RWFM 101 Exploring Rangeland, Wildlife and Fisheries Management
Credit 1. 1 Lecture Hour.
Exploration of knowledge, skills and abilities required for varied careers within rangeland, wildlife and fisheries management; development of a professional portfolio and résumé; exploration of career options through team approach; conduct one service project.

RWFM 102 Introduction to Natural Resources and Ecosystem Management
Credit 1. 1 Lecture Hour.
Introduction to natural resources including range and forest and ecosystem system approach to wildland management; survey of the field of natural resources and related industries.

RWFM 202 Concepts in Applied Plant Biology
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Overview of diversity in form and function present in the plant kingdom with linkage to the human condition; emphasis on the full spectrum of plant groups ranging from the lower plants to the highly advanced seed plants; selected families and genera considered in detail regarding important ecological and anthropogenic values; exploration of the structural, reproductive and ecological attributes from the cellular level to the whole organism; basic concepts of botanical classification and nomenclature.

RWFM 291 Research
Credits 1 to 4. 1 to 4 Other Hours.
Research conducted under the direction of faculty member in wildlife and fisheries sciences. May be repeated 3 times for credit.
Prerequisites: Freshman or sophomore classification and approval of instructor.

RWFM 301 Wildland Watershed Management
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Elements of watershed management including range, forest and other natural resources and principles and practices of wildland management for protection, maintenance and improvement of water resource values.
Prerequisite: Junior or senior classification or approval of instructor.

RWFM 302 Wildland Plants of North America
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Familiarization with the distribution and economic value of important wildland plants including range, forest and other natural resources in Texas and North America and fundamentals of sight identification of these plants; plant collection required.
Prerequisite: Junior or senior classification or approval of instructor.

RWFM 305 Principles and Practices of Wildlife and Fisheries Management
Credits 3. 3 Lecture Hours.
A broad survey of the diverse fields of wildlife, fisheries, and aquaculture management; exploration of professions for students interested in pursuing related careers; overview of the history and philosophical underpinnings of modern wildlife and fisheries management; emphasis on key subfields of each field that are translatable into post-graduate careers.

RWFM 306 Wildlife and the Changing Environment
Credits 3. 3 Lecture Hours.
Using an ecosystem approach, analyzes changes in the North American environment; effects of these changes on wildlife populations; and reviews areas of major, current concern.
Prerequisites: Junior or senior classification; restricted to non-majors.

RWFM 308 Fish and Wildlife Laws and Administration
Credits 3. 3 Lecture Hours.
Review and analysis of state and federal laws and international treaties and conventions affecting fish and wildlife; their application and administration; organizational structure of state, federal and international agencies; their objectives, policies and practices.
Prerequisites: Grade of C or better in ECCB 205 or BIOL 357; junior classification or approval of instructor.

RWFM 309/VTPB 301 Wildlife Diseases
Credits 3. 3 Lecture Hours.
Basic mechanisms of diseases as they occur in wildlife populations; interplay of habitat requirements, individual physiological requirements and disease producing mechanisms of varied wildlife species.
Prerequisite: Junior classification or approval of department head.
Cross Listing: VTPB 301/RWFM 309.

RWFM 313 Vegetation Sampling Methods and Designs in Ecosystems
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Basis for vegetation sampling in ecosystems including range, forest and other natural resources; methods for conducting sampling; selection of sampling unit appropriate for vegetation type; sampling statistics; mean comparisons; regression analysis; sampling design principles; development of sampling plan; presentation and interpretation of sampling data.
Prerequisites: Any MATH course satisfying university core curriculum, junior or senior classification or approval of instructor.

RWFM 314 Principles of Rangeland Management Around the World
Credits 3. 3 Lecture Hours.
Basic knowledge of world rangeland ecosystems, how these systems are managed in diverse cultural settings; principles of underlying ecological processes influenced by various land management practices; foster understanding of the values that people in different countries place on rangeland resources; use of these values to enhance geologically sustainable and socially acceptable rangeland management practices.
Prerequisite: Junior or senior classification or approval of instructor.

RWFM 315 Rangeland Inventory and Monitoring
Credit 1. 2 Lab Hours.
Theory and methods to inventory rangeland vegetation; sampling design; analysis of inventory data; preparation of technical report; presentation of inventory data in text, tables, and graphs using the style of the Rangeland Ecology and Management discipline.
Prerequisites: RWFM 313, junior or senior classification or approval of instructor.

RWFM 316 Range Ecology
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Organization and distribution of rangeland ecosystems of the world, with emphasis on North America; community dynamics and functions stressed including biotic history, succession, disturbance regimes, competitive interactions, herbivory, energy flow and nutrient cycling; conservation of rangeland resources.
Prerequisites: ECCB 205, ECCB 215, RWFM 302, and RWFM 314, junior or senior classification or approval of instructor.
RWFM 317 Vegetation Management
Credits 3. 3 Lecture Hours.
Familiarization with practices that cause changes in rangeland vegetation composition for multiple uses; understanding of criteria for range improvement practices; comparison of expected responses of livestock forage production, watershed parameters and wildlife to vegetation changes following range improvements; systems concept for planning, analysis and implementation of range improvement practices.
**Prerequisites:** RWFM 314, junior or senior classification or approval of instructor.

RWFM 318/ECCB 318 Coupled Social and Ecological Systems
Credits 3. 3 Lecture Hours.
Resilience-based stewardship of social-ecological systems including range, forest and other natural resources; ecological concepts of resilience, sustainability, ecosystem services and vulnerability; investigation of linkages among social and ecological system components; contribution to sustainability and provisioning of ecosystem services; evaluation of multiple knowledge sources as the basis for adaptive ecosystem management.
**Prerequisites:** ECCB 205, AGEC 105 or equivalent, junior or senior classification or approval of instructor.
**Cross Listing:** ECCB 318/RWFM 318.

RWFM 321 Communicating Natural Resources
Credits 3. 3 Lecture Hours.
Principles of effectively communicating natural resource science to a diverse stakeholder group; development of critical skills for obtaining and retaining employment in the Rangeland, Wildlife, and Fisheries Management fields; experience in audience identification, mixed-media presentations and interpersonal communications skills unique to the culture of diverse natural resources stakeholders.
**Prerequisite:** RWFM major.

RWFM 322 Community Development and Sustainability
Credits 3. 3 Lecture Hours.
Analysis of the elements comprising a community, community assessment techniques and community development processes engaged by stakeholders and residents to improve living conditions; definitions and principles associated with community development.
**Prerequisites:** Junior or senior classification, or approval of instructor.

RWFM 323 Parks and Protected Area Management
Credits 3. 3 Lecture Hours.
Focus on key aspects of parks and protected area management; significance of parks and protected areas in society; visitor use; systems and techniques for management; agencies and organizations involved, and factors that influence parks and protected area management.
**Prerequisites:** Junior or senior classification, or approval of instructor.

RWFM 325 Watershed Analysis and Planning
Credits 3. 3 Lecture Hours.
Provide an integrated framework for watershed planning that addresses the related biophysical, social and economic issues; comprehensive in scope and approach giving students the tools and techniques for developing sound watershed management policy and practice; water issues, problems and regulations for Texas.
**Prerequisite:** Junior or senior classification.

RWFM 333 Rangeland, Wildlife & Fisheries Field Techniques
Credits 3. 3 Lecture Hours.
Rangeland, Wildlife & Fisheries Field Techniques. Techniques of natural resource principles in rangeland, wildlife and fisheries management within a field practicum setting; analyze and assess management scenarios through critical thinking exercises, field measurements, conservation planning, and integration of social, legal and regulatory, and economic factors and constraints.

RWFM 345 Human Dimensions of Natural Resource Management and Policy
Credits 3. 3 Lecture Hours.
Social science principles that can help identify and address problems in natural resource and environmental management with two goals; exploration of concepts that help explain why people affect the environment as they do; introduction to methods for influencing and understanding human behavior that can be used to promote community and environmental sustainability.
**Prerequisite:** Junior or senior classification.

RWFM 349 Rangeland and Wildlife Animal Nutrition
Credits 3. 3 Lecture Hours.
Connection of the life history of wild and domestic animals with the quality of their habitat by examining the transfer of energy and nutrients from foods to body tissues and activities for survival, growth and reproduction; exploration of the use of nutrition for management and conservation of rangelands and wildlands.
**Prerequisite:** Junior or senior classification; RENR 205 or BIOL 357; ANSC 107 and ANSC 108 or BIOL 107.

RWFM 350 Wildlife Population Dynamics
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Development of a background in population dynamics of wildlife species, and basic estimation of those parameters; theoretical components, how populations are measured, underlying heuristic theories of population dynamics, and methods for assessing wildlife population dynamics and estimating population size.
**Prerequisite:** STAT 302, MATH 147, MATH 150, and RENR 205.

RWFM 351 Geographic Information Systems for Resource Management
Credits 3. 2 Lecture Hours. 2 Lab Hours.
Geographic Information Systems (GIS) approach to solving spatial problems and managing natural resources, including the acquisition, management, manipulation, analysis, and mapping of spatial and non-spatial databases; identification of natural and relevant features from various data sources; integration of relevant technologies and data; extensive use of GIS software to solve real-world problems. Only one of the following will satisfy the requirements for a degree: AGSM 461, ECCB 351, ECCB 651, BAEN 651, or RENR 651.
**Prerequisites:** Junior or senior classification or approval of instructor.
**Cross Listing:** AGSM 461 and ECCB 351.

RWFM 354 Wildlife Anatomy and Physiology
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Fundamental knowledge of the anatomy and physiology of wild animals; comparative form and function of all major vertebrate systems; familiarity with anatomical or physiological characteristics of various groups limit or allow their exploitation of different habitat types; examination and recognition of interactions between animals and their environment.
**Prerequisite:** RWFM majors; BIOL 111 and BIOL 112.
RWFM 370 Aquatic Vegetation Management
Credits 2. 2 Lecture Hours.
Identification and management of common and problematic aquatic vegetation species; aquatic plant ecology and management of aquatic vegetation as aquatic animal habitat; management methods include physical, chemical and biological methods as well as propagation and introduction and restoration.
Prerequisite: Junior or senior classification.

RWFM 371 Pond and Small Impoundment Management
Credits 3. 3 Lecture Hours.
Practices and principles with a focus on the variations in regional management techniques in North America, from north to south; history of pond management, the pond environment, stocking strategies for recreational small impoundments, fisheries management in small bodies of water; water quality management, problem troubleshooting in small impoundments and management opportunities.
Prerequisite: Junior or senior classification, or approval of instructor.

RWFM 375 Conservation of Natural Resources
Credits 3. 3 Lecture Hours.
Principles and philosophies associated with the development, management and use of natural resources; ecological and social implications inherent in management alternatives involving the natural environment and use of renewable natural resources.

RWFM 400 Study Abroad in Natural Resources
Credits 2 to 12. 2 to 12 Lecture Hours.
Provides students with an opportunity to gain first-hand experience in natural resource management in foreign countries; focus on the interaction of public, communal and private land tenure systems with the ecological and human dimensions of rangeland management, wildlife conservation and nature-based tourism. May be taken twice for credit.
Prerequisite: Junior or senior classification.

RWFM 401 Rangeland Plant and Herbivory Dynamics
Credits 3. 3 Lecture Hours.
Evaluation of the effects of herbivory at the plant population and community levels; developmental plant morphology and plant resistance to grazing; foraging strategies of herbivores relating to landscape and plant attributes along with animal nutritional needs; manipulation of the grazing process to meet management objectives; focus on resilience, adaptive management and alternative goods and services along with grazing topics.
Prerequisite: ESSM 314.

RWFM 404 Aquatic Ecosystems
Credits 3. 3 Lecture Hours.
Inland and coastal zone aquatic ecosystems, lower foodweb structure, functioning and influence on living resources; lakes, rivers, estuaries, open bay systems, factors impacting ecosystem health and fisheries; harmful algal blooms, reduced water inflows, eutrophication and hypoxia formation as they affect foodwebs, recruitment of commercially and recreationally important fisheries.
Prerequisite: Junior or senior classification or approval of instructor.

RWFM 405 Urban Wildlife and Fisheries
Credits 3. 3 Lecture Hours.
Urban wildlife and fisheries trains students to establish and maintain diverse, self-sustaining urban wildlife and fish populations at levels in harmony with ecological, social, and economic values of the human community and to develop optimal levels of public appreciation and use of urban wildlife and fish resources and associated habitats.
Prerequisites: ECCB 205, junior or senior classification.

RWFM 406 Wildlife Habitat Management
Credits 3. 3 Lecture Hours.
Designed to acquaint the student with major land use practices on lands that produce wildlife, how these influence wildlife production and alterations or manipulations of habitat used to achieve specific wildlife management goals.
Prerequisites: Grade of C or better in ECCB 205 and ECCB 302 or approval of instructor; junior classification.

RWFM 407 Field Wildlife Habitat Management
Credit 1. 2 Lab Hours.
Field and laboratory studies of specific wildlife habitat management practices with special emphasis on those used in Texas; attendance required at four weekend field trips to study wildlife habitat operations.
Prerequisite: Concurrent enrollment in RWFM 406.

RWFM 408 Techniques of Wildlife Management
Credits 3. 2 Lecture Hours. 3 Lab Hours.
Techniques available to directly and indirectly manipulate wild animal populations to achieve balance between socioeconomic and aesthetic values.
Prerequisites: Senior classification or approval of instructor.

RWFM 409 NATURE in the Classroom: Needed Activities To Understand Resource Ecology
Credit 1. 3 Lab Hours.
Integration of natural resources through conservation ecology programs, utilization of research techniques adaptable for classroom use; field trips to community facilities, gaming strategies and computer simulations.
Prerequisites: RWFM 420 or ECCB 205 or concurrent enrollment; junior or senior classification.

RWFM 410 Principles of Fisheries Management
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Basic knowledge from ichthyology, biology of fishes and limnology related to applied aspects of freshwater and marine fishery science; management techniques applicable to streams, ponds, reservoirs, estuaries and the oceans.
Prerequisites: BIOL 357, or grade of C or better in ECCB 311, ECCB 403, or RWFM 404, or approval of instructor.

RWFM 411 Ecosystem Management
Credits 4. 3 Lecture Hours. 3 Lab Hours.
Concepts and practices relevant to the development of landscape/ regional level ecosystem management plans including range, forest and other natural resources; an ecosystem management plan will be developed utilizing a strategic management/coordinate resources approach to establish resource goals, ecosystem resource analysis and impact evaluation and implementation compatible with societal and individual concerns.
Prerequisites: ECCB 205, senior classification or approval of instructor.

RWFM 413 Problem Solving in Wildlife and Fisheries
Credits 4. 2 Lecture Hours. 4 Lab Hours.
Project-based to combine experiences and knowledge from other wildlife and fisheries sciences courses; critical thinking about issues and relevant topics in wildlife and fisheries sciences field; emphasis on completion of course project and answering research or management question.
Prerequisites: Grade of C or better in RWFM 317 and ECCB 304; STAT 301, STAT 302, or STAT 303; senior classification.
RWFM 414 Ecology of Lakes and Rivers  
Credits 4. 3 Lecture Hours. 3 Lab Hours. 
Biological, physical, chemical and geological characteristics of fresh waters; human impacts, which include influence of industrial, domestic, conservation and restoration activities.  
**Prerequisites:** CHEM 101 and CHEM 222; PHYS 201; junior or senior classification. 

RWFM 415 Range Analysis and Management Planning  
Credits 4. 3 Lecture Hours. 2 Lab Hours. 
Basic concepts and theories of range management systems. Resource inventory, analysis, and management planning.  
**Prerequisites:** AGEC 105 or ECON 202, RWFM 314, RWFM 317; junior or senior classification or approval of instructor. 

RWFM 417 Biology of Fishes  
Credits 4. 3 Lecture Hours. 3 Lab Hours. 
Fishes' physiological and morphological adaptations for life in aquatic systems; physiological and behavioral responses of fish to environmental variation. Laboratory emphasizes design, conduct and analysis of virtual experiments featuring "EcoFish," a simulation model of fish autecology.  
**Prerequisites:** ECCB 302 or ECCB 311; RWFM 414; or approval of instructor. 

RWFM 418 Ecology of the Coastal Zone  
Credits 3. 3 Lecture Hours. 
Introduction to the ecosystems that comprise the coastal zone with an emphasis on the role of freshwater inflows; open bay systems are the focus of lectures, but fringing habitats are also discussed; human components of the coastal zone are also discussed including industrial, commercial domestic, conservation and restoration issues.  
**Prerequisite:** Junior or senior classification. 

RWFM 419 Wildlife Restoration  
Credits 3. 2 Lecture Hours. 3 Lab Hours. 
Study of the fundamentals of the restoration of animal populations and the resources they require; factors that control the distribution and abundances of animals in relation to restoration; and how restoration plans for wildlife are developed.  
**Prerequisite:** ECCB 205 or equivalent; junior or senior classification or approval of instructor; RWFM 406 and RWFM 407 and ECCB 320 preferred. 

RWFM 420 Ecology and Society  
Credits 3. 3 Lecture Hours. 
Study and compare human and natural ecosystems using diversity, interrelations, cycles, and energy as the conceptual organization; central themes are sustainability, stewardship and science.  
**Prerequisite:** Junior or senior classification. 

RWFM 421 Upland Bird Management  
Credits 3. 2 Lecture Hours. 3 Lab Hours. 
Basic morphological, physiological and nutritional characteristics important to upland bird management, both game and non-game; history of upland bird habitat and management in the U.S., as well as current status of various groups of species; emphasis on population and habitat management techniques relevant to specific species; application of management principles to current, real-world management problems.  
**Prerequisite:** RWFM majors; WFSC 402 and RWFM 350. 

RWFM 422 Large Mammal Management  
Credits 3. 2 Lecture Hours. 3 Lab Hours. 
Management of various herbivorous large mammals, both game and non-game; development of knowledge on how to implement habitat and population management techniques to achieve management goals; history of modern wildlife management as it relates to the restoration and harvest of various species as game that once were imperiled; utilization of natural history information in the selection of the most the beneficial management techniques, and a survey of the techniques currently used in large mammal population management.  
**Prerequisite:** RWFM majors; WFSC 401 and RWFM 350. 

RWFM 423 Waterfowl and Wetland Management  
Credits 3. 2 Lecture Hours. 3 Lab Hours. 
Management of waterfowl as a natural resource as well as their importance in maintaining the health of the freshwater ecosystems; integral management of wetland ecosystems that support migrating and resident waterfowl, water birds, wading birds and other species; development of Multi-trophic knowledge of the management of wetlands, from alligators to avocets, for systems critical to the health of Texas' coastal region, as well as their value to human health and safety statewide; interdisciplinary approach, including other birds, mammals, herpetofauna, fish and invertebrates.  
**Prerequisite:** RWFM majors; WFSC 402 and RWFM 350. 

RWFM 424 Wildlife Damage Management  
Credits 3. 2 Lecture Hours. 3 Lab Hours. 
Exploration of the principles, philosophy, techniques, and application of wildlife damage management to solve negativistic human-wildlife interactions; exposure to animal capture, handling and sampling as well as human dimensions of wildlife damage management; hands-on project throughout the semester in real-world wildlife damage management situations; focus on preparation to pursue employment as a wildlife damage manager with public or private employers.  
**Prerequisite:** RWFM majors; WFSC 401 and RWFM 350. 

RWFM 425 Carnivore Management  
Credits 3. 2 Lecture Hours. 3 Lab Hours. 
Principles and practices of carnivore management; biology, ecology and management of various carnivorous wildlife species; application of the principles of trophic levels, carrying capacity and wildlife restoration to inform management plans; emphasis on current carnivore management scenarios that encompass both the biology and human-dimensions of carnivores; real-life examples to contextualize course learning.  
**Prerequisite:** RWFM majors; WFSC 401 and RWFM 350. 

RWFM 426 Disease Management in Fisheries and Aquaculture  
Credits 3. 2 Lecture Hours. 2 Lab Hours. 
Fish and invertebrates of economic importance; factors influencing the maintenance of health for each species group; problems and solutions unique to each phase of aquaculture from breeding to growout; application of routine diagnosis and other management tools.  
**Prerequisite:** Junior classification. 

RWFM 427 Wetland Ecosystem Management  
Credits 4. 3 Lecture Hours. 3 Lab Hours. 
Ecosystem approach to the ecology and management of wetlands; emphasis on factors controlling wetland structure and function, characteristics of different wetland types, and applied issues of wetland restoration, creation and delineation.  
**Prerequisite:** Junior or senior classification.
RWFM 434 Changing Natural Resource Policy  
Credits 3. 3 Lecture Hours.  
Process through which environmental policies are changed; study theories of social and political change; teams use theories with their original research on environmental policy problems to create and implement plans for changing environmental policies in their own communities.  
Prerequisite: Junior or senior classification or approval of instructor.

RWFM 436 Natural Resources Policy  
Credits 3. 3 Lecture Hours.  
Natural resources and forest policy development in the United States and review of current issues in forest and related natural resource policy.  
Prerequisite: Junior or senior classification or approval of instructor.

RWFM 440 Wetland Delineation  
Credits 2. 2 Lecture Hours. 2 Lab Hours.  
Application of the 1987 Wetland Delineation Manual in use by the Army Corps of Engineers (CORPS); field indicators of hydrophytic vegetation; hydric soils, wetland hydrology, methods for making jurisdictional determinations in non-disturbed and disturbed areas, recognition of problem wetlands and technical guidelines for wetlands.  
Prerequisite: Junior or senior classification.

RWFM 443 Aquaculture I: Principles and Practices  
Credits 3. 2 Lecture Hours. 2 Lab Hours.  
Scientific perspectives concerning major principles associated with fish production under controlled conditions; production techniques associated with prominent species produced via aquaculture throughout the world with emphasis on those cultured in the United States.  
Prerequisite: Junior or senior classification.

RWFM 444 Aquaculture Hatchery Management  
Credits 3. 3 Lecture Hours.  
Study of finfish and shellfish hatchery requirements and operations, broodstock management, reproduction and hatchery techniques and application of those techniques in the field; management of hatchery systems for the production of seed stock.  
Prerequisite: Junior or senior classification.

RWFM 445 Fish Health and Diseases  
Credits 3. 3 Lecture Hours.  
Health disorders and diseases of finfish and shellfish including water quality issues and management, environmental endocrine disruptors, biosecurity and practical techniques used to isolate, identify and manage or mitigate diseases.  
Prerequisite: Junior or senior classification.

RWFM 446 Fish Physiology  
Credits 3. 3 Lecture Hours.  
Physiology of fish focusing on the diverse range of functional adaptations that fish use to cope with various environmental and physiological states; bioenergetics, respiration, cardiovascular system, blood chemistry and function, muscle function and locomotion, gas exchange, buoyancy regulation, nitrogen metabolism and excretion, thermoregulation, reproduction, growth, osmoregulation, and immunity.  
Prerequisite: Junior or senior classification; WFSC 311.

RWFM 447 Aquaculture II: Aquatic Animal Nutrition, Feeding and Disease Management  
Credits 3. 2 Lecture Hours. 2 Lab Hours.  
Review of scientific perspectives on major aspects of nutrition, diet formulation and feeding of aquatic species in aquaculture; major disease-causing organisms encountered in aquaculture and means of disease prevention and control.  
Prerequisite: Junior or senior classification.

RWFM 449 Professional Aspects of Aquatic Ecology  
Credits 3. 3 Lecture Hours.  
Discipline of aquatic sciences through oral presentation and written documentation; job market expectations, resume preparation, job application, and preparation for and giving an interview.  
Prerequisite: Junior or senior classification or approval of instructor.

RWFM 461 Community-Based Conservation  
Credits 3. 3 Lecture Hours.  
Study of community-based conservation (CBC); definition, description, discussion, and analysis of the history, principles, critical actors, benefits, factors leading to successful initiatives, challenges in implementation and different models of community-based conservation.  
Prerequisite: Junior or senior classification.

RWFM 470 Environmental Impact Assessment  
Credits 3. 3 Lecture Hours.  
The evolution of natural resources regulatory policies and how this influences current procedures for environmental/natural resources assessment and management; demonstration of the environmental impact assessment procedures and policy issues associated with environmental impacts.  
Prerequisite: Senior classification or approval of instructor.

RWFM 480 Plant Identification and Undergraduate Range Management Exam Team Competitions  
Credits 0 to 3. 0 to 3 Other Hours.  
Knowledge of plants morphology, identification and distribution for the profession of range management; knowledge of range management across the world; weekly tests to train on plant and range management knowledge. May be repeated for credit.  
Prerequisites: Junior or senior classification or approval of instructor.

RWFM 481 Senior Seminar  
Credit 1. 1 Lecture Hour.  
Completion of professional e-portfolio, résumé and job application; exploration of job search, application, and interview; discipline competency exams; program evaluation.  
Prerequisites: Senior classification in ESSM or RWFM degree programs.

RWFM 484 Internship  
Credits 0 to 9. 0 to 9 Other Hours.  
Practical experience working in a professional wildlife or fisheries facility.  
Prerequisite: Approval of department head.

RWFM 485 Directed Studies  
Credits 1 to 3. 1 to 3 Other Hours.  
Individual study and research on selected problem approved by instructor and academic advisor.  
Prerequisites: Junior or senior classification; approval of department head.

RWFM 489 Special Topics in...  
Credits 1 to 4. 1 to 4 Other Hours.  
Selected topics in an identified area of wildlife and fisheries sciences. May be repeated for credit.  
Prerequisite: Approval of department head.

RWFM 491 Research  
Credits 0 to 6. 0 to 6 Other Hours.  
Laboratory and/or field research supervised by a faculty member in wildlife and fisheries sciences. Registration in multiple sections of this course are possible within a given semester provided the per semester credit hour limit is not exceeded.  
Prerequisites: Junior or senior classification; approval of instructor.
