The Department of Epidemiology and Biostatistics offers students a supportive and stimulating work environment for their learning and growing. Our goal is to inspire students to be global leaders in public health by providing them a foundational education in epidemiology and biostatistics. Faculty will prepare students to design and conduct epidemiologic studies, analyze and interpret data obtained from those studies, and apply them to real-world settings.

Students will become competent users and interpreters of population-based health information, by learning to apply fundamental epidemiologic and biostatistical research methods and engaging with interdisciplinary teams.

Graduates of the department have gone on to apply their knowledge in a variety of public health settings, including: state and local health agencies, nonprofit organizations, academic institutions, and private industry.
