HEALTH - BS, ALLIED HEALTH TRACK

The goals of the curriculum leading to a Bachelor of Science in Health are to develop literate, informed professionals capable of making the world healthier and more humane. Students receive a general education through a broad exposure to information. They also receive a specialized education through coursework designed to help them develop as a professional, expand their knowledge and skills related to health education and prepare them for professional practice.

The Bachelor of Science program provides students a strong background that prepares students to pursue additional schooling in an allied health area. This degree provides an opportunity for students to take prerequisite courses for professional allied health schools such as nursing, PA, PT, OT, or other medical fields of study, as electives while receiving a background in the health education field. Students select electives from a list of prerequisites for specific professional school programs.

Program Requirements

This degree plan has been laid out showing students the number of hours they must take each semester in order to complete the degree in four years without attending summer school. This is a suggested plan and does not have to be followed as laid out below. Students should use this information in conjunction with advising documents available from their advisor or the department website when scheduling courses each semester to ensure they are meeting all prerequisites, taking courses for admission to professional phase in a timely manner and meeting all grade requirements.

First Year
