

STAT - STATISTICS

STAT 600 Reproducible Computations in Machine Learning

Credits 3. 3 Lecture Hours. Version control via Git and Github; code profiling; numerical optimization; writing documentation; creation of R packages; case studies of computational challenges based on modern machine learning methods including regularized logistic regression, k-means clustering, sparse regression. **Prerequisites:** Graduate classification or approval of instructor.

STAT 601 Statistical Analysis

Credits 4. 3 Lecture Hours. 2 Lab Hours. For students in engineering, physical and mathematical sciences. Introduction to probability, probability distributions and statistical inference; hypotheses testing; introduction to methods of analysis such as tests of independence, regression, analysis of variance with some consideration of planned experimentation. **Prerequisite:** MATH 152 or MATH 172.

STAT 604 Topics in Statistical Computations

Credits 3. 3 Lecture Hours. Efficient uses of existing statistical computer programs (SAS, R, etc.); generation of random numbers; using and creating functions and subroutines; statistical graphics; programming of simulation studies; and data management issues. **Prerequisite:** MATH 221, MATH 251, or MATH 253.

STAT 605 Advanced Statistical Computations

Credits 3. 3 Lecture Hours. Programming languages, statistical software and computing environments; development of programming skills using modern methodologies; data extraction and code management; interfacing lower-level languages with data analysis software; simulation; MC integration; MC-MC procedures; permutation tests; bootstrapping. **Prerequisite:** STAT 612 and STAT 648.

STAT 607 Sampling

Credits 3. 3 Lecture Hours. Planning, execution and analysis of sampling from finite populations; simple, stratified, multistage and systematic sampling; ratio estimates. **Prerequisite:** STAT 601 or STAT 652 or concurrent enrollment in STAT 641.

STAT 608 Regression Analysis

Credits 3. 3 Lecture Hours. Multiple, curvilinear, nonlinear, robust, logistic and principal components regression analysis; regression diagnostics, transformations, analysis of covariance. **Prerequisite:** STAT 601 or STAT 641.

STAT 610 Theory of Statistics - Distribution Theory

Credits 3. 3 Lecture Hours. Brief introduction to probability theory; distributions and expectations of random variables, transformations of random variables and order statistics; generating functions and basic limit concepts. **Prerequisite:** MATH 409 or concurrent enrollment in MATH 409.

STAT 611 Theory of Statistics - Inference

Credits 3. 3 Lecture Hours. Theory of estimation and hypothesis testing; point estimation, interval estimation, sufficient statistics, decision theory, most powerful tests, likelihood ratio tests, chi-square tests. **Prerequisite:** STAT 610 or equivalent.

STAT 612 Theory of Linear Models

Credits 3. 3 Lecture Hours. Matrix algebra for statisticians; Gauss-Markov theorem; estimability; estimation subject to linear restrictions; multivariate normal distribution; distribution of quadratic forms; inferences for linear models; theory of multiple regression and AOV; random-and mixed-effects models. **Prerequisite:** Course in linear algebra.

STAT 613 Statistical Methodology I

Credits 3. 3 Lecture Hours. Elements of likelihood inference; exponential family models; group transformation models; survival data; missing data; estimation and hypotheses testing; nonlinear regression models; conditional and marginal inferences; complex models-Markov chains, Markov random fields, time series, and point processes. **Prerequisite:** STAT 612.

STAT 614 Probability for Statistics

Credits 3. 3 Lecture Hours. Probability and measures; expectation and integrals, Kolmogorov's extension theorem; Fubini's theorem; inequalities; uniform integrability; conditional expectation; laws of large numbers; central limit theorems **Prerequisite:** STAT 610 or its equivalent.

STAT 615 Stochastic Processes

Credits 3. 3 Lecture Hours. Survey of the theory of stochastic processes; includes countable-state Markov processes, birth-death processes, Poisson point processes, renewal processes, Brownian motion and diffusion processes and covariance-stationary processes; theoretical development and applications to real world problems. **Prerequisites:** STAT 610; MATH 409.

STAT 616 Statistical Aspects of Machine Learning I: Classical Multivariate Methods

Credits 3. 3 Lecture Hours. Core methods from traditional multivariate analysis and various extensions; probability distributions of random vectors and matrices, multivariate normal distributions, model assessment and selection in multiple regression, multivariate regression, dimension reduction, linear discriminant analysis, logistic discriminant analysis, cluster analysis, multidimensional scaling and distance geometry, and correspondence analysis. **Prerequisite:** STAT 611, STAT 630, STAT 650, or equivalent.

STAT 618 Statistical Aspect of Machine Learning II: Modern Techniques

Credits 3. 3 Lecture Hours. Second course in statistical machine learning; recursive partition and tree-based methods, artificial neural networks, support vector machines, reproducing kernels, committee machines, latent variable methods, component analysis, nonlinear dimensionality reduction and manifold learning, matrix factorization and matrix completion, statistical analysis of tensors and multi-indexed data. **Prerequisites:** STAT 612, STAT 613, and STAT 616.

STAT 620 Asymptotic Statistics

Credits 3. 3 Lecture Hours. Review of basic concepts and important convergence theorems; elements of decision theory; delta method; Bahadur representation theorem; asymptotic distribution of MLE and the LRT statistics; asymptotic efficiency; limit theory for U-statistics and differential statistical functionals with illustrations from M-,L-,R-estimation; multiple testing. **Prerequisite:** STAT 614.

STAT 621 Advanced Stochastic Processes

Credits 3. 3 Lecture Hours. Conditional expectation; stopping times; discrete Markov processes; birth-death processes; queuing models; discrete semi-Markov processes; Brownian motion; diffusion processes, Ito integrals, theorem and limit distributions; differential statistical functions and their limit distributions; M-,L-,R-estimation. **Prerequisite:** STAT 614 or STAT 615.

STAT 624 Databases and Computational Tools Used in Big Data

Credits 3. 3 Lecture Hours. Survey of common tools used by statisticians for high performance computing and big data type problems; shell scripting; HPC clusters; code optimization and vectorization; parallelizing applications using numerical libraries; open MP, MPI and parallel R; data management and revision control using Git; exploration of SQL, survey NOSQL databases; introduction to Python. **Prerequisites:** Knowledge of R, Fortran, or C.

STAT 626 Methods in Time Series Analysis

Credits 3. 3 Lecture Hours. Introduction to statistical time series analysis; autocorrelation and spectral characteristics of univariate, autoregressive, moving average models; identification, estimation and forecasting. **Prerequisite:** STAT 601 or STAT 642 or approval of instructor.

STAT 627 Nonparametric Function Estimation

Credits 3. 3 Lecture Hours. Nonparametric function estimation; kernel, local polynomials, Fourier series and spline methods; automated smoothing methods including cross-validation; large sample distributional properties of estimators; recent advances in function estimation. **Prerequisite:** STAT 611.

STAT 630 Overview of Mathematical Statistics

Credits 3. 3 Lecture Hours. Basic probability theory including distributions of random variables and expectations. Introduction to the theory of statistical inference from the likelihood point of view including maximum likelihood estimation, confidence intervals, and likelihood ratio tests. Introduction to Bayesian methods. **Prerequisites:** MATH 221, MATH 251, and MATH 253.

STAT 631 Statistical Methods in Finance

Credits 3. 3 Lecture Hours. Regression and the capital asset pricing model, statistics for portfolio analysis, resampling, time series models, volatility models, option pricing and Monte Carlo methods, copulas, extreme value theory, value at risk, spline smoothing of term structure. **Prerequisites:** STAT 610, STAT 611, STAT 608.

STAT 632 Statistical Methodology II- Bayesian Modeling and Inference

Credits 3. 3 Lecture Hours. Decision theory; fundamentals of Bayesian inference; single and multi-parameter models; Gaussian model; linear and generalized linear models; Bayesian computations; asymptotic methods; non-iterative MC; MCMC; hierarchical models; nonlinear models; random effect models; survival analysis; spatial models. **Prerequisite:** STAT 613.

STAT 633 Advanced Bayesian Modeling and Computation

Credits 3. 3 Lecture Hours. Bayesian methods in their research; methodology, and applications of Bayesian methods in bioinformatics, biostatistics, signal processing, machine learning, and related fields. **Prerequisite:** STAT 608, STAT 613, STAT 632.

STAT 636 Applied Multivariate Analysis and Statistical Learning

Credits 3. 3 Lecture Hours. Exploratory analysis of multivariate data using ordination and clustering techniques; supervised learning methods of predictive modeling; regression and classification; model selection and regularization; resampling methods; nonlinear and tree-based models; error rate estimation; use of R software. **Prerequisites:** STAT 630, or STAT 610 and STAT 611; MATH 304.

STAT 638 Introduction to Applied Bayesian Methods

Credits 3. 3 Lecture Hours. Uncertainty regarding parameters and how they can be explicitly described as a posterior distribution which blends information from a sampling model and prior distribution; emphasis on modeling and computations under the Bayesian paradigm; includes prior distributions, Bayes Theorem, conjugate and non-conjugate models, posterior simulation via the Gibbs sampler and MCMC, hierarchical modeling. **Prerequisites:** STAT 630, or equivalent or approval of instructor.

STAT 639 Data Mining and Analysis

Credits 3. 3 Lecture Hours. Broad overview of data mining, integrating related concepts from machine learning and statistics; exploratory data analysis, pattern mining, clustering and classification; applications to scientific and online data. **Cross Listing:** ECEN 758 and CSCE 676.

STAT 641 The Methods of Statistics I

Credits 3. 3 Lecture Hours. An application of the various disciplines in statistics to data analysis, introduction to statistical software; demonstration of interplay between probability models and statistical inference. **Prerequisite:** Concurrent enrollment in STAT 610 or approval of instructor.

STAT 642 The Methods of Statistics II

Credits 3. 3 Lecture Hours. Design and analysis of experiments; scientific method; graphical displays; analysis of nonconventional designs and experiments involving categorical data. **Prerequisite:** STAT 641.

STAT 645 Applied Biostatistics and Data Analysis

Credits 3. 3 Lecture Hours. Survey of crucial topics in biostatistics; application of regression in biostatistics; analysis of correlated data; logistic and Poisson regression for binary or count data; survival analysis for censored outcomes; design and analysis of clinical trials; sample size calculation by simulation; bootstrap techniques for assessing statistical significance; data analysis using R. **Prerequisites:** STAT 630, STAT 652, STAT 641, STAT 642, or STAT 611; prior knowledge of matrices and R programming.

STAT 646 Statistical Bioinformatics

Credits 3. 3 Lecture Hours. An overview of relevant biological concepts and technologies of genomic/proteomic applications; methods to handle, visualize, analyze, and interpret genomic/proteomic data; exploratory data analysis for genomic/proteomic data; data preprocessing and normalization; hypotheses testing; classification and prediction techniques for using genomic/proteomic data to predict disease status. **Prerequisites:** STAT 604, STAT 651, STAT 652 or equivalent or prior approval of instructor.

STAT 647 Spatial Statistics

Credits 3. 3 Lecture Hours. Spatial correlation and its effects; spatial prediction (kriging); spatial regression; analysis of point patterns (tests for randomness and modelling patterns); subsampling methods for spatial data. **Prerequisite:** STAT 630 or STAT 611 or equivalent.

STAT 648 Applied Statistics and Data Analysis

Credits 3. 3 Lecture Hours. Background to conduct research in the development of new methodology in applied statistics. Topics covered will include: exploratory data analysis; sampling; testing; smoothing; classification; time series; and spatial data analysis. **Prerequisite:** Approval of instructor.

STAT 649 Communication Skills in Statistical Research, Teaching and Consulting

Credits 3. 3 Lecture Hours. Develop communication skills in teaching, research and statistical consulting; classroom and group exercises, teaching best practices; using simulations in the classroom, techniques to foster active learning environments; developing consulting techniques; communicating research dissemination. **Prerequisites:** Graduate classification in statistics or approval of instructor.

STAT 650 Statistical Foundation For Data Science

Credits 3. 3 Lecture Hours. Introduction to both probability and statistics with emphasis on applications in data science; topics include basic probability concepts, sample space, conditional probability, random variables, as well as statistical inference. **Prerequisites:** MATH 411 or STAT 414; graduate classification or approval of the instructor.

STAT 651 Statistics in Research I

Credits 3. 3 Lecture Hours. For graduate students in other disciplines; non-calculus exposition of the concepts, methods and usage of statistical data analysis; T-tests, analysis of variance and linear regression. **Prerequisite:** MATH 102 or equivalent.

STAT 652 Statistics in Research II

Credits 3. 3 Lecture Hours. Continuation of STAT 651. Concepts of experimental design, individual treatment comparisons, randomized blocks and factorial experiments, multiple regression, Chi-squared tests and a brief introduction to covariance, non-parametric methods and sample surveys. **Prerequisite:** STAT 651.

STAT 653 Statistics in Research III

Credits 3. 3 Lecture Hours. Advanced topics in ANOVA; analysis of covariance; and regression analysis including analysis of messy data; non-linear regression; logistic and weighted regression; diagnostics and model building; emphasis on concepts; computing and interpretation. **Prerequisite:** STAT 652.

STAT 654 Statistical Computing with R and Python

Credits 3. 3 Lecture Hours. Aspects of numerical analysis for statisticians and data scientists including matrix inversion, splines, function optimization and MCMC; emphasis on implementing methods in R and python; data science skills such as code profiling, web scraping and data visualization. **Prerequisites:** Basic knowledge of R or Python.

STAT 656 Applied Analytics

Credits 3. 3 Lecture Hours. Introduction to data mining and will demonstrate the procedures; Optimal prediction decisions; comparing and deploying predictive models; neural networks; constructing and adjusting tree models; the construction and evaluation of multi-stage models. **Prerequisite:** STAT 408 or equivalent.

STAT 657 Advanced Programming Using SAS

Credits 3. 3 Lecture Hours. Programming with SAS/IML, programming in SAS Data step, advanced use of various SAS procedures. **Prerequisites:** STAT 604.

STAT 659 Applied Categorical Data Analysis

Credits 3. 3 Lecture Hours. Introduction to analysis and interpretation of categorical data using ANOVA/regression analogs; includes contingency tables, loglinear models, logistic regression; use of computer software such as SAS, GLIM, SPSSX. **Prerequisite:** STAT 601, STAT 641 or STAT 652 or equivalent.

STAT 660 Flexible Regression

Credits 3. 3 Lecture Hours. Examination of aspects of semiparametric regression, especially involving generalized linear models such as logistic regression, and inclusion of completely nonparametric regression, partially linear models, additive models and grouped data including longitudinal data; topics include shape constraints, spatial models, robustness and accounting for missing observations. **Prerequisites:** STAT 408 or STAT 608, or equivalent.

STAT 665 Statistical Application of Wavelets

Credits 3. 3 Lecture Hours. Advanced wavelet-based algorithms designed for summarization of large and noisy data sets for subsequent statistical modeling and learning; theoretical component providing unified multiresolution-based framework for efficient modeling, synthesis, analysis, and processing of broad classes of signals and images; applications in geosciences, biomedical signal processing, signal and image denoising, medical diagnostics, financial data analysis.

Prerequisite: Familiarity with computing in MATLAB, Octave, Python; STAT 627 or approval of instructor.

STAT 667 Statistics for Advanced Placement Teachers

Credits 1 to 3. 1 to 3 Lecture Hours. Review of the fundamental concepts and techniques of statistics; topics included in Advanced Placement Statistics; exploring data, planning surveys and experiments, exploring models, statistical inference. **Prerequisite:** Approval of instructor.

STAT 673 Time Series Analysis I

Credits 3. 3 Lecture Hours. Introduction to diverse modes of analysis now available to solve for univariate time series; basic problems of parameter estimation, spectral analysis, forecasting and model identification.

Prerequisite: STAT 611 or equivalent.

STAT 674 Time Series Analysis II

Credits 3. 3 Lecture Hours. Continuation of STAT 673. Multiple time series, ARMA models, test of hypotheses, estimation of spectral density matrix, transfer function and forecasting. **Prerequisites:** STAT 673.

STAT 677 Advanced Spatial Statistics

Credits 3. 3 Lecture Hours. Spatial statistics from an advanced perspective; Gaussian processes; Gaussian Markov random fields; positive definite functions; nonstationary and multivariate process; hierarchical spatial models; measurement error; change of support; computational approaches for large spatial data sets; spatio-temporal statistics. **Prerequisites:** STAT 612, STAT 613, and STAT 632.

STAT 681 Seminar

Credit 1. 1 Lecture Hour. Oral presentations of special topics and current research in statistics. May be repeated for credit. **Prerequisite:** Graduate classification in statistics.

STAT 683 Data Science Capstone

Credits 3. 3 Lecture Hours. Application of data science methods including machine learning to research problems; team project-based training for project management, interdisciplinary collaboration and communication skills. **Prerequisite:** Two or more of CSCE 633, CSCE 636, CSCE 666, CSCE 676, ECEN 758, ECEN 649, ECEN 740, ECEN 743, ECEN 765, ECEN 760, STAT 616, STAT 618 or STAT 639; Python programming experience is highly recommended. **Cross Listing:** CSCE 725 and ECEN 725.

STAT 684 Professional Internship

Credits 1 to 3. 1 to 3 Other Hours. Practicum in statistical consulting for students in PhD program. Students will be assigned consulting problems brought to the Department of Statistics by researchers in other disciplines. **Prerequisite:** STAT 642 or its equivalent.

STAT 685 Directed Studies

Credits 1 to 6. 1 to 6 Other Hours. Individual instruction in selected fields in statistics; investigation of special topics not within scope of thesis research and not covered by other formal courses. **Prerequisites:** Graduate classification and approval of department head.

STAT 689 Special Topics in...

Credits 1 to 4. 1 to 4 Lecture Hours. Selected topics in an identified area of statistics. Open to non-majors. May be repeated for credit.

Prerequisite: Approval of instructor.

STAT 691 Research

Credits 1 to 23. 1 to 23 Other Hours. Research for thesis or dissertation.

Prerequisite: Graduate classification.

STAT 692 Statistical Consulting

Credits 2. 2 Lecture Hours. . Application of various statistical methods, including but not limited to, experimental design, sampling and survey, graphics and tables and all sorts of modeling and data mining techniques, to solve real problems; communication with clients and identification of the statistical problems to be solved, outlining of a project plan for solving a statistical problem, use of proper statistical software or methodology needed for the problem; creation of a statistical report for the problem solved. May be repeated four times for credit. Must be taken on a satisfactory/unsatisfactory basis. **Prerequisite:** STAT 642 or equivalent.

STAT 693 Statistical Consulting and Ethics

Credit 1. 1 Lecture Hour. Provision of consulting service to researchers from various disciplines at Texas A&M; integration of statistical learning in class and application to real world problems; identification of clients' statistical problems; consideration and implementation of statistical procedures; effective communication with clients for interpretation of results and promotion of ethical guidelines in statistical practice. May be repeated one time for credit. Must be taken on a satisfactory/unsatisfactory basis. **Prerequisite:** STAT 648.

STAT 695 Frontiers in Statistical Research

Credit 1. 1 Lecture Hour. Familiarize the present status of research in a wide variety of new areas of statistical research; content will vary from semester to semester but will always be framed around introducing new research areas. May be taken six times for credit. **Prerequisites:** Graduate classification in the Department of Statistics or approval of instructor.
