

# INTERNATIONAL PETROLEUM MANAGEMENT - CERTIFICATE

The certificate in International Petroleum Management was developed in cooperation between the Department of Petroleum Engineering and Mays Business School to fill a void by MS/MEng Petroleum Engineering graduates. These graduates obtain management positions of major oil and gas companies in the U.S. or abroad without basic/fundamental business knowledge/background. The benefits of the certificate program prepare graduates of Texas A&M's masters program in Petroleum Engineering to become successful leaders of oil and gas companies worldwide.

Refer to the required course sequence list ([https://engineering.tamu.edu/petroleum/\\_files/\\_documents/\\_content-documents/ipm\\_req.pdf](https://engineering.tamu.edu/petroleum/_files/_documents/_content-documents/ipm_req.pdf)) for more details. Any variation in the course sequence must be approved by the IPM Program Coordinator in the Mays Business School and the Graduate Advisor in the Petroleum Engineering Department.
