

# COMPUTING - BA

The Bachelor of Arts degree with a major in Computing provides students with the opportunity to obtain computing knowledge and skills to be coupled with their non-computing interests in a wide variety of areas such as liberal arts, science, education, business, data science, robotics, etc. The degree allows students to build up strong computational fundamentals that are custom-fit to domains of interest that require such skills. The degree program is designed to provide flexibility in the choice of courses, both in computing and in the students' field of interest, so that students, after graduation, can have a broader range of career options, both in industry and in academia, reflecting the increasing demand for interdisciplinary talent where computing plays a major role.

## Program Mission

The mission of the Computing program at Texas A&M University is to prepare intellectual, professional, and ethical graduates with a strong background in computing, who use computing skills to solve multidisciplinary challenges.
