

HORTICULTURE - MINOR

This program covers topics like crop production, enology, greenhouse management, floral design, and biotechnology, providing students with essential horticultural skills.

An undergraduate minor in Horticulture provides students with a concentration of courses focusing on horticulture and floriculture. These may range from a broad-based, comparative perspective to a narrower application within the field. Students may choose such diverse topics as herb, fruit, nut, and vegetable production, viticulture and wine production (enology), greenhouse and nursery management, floral and landscape design, science and biotechnology, urban and environmental horticulture, and much more. Earning a minor in Horticulture provides students with the skills required to have a basic working knowledge of the field of Horticulture.
