

LAND DEVELOPMENT AND SUSTAINABILITY - CERTIFICATE

The certificate in Land Development and Sustainability is designed to train professionals currently employed in industries related to real estate development such as engineers, attorneys, financial advisors and other professionals.

The certificate is designed to supplement the professional's area of expertise without requiring the professional to complete a full degree or redundant coursework in their profession.

The certificate in Land Development and Sustainability will provide professionals in fields related to real estate development a broader understanding of the land development process, making them better able to provide services to their clients in the real estate development industry. Being able to provide this service to their clients, the individual earning the certificate will be of more value to their employer and more competitive in their career pursuits. Additionally, professionals completing the Land Development and Sustainability certificate will be prepared to transition to job positions with real estate development firms.

The certificate in Land Development and Sustainability is available to graduate students from any program at Texas A&M University.
