MSCI - MEDICAL SCIENCES

MSCI 601 Contemporary Topics in Advanced Cell Biology I
Credits 5.5 Lecture Hours. Advanced cell and molecular biology examining the molecular basis of cellular functions relevant to human health; specific topics will vary but focus on the basic structures, functions and properties of proteins, nucleic acids and lipids; emphasis on recent developments and the primary literature. Prerequisites: MSCI 601 or equivalent.

MSCI 602 Contemporary Topics in Advanced Cell Biology II
Credits 5.5 Lecture Hours. Continuation of MSCI 601. Advanced cell and molecular biology course examining the molecular basis of cellular functions relevant to human health. Specific topics will vary but the course will focus on emergent properties of complex cellular systems. There will be an emphasis on recent developments and the primary literature. Prerequisites: MSCI 601 or equivalent.

MSCI 603 Tumor Microenvironment and Cancer Metastasis
Credits 3.3 Lecture Hours. Focus on the role of components of the tumor microenvironment in promoting cancer progression and distant metastasis and understanding of different types of cancer therapies; review the existing cutting-edge technologies and multi-disciplinary approaches to address fundamental questions in cancer biology with an emphasis on targeted therapies and translational research. Prerequisite: Graduate classification and approval of instructor.

MSCI 605 Foundations of Biomedical Informatics
Credits 3.3 Lecture Hours. Medical decision-making; performance of diagnostic tests clinical decision support; mobile health and telemedicine; systems biology; visual analytics; data mining; medical information retrieval; public health informatics; algorithms; software engineering in healthcare; electronic health records; consumer health informatics. Prerequisite: Graduate classification or approval of instructor.

MSCI 607 Life Science Entrepreneurship
Credits 3.3 Lecture Hours. Independent study designed as an introduction and overview of the commercialization process involved in moving a research discovery from the bench to the market.

MSCI 608 Development and Commercialization of Human Therapeutics
Credits 2.2 Lecture Hours. Survey the principles and concepts of commercializing a human pharmaceutical drug within the context of a startup biotechnology; emphasis on the issues and concepts encountered in either academic or industrial careers in moving potential pharmaceutical drug towards approved therapeutic.

MSCI 609 Responsible Conduct of Research
Credit 1.1 Lecture Hour. Responsible Conduct of Research (RCR) is defined by NIH as the practice of scientific investigation with integrity. It involves the awareness and application of established professional norms and ethical principles in the performance of all activities related to scientific research. Responsible conduct of research is an essential component of research training. This course is designed as a survey of basic topics that trainees will need to understand as they enter into the practice of research. The course will utilize outside reading assignments, online modules, class presentation and discussion of cases associated with each topic.

MSCI 610 Pathogenesis of Human Disease
Credits 1 to 4.1 to 4 Lecture Hours. Molecular mechanisms of human disease processes; the main goal of the course is to provide students with an understanding of basic disease processes such as cardiovascular disease, cancer, inflammatory disease, AIDS, tuberculosis, diabetes, Alzheimer's disease and spinal cord injury.

MSCI 611 Experimental Design for Biomedical Science
Credits 3.3 Lecture Hours. Students learn about the principles of experimental design. By the end of the course, the student should be able to incorporate appropriate design features into their own experiments and critically evaluate the experimental literature for design flaws and inappropriate use of statistics. Prerequisite: Undergraduate or graduate statistics 3 hours.

MSCI 612 Current Topics in Cell Signaling
Credits 3.3 Lecture Hours. The course provides an overview of intracellular signal transduction pathways utilized by various classes of growth factor, cytokine, integrin and G-protein coupled receptors. The course also will provide a clear understanding of the importance of these pathways in regulating cell growth, differentiation, apoptosis and other cellular processes, both under normal physiologic conditions as well as diseases.

MSCI 620 The Scientific Basis of Medicine
Credit 1.1 Other Hour. Journal club in which recent research papers relevant to medicine are presented by students and discussed by students and faculty. May be taken four times for credit.

MSCI 625 Foundations of Psychiatric Research
Credits 2.2 Lecture Hours. Examination of pathology and presentation of major mental health disorders; advanced and current techniques in psychiatric research including clinical research, neuroimaging, computational psychiatry, genome wide association studies, animal models, and molecular biology; evaluation of current and relevant mental health literature. Prerequisites: Graduate classification or approval of instructor.
MSCI 630 Pathogenesis of Human Disease
Credits 4. 4 Lecture Hours. Upon completion of this course, the student will be able to recognize and describe the molecular events responsible for various human diseases. The student will be able to differentiate between various types of diseases and independently assemble a concise presentation on a particular disease topic.

MSCI 631 Pathogenesis of Human Disease – Introduction to Inflammation and Human Disease
Credit 1. 1 Lecture Hour. Upon completion of this course, the student will be able to recognize and describe the molecular events that occur in inflammation, along with innate and adaptive immune responses. Various inflammatory mediators and signaling events will be discussed in the context of inflammation alongside a general introduction to immune responses. A relevant clinical condition will be discussed to reinforce these concepts.

MSCI 632 Pathogenesis of Human Disease – Cardiovascular Disease
Credit 1. 1 Lecture Hour. Upon completion of this course, the student will be able to recognize and describe the molecular events that occur in the most frequent cardiovascular diseases affecting the Western world, including coronary artery disease, ischemia, atherosclerosis, myocardial infarction, stroke, hypertension, cardiac hypertrophy, and heart failure.

MSCI 633 Pathogenesis of Human Disease – Infectious Disease
Credit 1. 1 Lecture Hour. Upon completion of this course, the student will be able to recognize and describe the molecular events that occur in response to bacterial and viral pathogens responsible for respiratory, gastrointestinal and urogenital disease, as well as AIDS and other viral infections.

MSCI 634 Pathogenesis of Human Disease – Neurodegenerative and Genetic Disease
Credit 1. 1 Lecture Hour. Upon completion of this course, the student will be able to recognize and describe the molecular events that occur in Alzheimer's, Parkinson's neurodegenerative disease in women, Muscular Dystrophy, neoplasia, tumor metastasis and dissemination, and breast cancer.

MSCI 635 Mammalian Immunobiology
Credits 3. 3 Lecture Hours. Detailed survey of the mammalian immune system; topics include organization, composition and effector responses of the innate immune system; B and T lymphocyte development, effector function, and immunological memory; mammalian immune responses to intracellular and extracellular pathogens; immune system contribution to human diseases, including autoimmunity, allergy and hypersensitivity, cancer and neurological disorders. Prerequisite: Graduate classification.

MSCI 636 Intermediate and Translational Immunology
Credits 2. 2 Lecture Hours. This course is designed to build on students' basic understanding of the immune system. Course consists of lectures on a clinical problem/disease by the director/guest lecturer; followed by student presentations describing how the immune system may impact the disease of interest, either positively or negatively, and a group discussion on how to modify clinical outcomes with immune-based interventions that translate basic understanding to clinical treatments. All participants will review and discuss current publications in the field.

MSCI 637 Pathogenesis of Human Disease – Introduction to Inflammation and Human Disease
Credit 1. 1 Lecture Hour. Upon completion of this course, the student will be able to recognize and describe the molecular events that occur in inflammation, along with innate and adaptive immune responses. Various inflammatory mediators and signaling events will be discussed in the context of inflammation alongside a general introduction to immune responses. A relevant clinical condition will be discussed to reinforce these concepts.

MSCI 638 Pathogenesis of Human Disease – Cardiovascular Disease
Credit 1. 1 Lecture Hour. Upon completion of this course, the student will be able to recognize and describe the molecular events that occur in the most frequent cardiovascular diseases affecting the Western world, including coronary artery disease, ischemia, atherosclerosis, myocardial infarction, stroke, hypertension, cardiac hypertrophy, and heart failure.

MSCI 639 Pathogenesis of Human Disease – Infectious Disease
Credit 1. 1 Lecture Hour. Upon completion of this course, the student will be able to recognize and describe the molecular events that occur in response to bacterial and viral pathogens responsible for respiratory, gastrointestinal and urogenital disease, as well as AIDS and other viral infections.

MSCI 640 Pathogenesis of Human Disease – Neurodegenerative and Genetic Disease
Credit 1. 1 Lecture Hour. Upon completion of this course, the student will be able to recognize and describe the molecular events that occur in Alzheimer's, Parkinson's neurodegenerative disease in women, Muscular Dystrophy, neoplasia, tumor metastasis and dissemination, and breast cancer.

MSCI 641 Mammalian Immunobiology
Credits 3. 3 Lecture Hours. Detailed survey of the mammalian immune system; topics include organization, composition and effector responses of the innate immune system; B and T lymphocyte development, effector function, and immunological memory; mammalian immune responses to intracellular and extracellular pathogens; immune system contribution to human diseases, including autoimmunity, allergy and hypersensitivity, cancer and neurological disorders. Prerequisite: Graduate classification.
MSCI 695 Frontiers in Medical Science Research

Credits 2. 2 Lecture Hours. Present status of research in a variety of significant medical sciences fields. Content depends on the availability of visiting lecturers who are selected because of distinguished international recognition in their field of research. May be repeated for credit.

Prerequisite: Graduate classification.

MSCI 920 The Scientific Basis of Medicine

Credit 1. 1 Other Hour. This course is a journal club in which recent research papers relevant to medicine are presented by students and discussed by students and faculty. May be repeated for credit four times.
