal medicine and surgery sections of the Veterinary Teaching Hospital. May be taken 12 times.
Prerequisite: VSCS 940 or approval of department head.

VSCS 948 Small Animal Medicine and Surgery Elective
Credits 1 to 12. 1 to 12 Lecture Hours.
In-depth study of selected disease processes in the various disciplines of small animal medicine and surgery will be conducted emphasizing management, diagnostics and medical or surgical treatment. May be repeated for credit.
Prerequisite: Third year classification in veterinary medicine or approval of department head.

VSCS 953 Small Animal Clinical Skills
Credit 1. 1 Lecture Hour.
Acquisition of basic technical skills useful in the diagnosis and treatment of small animals in general veterinary practice. Modular one month course.
Prerequisite: Third year classification in veterinary medicine in good standing.

VSCS 954 Small Animal Medicine I
Credits 6. 5 Lecture Hours. 2 Lab Hours.
Medical disease of dogs and cats; pathophysiology, diagnosis and therapy of diseases prevalent in small animals.
Prerequisite: Third year classification in veterinary medicine in good standing.

VSCS 955 Small Animal Medicine II
Credits 6. 6 Lecture Hours. 2 Lab Hours.
Continuation of Small Animal Medicine I; medical disease of dogs and cats; pathophysiology, diagnosis and therapy of diseases prevalent in small animals.

VSCS 985 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed individual study of a selected problem in small animal medicine, surgery or radiology. May be repeated for credit.
Prerequisites: Matriculation in veterinary professional curriculum and approval of department head.

VTMI - Veterinary Microbiology

VTMI 601 Fundamentals of Pathobiology
Credits 5. 5 Lecture Hours.
Encompasses the concepts of pathobiology including bacterial, viral and parasitic diseases, the host response to infectious agents, pathology, and metabolic and genetic diseases; includes animal and human diseases and provides enough background to facilitate in advanced graduate courses.
Prerequisite: Graduate classification.

VTMI 602 Animal Models of Obesity
Credits 4. 4 Lecture Hours.
Overview of animal models of obesity; emphasis on rodent genetically engineered models of obesity related to diabetes mellitus type 2 (obesity related diabetes) and leptin research to understand metabolism, molecular biology and origin of lipids as signaling molecules important in obesity.
Prerequisite: Approval of instructor; minimum 3 credit hours of undergraduate or graduate biochemistry.

VTMI 604 Amazon Field School
Credits 4. 4 Lecture Hours.
Investigation of social and ecological complexities of biodiversity conservation in tropical ecosystems; biological and social science approaches to evaluate causes, consequences and solutions to biodiversity loss through ecology, culture and governance.
Cross Listing: RPTS 654 and WFSC 654.

VTMI 614 Fermentation and Gastrointestinal Microbiology
Credits 3. 3 Lecture Hours.
Fermentation and gastrointestinal ecosystems in terms of microorganisms present, their activities and requirements and their interactions in a dynamic system.
Prerequisite: Beginning microbiology and/or biochemistry or approval of instructor.
Cross Listing: POSC 614 and NUTR 614.
VTMI 615 Immunogenetics and Comparative Immunology
Credits 3. 3 Lecture Hours.
Genetic mechanisms used to diversity immune receptors; immunoglobulins, T cell receptors, major histocompatibility complex, natural killer cell receptors, toll-like receptors and many others; selected comparative and veterinary examples of different immune recognition systems; evolution of the immune system; theoretical immune surveillance and vaccine development.
Prerequisite: Graduate classification; GENE 320/BIMS 320 and VTPB 409, or equivalent, or approval of instructor.

VTMI 619 Molecular Methods for Microbial Identification; practice consists of exercises in cultural methods, mechanisms and movement of potential pathogens in the ecosystem.

VTMI 629/SCSC 629 Laboratory Quality Systems
Credits 3. 3 Lecture Hours.
Quality systems and method development used within a laboratory; ensuring the integrity of procedures used in lab processes, chain of custody, information management, and international laboratory standards; regulatory requirements for laboratory operation; bio-security precautions; laboratory management.
Cross Listing: SCSC 629/VTMI 629.

VTMI 643 Pathogenic Bacteriology I
Credits 4. 3 Lecture Hours, 4 Lab Hours.
Pathogenic bacteria, their cultural and biological characteristics and pathogenicity.
Prerequisite: Minimum of 8 hours of undergraduate microbiology.

VTMI 645 Host-Agent Interaction
Credits 3. 3 Lecture Hours.
Basic concepts of infection versus disease; molecular approaches to problems in microbiology; inducible host responses, agent escape mechanisms and movement of potential pathogens in the ecosystem.
Prerequisite: GENE 431/BICH 431 or equivalent.

VTMI 647 Virology
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Virus infections in animals and humans; types of infections, mode of transmission, intracellular pathology, epidemiology, isolation and identification of inciting agents; tissue cultivation, animal inoculations and diagnostic tests.
Prerequisite: VTPB 438 or equivalent.

VTMI 648 Medical Mycology
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Actinomycetes, yeasts and molds that are pathogenic to humans and animals; morphology, cultural characteristics, pathogenicity and identification; practice consists of exercises in cultural methods, morphological characteristics, biochemical reactions and diagnosis.
Prerequisite: Minimum of 8 hours of undergraduate microbiology.

VTMI 649/POSC 649 Immunology
Credits 3. 3 Lecture Hours.
Cellular basis of the immune response; relationships between inflammation and acquired immunity, MHC and cell activation; the role of cytokines in immunoregulation and hypersensitivity, vaccines, and the mechanism of immunity to viruses, bacteria and parasites.
Prerequisite: VTPB 409 or equivalent.

VTMI 650/POSC 660 Experimental Immunology
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Familiarization, development and integration of techniques into experimental design of immunologic investigation; antibody production, protein purification, immunofluorescence, agar-gel diffusion, immunoelectrophoresis and specialized serologic tests.
Cross Listing: POSC 660/VTMI 650.

VTMI 654 Cell Culture Techniques
Credits 3. 1 Lecture Hour. 6 Lab Hours.
Introduction to the theory and practice of cell culture and provides illustrations of its applications; how to maintain a cell culture unit and culture cell lines; how to derive new cell cultures from animal tissues, characterize cultured cells, optimize in vitro conditions and introduce genetic changes into cultured cells.
Prerequisite: Approval of instructor.

VTMI 662 Advanced Immunologic Concepts
Credits 1 to 5. 1 to 5 Lecture Hours.
Modular course with detailed discussions, workshops and assigned reading/problem solving on advanced topics; structural organization of molecules; genetic regulation; cytokine cascades; pathophysiology of autoimmunity. May be repeated for credit.
Prerequisites: VTMI 649/POSC 649; BICH 603 or equivalent; approval of instructor.

VTMI 663/MPIM 663 Molecular Biology of Viruses
Credits 3. 3 Lecture Hours.
In-depth studies of the biochemistry and the replication strategies of viruses and molecular mechanisms of pathogenesis for selected viral systems.
Prerequisite: Graduate classification in pathology, molecular biology, biochemistry, or approval of instructor.
Cross Listing: MPIM 663/VTMI 663.

VTMI 664 Mammalian Genome Modification for Biomedical Research
Credits 3. 3 Lecture Hours.
Reviews the uses of genetic manipulation in biomedical research and provides a working knowledge of the various strategies used to modify mammalian genomes including transgenes, homologous recombination, gene-trapping, RNA interference, cloning, and gene therapy.

VTMI 665 Viral Vectors and Gene Therapy
Credits 3. 3 Lecture Hours.
Describes various viral vector systems, their development and their use as research tools in biotechnology and gene therapy; consists of a mixture of short lectures and discussion of papers from the literature.
Prerequisites: VTMI 663/MPIM 663, VTMI 647, PLPA 616, or PLPA 620 or approval of instructor.
Cross Listing: MPIM 665 and PLPA 665.

VTMI 681 Seminar
Credit 1. 1 Lecture Hour.
Review and discussion of current scientific work and research in field of microbiology and related subjects.
Prerequisite: Approval of instructor.
VTMI 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Problems course in microbiology.
Prerequisite: Approval of instructor.

VTMI 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of veterinary microbiology. May be
repeated for credit.
Prerequisite: Approval of instructor.

VTMI 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research for thesis or dissertation.

VTPB - Veterinary Pathobiology

VTPB 910 Veterinary Immunology
Credits 2. 2 Lecture Hours.
Introduction to veterinary immunology; mechanisms of resistance of
infectious diseases and tumors; tissue injury caused by the immune
system, including hypersensitivity reactions and autoimmunity;
immunization theory and practices; immunologic methods for diagnosis of
disease.
Prerequisite: Enrollment in the first year of professional curriculum.

VTPB 911 Veterinary Microbiology
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Introduction to veterinary microbiology; bacterial, viral, and mycotic agents
of veterinary significance; mechanisms of host injury by pathogenic
microorganisms; principles of disinfection, antisepsis, and sterilization;
classes and mechanisms of mechanisms of action of antibacterial,
antifungal, and antiviral drugs; diagnostic procedures and methods of
sample collection.
Prerequisite: Enrollment in the first year of professional curriculum.

VTPB 913 Infectious Diseases
Credits 2. 2 Lecture Hours.
Case-based approach to infectious diseases of animals; includes
infectious diseases of major body systems; etiologic agents include
viruses, bacteria, fungi, protozoa, helminths, and arthropods; differential
diagnosis of infectious agents, diagnostic approaches, prevention, and
treatment emphasized; management practices to control infectious
diseases covered by host species.
Prerequisite: Enrollment in second year of the professional curriculum.

VTPB 920 Parasitology
Credits 5. 3 Lecture Hours. 4 Lab Hours.
Taxonomy, biological and clinical aspects of the commonly occurring
helminth, protozoan and arthropod parasites of domestic and laboratory
animals. Signs, pathogenesis, diagnosis, treatment, prevention, and
control, public health and economic importance of parasitic diseases.
Prerequisite: Enrollment in the second year of professional curriculum.

VTPB 922 Pathology I
Credits 6. 5 Lecture Hours. 2 Lab Hours.
Structural and functional changes in cells, tissues and organ systems of
animals; pathogenesis, mechanisms and morphologic features of diseases
and their relationship to clinical signs; laboratory consists of studies of
gross and microscopic pathology.
Prerequisite: Enrollment in the second year of professional curriculum.

VTPB 923 Pathology II
Credits 6. 5 Lecture Hours. 2 Lab Hours.
Pathogenesis, mechanisms, laboratory analysis and structural features of
animal diseases; structural and functional changes in cells, tissues, body
fluids and organ systems that cause or are caused by disease. Laboratory
consists of studies in gross and microscopic pathology, cytology and
laboratory analysis of body fluids and tissues.
Prerequisite: Enrollment in the second year of professional curriculum.

VTPB 940 Diagnostics
Credits 2. 35 Lab Hours.
Student group participation on a rotating schedule in applied clinical
activities in the area of diagnostic medicine including clinical pathology,
necropsy, microbiology, parasitology, and serology.
Prerequisite: Enrollment in the first year of professional curriculum.

VTPB 941 Clinical Microbiology and Parasitology I
Credits 2. 35 Lab Hours.
Clinical rotation in microbiology and parasitology with emphasis on
performance and interpretation of diagnostic procedures.
Prerequisite: Enrollment in the first year of professional curriculum.

VTPB 948 Didactic Elective
Credits 1 to 12. 1 to 12 Lecture Hours.
Elective course in veterinary microbiology, pathology, genetics,
immunology or parasitology for professional students who wish to
supplement required curriculum. May be repeated for credit.
Prerequisite: Enrollment in third year of professional curriculum.

VTPB 985 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Problems in various subdisciplines.
Prerequisite: Approval of instructor.

VTPB 989 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of microbiology, pathology, genetics,
immunology or parasitology. May be repeated for credit.
Prerequisite: Approval of department head.

VTPP - Vet Physiology & Pharm.

VTPP 605 Systemic Veterinary Physiology I
Credits 5. 5 Lecture Hours.
Aspects of cellular physiology, physiology of excitable membranes,
physiology of body fluids, neurophysiology, and the physiology of
smooth, cardiac and skeletal muscle; provides a basic understanding of
mammalian physiology essential as a framework for advanced graduate
studies.
Prerequisite: Graduate classification.

VTPP 606 Systemic Veterinary Physiology II
Credits 5. 5 Lecture Hours.
In-depth study covering cardiovascular, respiratory, renal physiology,
gastrointestinal and endocrine physiology; provides a basic understanding
of mammalian physiology essential as a framework for advanced graduate
studies.
Prerequisite: VTPP 605.
VTPP 610 Physiology I
Credits 6. 5 Lecture Hours. 2 Lab Hours.
Introduction to physiology: cell physiology, cell signaling, cell cycle, body fluids, translocation of materials, membrane potentials, neurophysiology, autonomic nervous system, thermoregulation, cardiovascular, and muscle physiology.
Prerequisites: Enrollment in MS/PhD program in Veterinary Physiology and Pharmacology; approval of instructor.

VTPP 612 Physiology II
Credits 6. 5 Lecture Hours. 2 Lab Hours.
Blood and lymph, respiration, renal physiology, and acid-base balance, gastrointestinal physiology, metabolism, endocrinology, and reproduction.
Prerequisites: Enrollment in MS/PhD program in Veterinary Physiology and Pharmacology; approval of instructor.

VTPP 623 Biomedical Physiology I
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Physiological principles, review of cellular physiology, and development of an understanding of the nervous system and muscle, cardiovascular, and respiratory physiology; clinical applications related to organ systems.
Prerequisites: Graduate classification; BICH 410 and VIBS 305 recommended.

VTPP 624/VIBS 624 Endocrinology
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Neuroendocrine control of puberty menstruation, ovulation, pregnancy, labor, lactation, female reproductive cycles, male reproductive functions, thyroid and parathyroid, adrenal and kidney, diabetes, obesity, sleep, memory, learning and aging, and their endocrine disorders; overview on biosynthesis, transport and signaling of peptide and neuropeptide hormones, steroids and prostaglandins.
Prerequisite: Graduate classification.
Cross Listing: VIBS 624/VTPP 624.

VTPP 625 Pharmacology
Credits 3. 3 Lecture Hours.
Introduction to pharmacokinetics and pharmacodynamics; survey of major pharmaceutical classes; uses, mechanisms of action and adverse reactions of selected agents.
Prerequisites: Graduate classification; VTPP 423 or approval of instructor.

VTPP 627 Biomedical Physiology II
Credits 3. 3 Lecture Hours.
Continuation of VTPP 623 Fluid balance and acid-base balance; development of an understanding of renal, gastrointestinal, endocrine and reproductive physiology using human and other mammalian models; clinical applications related to organ systems.
Prerequisites: Graduate classification; VTPP 623.

VTPP 628 Pharmacology I
Credits 5. 4 Lecture Hours. 2 Lab Hours.
Pharmacokinetics, pharmacodynamics, CNS pharmacology, autonomic pharmacology, antineoplastic agents, immunopharmacology, recombinant products, fluid and electrolyte therapy, diuretics, pharmacology of the integument.
Prerequisite: Approval of instructor.

VTPP 629 Pharmacology II
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Antimicrobials, endocrine pharmacology, eicosanoids, anti-inflammatory agents, respiratory pharmacology, anticoagulants and hematinics, GI pharmacology, cardiovascular pharmacology.
Prerequisite: Approval of instructor.

VTPP 630 Pharmacology/Toxicology
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Management and treatment of toxicosis, antidotal pharmacology, toxic plants, mycotoxins, chemical toxicants, metals, euthanasia.
Prerequisite: Approval of instructor.

VTPP 634 Physiology for Bioengineers I
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Cellular anatomy, cellular physiology and biochemistry; systems analysis of digestive, endocrine and musculoskeletal system function including information related to gross anatomy, histology and disease states; quantitative aspects of physiology and engineering applications to clinical medicine.
Prerequisite: Biomedical Engineering major or approval of instructor.

VTPP 635 Physiology for Bioengineers II
Credits 4. 3 Lecture Hours. 3 Lab Hours.
A systems analysis of nervous, cardiovascular, respiratory and urinary function including information related to gross anatomy, histology and disease states; quantitative aspects of physiology and engineering applications to clinical medicine.
Prerequisite: VTPP 634.

VTPP 638 Analysis of Genomic Signals
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Overview of current high throughput technology for data acquisition and analysis of genomic signals (e.g., mRNA or proteins); emphasis on microarray technology, methods for analyzing microarray data, and approaches to model the underlying phenomena from the systems biology perspective.
Prerequisites: BIOL 451 or GENE 320/BIMS 320/BIMS 320/GENE 320 or equivalent; STAT 651 or equivalent; or approval of instructor.

VTPP 639 Non-Coding RNAs
Credits 3. 3 Lecture Hours.
Roles of non-coding RNAs in regulating gene expression for physiological functions, development and diseases; includes a brief history of the field, various categories and definitions of non-coding RNAs, research methodologies and animal models, and break-through advances in clinical applications.
Prerequisite: Approval of instructor.

VTPP 650 Stem Cell Biology
Credits 3. 3 Lecture Hours.
Wide-range of topics related to stem cells and tissue engineering, including a brief history of the field, various categories and definitions of stem cells, research methodologies and animal models, as well as break-through advances in the area of engineered stem cells.
Prerequisite: Approval of instructor.

VTPP 651 Epigenetics & Systems Physiology
Credits 3. 3 Lecture Hours.
Epigenetics & Systems Physiology. Journal club format focusing on epigenetic regulation of physiological systems; assignment of papers from primary literature and weekly oral presentations detailing opinions on research; emphasis on fundamental concepts in epigenetics, physiology and the molecular techniques employed to address research hypotheses, discussions of scientific ethics and fraud.
Prerequisite: Graduate classification.
VTPP 652 Fetal and Embryo Physiology
Credits 3.3 Lecture Hours.
Introduction to the physiologic processes driving embryonic development and pregnancy; focus on embryo implantation, establishment of the placenta, development of the fetal circulatory systems and the molecular processes governing embryo differentiation and development; special emphasis on the major organ systems affected by pediatric disease and on the actions of teratogens.
Prerequisites: Graduate classification.

VTPP 653 Endocrinology
Credits 4.3 Lecture Hours. 3 Lab Hours.
Physiology, biochemistry and pharmacology of the endocrines. Laboratory emphasizes a number of classical experiments with clinical application.
Prerequisite: Approval of instructor.

VTPP 654 Molecular Endocrinology
Credits 3.3 Lecture Hours.
Structure-function relationships of hormones, their receptors and biologic activities.
Prerequisites: VTPP 653 or BIOL 649 and BICH 410 or equivalent or approval of instructor.

VTPP 655 Vascular Physiology
Credits 4.4 Lecture Hours.
Structure and function of blood vessels and vascular beds; molecular and cell biology of endothelium and vascular smooth muscle; microcirculation; capillary exchange; regulation of blood flow by local, neural and humoral signals.
Prerequisite: MPHY 901 or approval of department head.

VTPP 656 Physiology of the Heart
Credits 4.4 Lecture Hours.
Structure and function of the heart; molecular and cell biology of cardiac myocytes; electrophysiology of myocardium, pacemaker cells and conducting tissue; cardiac mechanics; control of cardiac performance; coronary circulation.
Prerequisite: MPHY 901 or MPHY 604 or approval of department head.

VTPP 657 Cardiovascular Physiology
Credits 4.3 Lecture Hours. 3 Lab Hours.
Physiological considerations of the circulatory system including general and integrative aspects of the heart and blood vessels.
Prerequisites: Approval of instructor.

VTPP 659 Gamete and Embryo Physiology
Credits 3.2 Lecture Hours. 2 Lab Hours.
Physiology of gametes and preimplantation embryos in livestock and laboratory animals; oocyte growth and maturation in-vivo and in-vitro; fertilization in vivo and in-vitro, embryo transfer, cryopreservation, nuclear transfer, chimera formation, gene transfer.

VTPP 667 Current Topics in Pharmacology
Credits 3.3 Lecture Hours.
Discussions of literature regarding topics of current research interest; physiochemical or physiologic effects of drugs at sites from molecular to whole body.
Prerequisite: Approval of instructor.

VTPP 673 Metabolic and Detoxication Mechanisms
Credits 3.3 Lecture Hours.
Fate of foreign compounds; their inhibitory and antagonistic action toward normal metabolic processes of the animal body.
Prerequisites: BICH 603; approval of instructor and department head.

VTPP 675 Industrial and Environmental Toxicology
Credits 3.3 Lecture Hours.
Fundamentals of toxicology and risk assessment; effects of selected classes of hazardous chemicals encountered in the workplace or environment on human health will be considered.
Prerequisite: Approval of instructor.

VTPP 676 Genetic and Molecular Toxicology
Credits 3.3 Lecture Hours.
Mechanisms of toxicant-induced target organ toxicity with emphasis on molecular control of mammalian and cell growth differentiation.
Prerequisite: Graduate course in cell biology and biochemistry.

VTPP 677 Fluorescence Detection: Steady State, Time Resolved and Imaging
Credits 4.4 Lecture Hours.
Fluorescence spectroscopy and confocal/multiphoton microscopy in research; intro of pharmacology, life science, and physical science students to fluorophores, anisotropy, ligand binding, energy transfer, cytometry, lifetime imaging, correlation spectroscopy, immunocytochemistry, and image analysis with an emphasis on instrumental/sample artifacts, fluorescence application, literature evaluation, and communication of rationales to other scientists.
Prerequisite: General chemistry and biology course.

VTPP 681 Seminar
Credit 1.1 Lecture Hour.
Review and discussion of current scientific work in physiology and related subjects.
Prerequisite: Approval of department head.

VTPP 685 Directed Studies
Credits 1 to 4.1 to 4 Other Hours.
Problems in physiology, pharmacology or toxicology.
Prerequisite: Approval of instructor.

VTPP 689 Special Topics in...
Credits 1 to 4.1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in an identified area of veterinary physiology and pharmacology. May be repeated for credit.
Prerequisite: Approval of instructor.

VTPP 690 Theory of Research
Credits 3.3 Lecture Hours.
Theory and design of research related to current biomedical problems especially those involving study of animal disease; philosophical perspectives underlying historical advances in research pertaining to the study, prevention and treatment of disease.
Prerequisite: Graduate classification.
Cross Listing: VIBS 690 and VPAT 690.

VTPP 691 Research
Credits 1 to 23.1 to 23 Other Hours.
Original investigations in veterinary physiology, pharmacology or toxicology to be submitted by writing of thesis or dissertation as partial fulfillment for MS or PhD degree.
Prerequisite: Approval of department head.

VTPP 910 Physiology I
Credits 6.5 Lecture Hours. 2 Lab Hours.
Introduction to physiology: cell physiology, cell signaling, cell cycle, body fluids, translocation of materials, membrane potentials, neurophysiology, autonomic nervous system, thermoregulation, cardiovascular, and muscle physiology.
Prerequisite: Enrollment in first year of professional curriculum.
VTPP 912 Physiology II
Credits 6. 5 Lecture Hours. 2 Lab Hours.
Blood and lymph, respiration, renal physiology, and acid-base balance, gastrointestinal physiology, metabolism, endocrinology, and reproduction.
Prerequisite: Enrollment in the first year of professional curriculum.

VTPP 924 Pharmacology/Toxicology I
Credits 5. 4 Lecture Hours. 2 Lab Hours.
Pharmacokinetics, pharmacodynamics, CNS pharmacology, autonomic pharmacology, antineoplastic agents, immunopharmacology, recombinant products, fluid and electrolyte therapy, diuretics, pharmacology of the integument.
Prerequisite: Enrollment in the second year of professional curriculum.

VTPP 925 Pharmacology/Toxicology II
Credits 3. 5 Lecture Hours. 2 Lab Hours.
Antimicrobials, endocrine pharmacology, eicosanoids, antiinflammatory agents, respiratory pharmacology, anticoagulants and hematinics, GI pharmacology, cardiovascular pharmacology.
Prerequisite: Enrollment in the second year of professional curriculum.

VTPP 926 Pharmacology/Toxicology III
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Management and treatment of toxicoses, antitodal pharmacology, toxic plants, mycotoxins and mycotoxicoses, chemical toxicants, metals, euthanasia.
Prerequisite: Enrollment in the second year of professional curriculum.

VTPP 948 Didactic Elective in Veterinary Physiology and Pharmacology
Credits 1 to 12. 1 to 12 Lecture Hours.
Electic course in physiology and pharmacology for professional students who wish to supplement required curriculum. May be repeated for credit.
Prerequisite: Enrollment in the fourth year of professional curriculum.

VTPP 985 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed, individual study of selected problems in physiology, pharmacology or toxicology. May be repeated for credit.
Prerequisite: Approval of instructor and department head.

WFSC Wildlife & Fisheries Sci.

WFSC 602 Field Herpetology
Credit 1. 3 Lab Hours.
Field work involving collection and preservation of herpetological specimens; natural history, ecological relations.
Prerequisites: Graduate classification.*

WFSC 603 History of Ecological Thought and Conservation Practice
Credits 3. 3 Lecture Hours.
Survey of the philosophical roots and evolution of ecological thought and conservation practice; emphasis on theoretical foundations, seminal concepts, classic papers, and historic trends.
Prerequisites: Course in general ecology and graduate classification or instructor approval.

WFSC 604 Ecological Modeling
Credits 3. 3 Lecture Hours.
Philosophical basis, theoretical framework, and practical application of systems analysis and simulation within the context of ecology and natural resource management; emphasis placed on development, evaluation and use of simulation models by students.
Prerequisite: Approval of instructor.

WFSC 605 Community Ecology
Credits 3. 3 Lecture Hours.
Overview and in-depth knowledge of community ecology; historical development; current issues, methodologies, and practical applications in natural resource management, biological conservation, agriculture, and human health; practice critical thinking, communication skills, and professionalism.
Prerequisite: Graduate classification.

WFSC 607 Environmental Conflict Management
Credits 3. 3 Lecture Hours.
Understand environmental conflict systemically, understand how communication contributes to environmental conflict and develop increased capacity as managers of environmental conflict.
Prerequisite: Graduate classification or approval of instructor.

WFSC 608 Public Participation in Conservation Policy
Credits 3. 3 Lecture Hours.
Students will have the opportunity to become familiar with and critique theories and constructs as well as strategies and techniques for enhancing public participation in environmental conservation policy.
Prerequisite: Graduate classification or approval of instructor.

WFSC 609 Wildlife Research Methods
Credits 3. 3 Lecture Hours.
Research methods for ecology and conservation; become familiar with the philosophy of natural science and develop skill in study design, grantsmanship, presentation techniques, critical evaluation of others’ work, and publication in refereed journals.
Prerequisites: Courses in general ecology and statistics and graduate classification or approval of instructor.

WFSC 610 Evolutionary Ecology
Credits 3. 3 Lecture Hours.
Survey the development of paradigms in evolutionary ecology; incorporates phylogenies into comparative analysis and macroecology; evaluates the roles of historical and local processes in determining species diversity.
Prerequisite: Graduate classification.

WFSC 611 Estuarine Ecology
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Principles governing the relationships of estuarine organisms to their environment; productivity, adaptations to environment, community structure and factors affecting the distribution and abundance of biota.
Prerequisite: Invertebrate zoology and ichthyology or approval of instructor.

WFSC 613 Animal Ecology
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Concepts of animal ecology which emerge at various levels or organization; the ecosystem, the community, the population and the individual; laboratories emphasis on the quantitative analysis of field data and the simulation of population dynamics.
Prerequisite: Graduate classification or approval of instructor.*

WFSC 617 Biology of Fishes
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Fishes' physiological and morphological adaptations for life in aquatic systems; physiological and behavioral responses of fish to environments; molecular, cellular, and physiological mechanisms discussed in an evolutionary context that emphasizes the ontogeny of adaptive responses among vertebrates from basic biochemical and biophysical constraints.
Prerequisite: Graduate classification or approval of instructor.
WFSC 618 Wildlife Study Design and Analysis
Credits 3. 3 Lecture Hours.
Fundamental and advanced aspects of study design applicable to terrestrial animals; analysis and review of the scientific literature related to study design; and the development of study design for written and oral presentations.
Prerequisite: Graduate classification or approval of instructor.

WFSC 619 Wildlife Restoration
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Study of the fundamentals of the restoration of animal populations and the resources they require; factors that control the distribution and abundances of animals in relation to restoration; and how restoration plans for wildlife are developed.
Prerequisite: Graduate classification or approval of instructor.

WFSC 620 Vertebrate Ethology
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Mechanisms and control of vertebrate behavior in an ecological context, as shaped by natural selection; classical and current theories regarding the genetic basis, development, specialized sensory systems and organization of responses in changing environment; laboratory emphasizes observational skills and quantitative analysis of behavior occurring in natural settings.*

WFSC 622 Behavioral Ecology
Credits 3. 3 Lecture Hours.
Integration of animal behavior with ecological and evolutionary principles; includes mating, predation, foraging ecology, social behavior, game theory and behavioral genetics; emphasis on quantification of behavior and strategy modeling.
Prerequisites: Undergraduate ecology course; graduate classification.

WFSC 623 Aquaculture
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Principle of fish production for stock enhancement and human food. Species of fish used for production, cross-breeding and selection; feeds and feeding of fish and nutritional and environmental requirements for optimum productivity; effects of fish production on land and water uses as related to conservation.
Prerequisite: Graduate classification or approval of instructor.

WFSC 624 Dynamics of Populations
Credits 4. 3 Lecture Hours. 2 Lab Hours.
Principles, models and methods for analysis of population dynamics; analysis of contemporary research emphasizing theory and its uses in evaluation and management of animal populations. Laboratory emphasizes mathematical, statistical and computer modeling of population phenomena.

WFSC 628 Wetland Ecology and Pollution
Credits 3. 3 Lecture Hours.
Wetlands as ecological systems that are prime habitats for wildlife and fish; geomorphology, hydrology, limnology, plant and animal communities, and humans use and management; wetlands as ultimate reservoirs of environmental pollutants; distribution, fate and effects of environmental pollutants on aquatic and terrestrial wildlife.
Prerequisite: Graduate classification or approval of instructor.

WFSC 630 Ecology and Society
Credits 3. 3 Lecture Hours.
Study and compare human and natural ecosystems using diversity, interrelations, cycles, and energy as the conceptional organization; central themes of the course are sustainability, stewardship and science.
Prerequisite: Graduate classification or approval of instructor.

WFSC 632 Ethology
Credits 3. 3 Lecture Hours.
Survey of the control, ontogeny, function and natural selection of behavior in a variety of vertebrate and invertebrate species; interaction between the organism and its environment with regard to the mechanisms and adaptive significance of behavior; evolution of anti-predator, feeding, reproductive and cooperative traits.
Prerequisites: BIOL 112 or equivalent; graduate classification.

WFSC 633/GENE 633 Conservation Genetics
Credits 3. 3 Lecture Hours.
Genetic concepts and techniques relevant to management and conservation of biological diversity, research and conservation strategies within a conservation genetics framework.
Prerequisite: Introductory courses in genetics and ecology or biological conservation.
Cross Listing: GENE 633/WFSC 633.

WFSC 635 Urban Wildlife and Fisheries
Credits 3. 3 Lecture Hours.
Urban wildlife and fisheries trains students to establish and maintain diverse, self-sustaining urban wildlife and fish populations at levels in harmony with ecological, social, and economic values of the human community and to develop optimal levels of public appreciation and use or urban wildlife and fish resources and associated habitats.
Prerequisite: Graduate classification or approval of instructor.

WFSC 636 Wildlife Habitat Management
Credits 3. 3 Lecture Hours.
Designed to acquaint with major land use practices on lands that produce wildlife, how these influences wildlife production and alterations or manipulations of habitat used to achieve specific wildlife management goals.
Prerequisite: Graduate classification or approval of instructor.*

WFSC 638 Techniques of Wildlife Management
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Techniques available to directly and indirectly manipulate wild animal populations to achieve balance between socioeconomic and aesthetic values.
Prerequisite: Graduate classification or approval of instructor.*

WFSC 639 Wildlife Ecotoxicology
Credits 3. 3 Lecture Hours.
Distribution, fate, and effects of environmental pollutants on wildlife behavior and reproduction. Global distribution of pollutants and effects on near and remote ecosystems. Field studies, biomarkers, stable isotope and various techniques for evaluating pollutant hazards on wildlife.
Prerequisites: Courses in CHEM and BICH and graduate classification or approval of instructor.

WFSC 640 Human Dimensions of Wildlife and Fisheries Management
Credits 3. 3 Lecture Hours.
Theory and applications for considering human dimensions in an integrated approach to wildlife and fisheries management; a social science perspective with emphasis to diversity of human values, role of constituency groups, wildlife and fisheries policy development, conflict management, management decision-making, research methods and management case studies.
WFSC 641 Sustainable Military Land Management
Credits 3. 3 Lecture Hours.
Overview of the Department of Defense (DOD) lands within a temporal, geographic, and environmental context and perspective; major policies/laws impacting military land use and areas critical to mission sustainment; management strategies important to sustaining installations and ranges.
Prerequisite: Graduate classification or approval of instructor.

WFSC 642 Field Military Land Management
Credit 1. 0 Lecture Hours. 2 Lab Hours.
Review of land management practices and challenges on military and adjacent private lands through field visits of select military installations. Field trips required during Spring Semester.
Prerequisite: Graduate classification or approval of instructor. Previous or concurrent registration in WFSC 636 is strongly encouraged.

WFSC 643 Geospatial Technology in Military Land Management
Credits 3. 3 Lecture Hours.
Tools for visualizing, creating, managing, and analyzing geographic data on military lands and outside areas critical to mission sustainment; familiarization with ArcMap and ArcCatalog in military-related land management scenarios.
Prerequisites: Graduate classification or approval of instructor; previous experience with ArcMap and ArcCatalog helpful.

WFSC 646 Quantitative Phylogenetics
Credits 3. 2 Lecture Hours. 1 Lab Hour.
Designed to provide the theory and tools required for inference of phylogenetic (evolutionary) relationships among biological taxa using various types of comparative data including morphological characters, biochemical and molecular characters, and DNA sequences; hands-on analysis of data using contemporary tools.
Prerequisites: ENTO 601 or approval of instructor.
Cross Listing: ENTO 606 and GENE 606.

WFSC 647/NUTR 647 Nutritional Biochemistry of Fishes
Credits 3. 3 Lecture Hours.
Principles of nutritional biochemistry including nutrient metabolism and biochemical energetics with special emphasis on finfish and shellfish.
Prerequisite: BICH 410 or equivalent.
Cross Listing: NUTR 647/WFSC 647.

WFSC 648/GENE 648 Molecular Evolution
Credits 3. 2 Lecture Hours. 1 Lab Hour.
Theory and tools used in the analysis of molecular evolutionary patterns of DNA and protein sequences; format combines lecture presentations by instructor discussion of relevant scientific literature, computer exercises, preparation of research proposal or independent research project, and practice in peer-review process.
Prerequisite: Basic courses in general Genetics and Evolution.
Cross Listing: GENE 487/WFSC 648.

WFSC 649 Principles of Fisheries Management
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Basic knowledge of ichthyology, biology of fishes and limnology related to applied aspects of freshwater and marine fishery science; management techniques applicable to streams, ponds, reservoirs, estuaries and the oceans.
Prerequisite: Graduate classification.

WFSC 654 Amazon Field School
Credits 4. 4 Lecture Hours.
Investigation of social and ecological complexities of biodiversity conservation in tropical ecosystems; biological and social science approaches to evaluate causes, consequences and solutions to biodiversity loss through ecology, culture and governance.
Cross Listing: RPTS 654 and VTMI 664.

WFSC 655/RPTS 655 Applied Biodiversity Science I
Credits 3. 3 Lecture Hours.
Applied Biodiversity Science. Students will study in the areas of Conservation genetics, metapopulations, landscape ecology, and ecosystem management.
Prerequisite(s): Graduate classification.
Cross Listing: RPTS 655/WFSC 655.

WFSC 670 Excel Biometry
Credits 3. 3 Lecture Hours.
Rational and mathematics behind upper level biometrical methods; construct spreadsheets and analyze a common data set; topics include multiple regressions, principle components analysis, multivariate analysis of variance and others.
Prerequisites: Graduate classification; STAT 651 or equivalent.

WFSC 681 Seminar
Credit 1. 1 Lecture Hour.
Important current developments in wildlife or fisheries fields with special reference to literature. Students may register up to but no more than two sections of this course in the same semester.

WFSC 684 Professional Internship
Credits 1 to 16. 1 to 16 Other Hours.
On-the-job training in fields of wildlife and fisheries sciences.
Prerequisite: Graduate classification in Wildlife and Fisheries Sciences.

WFSC 685 Directed Studies
Credits 1 to 6. 1 to 6 Other Hours.
Individual study and research on selected problem approved by instructor and graduate advisor.
Prerequisite: Approved proposal.

WFSC 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lab Hours. 0 to 4 Lab Hours.
Special topics in wildlife ecology, fisheries ecology, vertebrate systematics, evolutionary biology of vertebrates and conservation education. May be repeated for credit.*

WFSC 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Original research on selected wildlife and/or fisheries problem to be used in thesis or dissertation.

WGST - Women's & Gender Studies

WGST 603 The Contemporary Family
Credits 3. 3 Lecture Hours.
Review and criticism of theories developed for study of the family: family formation, dynamics, conflicts, power, dissolution; subcultural family forms and responses to social change.
Prerequisite: Graduate classification or approval of instructor.
Cross Listing: SOCI 603/WGST 603.
WGST 634/EHRD 634 Introduction to Gender and Education
Credits 3. 3 Lecture Hours.
Major discussions and debates in the area of gender and education, with particular attention to the role that feminism and feminist theory have played and on the intersections of gender, race, class, ethnicity, and sexuality.
Prerequisite: Graduate classification.
Cross Listing: EHRD 634/WGST 634.

WGST 650/EHRD 650 Gender and International Education
Credits 3. 3 Lecture Hours.
Explores the intersection of formal and informal education and understandings of gender in countries beyond the United States.
Prerequisites: EHRD/WGST 634/EHRD 634 Introduction to Gender and Education.
Cross Listing: EHRD 649/WGST 649.

WGST 652/COMM 656 Feminism and Rhetoric
Credits 3. 3 Lecture Hours.
Historical development of the ideology, theory and rhetorical practices of U.S. feminism; criticism of significant artifacts of women orators and writers from the 19th century to contemporary times.
Cross Listing: COMM 656/WGST 652.

WGST 661/SOCI 661 Sociology of Gender
Credits 3. 3 Lecture Hours.
Overview of the Sociology of Gender, historical development, primary concepts, contemporary issues. Theory, methods, and applications.
Prerequisite: Graduate classification.
Cross Listing: SOCI 661/WGST 661.

WGST 680/ENGL 680 Theories of Gender
Credits 3. 3 Lecture Hours.
Theories of gender, sexualities, feminism, embodiment, and difference with particular focus on their relationship to literary and cultural studies; emphasis on contemporary theoretical positions, discourses, and debates.
Cross Listing: ENGL 680/WGST 680.

WGST 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Directed individual study of selected problems in the field of women's and gender studies.
Prerequisite: Approval of instructor.

WGST 689 Special Topics in...
Credits 1 to 4. 1 to 4 Lecture Hours. 0 to 4 Lab Hours.
Selected topics in an identified area of women's and gender studies. May be repeated for credit.
Prerequisite: Approval of instructor.

WMHS Water Mgmt & Hydrol. Sci.

WMHS 601 Applications and Problems in Hydrological Sciences
Credits 3. 3 Lecture Hours. 1 Lab Hour.
Integration and application of biophysical hydrologic processes affecting surface and groundwater resources; problem/resolution format; applications of experience through problem identification, data collection, analysis and identification of solutions and alternatives.
Prerequisite: Approval of instructor.

WMHS 602 Contemporary Issues in Water Resources
Credits 3. 3 Lecture Hours.
Examination of contemporary issues in water resource systems including water quantity, water quality, ecosystem sustainability and water supply; focus on economic, legal, political and social considerations, and alternatives in water resource systems.
Prerequisite: Approval of instructor.

WMHS 640/GEOL 640 Geochemistry of Natural Fresh Waters
Credits 3. 3 Lecture Hours.
Chemistry of aqueous solutions; weathering/redox reactions and controls on fresh waters; natural and anthropogenic factors affecting major, minor, and trace elements in fresh waters; evaluation of fresh water composition; application of water-quality measurements to quantitative hydrology.
Cross Listing: GEOL 640/WMHS 640.

WMHS 681 Seminar
Credit 1. 1 Other Hour.
Presentations on important developments and current research in hydrological sciences and water management; seminars presented by faculty, graduate students, visiting scholars and water professionals. May be repeated 3 times for credit.
Prerequisite: Approval of instructor.

WMHS 685 Directed Studies
Credits 1 to 4. 1 to 4 Other Hours.
Special topics in water not within scope of thesis research and not covered by other formal courses.
Prerequisite: Graduate classification and approval of instructor.

WMHS 689 Special topics in...
Credits 1 to 4. 1 to 4 Lecture Hours.
Selected topics in an identified area of water management or hydrological science. May be repeated for credit.
Prerequisite: Approval of instructor.

WMHS 691 Research
Credits 1 to 23. 1 to 23 Other Hours.
Research toward thesis or dissertation.
Texas A&M University at Galveston

Administrative Officers

Chief Executive Officer - Robert Smith III, RADM USN (RET)

Vice President for Academic Affairs and Chief Academic Officer - Patrick Louchoam, B.S., M.S., Ph.D.

Vice President for Academic Operations - Donna C. Lang, B.S., M.A., Ed.D.

Superintendent, Texas Maritime Academy - Robert Smith, III, RADM USN (RET)

Vice President for Finance and Compliance Officer - Susan Hernandez Lee, B.B.A., M.B.A.

Associate Vice President for Administration and Auxiliary Services - Grant Shallenberger, B.B.A., M.A.

Associate Vice President for Research Operations - Tammy L. Hollliday, B.A., Ph.D.

Associate Vice President for Research and Graduate Studies - Antonietta Quigg, B.S., B.S., Ph.D.

Assistant Vice President for Student Affairs - Todd Sutherland, B.S., M.A., Ph.D.

General Statement

Texas A&M University at Galveston, a branch campus of Texas A&M University, offers ocean-oriented graduate studies with a Master of Marine Resources Management (MMR) degree, Master of Science (MS) in Marine Biology, Doctor of Philosophy (PhD) in Marine Biology and Master of Maritime Administration and Logistics (MML). The Master of Marine Resources Management and Master of Maritime Administration and Logistics degrees are professional degrees offered on the Texas A&M University at Galveston campuses. The Master of Science and Doctor of Philosophy degrees in Marine Biology are offered as part of the Marine Biology Interdisciplinary program through the collaboration of the Texas A&M University, Texas A&M University at Galveston, and Texas A&M University–Corpus Christi campuses. Texas A&M University at Galveston is located on the shore of Galveston Bay with close access to the Gulf of Mexico.

General Program Information

Graduate Admissions

A formal application is required from a person seeking admission or readmission to graduate studies. A statewide Apply Texas application can be used to apply to any public university in the state of Texas and can be accessed at www.applytexas.org.

An application fee of $50 for U.S. citizens and permanent residents or $90 for international applicants is required to process an application for admission. Application fees are nonrefundable. Checks or money orders (U.S. currency) should be made payable to Texas A&M. All financial dealings with Texas A&M may be done by check or money order provided it displays an agency bank in the U.S. and has magnetic ink character recognition (MICR) routing numbers at the bottom of the check. The $50 fee required of U.S. citizens or permanent residents may be waived, but only in exceptional cases, for low-income applicants. In such cases, an applicant should include with the application for admission a letter from his/her financial aid officer or other knowledgeable officer verifying the need for a waiver. Waiver of the $90 international application fee is not available.

With the approval from the degree granting unit providing admission, admission to graduate studies normally remains valid for one year from the term of acceptance with one $50 or $90 (as appropriate) application fee. An extension to the one-year time limit may be granted, if requested by the applicant in writing and approved by the degree granting unit.

The normal requirement for admission to graduate studies is a scholastic record which, over at least the last two years of full-time academic study in a degree program, gives evidence of the applicant's ability to do successful graduate level work.

An applicant whose academic record is not satisfactory, or who is changing fields of study, may be required to take additional work in preparation for graduate study. Such work will normally be arranged in conference with the graduate advisor or the head of the student's major department. Before accepting a student for graduate study, a department may require that the student pass a comprehensive examination covering the basic undergraduate work in that field.

To allow time for processing, application forms should be filed at least six weeks prior to the opening of the semester (international applicants should refer to the deadlines under that heading). Admission to graduate studies cannot be completed until all the credentials requested in the application form have been received and evaluated.

In addition to the records sent to the Office of Admissions and Records, a student should have in his/her possession a copy of his/her record for use in conferences with the graduate advisor or graduate faculty in his/her department. An applicant, otherwise qualified for admission to graduate studies, may not be approved in instances where the facilities and staff available in the particular field are not adequate to take care of the needs of the student.

Students interested in applying for admission to this program should visit the website www.applytexas.org to obtain an online graduate admission application for Texas A&M University at Galveston. Students interested in receiving additional information on these programs should mail requests to:

Director of Graduate Programs
Research and Graduate Studies Office
Texas A&M University at Galveston
P.O. Box 1675
Galveston, TX 77553-1675
Or email gradstudies@tamug.edu.

Residence

In partial fulfillment of the residence requirement for all Texas A&M University at Galveston degrees, the student must complete 9 resident credit hours during one regular semester, one 10-week summer semester or in combination during the two five-week summer sessions (e.g., 3 hours first session, 6 hours second session). Upon recommendation of the student's advisory committee and with approval of the Office of
Graduate and Professional Studies, a student may be granted exemption from this requirement. However, such a petition must be approved prior to the student’s registration for the final 9 credit hours of required coursework. Full-time staff members of the University or of closely affiliated organizations stationed at the campus at Galveston or College Station may fulfill total residence requirements by completion of less-than-full course loads. Specific authorization for such programs must be granted in advance by the employing agency. Employees should submit verification of their employment at the time they submit their degree plan.

Student’s Advisory Committee

After being granted admission to graduate study and prior to enrollment in coursework, the student will meet with the departmental graduate advisor regarding the selection of a committee chair and the development of the student’s advisory committee. The student’s advisory committee for the master’s degree will consist of no fewer than three members and no more than five members of the graduate faculty representative of the student’s fields of study and research. Two members must be members of the graduate faculty of Texas A&M Galveston, one of whom should be the chair of the student’s advisory committee. At least one of the members must be from another department in Galveston or College Station. The chair, in consultation with the student, will select the remainder of the student’s advisory committee. Only graduate faculty members may serve as chair of a student’s advisory committee. The chair of the committee, who usually has immediate supervision of the student’s degree program, has the responsibility for calling required meetings of the committee, and for calling meetings at any other time considered desirable.

If the chair of the student’s advisory committee is unavailable for an extended time during any academic period during which the student is involved in activities relating to an internship or professional study and is registered for 684 or 693 courses, the student may request in writing that the program chair appoint an alternate advisory committee chair during the interim period. The duties of the student’s advisory committee include responsibility for the proposed degree plan.

In addition, the committee as a group, and as individual members, is responsible for counseling the student on academic matters, and, in the case of academic deficiency, initiating recommendations to the Office of Graduate and Professional Studies. The committee members’ signatures on the degree plan indicate their willingness to accept the responsibility for guiding and directing the entire academic program of the student and for initiating all academic actions concerning the student. Although individual committee members may be replaced by petition for valid reasons, a student’s advisory committee cannot resign en masse.

Other specific requirements of the student’s advisory committee (SAC) for students in the Marine Biology Interdisciplinary program are detailed in the Marine Biology (MARB-IDP) section to follow.

Degree Plan

Each graduate student must submit an official degree plan to the Office of Graduate and Professional Studies (OGAPS) for approval. The degree plan formally declares your degree objective, the membership of your advisory committee, and the specific courses that you will be required to complete as part of your degree program. You will develop your proposed degree plan in consultation with your advisory committee. The degree plan must be approved by your advisory committee members, your department head and, if applicable, your intercollegiate faculty chairperson.

Completed degree plans must be submitted to OGAPS according to the following regulation with the student meeting whichever of these deadlines falls earliest:

- Following the deadline imposed by the student’s college or interdisciplinary degree program.
- No later than 90 days prior to the date of the final oral examination or thesis defense for master’s students or 90 days prior to the date of the preliminary examination for doctoral students.
- According to deadlines published in the OGAPS calendar each semester for graduation that semester.

The calendar may be found at http://ogaps.tamu.edu/Buttons/Calendars.

Specific rules and limitations on coursework and committee membership can be found in the Texas A&M University Graduate and Professional Catalog. Once a degree plan is approved by OGAPS, changes in coursework or committee membership may be requested by petition to OGAPS. Changes of major, degree or department must be requested by submitting a petition and/or a new degree plan/coursework petition.

Credit Requirement for Masters Level Programs

There is a credit requirement of a minimum of 36 credit hours of courses, as approved on the degree plan. Students may elect to pursue either a thesis or a non-thesis degree in Marine Resources Management, Marine Biology or Master of Maritime Administration and Logistics. Student pursuing a course of study in Marine Biology will create their degree plan with the supervision of their faculty advisor. Students pursuing the thesis option master’s degree in Marine Biology will have a requirement of a minimum of 32 credit hours of courses, as approved on their degree plan.

Limitations on the Use of Transfer, Extension and Certain Other Courses

Some departments may have more restrictive requirements for transfer work. If otherwise acceptable, certain courses may be used toward meeting credit-hour requirements for the master’s degree under the following limitations.

1. The total of any combination of A and B below may not exceed the greater of either 12 hours or one-third (1/3) of the total hours on the degree plan. The following restrictions apply.
   - Courses taken in residence at an accredited U.S. institution, or approved international institution with a final grade of B or greater will be considered for transfer credit if, at the time the courses were completed, the student was in degree-seeking status at Texas A&M University, or the student was in degree-seeking status at the institution at which the courses were taken; and if the courses would be accepted for credit toward a similar degree for students in degree-seeking status at the host institution. Courses previously used for another degree are not acceptable for degree plan credit.
   - A maximum of 12 credit hours of 489 and/or 689 (Special Topics).

2. A maximum of 8 hours of 691 (Research), 4 hours of 684 (Professional Internship), or 9 hours of 485 and 685 (Directed Studies), and up to 3 hours of 690 (Theory of Research) or 695 (Frontiers in Research)-any combination of 684, 685, 690, 691 and 695 may not exceed one-fourth (1/4) of the total credit hour requirement shown on the individual degree plan.

3. A maximum of 2 hours of Seminar (481/681).
4. A maximum of 9 hours of advanced undergraduate courses (300- or 400-level).
5. For graduate courses of three weeks’ duration or less, up to 1 hour of credit may be obtained for each five-day week of coursework. Each week of coursework must include at least 15 contact hours.
6. Continuing education courses may not be used for graduate credit.
7. Extension courses are not acceptable for credit.

Exceptions will only be permitted in unusual cases and when petitioned by the student’s advisory committee and approved by the Office of Graduate and Professional Studies.

Transfer of Credit
Courses for which transfer credits are sought must have been completed with a grade of B or greater and must be approved by the student’s advisory committee and the Office of Graduate and Professional Studies. These courses must not have been used previously for another degree. Except for officially approved cooperative doctoral programs, credit for thesis or dissertation research or the equivalent is not transferable. Credit for “internship” coursework in any form is not transferable. Courses taken in residence at an accredited U.S. institution or approved international institution with a final grade of B or greater might be considered for transfer credit if the courses would be accepted for credit toward a similar degree for a student in degree-seeking status at the host institution. Credit for coursework taken by extension is not transferable. Coursework in which no formal grades are given or in which grades other than letter grades (A or B) are given (for example, CR, P, S, U, H, etc.) is not accepted for transfer credit. Credit for coursework submitted for transfer from any college or university must be shown in semester credit hours, or equated to semester credit hours. Grades for courses completed at other institutions, except for the Texas A&M Health Science Center, are not included in computing the GPR. An official transcript from the university at which transfer courses are taken must be sent directly to the Office of Admissions. Masters students may transfer a maximum of 12 hours of courses or one-third of the total hours of the degree plan, whichever number is greater, from an approved institution upon the advice of their advisory committee.

Scholarship
Graduate students must maintain a grade point ratio (GPR) of 3.000 (B average based on a 4.000 scale) for all courses which are listed on the degree plan and for all graded graduate and advanced undergraduate coursework (300- and 400-level) completed at Texas A&M University at College Station and/or Texas A&M University at Galveston and eligible to be applied toward a graduate degree. Graduate students will not receive graduate degree credit for undergraduate courses taken on a satisfactory/unsatisfactory (S/U) basis. Graduate students may not receive grades other than satisfactory (S) or unsatisfactory (U) in graduate courses bearing the numbers 681, 684, 690, 691, 692, 693 and 695. Any other graduate course taken on an S/U basis may not be used on a graduate degree plan. Graduate courses not on the degree plan may be taken on an S/U basis. Only grades of A, B, C and S are acceptable for graduate credit. Grades of D, F or Unsatisfactory (U) for courses on the degree plan must be assigned by repeating the courses at Texas A&M University at College Station and/or Texas A&M University at Galveston and achieving grades of C or above or Satisfactory (S). A course in which the final grade is C or lower may be repeated for a higher grade. The original grade will remain on the student’s permanent record, and the most recent grade will be used in computing the cumulative and degree plan GPRs. The cumulative GPR for a graduate student is computed by using all graded graduate (600-level) and advanced undergraduate (300- and 400-level) coursework completed at Texas A&M University at College Station and/or Texas A&M University at Galveston and eligible to be applied toward a graduate degree. Semester credit hours to which grades of Withdraw Failing (WF) are assigned shall be included in computing the GPR. Those involving grades of Withdraw Passing (WP), Satisfactory (S), Unsatisfactory (U) and Q-drop (Q) shall be excluded. If either of a student’s cumulative GPR or the GPR for courses listed on the degree plan falls below the minimum of 3.000, he or she will be considered to be scholastically deficient. If the minimum cumulative GPR is not attained in a reasonable length of time, the student may be dropped from graduate studies. The procedures for dismissal are explained in the Texas A&M University Student Rules. Departments or colleges may adopt specific guidelines pertaining to scholastic deficiency or dismissal.

Continuous Registration
A student in a graduate degree program requiring a thesis, dissertation, internship or record of study, who has completed all coursework on his/her degree plans other than 691 (Research), 684 (Internship) or 692 (Professional Study) is required to be in continuous registration until all requirements for the degree have been completed. The continuous registration requirement may be satisfied by registering either In Absentia or In Residence.

Foreign Language
There are no specific language requirements for the Master of Marine Resources Management, Master of Science, Doctor of Philosophy in Marine Biology, or the Master of Maritime Administration and Logistics degrees.

Thesis/Dissertation Proposal
For the thesis-option masters degree or doctoral degree, the student must prepare a thesis/dissertation proposal for approval by the advisory committee and the head of the major department. This proposal must be submitted to the Office of Graduate and Professional Studies at least 15 working days prior to the submission of the request for the final examination.

There are compliance issues that must be addressed if graduate students are performing research involving human subjects, animals, infectious biohazards and recombinant DNA. Students involved in these types of research should check with the Office of Research Compliance and Biosafety at (979) 458-1467 to address questions about all research compliance responsibilities. Additional information can also be obtained on the website http://rcb.tamu.edu.

Time Limit
All degree requirements for a master’s degree must be completed within a period of seven consecutive years for the degree to be granted. A course will be considered valid until seven years after the end of the semester in which it is taken. Graduate credit for coursework which is more than seven calendar years old may not be used to satisfy degree requirements.

All requirements for doctoral degrees must be completed within a period of ten consecutive calendar years for the degree to be granted. A course will be considered valid until 10 years after the end of the semester in which it is taken. Graduate credit for coursework more than 10 calendar years old at the time of the final oral examination may not be used to satisfy degree requirements.
Application for Degree

Graduate degrees are conferred at the close of each regular semester and 10-week summer semester. Candidates for advanced degrees who expect to complete their work at the end of a given semester must apply for graduation by submitting the electronic application for a degree to the Admissions and Records Office and by paying the required graduation fee at Financial Management Services no later than the Friday of the second week of the fall or spring semester or the Friday of the first week of the first summer term. The electronic application for degree can be accessed via the website http://graduation.tamu.edu/applica.html.

Thesis/Dissertation Defense/Final Examination

The candidate must pass a final examination by dates announced each semester or summer term in the Office of Graduate and Professional Studies Calendar. To be eligible to take the final examination, a student’s GPR must be at least 3.000 for courses on the degree plan and for all courses completed at Texas A&M which are eligible to be applied to a graduate degree, and there must be no unabsolved grades of D, F or U for any course listed on the degree plan.

To absolve a deficient grade, the student must repeat the course at Texas A&M University and achieve a grade of C or better. All coursework on the degree plan must have been completed with the exception of those hours for which the student is registered. Additionally, all English Language Proficiency requirements must be satisfied prior to scheduling the examination. An approved thesis proposal must be on file in the Office of Graduate and Professional Studies according to published deadlines.

The final examination covers the thesis/dissertation and all work taken on the degree plan and, at the option of the committee, may be written, oral or both. The final examination may not be administered before the thesis/dissertation is available to all members of the student’s advisory committee in substantially final form and all members have had adequate time to review the document. The examination is conducted by the student’s advisory committee as finally constituted. Thesis option masters and doctoral students must be registered in the University in the semester or summer term in which the final examination is taken. Persons other than members of the graduate faculty may, with mutual consent of the candidate and the major professor, attend final examinations for advanced degrees. Upon completion of the questioning of the candidate, all visitors must excuse themselves from the proceedings. A positive vote by all members of the graduate committee with at most one dissension is required to pass a student on his or her exam. A department, or interdisciplinary degree program, may have a stricter requirement provided there is consistency within all degree programs within a department or interdisciplinary program.

A request to hold and announce the final examination must be submitted to the Office of Graduate and Professional Studies a minimum of 10 working days in advance of the scheduled date for the examination. Examinations which are not completed and reported as satisfactory to the Office of Graduate and Professional Studies within 10 working days of the scheduled examination date will be recorded as failures. A student may be given only one opportunity to repeat the final examination for the master's degree and that must be within a time period that does not extend beyond the end of the next regular semester (summer terms are excluded).

Thesis option masters and doctoral candidates may petition to be exempt from their final examination provided their degree plan GPR is 3.500 or greater and they have the approval of the advisory committee, the head of the student’s major department, or intercollegiate faculty, if appropriate, and the Office of Graduate and Professional Studies. It is recommended that the petition for exemption be submitted the same semester the student intends to submit the thesis. Non-thesis option students cannot be exempted from their final examination.

Department of Marine Biology

The MS and PhD degrees in Marine Biology are taught by marine biologists within the Texas A&M University System (TAMUS). The program is interdisciplinary, involving courses and linking faculty from the Texas A&M Colleges of Science (SCI), Agriculture and Life Sciences (COALS), Geosciences (GEOS), TAMU at Galveston (TAMUG) and TAMU-Corpus Christi (TAMUCC).

The goal of the Marine Biology Interdisciplinary graduate program is to attract high-quality students interested in one or a combination of the sub-disciplines of marine biology who wish to pursue careers in higher education, government, or private industry. The structure of the education provided by the program will ensure that highly qualified individuals will be sent into the job market or on to further education. Employment of graduates will be related to environmental and living resource regulation and management within all levels of government; industries related to or affected by resource utilization and management; and within all levels of academia, including teaching and conducting both basic and applied research.

The degree program will focus on independently supervised research complemented by formal coursework. Essential components of the program include the following:

- a highly diverse curriculum available on all three campuses;
- original, supervised scholarly research, to be written and formally defended as a paper, thesis or dissertation;
- efficiencies obtained by sharing the diversity of courses already offered at the three participating entities facilitated by distance learning technologies;
- all students will benefit from distance technologies by having access to various courses offered at the alternative campuses and the ability to interact with members of their committees and others from whom they are separated by distance.

Students will earn one of the following degrees:

- Master of Science, non-thesis option, with 36 total semester credit hours;
- Master of Science, thesis option, with 32 total semester credit hours including thesis; or
- Doctor of Philosophy, with a minimum of 64 total semester hours beyond the MS degree or a minimum of 96 total semester hours beyond the BS degree, including dissertation.

Masters

- Master of Science in Marine Biology (p. 79)

Doctoral

- Doctor of Philosophy in Marine Biology (p. 83)
## Master of Science in Marine Biology

The **Master of Science (MS)** curriculum is designed to develop new understanding through research and creativity. Students have the option to pursue a thesis or non-thesis Master of Science degree.

### Steps to Fulfill Master’s Degree Requirements

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Meet with departmental graduate advisor to plan course of study for first semester. <em>When</em>: Before first semester registration. <em>Approved by</em>: Graduate advisor or chair of the intercollegiate faculty.</td>
</tr>
<tr>
<td>2</td>
<td>Establish advisory committee. Submit a degree plan. <em>When</em>: Prior to the deadline imposed by the student’s college and no later than 90 days prior to final oral or thesis defense. <em>Approved by</em>: Advisory committee, department head or chair of the intercollegiate faculty, and Office of Graduate and Professional Studies (OGAPS).</td>
</tr>
<tr>
<td>3</td>
<td>If thesis is required, submit thesis proposal to the Office of Graduate and Professional Studies. <em>When</em>: At least 20 working days prior to the submission of the Request for the Final Examination. <em>Approved by</em>: Advisory committee, department head or chair of the intercollegiate faculty and OGAPS.</td>
</tr>
<tr>
<td>4</td>
<td>Apply for degree; pay graduation fee. <em>When</em>: During the first week of the final semester, see OGAPS calendar.</td>
</tr>
<tr>
<td>5</td>
<td>Check to be sure degree program and advisory committee are up to date and all ELP requirements (if applicable) and coursework are complete. <em>When</em>: Well before submitting request to schedule final examination.</td>
</tr>
<tr>
<td>6</td>
<td>Complete residence requirement. <em>When</em>: If applicable, before or during final semester. <em>Approved by</em>: OGAPS.</td>
</tr>
<tr>
<td>7</td>
<td>Submit request to schedule final examination. <em>When</em>: Must be received by OGAPS at least 10 working days before exam date. See OGAPS calendar for deadlines. <em>Approved by</em>: Advisory committee, department head or chair of the intercollegiate faculty, and OGAPS.</td>
</tr>
<tr>
<td>8</td>
<td>Successfully complete final examination. <em>When</em>: The Report of the Final Examination Form should be submitted to OGAPS within 10 days following the exam. <em>Approved by</em>: Advisory committee and OGAPS.</td>
</tr>
<tr>
<td>9</td>
<td>If required, upload one approved final copy of thesis as a single PDF file (<a href="http://ogaps.tamu.edu">http://ogaps.tamu.edu</a>) and submit signed approval form to the Office of Graduate and Professional Studies. <em>When</em>: See OGAPS calendar for deadlines. <em>Approved by</em>: Advisory committee, department head or chair of the intercollegiate faculty and OGAPS.</td>
</tr>
<tr>
<td>10</td>
<td>Graduation; arrange for cap and gown. For more information, visit <a href="http://graduation.tamu.edu">http://graduation.tamu.edu</a>.</td>
</tr>
</tbody>

1 The online Document Processing Submission System is located on the website https://ogsdpss.tamu.edu.
2 Complete the application for degree form via the student’s Howdy portal.

### Program Requirements

#### Program Requirements

- Student’s Advisory Committee (p. 79)
- Degree Plan (p. 80)
- Credit Requirements (p. 80)
- Transfer of Credit (p. 80)
- Limitations on the Use of Transfer, Extension and Certain Other Courses (p. 81)
- Thesis Option (p. 81)
  - Thesis Proposal (p. 81)
  - Final Examination (p. 81)
- Non-Thesis Option (p. 82)

#### Student’s Advisory Committee

After receiving admission to graduate studies and enrolling for coursework, the student will consult with the head of his or her major or administrative department (or intercollegiate faculty, if applicable) concerning appointment of the chair of his or her advisory committee. With the exception of the Mays Business School non-thesis option, the Master of Science in Economics with a concentration in financial economics or
financial econometrics, the Master of Science with a major in Educational Human Resource Development, HRD option, and the Master of Science in Nursing with a major in Nursing Education, the student’s advisory committee for the master’s degree will consist of no fewer than three members of the graduate faculty, representative of the student’s fields of study and research. The chair or the co-chair of the advisory committee must be from the student’s major department (or intercollegiate faculty, if applicable), and at least one or more of the members must have an appointment to a department other than the student’s major department. The outside member for students in an interdisciplinary program must have an appointment to a department different from the chair of the student’s committee.

The chair, in consultation with the student, will select the remainder of the advisory committee. The student will interview each prospective committee member to determine whether he or she is willing to serve. Only graduate faculty members located on Texas A&M University campuses may serve as chair of a student’s advisory committee. Other graduate faculty members located off campus may serve as a member or co-chair (but not chair) with a member as the chair. The chair of the committee, who usually has immediate supervision of the student’s research and thesis, has the responsibility for calling required meetings of the committee and for calling meetings at any other time considered desirable.

If the chair of a student’s advisory committee voluntarily leaves the University and the student is near completion of the degree and wants the chair to continue to serve in this role, the student is responsible for securing a current member of the University Graduate Faculty, from the student’s academic program and located near the Texas A&M University campus site, to serve as the co-chair of the committee. The Department Head or Chair of Intercollegiate faculty may request in writing to the Associate Provost for Graduate and Professional Studies that a faculty member who is on an approved leave of absence or has voluntarily separated from the university be allowed to continue to serve in the role of chair of a student’s advisory committee without a co-chair for one year. The students should be near completion of the degree. Extensions beyond the one-year period can be granted with additional approval of the Dean.

If the chair of the student’s advisory committee is unavailable for an extended period in any academic period during which the student is involved in activities relating to an internship, thesis or professional paper, and is registered for courses such as 5V98, 5V99, 684, 691, 692 or 693, the student may request, in writing, that the department head appoint an alternate advisory chair during the interim period.

The duties of the committee include responsibility for the proposed degree plan, the research proposal, the thesis and the final examination. In addition, the committee as a group and as individual members are responsible for advising the student on academic matters, and, in the case of academic deficiency, initiating recommendations to the Office of Graduate and Professional Studies.

The committee members’ approval on the degree plan indicate their willingness to accept the responsibility for guiding and directing the entire academic program of the student and for initiating all academic actions concerning the student. Although individual committee members may be replaced by petition for valid reasons, a committee cannot resign en masse.

**Degree Plan**

The student’s advisory committee, in consultation with the student, will develop the proposed degree plan. The degree plan must be completed and filed with the Office of Graduate and Professional Studies prior to the deadline imposed by the student’s college or interdisciplinary degree program, if applicable, and no later than 90 days prior to the date of the final oral examination or thesis defense.

A student should submit the degree plan using the online Document Processing Submission System (http://ogsdpss.tamu.edu).

A student submitting a proposed degree plan for a Master of Science degree shall designate on the official degree plan the appropriate program option.

Additional coursework may be added to the approved degree plan by petition if it is deemed necessary by the advisory committee to correct deficiencies in the student’s academic preparation. No changes can be made to the degree plan once the student’s Request for Final Examination or Request for Final Examination Exemption is approved by the Office of Graduate and Professional Studies.

**Credit Requirement**

A minimum of 32 semester credit hours of approved courses and research is required for the thesis option Master of Science degree with the exception of the Master of Science in Visualization, which requires 48 hours and Master of Science in Athletic Training, which requires 60 hours. A minimum of 36 semester credit hours of approved coursework is required for the Non-Thesis Option.

Ordinarily the student will devote the major portion of his or her time to work in one or two closely related fields. Other work will be in supporting fields of interest.

**Transfer of Credit**

A student who has earned 12 hours of graduate credit in residence at Texas A&M University may be authorized to transfer courses in excess of the limits prescribed below upon the advice of the advisory committee and with the approval of the Office of Graduate and Professional Studies. Courses taken in residence at an accredited U.S. institution or approved international institution with a final grade of B or greater may be considered for transfer credit if, at the time the courses were completed, the courses would be accepted for credit toward a similar degree for a student in degree-seeking status at the host institution. Otherwise, the limitations stated in the following section apply. Coursework in which no formal grades are given or in which grades other than letter grades (A or B) are earned (for example, CR, P, S, U, H, etc.) is not accepted for transfer credit. Courses appearing on the degree plan with grades of D, F or U may not be absolved by transfer work. Credit for thesis research or the equivalent is not transferable. Credit for coursework submitted for transfer from any college or university must be shown in semester credit hours or equated to semester credit hours. An official transcript from the university at which the transfer coursework was taken must be sent directly to the Office of Admissions.

Courses used toward a degree at another institution may not be applied for graduate credit. If the course to be transferred was taken prior to the conferral of a degree at the transfer institution, a letter from the registrar at that institution stating that the course was not applied for credit toward
the degree must be submitted to the Office of Graduate and Professional Studies.

Grades for courses completed at other institutions are not included in computing the GPR.

Limitations on the Use of Transfer, Extension and Certain Other Courses

Some departments may have more restrictive requirements for transfer work. If otherwise acceptable, certain courses may be used toward meeting credit-hour requirements for the master’s degree under the following limitations.

1. The maximum number of credit hours which may be considered for transfer credit is the greater of 12 hours or one-third (1/3) of the total hours of a degree plan. The following restrictions apply:
   • Graduate and/or upper-level undergraduate courses taken in residence at an accredited U.S. institution, or approved international institution with a final grade of B or greater will be considered for transfer credit if, at the time the courses were completed, the student was in degree-seeking status at Texas A&M University, or the student was in degree-seeking status at the institution at which the courses were taken; and if the courses would be accepted for credit toward a similar degree for a student in degree-seeking status at the host institution.
   • Courses previously used for another degree are not acceptable for degree plan credit.

2. The maximum number of credit hours taken in post-baccalaureate non-degree (G6) classification at Texas A&M University which may be considered for application to the degree plan is 12.

3. Not more than 12 hours may be used in any combination of the following categories:
   • Not more than 8 hours in the combination of 5V98, 5V99, and 691 (Research) or 684 (Professional Internship) may be used.
   • Not more than 8 hours of 685 (Directed Studies) may be used.
   • Not more than 3 hours of 690 (Theory of Research) may be used.
   • Not more than 3 hours of 695 (Frontiers in Research) may be used.

4. A maximum of 2 hours of Seminar (681).

5. A maximum of 9 hours of advanced undergraduate courses (300- or 400-level).

6. For graduate courses of three weeks’ duration or less, taken at other institutions, up to 1 hour of credit may be obtained for each five-day week of coursework. Each week of coursework must include at least 15 contact hours.

7. Continuing education courses may not be used for graduate credit.

8. Extension courses are not acceptable for credit.

9. For the Degree of Master of Science in Medical Science, students with a first professional degree (MD, DDS or DVM) may take up to 20 hours of 691 (research). For the remaining hours, a maximum of 2 hours can be Seminar (681) and a maximum of 3 hours can be Directed Studies (685).

Exceptions will be permitted only in unusual cases and when petitioned by the student’s advisory committee and approved by the Office of Graduate and Professional Studies.

Thesis Option

An acceptable thesis is required for the Master of Science degree for a student who selects the thesis option program. The finished work must reflect a comprehensive understanding of the pertinent literature and express in clear English, the problem(s) for study, the method, significance and results of the student’s original research. Guidelines for the preparation of the thesis are available in the Thesis Manual, which is available online at the Office of Graduate and Professional Studies website.

After successful defense (or exemption) and approval by the student’s advisory committee and the head of the student’s major department (or chair of the intercollegiate faculty, if appropriate), the student must submit his/her thesis in electronic format as a single PDF file. The PDF file must be uploaded to the Office of Graduate and Professional Studies website. Additionally, a signed approval form must be brought or mailed to the Office of Graduate and Professional Studies. The PDF file and the signed approval form are required by the deadline.

Deadline dates for submitting the thesis are announced each semester or summer term in the “Office of Graduate and Professional Studies Calendar” (see Time Limit statement). These dates also can be accessed via the Office of Graduate and Professional Studies website.

Before a student can be “cleared” by Thesis and Dissertation Services, a processing fee must be paid through Student Business Services. This processing fee is for the thesis/dissertation services provided. After commencement, dissertations are digitally stored and made available through the Texas A&M Libraries.

A thesis that is deemed unacceptable by the Office of Graduate and Professional Studies because of excessive corrections will be returned to the student’s department head (or chair of the intercollegiate faculty, if applicable). The manuscript must be resubmitted as a new document, and the entire review process must begin again. All original submittal deadlines must be met during the resubmittal process to graduate that semester.

Thesis Proposal

For the thesis option Master of Science degree, the student must prepare a thesis proposal for approval by the advisory committee and the head of the major department or chair of the interdisciplinary faculty, if applicable. This proposal must be submitted to the Office of Graduate and Professional Studies at least 20 working days prior to the submission of the request for the final examination.

Compliance issues must be addressed if a graduate student is performing research involving human subjects, animals, infectious biohazards and recombinant DNA. A student involved in these types of research should check with the Office of Research Compliance and Biosafety at (979) 458-1467 to address questions about all research compliance responsibilities. Additional information can also be obtained on the Office of Research Compliance and Biosafety website.

Thesis Defense/Final Examination

A student must pass a final examination by dates announced each semester or summer term in the Office of Graduate and Professional Studies Calendar. The Office of Graduate and Professional Studies must be notified in writing of any cancellation. To be eligible to take the final examination, a student’s GPR must be at least 3.000 for courses on the degree plan and for all courses completed at Texas A&M University.
which are eligible to be applied to a graduate degree, and there must be no unabsoled grades of D, F or U for any course listed on the degree plan. To absolve a deficient grade, the student must repeat the course at Texas A&M University and achieve a grade of C or better. All coursework on the degree plan must have been completed with the exception of those hours for which the student is registered. Additionally, all English Language Proficiency requirements must be satisfied prior to scheduling the examination. If applicable, an approved thesis proposal must be on file in the Office of Graduate and Professional Studies according to published deadlines.

A request to hold and announce the final examination must be submitted to the Office of Graduate and Professional Studies a minimum of 10 working days in advance of the scheduled date for the examination. Examinations which are not completed and reported as satisfactory to the Office of Graduate and Professional Studies within 10 working days of the scheduled examination date will be recorded as failures. A student may be given only one opportunity to repeat the final examination for the master’s degree and that must be within a time period that does not extend beyond the end of the next regular semester (summer terms are excluded).

For thesis option students, the final examination covers the thesis and all work taken on the degree plan and at the option of the committee may be written or oral or both. The final examination may not be administered before the thesis is available to all members of the student’s advisory committee in substantially final form, and all members have had adequate time to review the document. The examination is conducted by the student’s advisory committee as finally constituted. A thesis option student must be registered in the University in the semester or summer term in which the final examination is taken. Persons other than members of the graduate faculty may, with mutual consent of the candidate and the major professor, attend final examinations for advanced degrees. Upon completion of the questioning of the candidate, all visitors must excuse themselves from the proceedings. A positive vote by all members of the graduate committee with at most one dissension is required to pass a student on his or her exam. A department, or interdisciplinary degree program, may have a stricter requirement provided there is consistency within all degree programs within a department or interdisciplinary degree program.

A thesis option candidate may petition to be exempt from his/her final examination provided his/her degree plan GPR is 3.500 or greater and he/she has the approval of the advisory committee, the head of the student’s major department, or intercollegiate chair, if appropriate, and the Office of Graduate and Professional Studies. It is required that the petition for exemption be submitted the same semester the student intends to submit the thesis.

For non-thesis option students, a final comprehensive examination is required. The Master of Science in Educational Human Resource Development, HRD option, the Master of Science in Nursing with a major in Nursing Education, the Master of Science Program in the Mays Business School and the Master of Science in Economics with a concentration in financial economics or financial econometrics, the Master of Science with a major in Educational Human Resource Development, HRD option, and the Master of Science in Nursing with a major in Nursing Education. No exemptions are allowed. The requirements as to level of courses and examinations are the same as for the thesis option Master of Science degree. The final examination cannot be held prior to the mid point of the final semester if questions on the examination are based on courses in which the student is currently enrolled.

A student pursuing the non-thesis option is not allowed to enroll in 5V98, 5V99, or 681 (research) for any reason and 691 may not be used for credit toward a non-thesis option Master of Science degree. A maximum of 4 credit hours of 684 (Professional Internship), 8 credit hours of 685 (Directed Studies), and up to 3 credit hours of 690 (Theory of Research) or 695 (Frontiers in Research) may be used toward the non-thesis option Master of Science degree. In addition, any combination of 684, 685, 690 and 695 may not exceed 25 percent of the total credit hour requirement shown on the individual degree plan. All requirements for the non-thesis option Master of Science degree other than those specified above are the same as for the thesis option degree.

Exam results must be submitted with original signatures of only the committee members approved by the Office of Graduate and Professional Studies. If an approved committee member substitution (1 only) has been made, his/her signature must also be submitted to the Office of Graduate and Professional Studies.

Non-Thesis Option

For the non-thesis option, a thesis is not required. A final comprehensive examination is required for all non-thesis Master of Science programs except the Master of Science programs offered by the Mays Business School, the Master of Science in Economics with a concentration in financial economics or financial econometrics, the Master of Science with a major in Educational Human Resource Development, HRD option, and the Master of Science in Nursing with a major in Nursing Education. No exemptions are allowed. The requirements as to level of courses and examinations are the same as for the thesis option Master of Science degree. The final examination cannot be held prior to the mid point of the final semester if questions on the examination are based on courses in which the student is currently enrolled.

A student pursuing the non-thesis option is not allowed to enroll in 5V98, 5V99, or 681 (research) for any reason and 691 may not be used for credit toward a non-thesis option Master of Science degree. A maximum of 4 credit hours of 684 (Professional Internship), 8 credit hours of 685 (Directed Studies), and up to 3 credit hours of 690 (Theory of Research) or 695 (Frontiers in Research) may be used toward the non-thesis option Master of Science degree. In addition, any combination of 684, 685, 690 and 695 may not exceed 25 percent of the total credit hour requirement shown on the individual degree plan. All requirements for the non-thesis option Master of Science degree other than those specified above are the same as for the thesis option degree.

Additional Requirements

Additional Requirements

- Residence (p. 82)
- Continuous Registration (p. 83)
- Time Limit (p. 83)
- Foreign Languages (p. 83)
- Application for Degree (p. 83)

Residence

In partial fulfillment of the residence requirement for the degree of Master of Science, the student must complete 9 resident credit hours during one regular semester or one 10-week summer semester in resident study at Texas A&M University. Upon recommendation of the student’s advisory committee, department head or Chair of the Interdisciplinary Program, if appropriate, and with approval of the Office of Graduate and Professional Studies, a student may be granted exemption from this requirement. Such a petition, however, must be approved prior to the student’s registration for the final 9 credit hours of required coursework.

Students who are employed full-time while completing their degree may fulfill total residence requirements by completion of less-than-full time course loads each semester. In order to be considered for this, the student is required to submit a Petition for Waivers and Exceptions along with verification of his/her employment to the Office of Graduate and Professional Studies.

See Residence Requirements (p. 22).
Continuous Registration

A student in the thesis option of the Master of Science program who has completed all coursework on his/her degree plan other than 5V98, 5V99, and 691 (research) is required to be in continuous registration until all requirements for the degree have been completed. See Continuous Registration Requirements (p. 25).

Time Limit

All degree requirements must be completed within a period of seven consecutive years for the degree to be granted. A course will be considered valid until seven years after the end of the semester in which it is taken. Graduate credit for coursework which is more than seven calendar years old at the time of the final examination (oral or written) may not be used to satisfy degree requirements.

A student who has chosen the thesis option must have the final corrected version of the thesis cleared by the Office of Graduate and Professional Studies no later than one year after the final examination, or approval of a petition for exemption from the final exam, or within the seven-year time limit, whichever occurs first. Failure to do so will result in the degree not being awarded.

Foreign Languages

No specific language requirement exists for the Master of Science degree.

Application for Degree

For information on applying for your degree, please visit the Graduation (p. 24) section.

Doctor of Philosophy in Marine Biology

Work leading to the degree of Doctor of Philosophy (PhD) is designed to give the candidate a thorough and comprehensive knowledge of his or her professional field and training in methods of research. The final basis for granting the degree shall be the candidate’s grasp of the subject matter of a broad field of study and a demonstrated ability to do independent research. In addition, the candidate must have acquired the ability to express thoughts clearly and forcefully in both oral and written languages. The degree is not granted solely for the completion of coursework, residence and technical requirements, although these must be met.

For a student who has completed a master’s degree, a DDS/DMD, DVM or MD at a U.S. institution, a minimum of 64 hours is required on the degree plan for the degree of Doctor of Philosophy. For a student who has completed a baccalaureate degree but not a master’s degree or a U.S. DDS/DMD, DVM or MD, a minimum of 96 hours is required on the degree plan for the degree of Doctor of Philosophy.

Steps to Fulfill Doctoral Degree Requirements

1. Meet with departmental/intercollegiate graduate advisor to plan course of study for first semester.
   When: Before first semester registration.
   Approved by: Graduate advisor.

2. Establish advisory committee. Submit a degree plan.
   When: Prior to the deadline imposed by the student's college or intercollegiate programs, and no later than 90 days prior to preliminary examination.
   Approved by: Advisory committee, department head or intercollegiate faculty chair, and Office of Graduate and Professional Studies (OGAPS).

3. Complete English Language Proficiency requirements (if applicable), and coursework detailed on degree plan.
   When: Before preliminary examination.

4. Complete the preliminary examination.
   When: See steps for completing the preliminary examination. The preliminary examination results must have been submitted to OGAPS 14 weeks prior to the date of the defense.
   Approved by: Advisory committee, department head or chair of the intercollegiate faculty, and OGAPS.

5. Submit proposal for dissertation or record of study to the Office of Graduate and Professional Studies.
   When: No later than 20 working days prior to the submission of the Request for the Final Examination.
   Approved by: Advisory committee, department head or intercollegiate faculty chair, and OGAPS.

6. Complete residence requirement.
   When: Before submitting request to schedule final oral examination.
   Approved by: OGAPS

7. Apply for degree; pay graduate fee.
   When: During the first week of the final semester; see OGAPS calendar for deadlines.
Submit request for permission to hold and announce final oral examination. When: Must be received by OGAPS at least 10 working days before requested exam date. See OGAPS calendar for deadlines. Approved by: Advisory committee, department head or intercollegiate faculty chair, and OGAPS.

Successfully complete final examination. When: The Report of the Final Examination Form should be submitted to OGAPS within 10 days following the exam. Approved by: Advisory committee and OGAPS.

Upload one approved final copy of the dissertation or record of study as a single pdf file (http://ogaps.tamu.edu) and submit a signed approval form to the Office of Graduate and Professional Studies. When: See OGAPS calendar for deadlines. Approved by: Advisory committee, department head or intercollegiate faculty chair, and Office of Graduate and Professional Studies.

Graduate; arrange for cap and gown. For more information, visit http://graduation.tamu.edu.

Note: Once formal coursework is complete, you must be continuously registered until all degree requirements have been met. See Continuous Registration Requirements (p. 25).

Program Requirements

Program Requirements

- Student’s Advisory Committee (p. 84)
- Degree Plan (p. 84)
- Transfer of Credit (p. 85)
- Research Proposal (p. 85)
- Examinations (p. 85)
  - Preliminary Examination (p. 85)
  - Final Examination/Dissertation Defense (p. 87)
- Dissertation (p. 87)

Student’s Advisory Committee

After receiving admission to graduate studies and enrolling, the student will consult with the head of his or her major or administrative department (or chair of the intercollegiate faculty) concerning appointment of the chair of the advisory committee. The student’s advisory committee will consist of no fewer than four members of the graduate faculty representative of the student’s several fields of study and research, where the chair or co-chair must be from the student’s department (or intercollegiate faculty, if applicable), and at least one or more of the members must have an appointment to a department other than the student’s major department. The outside member for a student in an interdisciplinary degree program must be from a department different from the chair of the student’s committee.

The chair, in consultation with the student, will select the remainder of the advisory committee. Only graduate faculty members located on Texas A&M University campuses may serve as chair of a student’s advisory committee. Other Texas A&M University graduate faculty members located off-campus may serve as a member or co-chair (but not chair), with a member as the chair.

If the chair of a student’s advisory committee voluntarily leaves the University and the student is near completion of the degree and wants the chair to continue to serve in this role, the student is responsible for securing a current member of the University Graduate Faculty, from the student’s academic program and located near the Texas A&M University campus site, to serve as the co-chair of the committee. The Department Head or Chair of Intercollegiate faculty may request in writing to the Associate Provost for Graduate and Professional Studies that a faculty member who is on an approved leave of absence or has voluntarily separated from the university, be allowed to continue to serve in the role of chair of a student’s advisory committee without a co-chair for us to one year. The students should be near completion of the degree. Extensions beyond the one year period can be granted with additional approval of the Dean.

The committee members’ signatures on the degree plan indicate their willingness to accept the responsibility for guiding and directing the entire academic program of the student and for initiating all academic actions concerning the student. Although individual committee members may be replaced by petition for valid reasons, a committee cannot resign en masse. The chair of the committee, who usually has immediate supervision of the student’s research and dissertation or record of study, has the responsibility for calling all meetings of the committee. The duties of the committee include responsibility for the proposed degree plan, the research proposal, the preliminary examination, the dissertation or record of study and the final examination. In addition, the committee, as a group and as individual members, is responsible for counseling the student on academic matters, and, in the case of academic deficiency, initiating recommendations to the Office of Graduate and Professional Studies.

Degree Plan

The student’s advisory committee will evaluate the student’s previous education and degree objectives. The committee, in consultation with the student, will develop a proposed degree plan and outline a research problem which, when completed, as indicated by the dissertation (or its equivalent for the degree of Doctor of Education or the degree of Doctor of Engineering), will constitute the basic requirements for the degree. The degree plan must be filed with the Office of Graduate and Professional Studies prior to the deadline imposed by the student’s college and no later than 90 days prior to the preliminary examination.

This proposed degree plan should be submitted through the online Document Processing Submission System located on the website http://ogsdpss.tamu.edu. A minimum of 64 hours is required on the degree plan for the Doctor of Philosophy for a student who has completed a master’s degree. A student who has completed a DDS/DMD, DVM or a MD at a U.S. institution is also required to complete a minimum of 64 hours. A student who has completed a baccalaureate degree but not a master’s degree will be required to complete a 96-hour degree plan. Completion of a DDS/DMD, DVM or MD degree at a foreign institution requires completion of a minimum of 96 hours for the Doctor of Philosophy. A
field of study may be primarily in one department or in a combination of departments. A degree plan must carry a reasonable amount of 691 or 5V98/5V99 (research).

Additional coursework may be added by petition to the approved degree plan by the student’s advisory committee if it is deemed necessary to correct deficiencies in the student’s academic preparation. No changes can be made to the degree plan once the student’s Request for Final Examination is approved by the Office of Graduate and Professional Studies.

Approval to enroll in any professional course (900-level) should be obtained from the head of the department (or Chair of the intercollegiate faculty, if applicable) in which the course will be offered before including such a course on a degree plan.

No credit may be obtained by correspondence study, by extension or for any course of fewer than three weeks duration.

Transfer of Credit

Courses for which transfer credits are sought must have been completed with a grade of B or greater and must be approved by the student’s advisory committee and the Office of Graduate and Professional Studies. These courses must not have been used previously for another degree. Except for officially approved cooperative doctoral programs, credit for thesis or dissertation research or the equivalent is not transferable. Credit for “internship” coursework in any form is not transferable. Courses taken in residence at an accredited U.S. institution or approved international institution with a final grade of B or greater will be considered for transfer credit if, at the time the courses were completed, the courses would have been accepted for credit toward a similar degree for a student in degree-seeking status at the host institution. Credit for coursework taken by extension is not transferable. Coursework in which no formal grades are given or in which grades other than letter grades (A or B) are earned (for example, CR, P, S, U, H, etc.) is not accepted for transfer credit. Credit for coursework submitted for transfer from any college or university must be shown in semester credit hours, or equated to semester credit hours.

Courses used toward a degree at another institution may not be applied for graduate credit. If the course to be transferred was taken prior to the conferral of a degree at the transfer institution, a letter from the registrar at that institution stating that the course was not applied for credit toward the degree must be submitted to the Office of Graduate and Professional Studies.

Grades for courses completed at other institutions are not included in computing the GPR. An official transcript from the university at which transfer courses are taken must be sent directly to the Office of Admissions.

Research Proposal

The general field of research to be used for the dissertation should be agreed on by the student and the advisory committee at their first meeting, as a basis for selecting the proper courses to support the proposed research.

As soon thereafter as the research project can be outlined in reasonable detail, the dissertation research proposal should be completed. The research proposal should be approved at a meeting of the student’s advisory committee, at which time the feasibility of the proposed research and the adequacy of available facilities should be reviewed. The approved proposal, signed by all members of the student’s advisory committee, the head of the student’s major department (or chair of the intercollegiate faculty, if applicable), must be submitted to the Office of Graduate and Professional Studies at least 20 working days prior to the submission of the Request for the Final Examination.

Compliance issues must be addressed if a graduate student is performing research involving human subjects, animals, infectious biohazards and recombinant DNA. A student involved in these types of research should check with the Office of Research Compliance and Biosafety at (979) 458-1467 to address questions about all research compliance responsibilities. Additional information can also be obtained on the website http://rcb.tamu.edu.

Examinations

Preliminary Examination

The student’s major department (or chair of the intercollegiate faculty, if applicable) and his or her advisory committee may require qualifying, cumulative or other types of examinations at any time deemed desirable. These examinations are entirely at the discretion of the department and the student’s advisory committee.

The preliminary examination is required. The preliminary examination for a doctoral student shall be given no earlier than a date at which the student is within 6 credit hours of completion of the formal coursework on the degree plan (i.e., all coursework on the degree plan except 681, 684, 690, 691, 5V98, 5V99 and 692 courses). The student is strongly encouraged to complete the Preliminary Examination no later than the end of the semester following the completion of the formal coursework on the degree plan. The Office of Graduate and Professional Studies must receive the results of the preliminary examination at least 14 weeks prior to the final examination date. The examination shall be oral and written unless otherwise recommended by the student’s advisory committee and approved by the Office of Graduate and Professional Studies. The written part of the examination will cover all fields of study included in the student’s degree plan. Each member of the advisory committee is responsible for administering a written examination in his or her particular field.

Unless he or she chooses to waive participation in this part of the examination, Two or more members of the advisory committee may give a joint written examination. One or more members may require a student to take a departmental or intercollegiate faculty examination to supplement or replace a written examination. Each written examination must be completed and reported as satisfactory to the chair of the advisory committee before the oral portion of the examination may be held. In case any written examination is reported unsatisfactory, the entire advisory committee must agree (1) to proceed with the oral portion of the preliminary examination, or (2) to adopt another course of action regarding the unsatisfactory written examination.

Prior to scheduling the preliminary examination with the other committee members, the committee chair will review the eligibility criteria with the student, using the Preliminary Examination Checklist to ensure the student is ready for the examination. The following list of eligibility requirements applies.

- Student is registered at Texas A&M University for the semester or summer term during which any portion of the preliminary examination may fall. If the entire examination falls between semesters, then the student must be registered for the term immediately preceding the examination.
• An approved degree plan was on file with the Office of Graduate and Professional Studies at least 90 days prior to the first written examination.
• Student's cumulative GPR is at least 3.000.
• Student's degree plan GPR is at least 3.000.
• All English language proficiency requirements have been satisfied.
• All committee members have scheduled or waived the written portion and agreed to attend the oral portion of the examination or have found a substitute. Only one substitution is allowed and it cannot be for the committee chair.
• At the end of the semester in which the exam is given, there are no more than 6 hours of coursework remaining on the degree plan (except 681, 684, 690, 691, 5V98, 5V99 and 692). The head of the student’s department (or Chair of the Intercollegiate Faculty, if applicable) has the authority to approve a waiver of this criterion.
• The time span from the first written examination to the oral is no more than three weeks. (In cases of department-wide written examinations, this criterion is not applicable.) The head of the student’s department (or chair of the intercollegiate faculty, if applicable) has the authority to approve a waiver of this criterion.

Once all requirements are met, departments or intercollegiate faculty may announce the schedule of the written and oral parts of the examination.

Credit for the preliminary examination is not transferable. If a departmental or intercollegiate faculty examination is used as part of the written portion of the preliminary examination, it must be the last examination offered prior to the date scheduled for the preliminary examination. In the schedule of the written portion, all members of the student's advisory committee are to be included.

Through the preliminary examination, the student’s advisory committee should satisfy itself that the student has demonstrated the following qualifications:

1. a mastery of the subject matter of all fields in the program;
2. an adequate knowledge of the literature in these fields and an ability to carry out bibliographical research.

In case a student is required to take, as a part of the written portion of a preliminary examination, an examination administered by a department or intercollegiate faculty, the department or intercollegiate faculty must:

1. offer the examination at least once every six months. The departmental or interdisciplinary degree program examination should be announced at least 30 days prior to the scheduled examination date.
2. assume the responsibility for marking the examination satisfactory or unsatisfactory, or otherwise graded, and in the case of unsatisfactory, stating specifically the reasons for such a mark.
3. forward the marked examination to the chair of the student’s advisory committee within one week after the examination.

The chair of the student's advisory committee is responsible for making all written examinations available to the members of the advisory committee at or before the oral portion of the preliminary examination. A positive vote by all members of the graduate committee with at most one dissent is required to pass a student on his or her preliminary exam. A department or intercollegiate faculty can have a stricter requirement provided there is consistency within all degree programs within a department or an interdisciplinary degree program.

The chair of the advisory committee will promptly report the results of the Preliminary Examination to the Office of Graduate and Professional Studies, using the Report of Doctoral Preliminary Examination form and the Preliminary Examination checklist. Both forms must have the appropriate signatures. These forms should be submitted to the Office of Graduate and Professional Studies within 10 working days of the scheduled preliminary examination.

The Report of the Preliminary Examination form must be submitted with original signatures of the approved committee members. If an approved committee member substitution (1 only) has been made, his/her signature must also be included on the form submitted to the Office of Graduate and Professional Studies. The original signature of the department head is also required on the form.

After passing the required oral and written preliminary examinations for the doctoral degree, the student must complete the final examination for the degree within four calendar years. Otherwise, the student will be required to repeat the preliminary examination. Upon approval of the student’s advisory committee, with no more than one member dissenting, and approval of the Office of Graduate and Professional Studies, a student who has failed the preliminary examination may be given one re-examination. Adequate time must be given to permit the student to address the inadequacies emerging from the first examination (normally six months). The student and the advisory committee should jointly negotiate a mutually acceptable date for this purpose.

A student must be registered at Texas A&M University for a minimum of one semester credit hour in the semester or summer term in which they will take any portion of the Preliminary Examination.

**Final Examination/Dissertation Defense**

The candidate for the doctoral degree must pass a final examination by deadline dates announced in the “Office of Graduate and Professional Studies Calendar” each semester or summer term. The doctoral student is allowed only one opportunity to take the final examination. No student may be given a final examination unless his or her current official cumulative degree plan GPAs are 3.000 or better and he or she has been admitted to candidacy. No unsolved grades of D, F, or U for any course can be listed on the degree plan. To absolve a deficient grade, a student must repeat the course and achieve a grade of C or better. A student must have completed all coursework on his or her degree plan with the exception of 691, 5V98, or 5V99 (research) or 692 (Professional Study) hours. The student must be registered for all remaining hours; no hours remain to be taken on the degree plan. The candidate for the doctoral degree must pass a final examination by deadline dates announced in the “Office of Graduate and Professional Studies Calendar” each semester or summer term in which the final examination is taken. Acceptance of the dissertation is based primarily on its scholarly merit, it must also exhibit creditable literary workmanship. The format of the dissertation must be acceptable to the Office of Graduate and Professional Studies. Guidelines for the preparation of the thesis are available in the Thesis Manual, which is available online at http://ogaps.tamu.edu.

After successful defense and approval by the student’s advisory committee and the head of the student’s major department (or chair of the intercollegiate faculty, if applicable), a student must submit his/her dissertation in electronic format as a single PDF file. The PDF file must be uploaded to the website, http://ogaps.tamu.edu. Additionally, a signed approval form must be brought or mailed to the Office of Graduate and Professional Studies. Both the PDF file and the signed approval form are required by the deadline.

Deadline dates for submitting are announced each semester or summer term in the Office of Graduate and Professional Studies Calendar (see Time Limit statement). These dates also can be accessed via the website http://ogaps.tamu.edu.

Before a student can be “cleared” by Thesis and Dissertation Services, a processing fee must be paid through Student Business Services. This processing fee is for the thesis/dissertation services provided. After the scheduled examination-defense date, The Office of Graduate and Professional Studies must be notified in writing of any cancellations.

The student’s advisory committee will conduct this examination. The final examination is not to be administered until the dissertation or record of study is available in substantially final form to the student’s advisory committee, and all concerned have had adequate time to review the document. Additionally, all English Language Proficiency requirements must be satisfied prior to scheduling the examination. Whereas the final examination may cover the broad field of the candidate’s training, it is presumed that the major portion of the time will be devoted to the dissertation and closely allied topics. Persons other than members of the graduate faculty may, with mutual consent of the candidate and the chair of the advisory committee, be invited to attend a final examination for an advanced degree. A positive vote by all members of the graduate committee with at most one dissension is required to pass a student on his or her exam. A department can have a stricter requirement provided there is consistency within all degree programs within a department. Upon completion of the questioning of the candidate, all visitors must excuse themselves from the proceedings.

The advisory committee will submit its recommendations on the appropriate Report of the Final Examination for Doctoral Candidates form to the Office of Graduate and Professional Studies regarding acceptability of the candidate for the doctoral degree. A student must be registered in the University in the semester or summer term in which the final examination is taken.

The Report of the Final Examination Form must be submitted with original signatures of only the committee members approved by the Office of Graduate and Professional Studies. If an approved committee member substitution (1 only) has been made, his/her signature must be included on the form submitted to the Office of Graduate and Professional Studies.

**Dissertation**

The ability to perform independent research must be demonstrated by the dissertation, which must be the original work of the candidate. Whereas acceptance of the dissertation is based primarily on its scholarly merit, it must also exhibit creditable literary workmanship. The format of the dissertation must be acceptable to the Office of Graduate and Professional Studies. Guidelines for the preparation of the thesis are available in the Thesis Manual, which is available online at http://ogaps.tamu.edu.

After successful defense and approval by the student’s advisory committee and the head of the student’s major department (or chair of the intercollegiate faculty, if applicable), a student must submit his/her dissertation in electronic format as a single PDF file. The PDF file must be uploaded to the website, http://ogaps.tamu.edu. Additionally, a signed approval form must be brought or mailed to the Office of Graduate and Professional Studies. Both the PDF file and the signed approval form are required by the deadline.

Deadline dates for submitting are announced each semester or summer term in the Office of Graduate and Professional Studies Calendar (see Time Limit statement). These dates also can be accessed via the website http://ogaps.tamu.edu.

Before a student can be “cleared” by Thesis and Dissertation Services, a processing fee must be paid through Student Business Services. This processing fee is for the thesis/dissertation services provided. After
commencement, dissertations are digitally stored and made available through the Texas A&M Libraries.

A dissertation that is deemed unacceptable by the Office of Graduate and Professional Studies because of excessive corrections will be returned to the student’s department head or chair of the intercollegiate faculty. The manuscript must be resubmitted as a new document, and the entire review process must begin anew. All original submittal deadlines must be met during the resubmittal process in order to graduate.

### Additional Requirements

#### Residence

A student who enters the doctoral degree program with a baccalaureate degree must spend one academic year plus one semester in resident study at Texas A&M University. A student who holds master’s degree when he/she enters doctoral degree program must spend one academic year in resident study. One academic year may include two adjacent regular semesters or one regular semester and one adjacent 10-week summer semester. The third semester is not required to be adjacent to the one year. Enrollment for each semester must be a minimum of 9 credit hours each to satisfy the residence requirement.

To satisfy the residence requirement, the student must complete a minimum of 9 credit hours per semester or 10-week summer semester in resident study at Texas A&M University for the required period. A student who enters a doctoral degree program with a baccalaureate degree may fulfill residence requirements in excess of one academic year (18 credit hours) by registration during summer sessions or by completion of a less-than-full course load (in this context a full course load is considered 9 credit hours per semester).

Students who are employed full-time while completing their degree may fulfill total residence requirements by completion of less-than-full time course loads each semester. In order to be considered for this, the student is required to submit a Petition for Waivers and Exceptions along with verification of his/her employment to the Office of Graduate and Professional Studies. An employee should submit verification of his/her employment at the time he/she submits the degree plan. See Registration.

See Residence Requirements (p. 22).

#### Time Limit

All requirements for doctoral degrees must be completed within a period of ten consecutive calendar years for the degree to be granted. A course will be considered valid until 10 years after the end of the semester in which it is taken. Graduate credit for coursework more than ten calendar years old at the time of the final oral examination may not be used to satisfy degree requirements.

After passing the required preliminary oral and written examinations for a doctoral degree, the student must complete the final examination within four calendar years. Otherwise, the student will be required to repeat the preliminary examination.

A final corrected version of the dissertation or record of study in electronic format as a single PDF file must be cleared by the Office of Graduate and Professional Studies no later than one year after the final examination or within the 10-year time limit, whichever occurs first. Failure to do so will result in the degree not being awarded.

### Continuous Registration

A student in a program leading to a Doctor of Philosophy who has completed all coursework on his/her degree plan other than 691, 5V98 or 5V99 (research) are required to be in continuous registration until all requirements for the degree have been completed. See Continuous Registration Requirements (p. 25).

### Admission to Candidacy

To be admitted to candidacy for a doctoral degree, a student must have:

1. completed all formal coursework on the degree plan with the exception of any remaining 681, 684, 690 and 691, or 5V98 and 5V99.
2. a 3.0 Graduate GPA and a Degree Plan GPA of at least 3.0 with no grade lower than C in any course on the degree plan.
3. passed the preliminary examination (written and oral portions).
4. submitted an approved dissertation proposal,
5. met the residence requirements. The final examination will not be authorized for any doctoral student who has not been admitted to candidacy.

### Languages

A student is required to possess a competent command of English. For English language proficiency requirements, see the Admissions section of this catalog. The doctoral (PhD) foreign language requirement at Texas A&M University is a departmental option, to be administered and monitored by the individual departments of academic instruction.

### 99-Hour Cap on Doctoral Degrees

In Texas, public colleges and universities are funded by the state according to the number of students enrolled. In accordance with legislation passed by the Texas Legislature, the number of hours for which state universities may receive subvention funding at the doctoral rate for any individual is limited to 99 hours. Texas A&M University and other universities will not receive subvention for hours in excess of the limit.

Institutions of higher education are allowed to charge the equivalent of nonresident tuition to a resident doctoral student who has enrolled in 100 or more semester credit hours of doctoral coursework.

A doctoral student at Texas A&M has seven years to complete his/her degree before being charged out-of-state tuition. A doctoral student who, after seven years of study, has accumulated 100 or more doctoral hours will be charged tuition at a rate equivalent to out-of-state tuition. Please note that the tuition increases will apply to Texas residents as well as students from other states and countries who currently are charged tuition at the resident rate. This includes those doctoral students who hold GAT,
Texas A&M University at Galveston

GANT, and GAR appointments of 20 or more hours and recipients of competitive fellowships who receive more than $1,000 per semester. Doctoral students who, after seven years of study, have not accumulated 100 hours are eligible to pay in-state tuition if otherwise eligible.

For count purposes, a year is counted as three semesters, normally fall, spring and summer. Using this system, a student is allowed 21 semesters as a G8 student to complete the doctoral degree before being penalized with the higher tuition rate. Any semester in which a G8 student is enrolled for a doctoral level course is counted.

The following majors are exempt from the 99-Hour Cap on Doctoral Degrees:

- Biomedical Sciences
- Biochemistry
- Microbiology
- Genetics
- Toxicology
- Nutrition Sciences
- Community Clinical Psychology
- Counseling Psychology
- School Psychology
- Veterinary Pathology
- Clinical Psychology
- Counseling Psychology
- Medical Sciences
- Health Services Research
- Health Promotion and Community Health Sciences
- Epidemiology and Environmental Health

The hour limit for these majors is 130 doctoral hours.

Application for Degree

For information on applying for your degree, please visit the Graduation (p. 24) section.

Department of Marine Sciences

For information about the Department of Marine Sciences, visit http://www.tamug.edu/mars.

MASTERS

- Master of Marine Resources Management in Marine Resources Management (p. 1753)

Master of Marine Resources Management in Marine Resources Management

The Master of Marine Resources Management (MMRM) provides students with a broad understanding of coastal and ocean policy and management. The demand for graduates from this program in industry, government, academia and non-governmental organizations (NGO’s) has never been stronger. Federal agencies employing graduates include the U.S. Coast Guard, the U.S. Army Corps of Engineers, and the Environmental Protection Agency. State agencies include the Texas General Land Office and the Texas Commission on Environmental Quality. Industries employing graduates include oil and natural gas, environmental consulting companies, ports, and tourism. These organizations have identified the need for a degree which focuses on national and international ocean resource law and policy; coastal zone management; physical and geochemical marine resources management strategies; and fisheries management. This degree program views marine natural resources management and policy development from both an ecological and policy perspective.

The degree may be viewed as a degree comparable to an MBA as an alternative terminal degree for people working in marine/ocean/coastal organizations. In addition, the degree program may address the needs of some public school science teachers seeking a degree outside the field of education.

Thesis Option

The MARM thesis option is designed to allow the student to demonstrate research capabilities through developing an independent and thorough investigation of a particular problem of interest. This would also prepare the student for further graduate studies. The 36-hour thesis-option curriculum is structured with 22 hours of required courses and 14 hours of elective courses. Additional flexibility to replace required courses targeted to their area of research is available to thesis-option students upon recommendation and approval by their committees and the department.

Non-Thesis Option

For the non-thesis degree in Masters of Marine Resources Management, of the total 36 hours of curriculum, 24 are required courses of study. The required courses include 6 hours of science, 8 hours of management, 2 hours of Geographic Information Systems (GIS) and 8 hours of law/policy courses. The student in the non-thesis option will choose electives for the remaining 12 credit hours, 3 hours of which will be additional science, and 3 hours of which will be additional law/policy/management. The remaining 6 hours can be in an appropriate supporting field, if desired. Additional flexibility to replace required courses with courses targeted to their area of research is available to thesis option students upon recommendation and approval by their committee and the department.

Program Requirements

Program Requirements

- Student’s Advisory Committee (p. 194)
- Degree Plan (p. 195)
- Credit Requirements (p. 195)
- Transfer of Credit (p. 195)
- Limitations on the Use of Transfer, Extension and Certain Other Courses (p. 195)
- Thesis Option (p. 196)
  - Thesis Proposal (p. 196)
  - Final Examination (p. 196)
- Non-Thesis Option (p. 197)

Student’s Advisory Committee

After receiving admission to graduate studies and enrolling for coursework, the student will consult with the head of his or her major or administrative department (or intercollegiate faculty, if applicable) concerning appointment of the chair of his or her advisory committee. The student’s advisory committee for the master’s degree will consist of no fewer than three members of the graduate faculty.
representative of the student’s fields of study and research. The chair or the co-chair of the advisory committee must be from the student’s major department (or intercollegiate faculty, if applicable), and at least one or more of the members must have an appointment to a department other than the student’s major department. The outside member for students in an interdisciplinary program must have an appointment to a department different from the chair of the student’s committee.

The chair, in consultation with the student, will select the remainder of the advisory committee. The student will interview each prospective committee member to determine whether he or she is willing to serve. Only graduate faculty members located on Texas A&M University campuses may serve as chair of a student’s advisory committee. Other graduate faculty members located off campus may serve as a member or co-chair (but not chair) with a member as the chair. The chair of the committee, who usually has immediate supervision of the student’s research and thesis, has the responsibility for calling required meetings of the committee and for calling meetings at any other time considered desirable.

If the chair of a student’s advisory committee voluntarily leaves the University and the student is near completion of the degree and wants the chair to continue to serve in this role, the student is responsible for securing a current member of the University Graduate Faculty, from the student’s academic program and located near the Texas A&M University campus site, to serve as the co-chair of the committee. The Department Head may request in writing to the Associate Provost for Graduate and Professional Studies that a faculty member who is on an approved leave of absence or has voluntarily separated from the university, be allowed to continue to serve in the role of chair of a student’s advisory committee without a co-chair for us to one year. The students should be near completion of the degree. Extensions beyond the one year period can be granted with additional approval of the Dean.

If the chair of the student’s advisory committee is unavailable for an extended time in any academic period during which the student is involved in activities relating to an internship, thesis or professional paper, and is registered for courses such as 5V98, 5V99, 684, 691, 692 or 693, the student may request, in writing, that the department head appoint an alternate advisory committee chair during the interim period.

The duties of the committee include responsibility for the proposed degree plan, the research proposal, the thesis and the final examination. In addition, the committee as a group and as individual members are responsible for advising the student on academic matters, and, in the case of academic deficiency, initiating recommendations to the Office of Graduate and Professional Studies.

The committee members’ approval on the degree plan indicate their willingness to accept the responsibility for guiding and directing the entire academic program of the student and for initiating all academic actions concerning the student. Although individual committee members may be replaced by petition for valid reasons, a committee cannot resign en masse.

Degree Plan

The student’s advisory committee, in consultation with the student, will develop the proposed degree plan. The degree plan must be completed and filed with the Office of Graduate and Professional Studies prior to the deadline imposed by the student’s college, if applicable, and no later than 90 days prior to the date of the final oral examination or thesis defense.

A student should submit the degree plan using the online Document Processing Submission System (https://ogsdpss.tamu.edu).

A student submitting a proposed degree plan for a Master of Marine Resources Management degree should designate on the official degree plan the appropriate program option.

Additional coursework may be added to the approved degree plan by petition if it is deemed necessary by the advisory committee to correct deficiencies in the student’s academic preparation. No changes can be made to the degree plan once the student’s Request for Final Examination or Request for Final Examination Exemption is approved by the Office of Graduate and Professional Studies.

Credit Requirement

A minimum of 36 semester credit hours of approved courses and research is required for the thesis option Master of Marine Resources Management. A minimum of 36 semester credit hours of approved coursework is required for the Non-Thesis Option.

Ordinarily the student will devote the major portion of his or her time to work in one or two closely related fields. Other work will be in supporting fields of interest.

Transfer of Credit

A student who has earned 12 hours of graduate credit in residence at Texas A&M University may be authorized to transfer courses in excess of the limits prescribed below upon the advice of the advisory committee and with the approval of the Office of Graduate and Professional Studies. Courses taken in residence at an accredited U.S. institution or approved international institution with a final grade of B or greater may be considered for transfer credit if, at the time the courses were completed, the courses would be accepted for credit toward a similar degree for a student in degree-seeking status at the host institution. Otherwise, the limitations stated in the following section apply. Coursework in which no formal grades are given or in which grades other than letter grades (A or B) are earned (for example, CR, P, S, U, H, etc.) is not accepted for transfer credit.

Courses appearing on the degree plan with grades of D, F or U may not be absolved by transfer work. Grades for courses completed at other institutions are not included in computing the GPR.

Credit for thesis research or the equivalent is not transferable. Credit for coursework submitted for transfer from any college or university must be shown in semester credit hours or equated to semester credit hours. An official transcript from the university at which the transfer coursework was taken must be sent directly to the Office of Admissions.

Courses used toward a degree at another institution may not be applied for graduate credit. If the course to be transferred was taken prior to the conferral of a degree at the transfer institution, a letter from the Registrar at that institution stating that the course was not applied for credit toward the degree must be submitted to the Office of Graduate and Professional Studies.
Limitations on the Use of Transfer, Extension and Certain Other Courses

Some departments may have more restrictive requirements for transfer work. If otherwise acceptable, certain courses may be used toward meeting credit-hour requirements for the master’s degree under the following limitations.

- The maximum number of credit hours which may be considered for transfer credit is the greater of 12 hours or one-third (1/3) of the total hours of a degree plan. The following restrictions apply:
  - Graduate and/or upper-level undergraduate courses taken in residence at an accredited U.S. institution, or approved international institution with a final grade of B or greater will be considered for transfer credit if, at the time the courses were completed, the student was in degree-seeking status at Texas A&M University, or the student was in degree-seeking status at the institution at which the courses were taken; and if the courses would be accepted for credit toward a similar degree for a student in degree-seeking status at the host institution.
  - Courses previously used for another degree are not acceptable for degree plan credit.
  - The maximum number of credit hours taken in post-baccalaureate non-degree (G6) classification at Texas A&M University which may be considered for application to the degree plan is 12.
  - Not more than 12 hours may be used in any combination of the following categories:
    - Not more than 8 hours of 691 (research) may be used.
    - No credit hours of 684 (Professional Internship) may be used.
    - Not more than 8 hours of 685 (Directed Studies) may be used.
    - Not more than 3 hours of 690 (Theory of Research) may be used.
    - Not more than 3 hours of 695 (Frontiers in Research) may be used.
  - A maximum of 2 hours of Seminar (681).
  - A maximum of 9 hours of advanced undergraduate courses (300- or 400-level).
  - For graduate courses of three weeks’ duration or less, taken at other institutions, up to 1 hour of credit may be obtained for each five-day week of coursework. Each week of coursework must include at least 15 contact hours.
  - Continuing education courses may not be used for graduate credit.
  - Extension courses are not acceptable for credit.
  - Exceptions will be permitted only in unusual cases and when petitioned by the student’s advisory committee and approved by the Office of Graduate and Professional Studies.

Thesis Option

An acceptable thesis is required for the Master of Marine Resources Management degree for a student who selects the thesis option program. The finished work must reflect a comprehensive understanding of the pertinent literature and express in clear English, the problem(s) for study, the method, significance and results of the student’s original research. Guidelines for the preparation of the thesis are available in the Thesis Manual, which is available online at the Office of Graduate and Professional Studies (http://ogaps.tamu.edu) website.

After successful defense (or exemption) and approval by the student’s advisory committee and the head of the student’s major department (or chair of the intercollegiate faculty, if appropriate), the student must submit his/her thesis in electronic format as a single PDF file. The PDF file must be uploaded to the Office of Graduate and Professional Studies (http://ogaps.tamu.edu) website. Additionally, a signed approval form must be brought or mailed to the Office of Graduate and Professional Studies. The PDF file and the signed approval form are required by the deadline.

Deadline dates for submitting the thesis are announced each semester or summer term in the “Office of Graduate and Professional Studies Calendar” (see Time Limit statement). These dates also can be accessed via the Office of Graduate and Professional Studies (http://ogaps.tamu.edu) website.

Before a student can be “cleared” by Thesis and Dissertation Services, a processing fee must be paid through Student Business Services. This processing fee is for the thesis/dissertation services provided. After commencement, dissertations are digitally stored and made available through the Texas A&M Libraries.

A thesis that is deemed unacceptable by the Office of Graduate and Professional Studies because of excessive corrections will be returned to the student’s department head (or chair of the intercollegiate faculty, if applicable). The manuscript must be resubmitted as a new document, and the entire review process must begin again. All original submittal deadlines must be met during the resubmittal process to graduate that semester.

Thesis Proposal

For the thesis option Master of Marine Resources Management degree, the student must prepare a thesis proposal for approval by the advisory committee and the head of the major department or chair of the interdisciplinary faculty, if applicable. This proposal must be submitted to the Office of Graduate and Professional Studies at least 20 working days prior to the submission of the request for the final examination.

Compliance issues must be addressed if a graduate student is performing research involving human subjects, animals, infectious biohazards and recombinant DNA. A student involved in these types of research should check with the Office of Research Compliance and Biosafety at (979) 458-1467 to address questions about all research compliance responsibilities. Additional information can also be obtained on the Office of Research Compliance and Biosafety (http://rcb.tamu.edu) website.

Thesis Defense/Final Examination

A student must pass a final examination by dates announced each semester or summer term in the Office of Graduate and Professional Studies Calendar. The Office of Graduate and Professional Studies must be notified in writing of any cancellation. To be eligible to take the final examination, a student’s GPR must be at least 3.000 for courses on the degree plan and for all courses completed at Texas A&M which are eligible to be applied to a graduate degree, and there must be no unabsolved grades of D, F or U for any course listed on the degree plan. To absolve a deficient grade, the student must repeat the course at Texas A&M University and achieve a grade of C or better. All coursework on the degree plan must have been completed with the exception of those hours for which the student is registered. Additionally, all English Language Proficiency requirements must be satisfied prior to scheduling the examination. If
applicable, an approved thesis proposal must be on file in the Office of Graduate and Professional Studies according to published deadlines.

A request to hold and announce the final examination must be submitted to the Office of Graduate and Professional Studies a minimum of 10 working days in advance of the scheduled date for the examination. Examinations which are not completed and reported as satisfactory to the Office of Graduate and Professional Studies within 10 working days of the scheduled examination date will be recorded as failures. A student may be given only one opportunity to repeat the final examination for the master’s degree and that must be within a time period that does not extend beyond the end of the next regular semester (summer terms are excluded).

For thesis option students, the final examination covers the thesis and all work taken on the degree plan and at the option of the committee may be written or oral or both. The final examination may not be administered before the thesis is available to all members of the student’s advisory committee in substantially final form, and all members have had adequate time to review the document. The examination is conducted by the student’s advisory committee as finally constituted. A thesis option student must be registered in the University in the semester or summer term in which the final examination is taken. Persons other than members of the graduate faculty may, with mutual consent of the candidate and the major professor, attend final examinations for advanced degrees. Upon completion of the questioning of the candidate, all visitors must excuse themselves from the proceedings. A positive vote by all members of the graduate committee with at most one dissension is required to pass a student on his or her exam. A department, or interdisciplinary degree program, may have a stricter requirement provided there is consistency within all degree programs within a department or interdisciplinary degree program.

A thesis option candidate may petition to be exempt from his/her final examination provided his/her degree plan GPR is 3.500 or greater and he/she has the approval of the advisory committee, the head of the student’s major department, or intercollegiate chair, if appropriate, and the Office of Graduate and Professional Studies. It is required that the petition for exemption be submitted the same semester the student intends to submit the thesis.

For non-thesis option students, a final comprehensive examination is required. The Master of Marine Resources Management in Educational Human Resource Development, HRD option, the Master of Marine Resources Management in Nursing with a major in Nursing Education, the Master of Marine Resources Management Program in the Mays Business School and the Master of Marine Resources Management in Economics with a concentration in financial economics do not have final examination requirements. Otherwise, exemptions from final examinations are not allowed. The final exam cannot be held prior to the mid point of the final semester if questions on the exam are based on courses in which the student is currently enrolled. If a student has completed all required degree plan coursework, the student is not required to be registered for classes in the semester the final examination is administered (unless he/she holds an assistantship).

Exam results must be submitted with original signatures of only the committee members approved by the Office of Graduate and Professional Studies. If an approved committee member substitution (1 only) has been made, his/her signature must also be submitted to the Office of Graduate and Professional Studies.

**Non-Thesis Option**

For the non-thesis option, a thesis is not required. A final comprehensive examination is required. No exemptions are allowed. The requirements as to level of courses and examinations are the same as for the thesis option Master of Marine Resources Management degree. The final examination cannot be held prior to the mid point of the final semester if questions on the examination are based on courses in which the student is currently enrolled.

A student pursuing the non-thesis option is not allowed to enroll in 5V98, 5V99, or 691 (research) for any reason and 691 may not be used for credit toward a non-thesis option Master of Marine Resources Management degree. A maximum of 4 credit hours of 684 (Professional Internship), 8 credit hours of 685 (Directed Studies), and up to 3 credit hours of 690 (Theory of Research) or 695 (Frontiers in Research) may be used toward the non-thesis option Master of Marine Resources Management degree. In addition, any combination of 684, 685, 690 and 695 may not exceed 25 percent of the total credit hour requirement shown on the individual degree plan. All requirements for the non-thesis option Master of Marine Resources Management degree other than those specified above are the same as for the thesis option degree.

**Additional Requirements**

**Additional Requirements**

- Residence (p. 197)
- Continuous Registration (p. 197)
- Time Limit (p. 197)
- Foreign Languages (p. 197)
- Application for Degree (p. 197)

**Residence**

In partial fulfillment of the residence requirement for the degree of Master of Marine Resources Management, the student must complete 9 resident credit hours during one regular semester or one 10-week summer semester in resident study at Texas A&M University. Upon recommendation of the student’s advisory committee, department head and with approval of the Office of Graduate and Professional Studies, a student may be granted exemption from this requirement. Such a petition, however, must be approved prior to the student’s registration for the final 9 credit hours of required coursework.

Students who are employed full-time while completing their degree may fulfill total residence requirements by completion of less-than-full time course loads each semester. In order to be considered for this, the student is required to submit a Petition for Waivers and Exceptions along with verification of his/her employment to the Office of Graduate and Professional Studies.

See Residence Requirements (p. 22).

**Continuous Registration**

A student in the thesis option of the Master of Marine Resources Management program who has completed all coursework on his/her degree plan other than 5V98, 5V99, and 691 (research) is required to be
Time Limit

All degree requirements must be completed within a period of seven consecutive years for the degree to be granted. A course will be considered valid until seven years after the end of the semester in which it is taken. Graduate credit for coursework which is more than seven calendar years old at the time of the final examination (oral or written) may not be used to satisfy degree requirements.

A student who has chosen the thesis option must have the final corrected version of the thesis cleared by the Office of Graduate and Professional Studies no later than one year after the final examination, or approval of a petition for exemption from the final exam, or within the seven-year time limit, whichever occurs first. Failure to do so will result in the degree not being awarded.

Foreign Languages

No specific language requirement exists for the Master of Marine Resources Management degree.

Application for Degree

For information on applying for your degree, please visit the Graduation Application for Degree section.

Department of Maritime Administration

Masters

- Master of Maritime Administration and Logistics in Maritime Administration and Logistics (p. 1757)

Master of Maritime Administration and Logistics in Maritime Administration and Logistics

The Master of Maritime Administration and Logistics is a professional graduate management degree that helps the student develop an integrated understanding of the centrality of ports and interconnected transportation systems to the international and domestic commerce of the United States and to the general global trading system. Coursework in international trade, economics, finance, marketing, management, logistics, port management and environmental science will prepare graduates for senior management positions in a wide variety of industries associated with logistics and, most specifically, waterborne commerce.

Southeast Texas, from the Louisiana border to Freeport, contains the important ports of Beaumont-Port Arthur, Galveston, Houston and Freeport, an important segment of the Gulf Intracoastal Waterway (GIWW), and a significant portion of the oil refining capacity of the United States. This maritime complex contains a rich diversity of cargo handling facilities which connect to the main east-west and north-south rail and road arteries of the nation. Port activity in the region is steadily expanding as world trade and the general globalization of business increases. The opening of the new locks of the Panama Canal in 2014 will dramatically increase regional port and logistics activity and the associated need for professionals with advanced degrees. Additionally, increased energy exploration and recovery activities in the Gulf of Mexico are expected to stimulate 2-3 trillion dollars of economic investment in the coastal zone of Texas in the next few decades. This investment will sustain continued economic growth for the foreseeable future. The combination of these two circumstances—the general increase in world trade and the expanding energy industry in the Gulf of Mexico—will provide exciting and challenging opportunities throughout the energy, maritime and all other transportation industries.

The graduate program in Maritime Administration and Logistics will attract dynamic and forward looking students who understand the implications of expanding regional and international trade. Some students will want to complete the thesis option, which requires preparation of a graduate thesis involving original research. This is strongly recommended for students who intend to continue their education at the doctoral level. The non-thesis option does not preclude future work toward a doctorate but is most appropriate for students who see this graduate program as their final professional degree. Thesis students will be supervised by a graduate advisory committee that is responsible for development of their final degree plan.

Graduate programs in business typically are delivered by both full time and part-time/adjunct faculty who are active researchers and practitioners in their fields. Proximity to the Houston-Galveston port complex allows ready access to extremely well qualified faculty, to research opportunities, and to challenging and exciting professional career opportunities following graduation. The websites of the Department of Maritime Administration and the Department of Marine Sciences contain biographical summaries of all faculty who will teach in this program and their research interests.

Program Requirements

Program Requirements

- Student’s Advisory Committee (p. 1757)
- Degree Plan (p. 1758)
- Transfer of Credit (p. 1758)
- Limitations on the Use of Transfer, Extension and Certain Other Courses (p. 1758)
- Thesis Option (p. 1759)
  - Thesis Proposal (p. 1759)
  - Final Examination (p. 1759)
- Non-Thesis Option (p. 1759)

Student’s Advisory Committee

For the Non-Thesis Student:

All MMAL non-thesis students’ advisory committees will consist of the departmental graduate advisor for the MMAL program or the department head for the Maritime Administration department. The departmental graduate advisor or the department head has the responsibility of approving the proposed degree plan for all non-thesis MMAL students.

For the Thesis Student:

After receiving admission to graduate studies and enrolling for coursework, the student will consult with the head of his or her major or administrative department concerning appointment of the chair of his or her advisory committee. The student’s advisory committee for the master’s degree will consist of no fewer than three members of the graduate faculty,
representative of the student’s fields of study and research. The chair or
the co-chair of the advisory committee must be from the student’s major
department (or intercollegiate faculty, if applicable), and at least one or
more of the members must have an appointment to a department
other than the student’s major department.

The chair, in consultation with the student, will select the remainder of the
advisory committee. The student will interview each prospective committee
member to determine whether he or she is willing to serve. Only graduate
faculty members located on Texas A&M University campuses may
serve as chair of a student’s advisory committee. Other graduate faculty
members located off campus may serve as a member or co-chair (but not
chair) with a member as the chair. The chair of the committee, who usually
has immediate supervision of the student’s research and thesis, has the
responsibility for calling required meetings of the committee and for calling
meetings at any other time considered desirable.

If the chair of a student’s advisory committee voluntarily leaves the
University and the student is near completion of the degree and wants
the chair to continue to serve in this role, the student is responsible for
securing a current member of the University Graduate Faculty, from the
student’s academic program and located near the Texas A&M University
campus site, to serve as the co-chair of the committee. The Department
Head may request in writing to the Associate Provost for Graduate and
Professional Studies that a faculty member who is on an approved
leave of absence or has voluntarily separated from the university, be
allowed to continue to serve in the role of chair of a student’s advisory
committee without a co-chair for us to one year. The students should be
near completion of the degree. Extensions beyond the one year period can
be granted with additional approval of the Dean.

If the chair of the student’s advisory committee is unavailable for an
extended time in any academic period during which the student is involved
in activities relating to an internship, thesis or professional paper, and is
registered for courses such as 5V98, 5V99, 684, 691, 692 or 693, the
student may request, in writing, that the department head appoint an
alternate advisory committee chair during the interim period.

The duties of the committee include responsibility for the proposed
degree plan, the research proposal, the thesis and the final examination.
In addition, the committee as a group and as individual members are
responsible for advising the student on academic matters, and, in the
case of academic deficiency, initiating recommendations to the Office
of Graduate and Professional Studies.

The committee members’ approval on the degree plan indicate their
willingness to accept the responsibility for guiding and directing the entire
academic program of the student and for initiating all academic actions
concerning the student. Although individual committee members may
be replaced by petition for valid reasons, a committee cannot resign en
masse.

Degree Plan
Each graduate student must submit an official degree plan to the Office
of Graduate and Professional Studies (OGAPS) for approval. The degree
plan formally declares his/her degree objective, the membership of the
advisory committee, and the specific courses that she/he will be required
to complete as part of the degree program. She/he will develop their
proposed degree plan in consultation with their designated advisory
committee. The Head of the Department of Maritime Administration must
approve all degree plans. Completed degree plans must be submitted to
OGAPS according to the following regulation with the student meeting
which ever of these deadlines falls earliest:

• Following the deadline imposed by the student’s college or
  interdisciplinary degree program.
• No later than 90 days prior to the date of the final oral examination or
  thesis defense – thesis students only.
• According to deadlines published in the OGAPS calendar each
  semester for graduation that semester. The calendar may be found at

Specific rules and limitations on coursework and committee membership
can be found in the Texas A&M University Graduate and Professional
Catalog. Once a degree plan is approved by OGAPS, changes in
coursework or committee membership may be requested by petition to
OGAPS. Changes of major, degree or department must be requested
by submitting a petition and/or a new degree plan/coursework petition.
Additional flexibility to replace required courses with courses targeted
to their area of research is available to thesis option students upon
recommendation and approval by their committee and the department
head.

Transfer of Credit
Students may transfer a maximum of 12 hours of courses or one-third
of the total hours of the degree plan, whichever number is greater, from
an approved institution upon the advice of their advisory committee.
Courses taken in residence at an accredited U.S. institution or approved
international institution with a final grade of B or better might be
considered for transfer credit if, at the time the courses were completed,
the student was in degree-seeking status at Texas A&M University
or at the institution at which the courses were taken, and if the
courses would be accepted for credit toward a similar degree for students
in degree-seeking status at the host institution.

Coursework in which no formal grades are given or in which grades other
than letter grades (A, B, C, etc.) are given (for example, CR, P, S, U, H,
etc.) is not accepted for transfer credit. Courses appearing on the degree
plan with grades of D, F or U may not be absolved by transfer work.
Credit for thesis research or the equivalent is not transferable. Credit for
coursework submitted for transfer from any college or university must
be shown in semester credit hours or equated to semester credit hours.
Students must have an official transcript sent directly from the university in
which the transfer coursework was taken to the Texas A&M at Galveston
Office of Admissions and Records. Courses completed at other institutions
are not included in computing the GPR.

Limitations on the Use of Transfer,
Extension and Certain Other Courses
If otherwise acceptable, certain courses may be used toward meeting
credit-hour requirements for the master’s degree under the following
limitations.

1. The total of any combination of A and B below may not exceed the
greater of either 12 hours or one third (1/3) of the total hours on the
degree plan. The following restrictions apply:
   a. Courses taken in residence at an accredited U.S. institution, or
   approved international institution with a final grade of B or greater,
   will be considered for transfer credit if, at the time the courses
   were completed, the student was in degree-seeking status at
   Texas A&M University, or the student was in degree-seeking
   status at the institution at which the courses were taken; and if the
courses would be accepted for credit toward a similar degree for students in degree-seeking status at the host institution. Courses previously used for another degree are not acceptable for degree plan credit.

b. A maximum of 12 credit hours of 489 and/or 689 (Special Topics).

2. A maximum of 8 hours of 691 (Research), 4 hours of 684 (Professional Internship), or 9 hours of 485 and/or 685 (Directed Studies), and up to 3 hours of 690 (Theory of Research) or 695 (Frontiers in Research). Any combination of 684, 685, 690, 691 and 695 may not exceed one-fourth (1/4) of the total credit hour requirement shown on the individual degree plan.

3. A maximum of 2 hours of Seminar (481/681).

4. A maximum of 9 hours of advanced undergraduate courses (300- or 400-level).

5. No credit may be obtained by correspondence study. (Courses in the student’s degree plan which may be delivered in whole or in part by electronic means are not considered “correspondence study.”)

6. For graduate courses of three weeks’ duration or less, up to 1 hour of credit may be obtained for each five-day week of coursework. Each week of coursework must include at least 15 contact hours.

7. Extension courses are not acceptable for credit.

Exceptions will only be permitted in unusual cases and when petitioned by the student’s advisory committee and approved by the Office of Graduate and Professional Studies.

Thesis Option

The thesis option is designed to allow the student to demonstrate research capabilities through developing an independent and thorough investigation of a particular problem of interest. This would also prepare the student for further graduate studies. An acceptable thesis is required for the Master of Maritime Administration and Logistics degree for students who select the thesis option program. The finished work must reflect a comprehensive understanding of the pertinent literature and express in clear English, the problem(s) for study, the method, and the significance and results of the student’s original research. Guidelines for the preparation of the thesis are available in the Thesis Manual which is available online at http://ogapa.tamu.edu.

After successful defense (or exemption from) and approval by the student’s advisory committee and the Head of the Department of Maritime Administration, students must submit their thesis to . Students must submit their thesis in electronic format as a single PDF file.

No credit hours of 684 (Professional Internship) may be used for the thesis option for the Master of Maritime Administration and Logistics degree. A maximum of 8 credit hours of 691 (Research) or 485 and/or 685 (Directed Studies), and up to 3 credit hours of 690 (Theory of Research) or 695 (Frontiers in Research) may be used toward the thesis option of the Master of Maritime Administration and Logistics degree. In addition, any combination of 685, 690, 691 and 695 may not exceed 12 credit hours.

The 36-hour thesis-option curriculum is structured with 21 hours of required courses and 15 hours of optional elective courses of which at least 6 hours are in 691 courses. Additional flexibility to replace required courses targeted to their area of research is available to thesis-option students upon recommendation and approval by their committees and the Head of the Department of Maritime Administration.

Thesis Proposal

For the thesis option, the student must prepare a thesis proposal for approval by the advisory committee and the head of the Department of Maritime Administration. This proposal must be submitted to the Office of Graduate and Professional Studies at least 15 working days prior to the submission of the request for the final examination. There are compliance issues that must be addressed if graduate students are performing research involving human subjects, animals, infectious biohazards and recombinant DNA. Students involved in these types of research should check with the Office of Research Compliance and Biosafety at (979) 458-1467 to address questions about all research compliance responsibilities. Additional information can also be obtained on the website rcb.tamu.edu.

Thesis Defense/Final Examination

This section applies to thesis students only. The candidate must pass a final examination by dates announced each semester or summer term in the Office of Graduate and Professional Studies Calendar. To be eligible to take the final examination, a student’s GPR must be at least 3.000 for courses on the degree plan and for all courses completed at Texas A&M which are eligible to be applied to a graduate degree, and there must be no unabsolved grades of D, F or U for any course listed on the degree plan. All coursework on the degree plan must have been completed with the exception of those hours for which the student is registered. Additionally, all English Language Proficiency requirements must be satisfied prior to scheduling the examination. An approved thesis proposal must be on file in the Office of Graduate and Professional Studies according to published deadlines. The final examination covers the thesis and all work taken on the degree plan and, at the option of the committee, may be written or oral or both. The final examination may not be administered before the thesis is available to all members of the student’s advisory committee in substantially final form, and all members have had adequate time to review the document. The examination is conducted by the student’s advisory committee as finally constituted.

Non-Thesis Option

A final examination is not required for the non-thesis option.

Additional Requirements

Additional Requirements

- Residence (p. 1759)
- Continuous Registration (p. 1760)
- Time Limit (p. 1760)
- Scholarship (p. 1760)
- Application to Degree (p. 1760)

Residence

In partial fulfillment of the University residence requirement for the degree of Master of Maritime Administration and Logistics, the student must complete 9 resident credit hours during the regular semester, one 10-week summer semester, or in combination during the two five-week summer sessions. Upon recommendation of the student’s advisory committee, or advisor for non-thesis students, and with the approval of the Office of Graduate and Professional Studies, a student may be granted exemption from this requirement. Such a petition, however, must be approved prior to the student’s registration for the final 9 credit hours of required coursework. Full-time staff members of the University or of
closely affiliated organizations stationed at the campus in Galveston or College Station may fulfill total residence requirements by completion of less-than-full course loads. Specific authorization for such programs must be granted by the employing agency. An employee should submit verification of his/her employment at the time he/she submits a degree plan.

**Continuous Registration**

Students in the thesis option of the Master of Maritime Administration and Logistics program who have completed all coursework on their degree plans other than 691 (Research) are required to be in continuous registration until all requirements for the degree have been completed. See Continuous Registration Requirements (p. 25).

**Time Limit**

All degree requirements for a master’s degree must be completed within a period of seven consecutive years for the degree to be granted. A course will be considered valid until seven years after the end of the semester in which it is taken. Graduate credit for coursework which is more than seven calendar years old may not be used to satisfy degree requirements.

**Scholarship**

Graduate students must maintain a grade point ratio (GPR) of 3.000 (B average based on a 4.000 scale) for all courses which are listed on the degree plan and for all graded graduate and advanced undergraduate coursework (300- and 400-level) completed at Texas A&M University at College Station and/or Texas A&M University at Galveston and eligible to be applied toward a graduate degree. If either of a student’s cumulative GPR or the GPR for courses listed on the degree plan falls below the minimum of 3.000, he or she will be considered to be scholastically deficient. If the minimum cumulative GPR is not attained in a reasonable length of time, the student may be dropped from graduate studies. The procedures for dismissal are explained in the Texas A&M University Student Rules.

**Application for Degree**

For information on applying for your degree, please visit the Graduation (p. 24) section.
Texas A&M University at Qatar

Administrative Officers
Dean and CEO - Mark H. Weichold
Executive Associate Dean - Eyad Masad
Associate Dean for Research and Graduate Studies - Kenneth R. Hall
Assistant Dean for Research and Graduate Studies - Hassan S. Bazzi
Assistant Dean for Academic and Student Services - Troy O. Bickham
Assistant Dean for Finance and Administrative Services - Rosalie Nickles

General Statement
The Texas A&M branch campus in Qatar, part of the 2,500-acre multi-institutional campus known as “Education City,” offers two graduate degrees in chemical engineering. Texas A&M’s engineering program is widely considered among the best in America, and the curricula offered at the Qatar campus are materially the same as those offered at the main campus located in College Station, Texas. Texas A&M University at Qatar is fully funded by the Qatar Foundation for Education, Science, and Community Development and provides a unique opportunity for the University to expand its international presence and to provide educational and research opportunities for faculty and students.

Programs of Study at Texas A&M University at Qatar
Texas A&M University’s Dwight Look College of Engineering strives to provide its students with a high-quality education that will prepare them for a wide range of careers at the forefront of the engineering field. The curriculum is designed to accomplish this by closely integrating cutting-edge basic and applied research with innovative classroom instruction. Texas A&M University’s engineering programs are routinely ranked among the best in the United States, and graduates are highly sought after to provide leadership and innovative solutions to global challenges.

Our faculty members maintain active research programs in a wide range of areas. In addition, our students participate in numerous co-op and internship programs, which give them the opportunity to apply their knowledge to real problems in a variety of settings.

Admission
Admissions information, including access to the online application for admission (during admission periods) is available at www.qatar.tamu.edu/admissions/graduate-admissions/. Additional information may be obtained by calling +974.4423.0135, or by visiting the Office of Research and Graduate Studies at the Engineering Building located in Education City, Doha, Qatar. To be considered a candidate for admission to Texas A&M at Qatar, the prospective student must formally apply by submitting all of the required documents and test scores and meeting all of the admission requirements. Required documents may include the following:

1. Completed application
2. Passport copy (resident permit if required)
3. Official college/university transcripts
4. Official test scores (GRE, TOEFL or IELTS)
5. Statement of Purpose
6. Resume/Curriculum Vitae
7. Letters of Recommendation
8. Application fee

Facilities
The Texas A&M at Qatar Engineering Building is one of the most advanced facilities for engineering education in the world. Designed by the famous father-son Mexican architect team Legoretta + Legoretta, the 55,000 square meter (595,000 square feet) facility combines modernist elements with traditional Islamic architectural motifs. The building is fully wireless and features high-tech classrooms, teaching laboratories and computer laboratories. The research rotunda provides additional research laboratories that give future Aggie engineers firsthand experience.

Texas A&M at Qatar’s home in Education City also includes a library with a core professional collection of over 7,000 titles is complemented by a basic collection in the arts and humanities of around 3,000 volumes. Students may also request books and journal articles from the libraries on the main campus, where there is a print collection of about 5 million volumes. Extensive online resources are available to students both within the library and on desktop or mobile devices via remote access. This includes more than 100,000 electronic journals and newspaper titles, over 1,000 databases, and more than 1.3 million electronic books.

Dwight Look College of Engineering

Chemical Engineering Program
The Chemical Engineering Program offers two graduate degrees: Master of Science and Master of Engineering. A student holding a Bachelor of Science degree in engineering or a qualified senior during the last semester may apply for admission to graduate studies to work toward the Master of Engineering (MEng) degree, majoring in his or her particular field of engineering. The work in the major field will include one or two written reports (not necessarily involving results of research conducted by the candidate).

The Master of Science (MS) degree program includes a significant research component in addition to graduate coursework. Some research areas available within the program include: liquefied natural gas safety, water and environmental management, desalination, gas-to-liquid conversion, applied catalysis, design and simulation of chemical reactors, energy efficiency, process integration and optimization, oil and gas processing, nonlinear modeling, and process dynamics and control. Modern equipment is available in numerous laboratories to perform research in these and other areas.

Information about specific program coursework and examinations is available upon request and on our website http://chen.qatar.tamu.edu.

Masters
- Master of Science in Chemical Engineering (p. 1764)
- Master of Engineering in Chemical Engineering (p. 1762)
Master of Engineering in Chemical Engineering

A student holding a Bachelor of Science degree in engineering or a qualified senior during the last semester may apply for admission to graduate studies to work toward the non-thesis degree of Master of Engineering (MEng), majoring in his or her particular field of engineering.

The work in the major field will include one or two written reports (not necessarily involving results of research conducted by the candidate).

Program Requirements

Program Requirements

- Student’s Advisory Committee (p. 1762)
- Degree Plan (p. 1762)
- Credit Requirement (p. 1762)
- Transfer of Credit (p. 1762)
- Limitations on the Use of Transfer, Extension and Certain Other Courses (p. 1763)
- Final Examination (p. 1763)

Student’s Advisory Committee

After receiving admission to graduate studies and enrolling for coursework, the student will consult with the head of the department or the department head’s designee (e.g., departmental graduate advisor) concerning appointment of the chair of his or her advisory committee. The student’s advisory committee for the Master of Engineering will consist of at least one member of the graduate faculty. Typically this member may be the departmental graduate advisor and will serve as the student’s committee chair or, the departmental graduate advisor may appoint/approve another departmental faculty member to serve as the appropriate chair of the student’s advisory committee. Depending on the departmental policy, additional committee members may be required. If additional committee members are deemed necessary by the department, the chair, in consultation with the student, will select the remainder of the advisory committee. The student will interview each prospective committee member to determine whether he or she is willing to serve. Only graduate faculty members located on Texas A&M University campuses may serve as chair of a student’s advisory committee. Other graduate faculty members located off-campus may serve as a member or co-chair (but not chair), with a member as the chair. The chair of the committee, who usually has immediate supervision of the student’s degree program, has the responsibility for calling meetings at any other time considered desirable.

If the chair of a student’s advisory committee voluntarily leaves the University and the student is near completion of the degree and wants the chair to continue to serve in this role, the student is responsible for securing a current member of the University Graduate Faculty, from the student’s academic program and located near the Texas A&M University campus site, to serve as the co-chair of the committee. The Department Head or Chair of Intercollegiate faculty may request in writing to the Associate Provost for Graduate and Professional Studies that a faculty member who is on an approved leave of absence or has voluntarily separated from the university, be allowed to continue to serve in the role of chair of a student’s advisory committee without a co-chair for us to one year. The students should be near completion of the degree. Extensions beyond the one year period can be granted with additional approval of the Dean.

Degree Plan

The student’s advisory committee, in consultation with the student, will develop the proposed degree plan. The degree plan must be completed and filed with the Office of Graduate and Professional Studies prior to the deadline imposed by the student’s college, and no later than 90 days prior to the date of the final oral examination. No exceptions are allowed.

This proposed degree plan should be submitted through the online Document Processing Submission System located on the website https://ogsdpps.tamu.edu.

Credit Requirement

A minimum of 30 semester credit hours of approved courses is required for the Master of Engineering degree.

Transfer of Credit

A student who has earned 12 hours of graduate credit in residence at Texas A&M University may be authorized to transfer courses in excess of the limits prescribed above upon the advice of the advisory committee and with the approval of the Office of Graduate and Professional Studies. Courses taken in residence at an accredited U.S. institution or approved international institution with a final grade of B or greater might be considered for transfer credit if, at the time the courses were completed, the courses would be accepted for credit toward a similar degree for a student in degree-seeking status at the host institution. Otherwise, the limitations stated in the preceding section apply. Coursework in which no formal grades are given or in which grades other than letter grades (A or B) are earned (for example, CR, P, S, U, H, etc.) is not accepted for transfer credit. Courses appearing on the degree plan with grades of D, F or U may not be absolved by transfer work. Credit for thesis research or the equivalent is not transferable. Credit for coursework submitted for transfer from any college or university must be shown in semester credit.
hours or equated to semester credit hours. An official transcript from the university at which the transfer coursework was taken must be sent directly to the Office of Admissions.

Courses used toward a degree at another institution may not be applied for graduate credit. If the course to be transferred was taken prior to the conferral of a degree at the transfer institution, a letter from the registrar at that institution stating that the course was not applied for credit toward the degree must be submitted to the Office of Graduate and Professional Studies.

Grades for courses completed at other institutions are not included in computing the GPR.

Limitations on the Use of Transfer, Extension and Certain Other Courses

Some departments may have more restrictive requirements for transfer work. If otherwise acceptable, certain courses may be used toward meeting credit-hour requirements for the master’s degree under the following limitations.

1. The maximum number of credit hours which may be considered for transfer credit is the greater of 12 hours or one-third (1/3) of the total hours of a degree plan. The following restrictions apply:
   - Graduate or upper-level undergraduate courses taken in residence at an accredited U.S. institution, or approved international institution with a final grade of B or greater will be considered for transfer credit if, at the time the courses were completed, the student was in degree-seeking status at Texas A&M University, or the student was in degree-seeking status at the institution at which the courses were taken; and if the courses would be accepted for credit toward a similar degree for a student in degree-seeking status at the host institution.
   - Courses previously used for another degree are not acceptable for degree plan credit.

2. The maximum number of credit hours taken in post-baccalaureate non-degree (G6) classification at Texas A&M University which may be considered for application to the degree plan is 12.

3. Any combination of 684, 685, 690 and 695 may not exceed 25 percent of the total credit hour requirement shown on the individual degree plan:
   - A maximum of 6 hours of 684 (Professional Internship) and/or
   - A maximum of 6 hours of 685 (Directed Studies), and
   - Up to 3 hours of 690 (Theory of Research), and
   - Up to 3 hours of 695 (Frontiers in Research).

4. A maximum of 2 hours of Seminar (681).

5. A maximum of 9 hours of advanced undergraduate courses (300- or 400-level).

6. For graduate courses of three weeks’ duration or less, taken at other institutions, up to 1 hour of credit may be obtained for each five-day week of coursework. Each week of coursework must include at least 15 contact hours.

7. No credit hours of 691 (Research) may be used.

8. Continuing education courses may not be used for graduate credit.

9. Extension courses are not acceptable for credit.

Exceptions will be permitted only in unusual cases and when petitioned by the student’s advisory committee and approved by the Office of Graduate and Professional Studies.

Final Examination

The candidate must pass a final examination by dates announced each semester or summer term in the “Office of Graduate and Professional Studies Calendar” unless the student has been exempted from the examination. The Office of Graduate and Professional Studies must be notified in writing of any cancellation. The candidate is eligible to petition for an exemption from the final examination with departmental or chair of intercollegiate faculty, if applicable, and committee approval. The approved petition should be submitted to the Office of Graduate and Professional Studies by the deadline announced for the student’s final semester (or semester of graduation) in the Office of Graduate and Professional Studies Calendar. Please see the Office of Graduate and Professional Studies website at http://ogaps.tamu.edu.

To be eligible to take the final examination, a student’s GPR must be at least 3.000 for courses on the degree plan and for all courses completed at Texas A&M which are eligible to be applied to a graduate degree, and no unabsolved grades of D, F or U can occur for any course listed on the degree plan. To absolve a deficient grade, the student must repeat the course at Texas A&M University and achieve a grade of C or better. All coursework on the degree plan must have been completed with the exception of those hours for which the student is registered. Additionally, all English language proficiency requirements must be satisfied prior to scheduling the examination.

A request to hold and announce the final examination must be submitted to the Office of Graduate and Professional Studies a minimum of 10 working days in advance of the scheduled date for the examination. Examinations which are not completed and reported as satisfactory to the Office of Graduate and Professional Studies within 10 working days of the scheduled examination date will be recorded as failures. A student may be given only one opportunity to repeat the final examination for the master’s degree and that must be within a time period that does not extend beyond the end of the next regular semester (summer terms are excluded). The final exam cannot be held prior to the mid point of the semester if questions on the exam are based on courses in which the student is currently enrolled.

The final examination covers all work taken on the degree plan and at the option of the committee may be written or oral or both. The examination is conducted by the student’s advisory committee as finally constituted. Persons other than members of the graduate faculty may, with mutual consent of the candidate and the major professor, attend final examinations for advanced degrees. Upon completion of the questioning of the candidate, all visitors must excuse themselves from the proceedings. A positive vote by all members of the graduate committee (with at most one dissension is required to pass a student on his or her exam) are both accepted. A department can have a stricter requirement provided there is consistency within all degree programs within a department.

Exam results must be submitted with original signatures of only the committee members approved by the Office of Graduate and Professional Studies. If an approved committee member substitution (1 only) has been made, his/her signature must also be submitted to the Office of Graduate and Professional Studies.

Additional Requirements

Additional Requirements

- Residence (p. 1764)
- Time Limit (p. 1764)
Residence

No residence requirement exists; however, attention is directed to the rules regarding Limitations on the Use of Transfer, Extension and Certain Other Courses.

See Residence Requirements (p. 22).

Time Limit

All degree requirements must be completed within a period of seven consecutive years for the degree to be granted. A course will be considered valid until seven years after the end of the semester in which it is taken. Graduate credit for coursework which is more than seven calendar years old at the time of the final examination (oral or written) may not be used to satisfy degree requirements.

Foreign Languages

No specific language requirement exists for the Master of Engineering degree.

Internship or Practicum

The final examination is not to be administered until all other requirements for the degree, including any internship, have been substantially completed.

Application for Degree

For information on applying for your degree, please visit the Graduation (p. 24) section.

Master of Science in Chemical Engineering

The Master of Science (MS) curriculum is designed to develop new understanding through research and creativity. Students have the option to pursue a thesis or non-thesis Master of Science degree.

Steps to Fulfill Master's Degree Requirements

1. Meet with departmental graduate advisor to plan course of study for first semester.  
   **When:** Before first semester registration.  
   **Approved by:** Graduate advisor or chair of the intercollegiate faculty.

2. Establish advisory committee.  
   Submit a degree plan.  
   **When:** Prior to the deadline imposed by the student's college and no later than 90 days prior to final oral or thesis defense.  
   **Approved by:** Advisory committee, department head or chair of the intercollegiate faculty, and Office of Graduate and Professional Studies (OGAPS).

3. If thesis is required, submit thesis proposal to the Office of Graduate and Professional Studies.  
   **When:** At least 20 working days prior to the submission of the Request for the Final Examination.  
   **Approved by:** Advisory committee, department head or chair of the intercollegiate faculty and OGAPS.

4. Apply for degree; pay graduation fee.  
   **When:** During the first week of the final semester, see OGAPS calendar.

5. Check to be sure degree program and advisory committee are up to date and all ELP requirements (if applicable) and coursework are complete.  
   **When:** Well before submitting request to schedule final examination.

6. Complete residence requirement.  
   **When:** If applicable, before or during final semester.  
   **Approved by:** OGAPS.

7. Submit request to schedule final examination.  
   **When:** Must be received by OGAPS at least 10 working days before exam date. See OGAPS calendar for deadlines.  
   **Approved by:** Advisory committee, department head or chair of the intercollegiate faculty, and OGAPS.

8. Successfully complete final examination.  
   **When:** The Report of the Final Examination Form should be submitted to OGAPS within 10 days following the exam.  
   **Approved by:** Advisory committee and OGAPS.
Graduation; arrange for cap and gown.

When: See OGAPS calendar for deadlines. Approved by: Advisory committee, department head or chair of the intercollegiate faculty and OGAPS.

If the chair of a student's advisory committee voluntarily leaves the University and the student is near completion of the degree and wants the chair to continue to serve in this role, the student is responsible for securing a current member of the University Graduate Faculty, from the student's academic program and located near the Texas A&M University campus site, to serve as the co-chair of the committee. The Department Head may request in writing to the Associate Provost for Graduate and Professional Studies that a faculty member who is on an approved leave of absence or has voluntarily separated from the university, be allowed to continue to serve in the role of chair of a student's advisory committee without a co-chair for up to one year. The student should be near completion of the degree. Extensions beyond the one year period can be granted with additional approval of the Dean.

If the chair of the student's advisory committee is unavailable for an extended time in any academic period during which the student is involved in activities relating to an internship, thesis or professional paper, and is registered for courses such as 5V98, 5V99, 684, 691, 692 or 693, the student may request, in writing, that the department head appoint an alternate advisory committee chair during the interim period.

The duties of the committee include responsibility for the proposed degree plan, the research proposal, the thesis and the final examination. In addition, the committee as a group and as individual members are responsible for advising the student on academic matters, and, in the case of academic deficiency, initiating recommendations to the Office of Graduate and Professional Studies.

The committee members' approval on the degree plan indicate their willingness to accept the responsibility for guiding and directing the entire academic program of the student and for initiating all academic actions concerning the student. Although individual committee members may be replaced by petition for valid reasons, a committee cannot resign en masse.

Student's Advisory Committee

After receiving admission to graduate studies and enrolling for coursework, the student will consult with the head of his or her major or administrative department concerning appointment of the chair of his or her advisory committee. The student's advisory committee for the thesis option master's degree will consist of no fewer than three members of the graduate faculty, representative of the student's fields of study and research. The chair or the co-chair of the advisory committee must be from the student's major department, and at least one or more of the members must have an appointment to a department other than the student's major department. The outside member for students in an interdisciplinary program must have an appointment to a department different from the chair of the student's committee. The student's advisory committee for the non-thesis option master's degree will consist of only the chair.

The chair, in consultation with the student, will select the remainder of the advisory committee. The student will interview each prospective committee member to determine whether he or she is willing to serve. Only graduate faculty members located on Texas A&M University campuses may serve as chair of a student's advisory committee. Other graduate faculty members located off campus may serve as a member or co-chair (but not chair) with a member as the chair. The chair of the committee, who usually has immediate supervision of the student's research and thesis, has the responsibility for calling required meetings of the committee and for calling meetings at any other time considered desirable.

Degree Plan

The student's advisory committee, in consultation with the student, will develop the proposed degree plan. The degree plan must be completed and filed with the Office of Graduate and Professional Studies prior to the deadline imposed by the student's college or interdisciplinary degree program, if applicable, and no later than 90 days prior to the date of the final oral examination or thesis defense.

A student should submit the degree plan using the online Document Processing Submission System located on the website https://ogsdpss.tamu.edu.

A student submitting a proposed degree plan for a Master of Science degree should designate on the official degree plan the appropriate program option.

Additional coursework may be added to the approved degree plan by petition if it is deemed necessary by the advisory committee to correct deficiencies in the student's academic preparation. No changes can be made to the degree plan once the student's Request for Final Examination or Request for Final Examination Exemption is approved by the Office of Graduate and Professional Studies.

Credit Requirement

A minimum of 32 semester credit hours of approved courses and research is required for the thesis option Master of Science degree with the exception of the Master of Science in Visualization, which requires 48
hours and Master of Science in Athletic Training, which requires 60 hours. A minimum of 36 semester credit hours of approved coursework is required for the Non-Thesis Option.

Ordinarily the student will devote the major portion of his or her time to work in one or two closely related fields. Other work will be in supporting fields of interest.

Transfer of Credit

A student who has earned 12 hours of graduate credit in residence at Texas A&M University may be authorized to transfer courses in excess of the limits prescribed below upon the advice of the advisory committee and with the approval of the Office of Graduate and Professional Studies. Courses taken in residence at an accredited U.S. institution or approved international institution with a final grade of B or greater may be considered for transfer credit if, at the time the courses were completed, the courses would be accepted for credit toward a similar degree for a student in degree-seeking status at the host institution. Otherwise, the limitations stated in the following section apply. Coursework in which no formal grades are given or in which grades other than letter grades (A or B) are earned (for example, CR, P, S, U, H, etc.) is not accepted for transfer credit. Courses appearing on the degree plan with grades of D, F or U may not be absolved by transfer work. Credit for thesis research or the equivalent is not transferable. Credit for coursework submitted for transfer from any college or university must be shown in semester credit hours or equated to semester credit hours. An official transcript from the university at which the transfer coursework was taken must be sent directly to the Office of Admissions.

Courses used toward a degree at another institution may not be applied for graduate credit. If the course to be transferred was taken prior to the conferment of a degree at the transfer institution, a letter from the registrar at that institution stating that the course was not applied for credit toward the degree must be submitted to the Office of Graduate and Professional Studies.

Grades for courses completed at other institutions are not included in computing the GPR.

Limitations on the Use of Transfer, Extension and Certain Other Courses

Some departments may have more restrictive requirements for transfer work. If otherwise acceptable, certain courses may be used toward meeting credit-hour requirements for the master’s degree under the following limitations.

1. The maximum number of credit hours which may be considered for transfer credit is the greater of 12 hours or one-third (1/3) of the total hours of a degree plan. The following restrictions apply:
   • Graduate and/or upper-level undergraduate courses taken in residence at an accredited U.S. institution, or approved international institution with a final grade of B or greater will be considered for transfer credit if, at the time the courses were completed, the student was in degree-seeking status at Texas A&M University, or the student was in degree-seeking status at the institution at which the courses were taken; and if the courses would be accepted for credit toward a similar degree for a student in degree-seeking status at the host institution.
   • Courses previously used for another degree are not acceptable for degree plan credit.

2. The maximum number of credit hours taken in post-baccalaureate non-degree (G6) classification at Texas A&M University which may be considered for application to the degree plan is 12.

3. Not more than 12 hours may be used in any combination of the following categories:
   • Not more than 8 hours in the combination of 5V98, 5V99, and 691 (research) or 684 (Professional Internship) may be used.
   • Not more than 8 hours of 685 (Directed Studies) may be used.
   • Not more than 3 hours of 690 (Theory of Research) may be used.
   • Not more than 3 hours of 695 (Frontiers in Research) may be used.

4. A maximum of 2 hours of Seminar (681).

5. A maximum of 9 hours of advanced undergraduate courses (300- or 400-level).

6. For graduate courses of three weeks’ duration or less, taken at other institutions, up to 1 hour of credit may be obtained for each five-day week of coursework. Each week of coursework must include at least 15 contact hours.

7. Continuing education courses may not be used for graduate credit.

8. Extension courses are not acceptable for credit.

9. For the Degree of Master of Science in Medical Science, students with a first professional degree (MD, DDS or DVM) may take up to 20 hours of 691 (research). For the remaining hours, a maximum of 2 hours can be Seminar (681) and a maximum of 3 hours can be Directed Studies (685).

Exceptions will be permissioned only in unusual cases and when petitioned by the student’s advisory committee and approved by the Office of Graduate and Professional Studies.

Thesis Option

An acceptable thesis is required for the Master of Science degree for a student who selects the thesis option program. The finished work must reflect a comprehensive understanding of the pertinent literature and express in clear English, the problem(s) for study, the method, significance and results of the student's original research. Guidelines for the preparation of the thesis are available in the Thesis Manual, which is available online at the Office of Graduate and Professional Studies website.

After successful defense (or exemption) and approval by the student’s advisory committee and the head of the student’s major department (or chair of the intercollegiate faculty, if appropriate), the student must submit his/her thesis in electronic format as a single PDF file. The PDF file must be uploaded to the Office of Graduate and Professional Studies website. Additionally, a signed approval form must be brought or mailed to the Office of Graduate and Professional Studies. The PDF file and the signed approval form are required by the deadline.

Deadline dates for submitting the thesis are announced each semester or summer term in the “Office of Graduate and Professional Studies Calendar” (see Time Limit statement). These dates also can be accessed via the Office of Graduate and Professional Studies website.

Before a student can be “cleared” by Thesis and Dissertation Services, a processing fee must be paid through Student Business Services. This processing fee is for the thesis/dissertation services provided. After commencement, dissertations are digitally stored and made available through the Texas A&M Libraries.
A thesis that is deemed unacceptable by the Office of Graduate and Professional Studies because of excessive corrections will be returned to the student’s department head (or chair of the intercollegiate faculty, if applicable). The manuscript must be resubmitted as a new document, and the entire review process must begin again. All original submittal deadlines must be met during the resubmittal process to graduate that semester.

**Thesis Proposal**

For the thesis option Master of Science degree, the student must prepare a thesis proposal for approval by the advisory committee and the head of the major department or chair of the intercollegiate faculty, if applicable. This proposal must be submitted to the Office of Graduate and Professional Studies at least 20 working days prior to the submission of the request for the final examination.

Compliance issues must be addressed if a graduate student is performing research involving human subjects, animals, infectious biohazards and recombinant DNA. A student involved in these types of research should check with the Office of Research Compliance and Biosafety at (979) 458-1467 to address questions about all research compliance responsibilities. Additional information can also be obtained on the Office of Research Compliance and Biosafety website.

**Thesis Defense/Final Examination**

A thesis option student must pass a final examination by dates announced each semester or summer term in the Office of Graduate and Professional Studies Calendar. The Office of Graduate and Professional Studies must be notified in writing of any cancellation. To be eligible to take the final examination, a student’s GPR must be at least 3.000 for courses on the degree plan and for all courses completed at Texas A&M which are eligible to be applied to a graduate degree, and there must be no unabsolved grades of D, F or U for any course listed on the degree plan. To absolve a deficient grade, the student must repeat the course at Texas A&M University and achieve a grade of C or better. All coursework on the degree plan must have been completed with the exception of those hours for which the student is registered. Additionally, all English Language Proficiency requirements must be satisfied prior to scheduling the examination. An approved thesis proposal must be on file in the Office of Graduate and Professional Studies according to published deadlines.

A request to hold and announce the final examination must be submitted to the Office of Graduate and Professional Studies a minimum of 10 working days in advance of the scheduled date for the examination. Examinations which are not completed and reported as satisfactory to the Office of Graduate and Professional Studies within 10 working days of the scheduled examination date will be recorded as failures. A student may be given only one opportunity to repeat the final examination for the master’s degree and that must be within a time period that does not extend beyond the end of the next regular semester (summer terms are excluded).

The final examination covers the thesis and all work taken on the degree plan and at the option of the committee may be written or oral or both. The final examination may not be administered before the thesis is available to all members of the student’s advisory committee in substantially final form, and all members have had adequate time to review the document. The examination is conducted by the student’s advisory committee as finally constituted. The student must be registered in the University in the semester or summer term in which the final examination is taken. Persons other than members of the graduate faculty may, with mutual consent of the candidate and the major professor, attend final examinations for advanced degrees. Upon completion of the questioning of the candidate, all visitors must excuse themselves from the proceedings. A positive vote by all members of the graduate committee with at most one dissension is required to pass a student on his or her exam. A department, or interdisciplinary degree program, may have a stricter requirement provided there is consistency within all degree programs within a department or interdisciplinary degree program.

A thesis option candidate may petition to be exempt from his/her final examination provided his/her degree plan GPR is 3.500 or greater and he/she has the approval of the advisory committee, the head of the student’s major department, or intercollegiate chair, if appropriate, and the Office of Graduate and Professional Studies. It is required that the petition for exemption be submitted the same semester the student intends to submit the thesis.

Exam results must be submitted with original signatures of only the committee members approved by the Office of Graduate and Professional Studies. If an approved committee member substitution (1 only) has been made, his/her signature must also be submitted to the Office of Graduate and Professional Studies.

**Non-Thesis Option**

For the non-thesis option, a thesis is not required. A final comprehensive examination is not required. The requirements as to level of courses are the same as for the thesis option Master of Science degree.

A student pursuing the non-thesis option is not allowed to enroll in 5V98, 5V99, or 691 (research) for any reason and 691 may not be used for credit toward a non-thesis option Master of Science degree. A maximum of 4 credit hours of 684 (Professional Internship), 8 credit hours of 685 (Directed Studies), and up to 3 credit hours of 690 (Theory of Research) or 695 (Frontiers in Research) may be used toward the non-thesis option Master of Science degree. In addition, any combination of 684, 685, 690 and 695 may not exceed 25 percent of the total credit hour requirement shown on the individual degree plan. All requirements for the non-thesis option Master of Science degree other than those specified above are the same as for the thesis option degree.

**Additional Requirements**

**Additional Requirements**

- Residence (p. 1767)
- Continuous Registration (p. 1768)
- Time Limit (p. 1768)
- Foreign Languages (p. 1768)
- Application for Degree (p. 1768)

**Residence**

In partial fulfillment of the residence requirement for the degree of Master of Science, the student must complete 9 resident credit hours during one regular semester or one 10-week summer semester in resident study at Texas A&M University. Upon recommendation of the student’s advisory committee, department head or Chair of the Interdisciplinary Program, if appropriate, and with approval of the Office of Graduate and Professional Studies, a student may be granted exemption from this requirement. Such a petition, however, must be approved prior to the student’s registration for the final 9 credit hours of required coursework.
Students who are employed full-time while completing their degree may fulfill total residence requirements by completion of less-than-full time course loads each semester. In order to be considered for this, the student is required to submit a Petition for Waivers and Exceptions along with verification of his/her employment to the Office of Graduate and Professional Studies.

See Residence Requirements (p. 22).

**Continuous Registration**

A student in the thesis option of the Master of Science program who has completed all coursework on his/her degree plan other than 5V98, 5V99, and 691 (research) is required to be in continuous registration until all requirements for the degree have been completed. See Continuous Registration Requirements (p. 25).

**Time Limit**

All degree requirements must be completed within a period of seven consecutive years for the degree to be granted. A course will be considered valid until seven years after the end of the semester in which it is taken. Graduate credit for coursework which is more than seven calendar years old at the time of the final examination (oral or written) may not be used to satisfy degree requirements.

A student who has chosen the thesis option must have the final corrected version of the thesis cleared by the Office of Graduate and Professional Studies no later than one year after the final examination, or approval of a petition for exemption from the final exam, or within the seven-year time limit, whichever occurs first. Failure to do so will result in the degree not being awarded.

**Foreign Languages**

No specific language requirement exists for the Master of Science degree.

**Application for Degree**

For information on applying for your degree, please visit the Graduation (p. 24) section.

EDUCATION CODE - HAZING

Education Code § 51.936 requirement to publish a summary of Education Code Ch. 37, subchapter F. Hazing in the University Catalog

The following is a summary of Chapter 37, subchapter F. (§§ 37.151-157) of the Texas Education Code, which prohibits hazing in Texas public or private high schools. Texas Education Code §51.936 applies Ch. 37’s prohibition on hazing to institutions of higher education. This summary of Chapter 37 is provided as required by § 51.936(d).

Summary

Hazing is a criminal violation under Texas law. A person may be found guilty of criminal conduct for hazing, encouraging hazing, permitting hazing, or having knowledge of the planning of hazing incidents and failure to report in writing his/her knowledge to the Dean of Students.

Both failing to report hazing and hazing that does not result in serious bodily injury are Class B misdemeanors. Hazing that results in serious bodily injury is a Class A misdemeanor. Hazing resulting in a death is a state jail felony. An organization found guilty of hazing may be fined $5,000 to $10,000 or, for incidents causing personal injury or property damage, an amount double the loss or expenses incurred because of the hazing incident. It is not a defense to prosecution that the person hazed consented to the hazing activity.

Any person reporting a specific hazing incident to the Dean of Students or other appropriate institutional official is immune from civil and criminal liability unless the report is in bad faith or malicious.

The state law does not limit or affect an educational institution’s right to enforce its own penalties against hazing.

The Education Code defines hazing as “any intentional, knowing, or reckless act occurring on or off the campus of an educational institution, by one person or acting with others, directed against a student, that endangers the mental or physical health or safety of a student for the purpose of pledging, being initiated into, affiliating with, holding office in, or maintaining membership in an organization.” The statute contains a list of conduct which constitutes hazing.

In order to report suspected incidents of hazing, please contact either the Office of the Dean of Student Life at (979) 845-3111 or the Texas A&M University Police Department at (979) 845-2345. For information on how to report suspected incidents of hazing, go to http://stophazing.tamu.edu/report

Family Educational Rights and Privacy Act

Texas A&M University informs students annually of the Family Educational Rights and Privacy Act. This Act, with which the University intends to comply fully, is intended to protect the privacy of education records, to establish the rights of students to inspect and review their education records and to provide guidelines for the correction of inaccurate or misleading data through informal and formal hearings. Students also have the right to file complaints with the Family Policy Compliance Office of the Department of Education in Washington, D.C. concerning alleged failures by the University to comply with the Act.

The Family Educational Rights and Privacy Act (FERPA) is a federal regulation that provides minimum standards for the management of student education records for universities receiving funds made available under any federal program administered by the U.S. Commissioner of Education. The Act provides, among other things, that an institution will maintain the confidentiality of student education records, and students will have the right to inspect their own education records.

This Policy is designed to meet FERPA provisions. Texas A&M University is committed to the good faith implementation of this Policy. Questions may be emailed to ferpa@tamu.edu.

If a student, the parent of a student, or any other individual has a complaint that an official of the University is violating FERPA, and the complaint cannot be satisfactorily resolved within the University, that person has the right to file a complaint with the Department of Education by contacting:

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Ave., S.W.
Washington, D.C. 20202-5920

For the purposes of this Policy, Texas A&M University has used the following definitions of terms:

Student. Person who attends or has attended a program of instruction sponsored by Texas A&M University.

Education Records. Any records (in handwriting, print, tapes, film or other medium) maintained by the University, an employee of the University or agent of the University which is related to the student.

Directory Information. The following directory information may be made public unless the student desires to withhold any or all of this information: the student’s name, UIN (Universal Identification Number), local address, permanent address, email address, local telephone number, permanent telephone number, dates of attendance, program of study, classification, previous institution(s) attended, degrees received, honors and awards received, participation in officially recognized activities and sports, medical residence location (Health Science Center students), and medical residence specialization (Health Science Center students).

Currently enrolled students wishing to withhold any or all directory information items may do so by going to the My Record tab in the Howdy (https://howdy.tamu.edu) portal, clicking on “Withhold Directory
Information” in the My Information channel and submitting a completed form.

Directory information may be released unless a Withhold Directory Information request is submitted by the student. The request remains in effect until the student revokes it or is deceased. Only currently enrolled students may request directory information be withheld.

Statement of Rights
Texas A&M University encourages students to exercise all of their rights under the Family Educational Rights and Privacy Act. Operating under the premise that the educational process is a cooperative venture between a student and the University, we emphasize the following rights of eligible students:

1. the right to inspect and review, with certain limited exceptions, the student’s educational records, including the right to receive explanations and interpretations of the records and to obtain copies of the records when such are needed to allow the student to effectively exercise his/her right of inspection and review;
2. the right to consent to disclosures of personally identifiable information contained in the student’s education records, except to the extent that FERPA authorizes disclosure without consent.

One exception which permits disclosure without consent is disclosure to school officials with legitimate educational interests. A school official is a person or entity: (a) employed by the university or the university system in an administrative, supervisory, academic or research, or support staff position; (b) serving on a university governing body or duly authorized panel or committee; or (c) employed by or under contract to the university to perform a special task, function, or service for the university.

A school official has a legitimate educational interest if the information requested is necessary for that official to (a) perform appropriate tasks that are specified in his/her position description or in the performance of regularly assigned duties by a lawful supervisor; (b) fulfill the terms of a contractual agreement; (c) perform a task related to a student’s education; (d) perform a task related to the discipline of a student; or (e) provide a service or benefit relating to the student or student’s family, such as health care, counseling, financial aid, job placement, or former student-related activities.

Disclosure to a school official having a legitimate educational interest does not constitute university authorization to transmit, share, or disclose any or all information received to third parties unless such disclosure is permitted or required by law.

3. the right to correct a student’s education records when the records are inaccurate, misleading or otherwise in violation of FERPA;
4. the right to report violations of FERPA to the Department of Education;
5. the right to be informed about FERPA rights.

All the rights and protections given students under FERPA belong to the student. However, information in student records may be provided to parents/legal guardians without the written consent of the student if the eligible student is a financial dependent of his or her parents/legal guardians as defined under Section 152 of the Internal Revenue Code of 1954.

Records Not Available for Information and Review
Students shall have access to all education records concerning them maintained by the University with the exception of the following:

1. A personal record kept by a university faculty or staff member which meets the following tests:
   a. It is in the personal possession of the individual who made it.
   b. Information contained in it has never been revealed or made available to any other person except the maker’s temporary substitute.
2. An employment record which is used in relation to a student’s employment by the University, except where an individual in attendance at the University is employed as a result of his or her status as a student.
3. Records relating to a student which are created or maintained by a physician, psychiatrist, psychologist or other recognized professional or para-professional acting in his or her professional or para-professional capacity or assisting in that capacity which are used in connection with the provision of treatment to a student and are not disclosed to anyone other than the individuals providing the treatment.
4. Financial records and statements of a student’s parents.
5. Confidential letters and statements of recommendation which were placed in the education records of a student prior to January 1, 1975.
6. Confidential letters and statements of recommendation which were placed in the education records of a student on or after January 1, 1975, if the student has waived his or her right to inspect and review the letters or statements.
7. Records concerning admissions to an academic component of the University which the student has never attended.

Any questions concerning FERPA should be directed to the Office of the Registrar.

Graduate Appeals Panel

Revised 2008
The Graduate Appeals Panel is governed by the most current version of Texas A&M University Student Rule 59. Rule 59 can be found on the web at http://student-rules.tamu.edu/rule59.

The Graduate Appeals Panel will hear appeals that involve disciplinary actions stemming from suspension or blocks for scholastic deficiency, and disputes over final course grades or evaluation of performance on examinations required by the department, intercollegiate faculty or the graduate advisory committee. Appeals will be heard when the student alleges that an arbitrary, capricious or prejudiced evaluation occurred. Appeals regarding departmental, intercollegiate faculty or Office of Graduate and Professional Studies requirements will not be heard.

The decision to request action by the Graduate Appeals Panel means that
1. the student has appealed to the department head and then the dean of the college administering the student’s degree, and
2. the actions recommended at each level are unsatisfactory to the student or the examining committee.

The student and/or the examining committee through its chair may file an appeal to the Graduate Appeals Panel.
# International Agreements

In order to help internationalize the campus and create significant global opportunities for our students and faculty, Texas A&M University has active, formal agreements with foreign institutions as well as Reciprocal Educational Exchange Programs (REEP). For information regarding international Partnerships visit the Global Program Support (http://globalsupport.tamu.edu) website or call Public Partnership & Outreach, Global Partnerships office at 979.845.3099.

All current (as of April 2015) agreements with foreign institutions are as follows:
